management plan implemented pursuant to the provisions of Article 19. ^{1biv}. Each Specific Agreement shall bind the signatory Project Company to and shall further detail the obligations for which it is liable under the Environmental and Social Assessment and Management Plan. The Environmental and Social Assessment and Management Plan shall be revised upon mutual agreement of the Project Companies and the State to take into account the evolution of the Project and the environmental constraints attached to the Project according to the following schedule with respect to the obligations borne by Mine Project Company at the time of renewal of the Exploitation Permit if any; and with respect to the obligations borne by the other Project Companies on the date determined by each Specific Agreement. In order to secure the obligations it bears under the Environmental and Social Assessment and Management Plan and this Convention including in terms *inter alia* of remedying the damages it caused to the Environment rehabilitation of the Project Area it occupies and, more generally proper performance of its environmental obligations the Mineral Terminal Project Company or Cam Iron on behalf of the Mineral Terminal Project Company shall within ten 10 Business Days from Project Commissioning issue a Bank Guarantee the Mineral Terminal Project Company Environmental Bank Guarantee in an amount equal to twenty million 20000000 US Dollars and shall maintain such Mineral Terminal Project Company Environmental Bank Guarantee in place until one 1 year after the expiration of the concession to operate the Mineral Terminal v page 1123 ^{fr}A Concession. ii the Mine Project Company or Cam Iron on behalf of the Mine Project Company shall within ten 10 Business Days as from the commencement of ground construction in the Construction Phase of the Project Facilities shall issue a Bank Guarantee Mine Project Company Environmental Bank Guarantee in an amount of twenty million 20000000 US Dollars and shall maintain such Mine Project Company Environmental Bank Guarantee until one year after the expiration of the Mining Permit; provided that at such time as the total amount of cash on deposit in the Rehab Escrow Account reaches twenty million 20000000 US Dollars the Mine Project Company Environmental Bank Guarantee may be terminated or reduced. e l g h is 1be State may draw down on the Mineral Terminal Project Company Environmental Bank Guarantee or

the Mine Project Company Environmental Bank Guarantee every time the relevant Project Company has failed to fulfil through its own action or that of a Contractor Subcontractor or other Third Party involved in the Project Operations of in charge. its obligations under Legislation regarding which it protection of the Environment and health and human safety its obligations under Article 29.2 including its obligations under the Environmental and Social Assessment and Management Plan subject however to a prior formal notice and the Project Company not remedying the Breach Events including any outstanding payment obligations within a reasonable time frame. The provisions of this Article 29.2.1e do not affect in any manner the right of each Project Company to pursue remedies against said Contractor Subcontractor or other Third Party involved in the Project Operations of which it is in charge where it considers that party to be responsible for the Breach Event for which the State has drawn down on the applicable Environmental Guarantee. The State shall discharge whichever of Cam Iron or the Project Company which provided the applicable prior Bank Guarantee upon receipt of a certificate issued by the bank which issued such Bank Guarantee or by a mutually agreeable replacement Environmental Guarantee. substitute bank delivering a It is expressly agreed that in case of total or partial draw down of the company Environmental Guarantee either Cam Iron or the applicable Project Company as that such Environmental Guarantee shall be promptly restored for its initial amount adjusted as the case may be. the case may be undertakes For the avoidance of doubt. it is expressly agreed that neither the existence nor the drawdown of any Environmental Guarantee shall limit the States right of remedy against Cam Iron or any default.1g Project Company in case the amounts of such Environmental Guarantee proves insufficient to cover the amounts due by such Project Company. i Rehabilitation A In addition to the foregoing in fulfilment of its obligations under Articles 130 to 133 under the Implementation Decree page I 124 . . in the first year Cam Iron and the Mine Project Company shall establish an escrow account the Rehab Escrow Account and escrow agreement the Rehab Escrow Agreement at a bank with a physical presence in the State that is under the supervision and regulation of the States national monetary authority and shall make annual contributions into such escrow account following Project commencing

Commissioning. Such contributions shall be in the aggregate amount equal to fifty eight million 58000000 US Dollars made in ten (10) equal annual payments of five million eight hundred thousand 5800000 US Dollars beginning on December 31 of the year in which Project Commissioning occurs which sum represents an estimate of the rehabilitation costs for the Exploitation Area based initially on the exploitation of the High Grade Ore and following commencement of the Beneficiation Operations two hundred fifty eight million 258000000 US Dollars inclusive of any amounts in escrow based on the initial fifty eight million 58000000 US Dollar contribution made in fifteen (15) equal annual payments of thirteen million three hundred and thirty three thousand three hundred and thirty 13333333 US Dollars beginning on December 31 of the year in which BF Commissioning occurs assuming the Rehab the time of BF Escrow Account is fully funded at Commissioning which sum represents an estimate of such rehabilitation costs for the exploitation of aU of the Mbalam Ore. The Parties shall assess the amount of annual contributions into such escrow account every five (5) years and make appropriate adjustments; B under including obligations The State may draw down on the funds in the Rehab Escrow Account any time the Mine Project Company has failed to fulfil through its own action or that of a Contractor Subcontractor or other Third Party involved in the Project Operations of which it is in charge its obligations under Article 29.2 the its Environmental and Social Assessment and Management Plan and its obligations under Legislation regarding protection of the Environment and health and human safety subject however to a prior formal notice and the Mine Project Company is not remedying the Breach Events including the outstanding payment obligations within a reasonable time frame. The provisions of this Article 29.2 shall not affect in any manner the right of the Mine Project Company to pursue remedies against said Contractor Subcontractor or other Third Party involved in the Project Operations of which it is in charge where it considers that party to be responsible. C 11 is expressly agreed that in case of total or partial draw down of the funds in the Rehab Escrow Account the Mine Project Company shall promptly restore it to the amount that was in the Rehab Escrow Account immediately prior to such draw. In addition to any remedy provided in the Legislation each Project participant Company shall pay to the State any

amounts provided under the Legislation in connection with i any violation of the Legislation related to protection of the Environment health or safety or ii a failure to implement the Environmental and Social Assessment and Management Plan.

29.3 Health and safety

a Each Project Company shall prepare implement and comply with and require all Contractors and Subcontractors to comply with i ii an accident prevention scheme and emergency plans to be implemented in case of loss or threatened loss that poses a risk to the Environment personnel or to the safety of persons and Assets; and appropriate and detailed procedures in order to guarantee optimum conditions for health and safety of personnel and all the Third Parties involved in the Project Operations or having a right to access the Project Facilities and/or the Project Areas.

b c Each Project Company Contractor and Subcontractor shall conduct awareness campaigns on safety health and diseases aiming at informing the personnel Third Parties involved in the Project Operations or having a right to access the Project Facilities and/or the Project Areas and the members of communities immediately neighbouring the Project Areas. Any accident occurring or any hazard identified within a Project Area or in the immediate surroundings thereof shall be promptly notified to the State.

29.4 Environmental Requirements

Each Project Company Contractor and Subcontractor shall take the actions set forth in this Article 29.4 to protect the Environment in each case in compliance with the Legislation and standards set forth in this Convention and to the extent not inconsistent with Good International Industry Practice

a Prior to commencing work on the Project Area prepare and in the case of a Contractor or Subcontractor submit to the Project Company for approval waste management procedures and comply with such procedures. In particular Project Companies Contractors and Subcontractors shall i ii iii ensure that all waste is disposed of in an environmentally sensitive manner and in accordance with Legislation; take all reasonable steps to minimise the release of dangerous waste into the Environment; ensure that all of the Contractors and Subcontractors waste litter scrap parts and machinery are disposed of daily at a location that is approved by the Project Company and in accordance with the Legislation; iv keep the Project Area clean and tidy to the reasonable satisfaction of page 1126 . v the Project Company; and v as soon

as practicable and in no case more than twenty one 21 Days after the end of a contract in the case of a Contractor or Subcontractor or the end of the Term of the Project in the case of the Project Companies remove all rubbish accumulated during the performance of the works and shall leave that part of the Project Area it was operating on in a clean and tidy condition. This obligation survives termination of this Convention; b c d e t g h Each of the Project Companies Contractors and Subcontractors shall in accordance with the standards set forth in this Convention and Legislation minimise the dust generated or caused by operating equipment and take measures to direct dust away from any public facility or access the public at large or any operational personnel; The Project Companies Contractors and Subcontractors shall only use designated wash down areas for cleaning machinery; The Project Companies Contractors and Subcontractors shall take all reasonable steps to minimise the release of hydrocarbons into the Environment and each shall implement procedures to ensure that there is no spillage of hydrocarbons on the Project Area. Any soil fill or other material contaminated by fuel or oil shall be removed from the Project Area; The Project Companies Contractors and Subcontractors shall confine their activities and movements and those of their personnel to that part of the Project Area on which they are designated to perform the work. The Project Companies Contractors and Subcontractors shall ensure their personnel minimise lighting any fires making any track or constructing any road such that will disturb the ground surface or the established flora and fauna habitats; The Project Companies Contractors and Subcontractors are to maintain a hazardous chemicals register. The register is to contain a list of all chemicals fuels oils gases reagents cleaning and other hazardous fluids and other chemicals kept on the Project Area; Storage handling and disposal and the reporting of any related incidents shall be in accordance with the Legislation. Reporting of such incidents must be done in accordance with the Project reporting procedures and For the avoidance of doubt Good International Industry Practice as used in this Convention including in this Article 29.4. shall include as applicable implementation of the following standards i ii the 2012 IFC Performance Standards on Environmental and Social Sustainability; the IFC World Bank Environmental Health and Safety Guidelines including the following A General; v

paget127 I B Mining; C Railways; D Toll roads; E Ports Harbours and Tenninals; F Construction materials extraction; G WastcManagemem Facilities; and H Water and Sanitation. iii Voluntary Principles on Security and Human Rights; iv v vi International Labour organisation ILO Convention The Indigenous and Tribal Peoples in independent Counrries 1989; in The United Nations Declaration on the Rights of Indigenous Peoples 2007; Intemational Cow1cil on Mining development principles guidelines and toolkits; and and Metals sustainable vii World Commission on Dams. 29.5 Su stainable development and community su pport 29.5.1 Management of the direct environmental and social impact a b c d As the Project is located in the heart of the second largest ecological reserve in the world and in the border area with the Republic of Congo. the Republic of Gabon and the Central African Republic the State has determined it is necessary to implement a specific planning and development program for the South and East Reions of Cameroon the South and East Regions Plan with a view to managing the social and environmental impact resulting from the Project. Although it is primarily the States responsibility the implementation of the South and East Regions Plan calls for an involvement of Cam Iron as a corporate citizen to prevent the risk of the adverse social and environmental impact that will be generated by the Project. Cam Irons joint social liability with the State shall not be deemed to relieve it of its obligations under the Environmental and Social Assessment Management Plan to address the immediate impact of the Project. Accordingly in addition to its other obligations under this Convention Cam Iron undertakes to make a cash contribution of twenty million 20000000 US Dollars per year for five 5 years commencing on the Date of Entry into Force to fmance the South and East Regions Plan. e The State has announced an overall fmancing commitment to implement pagel128 f g h i lthe Soulh and East Regions Plan of eight hundred million 800000000 US Dollars and in funherance thereof the State commits to contribute funds for the Soulh and East Regions Plan in an amount at least equal to the contribution of Cam Lron set forth in the preceding paragraph and during the same five 5 year period. For avoidance of doubt the foregoing announcement shall in no manner give rise to any claim or cause of action by Cam Iron or a Project Company against the State with respect to such funding

commitment. Contributions of Cam Iron and the State in respect of the South and East Regions Plan shall be made to a specific fund administered in a manner determined by the State that shall be set up to finance the South and East Regions Plan the Special Development Fund. The State hereby agrees to hereinafter organize the Special Development Fund. With respect to the long term funding of the development of the area impacted by the Project the State intends to allocate thirty percent 30 of its portion of the base charge tariff paid by Expansion Capacity users and 30 of the lease payments it receives in connection with the Mineral Terminal Site and Railway Site to fund the Special Development Fund. For avoidance of doubt the foregoing intention shall in no manner give rise to any claim or cause of action by Cam Iron or a Project Company against the State with respect to such funding commitment. In addition the Project Companies shall also contribute or shall cause Marketing Company to contribute to the Special Development Fund which in addition to other uses may be used for university and technical educational purposes an amount equal to 0.75 of the gross sales price of Mbalam Ore sold whether it is sold as part of Blended Ore or otherwise. This fund shall be managed by a Fund Committee to be implemented by the State which is to develop a plan for managing and overseeing the use of the funds in the Special Development Fund for the activities set forth in the South and East Regions Plan. The Fund Committee shall consist of a number of representatives equal to twelve 12 of which four 4 will be appointed by Cam Iron but only during the Term of the Project four 4 by the State and four 4 will be appointed from among local representatives and development experts. The Parties may vary this arrangement by mutual agreement. In addition to the Special Development Fund Cam Iron undertakes to fund a sustainable development and community support fund pursuant to which Cam Iron or the Project Companies will contribute A from the Date of Entry into Force until the Date of First Commercial Shipping the aggregate sum of seven hundred thousand 700000 US Dollars per year adjusted by the Inflation Adjustment and B from and after the Date of First Commercial Shipping for the Term of the Project contribute three quarters of one percent 0.75 of the Project Companies net profits after Tax to enable Cam Iron and the Project Companies to carry out environmental and community support

programs within the framework of the sustainable development undertakings entered into under the Environmental and Social Assessment and Management Plan. j The Parties agree that all amounts expended from any fund established in accordance with this Article should be audited. page 1129

rm k The Parties will agree on a protocol to manage the Special Development Fund and Fund Committee to ensure there is clarity and transparency with respect to the fonnation operation and accountability of both the Special Development Fund and the Fw1d Committee. 29.5.2 Protection of Biodiversity and Sustainable Development ofUF A I 0034. a Given the contiguous perimeter of the Exploitation Area with that of the Forest Management Unit FMU No. 10034 the Parties agree to include this FMU as an important part of the biodiversity conservation and sustainable development component of the Project. The Parties shall enter into a convention that shall detail the basis for the management and operation of activities within the FMU Conservation Convention and without limiting the Conservation Convention it shall include provisions dealing with i the conservation of the FMU as a biodiversity area and the preservation of aU carbon credits associated with the FMU for the benefit of the Project Companies; ii the establishment of an ecotourism facility within the FMU; and iii the protocols for securing the FMU and dealing with trespasses. b The State shall i ii not unreasonably withhold its consent to a request to issue to Cam Iron the necessary authori7.ations for such conservation activity after the Sitllature Date; and use its reasonable efforts to do all that might be reasonably necessary from time to time to enable the Project Companies to utilize the carbon credits associated with the FMU. c d e I Cam Iron will in accordance with the Conservation Convention submit to the State a plan for conservation and sustainable management of the FMU I 0034. Cam Iron shall also i pay an annual fee of two thousand 2000 CFA Franc per hectare from the Date of Entry into Force until the date of Project Commissioning and three thousand 3000 CFA Franc per hectare from and after the date of Project Commissioning in each case into a fund established pursuant to the Conservation Convention and ii to fund the expenses related to such conservation. Further Cam Iron will fund its conservation activities within the FMU. All funds generated by after offsetting the reasonable costs of ecotourism activities in the FMU shall be

transferred to the Special Development Fund. Where for the purpose of any Legislation the Project Companies are required to obtain carbon credits for their activities then the Project Companies may source those carbon credits from the FMU at no cost. page 1130 30 ADMINISTRATIVE AND TECHNICAL SUPERVISION AND FINANCIAL AUDIT 30.1 Applicable standards The Project Companies shall conduct and ensure that their Contractors and Subcontractors conduct the Project Operations of which they are in charge in accordance with among other applicable standards Legislation. the Environmental and Social Assessment and Management Plan the Operating Standards and Good International Industry Practice with respect to the mining exploitation and processing railway port and other applicable industries with consideration of the scale of the Project. 30.2 Administrative supervision a b i ii For the Term of the Project the State has the right to audit and inspect for all the Project Operations as contemplated in Article 30.2bi and all other operations activities and assets of the Project Companies. This right is exercised either by mining officials or by authorised and qualified representatives of the States tax administration or by customs agents appointed for that purpose by other representatives of the State or by consultants authorised by the State the Auditors. The purpose of the administrative supervision in Article 30.2a is to control the technical regularity of the conduct of the Project Operations and in particular the conditions referred to of conduct by each Project Company Contractor Subcontractor or Subsidiary of the Project Operations of which it is in charge; of compliance by any Project Company Contractor Subcontractor or Subsidiary with its obligations under the Environmental and Social Assessment and Management Plan; iii of preservation of public safety safety and health of the personnel; and iv of compliance with the Project Agreements and the Legislation. c In addition the State has the right to cause the records and books of account relating to the Project Operations to be examined by the Auditors in accordance with the provisions of an accounting procedure to be agreed to by the Parties prior to the Date of Entry into Force. d It is understood that the Auditors shall have the right to. inter alia i ii V access and inspect at any time the sites premises facilities works vehicles ships aircraft machines and other equipment in particular the devices for counting and measuring the Sale

Products with regard to mining sites used for the purposes of the Project Operations and subject to presentation of a sheet of the regulatory form delivered by the Ministry in accordance with the provisions of Section 101 of the Mining Code; examine and receive copies or extracts of documents reports and other documents relating to the Project Operations; page 1131 iii witness during the period up to Project Commissioning all material tests trials and controls initiated by any Project Company and the Project Companies shall use its reasonable efforts to notify the State of all such material tests trials and controls at least seven 7 Days prior to their commencement except where the nature of the test requires less notice and the State will use its reasonable efforts obligation de moyens to notify the relevant Project Company of its plans to participate; and iv carry out any examination and investigation to make sure the provisions of the Legislation and those of this Convention and the Project Agreements are complied with. At least fifteen 15 Days prior to the commencement of any administrative and technical supervision or financial audits under this Article 30 the State shall inform the relevant Project Company of the conduct of such audits their purpose the Auditors identity and the duration of such operations and audits. In the performance of their duties the Auditors shall comply with all the internal rules and procedure in force with the Project Company during their stay in the latter's premises and facilities provided that such an obligation shall not hinder their task. The State will use reasonable efforts obligation de moyens to notify the Project Companies in advance of audits but has the right to forgo such notice and conduct surprise audits. Before undertaking an audit as provided in this Article 30.2 the State shall ensure that the Auditors advise the chairman of the Joint Committee of the pending audit and the chairman shall use reasonable efforts obligation de moyens to ensure that the Auditors do not create an unreasonable administrative burden on the Project Operations. At least fifteen 15 Days prior to the commencement of any administrative and technical supervision or financial audit undertaken pursuant to the terms of the Finance Documents the relevant Project Company shall keep the State abreast of the time table for said audits of their purpose and of the duration of these audits. The relevant Project Company shall supply all necessary assistance to the Auditors and shall put at the

Auditors disposal the reasonable material means required to enable the Auditors to fulfil their duties. The relevant Project Company shall abide by any reasoned measures for which it is notified during the inspection operations or after such operations including the installation at its expense of equipment aiming at preventing or remedying any likely hazard attributable to the Project Operations to public safety its personnel the Environment archaeological sites and reserves classified reserves public buildings sources of water and groundwater and public roads; provided that the measures in question have been discussed in the presence of the Parties. e f g h i The relevant State ministries shall oversee the drafting of a mutually agreeable manual describing the procedures applicable to all Project Areas which will reiterate the provisions of this Article 30 and detail the frequency at which the Auditors can undertake the operations described above which are not to exceed i one 1 time per Calendar Year for tax audits; page 132 ii two 2 times per Calendar Year for customs audits; and iii one 1 time per Quarter for any other audits unless the State has in good faith formed the view that an unscheduled audit is justifiable. 30.3 Reports a In addition to any other reports required by the Legislation the Mine Project Company shall provide to the Minister the activity reports relating to the Mining Operations in accordance with the provisions of the Mining Legislation that is to say as of the date of this Convention i ii at the latest the fifteenth 15th Day of each calendar month following Project Commissioning a detailed report on the production of Mbalam Ore and as the case may be the Blended Ore and the Beneficiated Ore including all details on the quantity and value of the Products so generated during the preceding calendar month; at the latest on the ninetieth 90 Day after the conclusion of each Calendar Year after which the Date of Entry into Force has occurred A a report containing details on all the works undertaken in connection with the Exploitation Permit in particular the details relating to the production of all Products. the development works exploration works and other useful information in terms of geology and mining resources the Exploitation Area and B any information required specifically for mining companies listed on the Australian Securities Exchange in respect of the reporting of resources and reserves even though the Mine Project Company may not be listed on that exchange; and in iii prior to March 31 of each Calendar Year

after which the Date of Entry into Force has occurred a statistical report for each permit and authorization comprising A the number of the mining permit or authorization; B the date of establishment or renewal; C D an analytical summary of the progress report of the works carried out during the previous year; an executive geological and mining report illustrated by an appropriate plan; E the number of staff working Days; F the weight nature and of extracted raw materials; G the weight nature and of obtained market minerals; H the weight nature and of various consignments of exported minerals indicating the places and dates of dispatch and delivery; page 1133 I J K a report of stocks of raw products and market products as at 31 December; the list of accidents which have led to more than 4 four Days of industrial disability; and the volume in the case of the geothermal deposit spa or thermomineral waters as concerns the statistics required for subsections F G H and I above must be provided. b Each Project Company shall also provide within the time limits set forth in the Legislation i ii c d the status of implementation of the Environmental and Social Assessment and Management Plan; and the audited financial statements of each respective Project Company prepared by the Independent Accountant. The Mine Project Company shall also provide in form reasonably satisfactory to the Minister reports with respect to minerals reserves and resources compliant with JORC NI43101, SAMREC or other mutually agreeable standards. The obligations of the other Project Companies in terms of preparation and submission of reports to the State as specified in each Specific Agreement shall include notably the provision of the audited financial statements within the time limits set forth in the Legislation. 30.4 Measures Each Project Company shall adopt procedures for counting and measuring the Sale Products including tonnage granulometry and metallurgical in line with the practices generally accepted in the international iron ore industry with a view to drawing up the reports and calculating the fees referred to in Article 34.1 . To the extent feasible the Project Companies shall use automated devices for these procedures which will need to be certified by an independent expert in such certifications. A certificate of authenticity shall be issued to this effect by the laboratory of the Ministry or any laboratory approved by the Minister. The Project Companies Contractors and Subcontractors shall maintain all physical

books and records related to the Project other than with respect to environmental health and safety matters for a period of five 5 years and all electronic records and physical records relating to environmental health and safety matters shall be maintained throughout the Term of the Project and five 5 years thereafter as each such period may be extended as required by Legislation.

30.5 Joint Committee

30.5 .1 Creation of the Joint Committee Within thirty 30 Days following the Date of Entry into Force the committee described in this Article 30.5 the Joint Committee shall be established for the Project.

30.5.2 Composition of the Joint Committee a The Joint Committee shall initially be composed of ten 10 members and thereafter may be modified upon agreement of the Project Companies and the State

i ii b c v for Cam Iron half of the total representatives each assisted by an alternate as the existing Project Companies during the Term of the Project and representatives having specific expertise in terms of health safety and Environment finance and administration and port and human resources who shall be designated by Cam Iron in agreement with the Project Companies and among whom Cam Iron shall elect one Representative; and representative principal Cam Iron for the State half of the total representatives and alternates as those appointed for their specific expertise in terms of mining finance and customs employment law and immigration Environment port and transportation notably by rail who shall be designated by the State and among whom the State shall elect a principal representative the State Representative. The alternates appointed by a Party shall act only in case the representatives designated by said Party are unavailable. Each Party is entitled to replace its representatives or alternates at any time by giving written notice to the other Party of such replacement. The State and Cam Iron may arrange for a reasonable number of members of their personnel to take part in meetings of the Joint Committee. However only the persons appointed as representatives of the State and of Cam Iron or in their absence their alternates shall have a right to vote on the Joint Committee and be included for purposes of determining the budget for the Joint Committee. Each permanent representative or in the absence of a permanent representative his or her alternate representative shall have one 1 vote and shall be deemed to be authorized to represent and to bind the Party that appointed it on

any subject within the competence of the Joint Committee. Any person attending the meetings of the Joint Committee shall be under a strict obligation of confidentiality with regard to the discussions the questions raised and the information disclosed. Nevertheless representatives of the State and of Cam Iron shall have the right to debrief their respective the discussions and questions raised. principals and advisors on Disclosure of confidential information as required by the Legislation or other applicable law shall not be a violation of this restriction and confidential information may be disclosed to the extent that it i is or becomes generally available to the public or in the industry other than as a result of a disclosure by the recipient in breach of this Convention; ii was within the possession of the recipient or the Party with which that recipient is affiliated prior to its being furnished to the recipient provided that the source of such infonnation was not bound by a confidentiality agreement with or other contractual legal or fiduciary obligation of confidentiality to the provider with respect to such infonnation; iii is or becomes available to the recipient or the Party with which that recipient is affiliated on a nonconfidential basis from a source other than the provider provided that such source is not bound by a confidentiality page 135 ft agreement with or other contractual legal or fiduciary obligation of confidentiality to the provider with respect to such information; or iv was independently developed.

30.5.3 Competence of the Joint Committee a The Joint Committee shall examine all matters put on its agenda with respect to the orientation programming and control of the conduct of the Project Operations. Within this framework the Joint Cornmillee is empowered to i review and provide any comments on the annual work programs and related budgets in accordance with the provisions of Article 9.3 as well as any potential modifications thereof; ii control the execution of the budgets for the Joint Committee; iii iv dee on U1e matters which it is expressly meant to deal with under this Convention; and be consulted about key appointments to the management of the Project Companies. b Each Project Company shall submit its proposals to the Joint Committee concerning i ii the annual works programs and related budgets of sucl1 Project Company; any modifications to be made to such annual works programs and related budgets of such Project Company; iii matters needing determination under this

Convention; and iv key appointment to the management of Project Companies. c The members of the Joint Committee consult one another on the matters submitted to them in order to reach a unanimous decision. When a matter is not decided unanimously during a meeting of the Joint Committee the examination of such matter shall be postponed to a subsequent meeting of the Joint Committee which shall take place as convened by Cam Iron at least ten 10 but no more than forty five 45 Days following the date of the first meeting. During this period the Parties shall meet and Cam Iron shall provide all information and details as may be required by the State in its capacity as a member of the Joint Committee. If during the subsequent meeting the members of the Joint Committee do not reach an agreement on the decision to be made minutes of the meeting must be prepared in order to expose the position taken by each Party. d The role of the Joint Committee with respect to the matters referred to in Article 30.5.3aiv is merely one on which it is to be consulted and no decision of the Joint Committee shall be required. 30.5.4 Meetings of the Joint Committee v .

page 136 OTI a b c The Joint Committee shall meet at any time at the request of the State Representative or the Cam Iron Representative and at least twice 2 per Calendar Year. Notices of meetings of the Joint Committee will be sent to the members thereof by the Party that took the initiative for the meeting at least thirty 30 Days before the anticipated date of the meeting. Every notice of meeting shall contain an indication of the date time and place of the planned meeting and the proposed agenda of such meeting. Meetings of the Joint Committee will be held in Yaounde Cameroon or another location agreed to by the Cam Iron Representative and State Representative. When Cam Iron takes the initiative to call a meeting it shall provide the State Representative within a period of at least fifteen 15 Days before the anticipated date of the meeting with all the information necessary for the taking of decisions at the meeting. Each of Cam Iron Representative and the State Representative shall be entitled to add subjects to the agenda subject to giving notice thereof to the other representative at least fifteen 15 Days before the anticipated date of the meeting. No decision may be taken at a meeting of the Joint Committee on a subject that has not been included on the agenda for the meeting in advance unless otherwise agreed to by each of the

Cam Iron Representative and the State Representative. 30.5.5 Consultation a b At any time before the Joint Committee is referred to assist in the making of a decision as provided under Article 30.5.3 a Partys representative may submit the matter to the other Partys representative who has the expertise required to examine the matter and such representatives shall endeavour to determine the matter before submitting it to the Joint Committee. Where the matter referred to in Article 30.5.5a is substantial it shall be referred to the State Representative who after having consulted with the Cam Iron Representative may refer the matter to the Joint Committee for examination. 30.5.6 Subcommittee The activities of the Joint Committee may be referred to a subcommittee. 30.5.7 Chairing and secretariat Meetings of the Joint Committee will be chaired by the State Representative. The Cam Iron Representative will act as secretary and a member of the Joint Committee appointed by the State will act as deputy secretary. 30.5.8 Minutes The secretary and the deputy secretary of the Joint Committee shall prepare written minutes of each meeting and shall send a copy thereof to the State Representative and the Cam Iron Representative within fifteen 15 Days of the date of the meeting for approval or comments and the State Representative and Cam Iron Representative v page 1137 will respond to the comments of the other Partys representatives will respond within a reasonable time period. 30.5.9 Decision without meeting a Any question may be submitted to the Joint Committee for a decision without giving rise to a formal meeting of the Joint Committee for example in the event of an emergency on the condition that the Party taking this initiative transmits the question to the other Party in writing. In this event each of the Parties must inform the other of its vote within twenty 20 Days of receipt of the said question unless the question submitted to the vote requires a decision to be made within a shorter period which period save in urgent cases shall reasonably provide for notice and opportunity to respond not to exceed the twenty 20 Days noted above. The absence of a response from a Party on the question under discussion shall be deemed to represent a negative vote. b Any decision adopted by the Parties according to the terms and conditions provided by Article 30.5.9a shall have the same value as a decision adopted in the context of a formal meeting of the Joint Committee. 30.5. 10 External

specialists The Joint Committee may decide to hear any person whose interview is requested by one of the Parties. Each Party may also at its own expense arrange for meetings of the Joint Committee to be attended by external specialists of its choice on condition that it obtains a confidentiality undertaking from such specialists.

30.5.11 Funding of Joint Committee

a At least fortyfive 45 Days prior to the beginning of each Calendar Year Cam Iron shall in consultation with the State send to the State a proposal for funding the Joint Committee for the following Calendar Year on the basis of the estimated operational costs including the daily compensation of the State Representatives.

b The State within fortyfive 45 Days following receipt of the aforementioned proposal shall i accept the proposal; or ii provide its comments and recommendations to Cam Iron.

c d In case of the State's failure to respond within the aforementioned period the State shall be deemed to have accepted the proposal. In case of a disagreement between the State and Cam Iron the Parties undertake to seek an agreement on the funding of the Joint Committee. In the absence of an amicable settlement within sixty 60 Days following receipt of the State's comments and recommendations the amount of the Joint Committee's budget for the contemplated calendar Year shall be equal to the higher of i the sum of one hundred percent 100 of the prior Calendar Year's budget plus the Inflation Adjustment; or ii the amount proposed by Cam Iron.

The Parties will also discuss a method of paying per diems to such members of the Joint Committee.

e The Mine Project Company shall fund the approved budget of the Joint Committee.

30.6 Transparency

a In order to ensure the State can properly discharge its rights to monitor the activities associated with the Project it is agreed between the Parties that the following agreements will be entered into i Monitoring Agreement Blending; ii Monitoring Agreement Marketing; and iii Monitoring Agreement Treasury.

b The Parties will enter into or otherwise arrange for the provision of any documents necessary for the Project Companies and their parent companies to comply with applicable provisions of Australian legislation regarding any payments received on account of service on the Joint Committee.

31 BANK GUARANTEES

31.1 Issue of Bank Guarantees

a b c Cam Iron or the Mine Project Company will cause a Bank Guarantee Mine Project Company General Bank Guarantee to be issued for the benefit of the State

in an amount of twenty million 20000000 US Dollars subject to the Inflation Adjustment and to be available for draw in the event that the Mine Project Company is obliged to pay to the State for breaches of its obligations under the Project Agreements other than environmental breaches occurring on and from the Date of Entry into Force until one (1) year after the date Project Commissioning occurs. The State shall release any Bank Guarantee provided in Article 31.1 b. The State shall release the Mine Project Company General Bank Guarantee if the State has made no payment request under the terms of the Mine Project Company General Bank Guarantee upon the expiration of the term the Mine Project Company is required to maintain the Mine Project Company General Bank Guarantee. If one or more of the conditions described in Article 31.1b have not been met for either Cam Iron or the Mine Project Company the term of any Bank Guarantee shall be extended for one (1) or several successive one (1) year periods until all of the conditions referred to above have been met it being understood that the fulfilment of such conditions will be assessed only at the end of each aforementioned one (1) year period. d Pursuant to Article 54.2 each of the Railway Project Company the Mineral Terminal Company and other applicable Project Company shall cause Bank Guarantees to be issued for the benefit of the State. pagol139 31.2 Issuer of Bank Guarantee For the purposes of Articles 29 and 31 a Bank Guarantee must be issued by a bank with an Acceptable Bank Rating. 31.3 Bank Guarantee Claims a Each Bank Guarantee issued on behalf of any Project Company must guarantee i ii payment of any damages and reimbursement of any mitigation or cure expenses incurred by the State for violations of a Project Agreement by the respective Project Company its Contractors and Subcontractors; the resolution of all issues associated with the reservations potentially issued by the State at the time of the transfer to it by the Railway Project Company and Mineral Terminal Project Company respectively of those Assets which each is to transfer pursuant to Articles 12.2.1 and 13.4 and iii the payment of any penalties owed by such Project Company in accordance with the provisions of Article 50. b c d e f The Bank Guarantee must guarantee the payment of any penalties owed by Cam Iron or the Project Companies in accordance with the provisions of Article 50. In the event of a total or partial claim on

a Bank Guarantee Cam Iron or Project Company U1at caused U1e issue of the Bank Guarantee shall immediately replenish such Bank Guarantee at its initial amount as soon as possible with updated amounts as the case may be. For the avoidance of doubt neither the existence nor a claim to any Bank Guarantee shall limit the State from submitting a claim against the Project Companies in the case where U1e amounts guaranteed happened to be insufficient to fully meet the obligations of a Project Company in accordance with this Article 31.3. The State shall nOL be required to subordinate its rights under any Bank Guarantee to any Lender o r Third Party. 32 PERSONNEL

32.1 Scope of the Collective Bargaining Agreement a The Project Companies and their Affiliates incorporated as Cameroonian Companies shall apply the Collective Bargaining Agreement to their Cameroonian employees. The Project Companies Contractors and Subcontractors which are pagel140 b v incorporated as Cameroonian Companies shall have the choice to enter into and apply the Collective Bargaining Agreement to their employees who are specifically used to carry out services in connection with the Project. c The Project Companies Affiliates operating in Can1eroon Contractors and Subcontractors which are incorporated as foreign i.e. non Cameroonian companies shall have the choice to enter into and apply the Collective Bargaining Agreement to their employees who are specifically used to carry out services in coMccction with the Project. The Cameroonian employees of the Project Companies foreign Affiliates Contractors and Subcontractors incorporated as foreign companies shall be granted employment terms and conditions not less favorable than those provided for in the Collective Bargaining Agreement.

32.2 Scope of Article 32 a b i ii The provisions of this Article 32 shall apply to the Project Companies and their Affiliates incorporated in Cameroon. The following provisions of this Article 32 shall apply mlllatis mutandis to the Project Companies. Contractors and Subcontractors irrespective of whether such entities are incorpomted as Cameroonian Contractors or Cameroonian Subcontractors or foreign entities operating in Cameroon provisions relating to priority given to Cameroonian nationals as set fonh in Article 32.3; provisions on working time and

annual leaves as set forth in Article 32.8 for their Cameroonian employees and for employees whose work contract is subject to Legislation it being specified that work contracts of foreign employees working on Rosters during the Construction Phase shall not be required to be subject to Legislation; iii general employment provisions as set forth in Article 32.10; iv HSECS provisions set forth in Article 32.11; and v application process Personnel as per Article 32.12. for Immigration Documents for Foreigners

c The following provisions of this Article 32 shall apply in accordance with their terms to the Main Contractors and Main Subcontractors of the Project Companies which operate in Cameroon: i provisions on priority given to Cameroonian nationals as set forth in Article 32.3; ii provisions on quotas set forth in Article 32.4; iii provisions on professional training and transfer of knowhow as set forth in Article 32.5 excluding for the avoidance of doubt the financing obligations in Article 32.6; iv provisions on working time and annual leaves as set forth in Article 32.8 for their Cameroonian employees and for employees whose work contract is subject to Legislation it being specified that work contracts of foreign employees working on Rosters during the Construction Phase shall not be required to be subject to Legislation; v general employment provisions as set forth in Article 32.10; vi HSECS provisions set forth in Article 32.11; and vii application process Personnel as per Article 32.12. for Immigration Documents for Foreigners

d Consequently the Project Companies shall require in their contractual arrangements with their Contractors operating in Cameroon that the latter comply with the above provisions and that such Contractors shall impose the same obligations on their Subcontractors operating in Cameroon and on their own subcontractors operating in Cameroon if applicable so as to give full effect to this Article 32.2.

32.3 Priority to Domestic Employment Throughout the Term of the Project a Throughout the duration of the Project the Project Companies the Contractors and Subcontractors undertake to give priority to the employment of Cameroonian nationals subject to their availability at the time of recruitment and required level of qualification and professional experience. or the avoidance of doubt in making this assessment the Project Companies shall not discriminate against Cameroonian nationals based on the work conditions applicable to Article 32.11. The Project Companies shall

procure that their Contractors and Subcontractors shall comply with this obligation. them pursuant to

b Accordingly the Project Companies the Contractors and Subcontractors shall recruit their operational staff working on the Project in Cameroon as follows i from the local Cameroonian nationals residing in the region of the Exploitation Area Minera I Tenninal Area and Railway Area throughout the duration of the Project; ii from the ranks of the constmction contractors Cameroon national construct ion workforce; and iii throughout Cameroon and from the international Cameroon diaspora. The Project Companies undertake to timely provide the Labor Committee with details on the workforce number level of qualification etc. that shall be needed to carry out all the major construction and operation related works of the Project for the Labor Committee to be in a position to assist in sourcing local Cameroonians for such works. Where Cameroonian nationals with the required level of qualification and professional experience cannot be identified or are not available foreign nationals may be recruited. page142 c d v 32.4 Quotas a The Parties acknowledge that their joint intention is each Project Company and the Main Contractors and Main Subcontractors achieve during the Exploitation Phase the following minimum quotas of Cameroon nationals among their employees located in Cameroon and working on the Project i ii iii iv for managerial positions at least fifty percent 50 of national employees five 5 years after the beginning of the Exploitation Phase ramping up to sixty percent 60 of national employees seven 7 years after the beginning of the Exploitation Phase; for supervisory positions at least 60 of national employees three 3 years after the beginning of ti1e Exploitation Phase and seventy five percent 75 of national employees seven 7 years after the beginning of the Exploitation Phase and for unskilled positions at least eightyfive percent 85 of national employees three 3 years after the beginning of the Exploitation Phase. len 10 years after the beginning of the Exploitation Phase ninety percent 90 of all categories of employees shall be Cameroonian nationals. b c The quotas above shall be calculated by taking into account the workforce at the level of the Project Company and based on the full time equivalent the pan of the workforce of the Main Contractors and Main Subcontractors who are employed or used for the purpose of the Project as idemified in the safety and acent prevention plan required by the Project

Companies the Main Subcontractors, the Main Contractors and from The Parties acknowledge that the above quotas are nonbinding targets but that it is in their best interest to maximize U1e Cameroonization of U1e workforce involved in the Project and that the undertakings relating to professional training and financing thereof set forth in Articles 32.5 and 32.6 are given in order to further such joint interest.

32.5 Professional Training and Transfer of KnowRow a b The Project Companies shall from the beginning of the Construction Phase and throughout the Exploitation Phase provide a budget as indicated in Article 32.6a below and deliver or require the Main Contractors and/or Main Subcontractors to deliver professional ongoing training ptOTIlms on i health safety and risk management and ii trades required for the Exploitation Phase of the Project with a view to maximizing the Cameroonization of the workforce and more generally to providing development and careers opportunities their Cameroonian workforce. for Accordingly each Project Company undertakes to implement or require the Main Contractors and/or Main Subcontractors except those in charge of construction during the Construction Phase to implement, in close V

page143 I On cooperation with the competent departments of the State professional training structures and programs for its Cameroonian workforce in the business segment in which it operates for the Exploitation Phase of the Project. c If required and in order to assist the Project Companies in implementing or causing the implementation by the Main Contractors and/or Main Subcontractors of the contemplated training programs the State and the their Main Contractors and/or Main Project Companies Subcontractors shall agree upon the technical requirements that shall be referenced for an individual to be officially recognized as a qualified professional in any trade relevant to the Exploitation Phase of the Project. and

32.6 Financing of Professional Training and Transfer of KnowFlow a The Project Companies commit to a minimum training budget as follows which they will use directly or through their Main Contractors and/or Main Subcontractors i during the Construction Phase. a m1mmum amount of seven 7 million US Dollars in aggregate which shall be broken down into two million 2000000 US Dollars per year during the first two 2 years of the Construction Phase and three million 3.000000 US Dollars for the third 3 year of the Construction Phase it being agreed

by Cam Iron that should U1e Construction Phase extend beyond three 3 years it shall conunit to renew the training budget for an amount not less than two 2 million US Dollars per year calculated pro rata per month of extension; and ii during the first ten 10 years of the Exploitation Phase an amount of three million 3000000 US Dollars in aggregate per year. b c At the end of the tenth 10111 year of the Exploitation Phase the Project Companies shall convene with the State and submit a report in writing outlining the detail of the number of their respective domestic and foreign employees who work on the Project at such time with a view to assessing whether the quotas set forth in Article 32.4a and calculated in accordance with Article 32.4b are fulfilled at the level of each Project Company at such time. In the event the quotas set forth in Article 32.4a are not fulfilled at the end of the tenth 10 year of the Exploitation Phase at the level of each Pwject Company. the Parties shall agree on methods to achieve such quotas within an agreed timeframe and on the corresponding budget. The training budget set forth in Articles 32.6ai and 32.6aaii shall be fifty percent 50 and relevant divided equaUy between internal external fifty percent 50 training. Internal training shall include professional training centers within the Project Companies scholarships for staff or prospective staff with potential to undertake specific undergraduate and postgraduate university courses linked to the Project Companies business needs and internships within the Project Companies andor their Main Contractors and Main Subcontnmctors. External training may include setting up or contributions to trade academies linked to the Project Companies activities.

page 1144 32.7 Annual Report The Project Companies s hall provide the Labor Committee with an annual report outlining the detail of the number of domestic and foreign employees who have worked on the Project for the past year and anticipated number thereof for the coming year together with details on the tmining programs that were and shall be implemented. 32.8 Working Time and Annual Leave a the Project Companies. The Parties recognize the need for the Contractors and Subcontractors to have the flexibility to organize different Shifts Rosters rest and rumual leave arrangements in order to meet their various operational requirements of the Project which should however not prejudice the safety and wellbeing of their employees. The State shall use its

reasonable endeavors to facilitate the implementation of the flexibility required for continuous operation of the Project as per the provisions of this Article 32.8. b Accordingly the Project Companies Contractors and Subcontractors shall be authorized to implement Shifts and Rosters under the following conditions i ii their respective employees shall not work Shifts extending beyond twelve 12 hours a Day; their respective employees shall not work in excess of sixty 60 hours a week on average over a full Roster period and that every fourteenth 14 Day during such rotation period is a Business Day; and iii any work period within a Roster does not exceed eight 8 weeks during the Exploitation Phase. c Should the Project Companies the Contractors or the Subcontractors require Shifts and Rosters to be implemented in excess of the terms and conditions set forth in the preceding paragraph the State shall consider how such flexibility could be implemented in particular as regards the work inspector authorizations for overtime and subject to the interest of the Cameroonian workforce shall facilitate such flexibility. d During the Construction Phase annual leaves for employees under a Roster may be considered taken during weeks off and details thereof shall be set forth in their respective employment contracts. 32.9 Labor Committee on Recruitment and Training A Labor Committee on Recruitment and Training the Labor Committee shall be established by the State and Cam Iron prior to the Construction Phase and for the Term of the Project. a The different roles of the Labor Committee are the following i assist in sourcing Cameroonian employees for all lines of work having to be carried out by the Project Companies and their affiliates Contractors and Subcontractors as applicable connection with the Project and issue deficiency certificates *certificats de carence* in cases where suitably qualified and experienced Cameroonian employees were not available so as to facilitate and help speed up the issuance of the necessary Immigration Documents; review annual reports from Cam Iron on its and the other Project Companies record with respect to recruitment training and labor relations; collect feedback from the State on the States expectations and assessment of Cam Irons and the other Project Companies performance with respect to recruitment training and labor relations; review the performance of the Project on recruitment training and labor relations with respect to compliance with

i Legislation; ii the Convention; and iii the Collective Bargaining Agreement; promote communication between the Project Companies and any other entity having signed to the Collective Bargaining Agreement the trade unions and the State on labor relations matters and assist in the voluntary and without prejudice mediation of any laborrelated disputes when requested by Cam Iron or a Project Company; ii iii iv v vi assist in the establishment of training arrangements between the Project Companies Contractors and Subcontractors and academic and vocational training institutions in Cameroon; vii establish the Protocol relating to the process and issuance of Immigration Documents as provided in Article 32.12c; viii review the training programs designed to meet or improve the progressive quotas for national staff set forth in Article 32.4a; ix audit the implementation of the training programs; x xi review the budget allocated to training programs as defined under the Convention and provide advice and recommendations to the Project Companies and their Contractors and Subcontractors to facilitate the establishment training and longterm employment of a skilled and harmonious workforce and the maintenance of good labor relationships. b The Labor Committee shall be composed of an equal number of State and Project Company representatives and shall be chaired by a State representative. The State representatives shall be representatives of relevant labor and employment ministries and shall also include a representative of the Immigration Department. bcontractor s For the purposes of this Article 33 Cameroonian Contractor or Cameroon¹¹ Su
hcontracror shall refer to an entity registered in the State that meets one or more of the following
criteria a at least five percent 5 of the equity interests are owned by citizens of the State; or b more
than tifty percent 50 of the employees are citizens of the State. The Project Companies will give
reasonable preferences to entities with more significant ties to Cameroon. page149 m SECTION V
ECONOMIC AND TAX PROVISIONS 34 ROYALTY 34.1 Royalty P ayment The Mine Project
Company shall in respect of any month for the Tenn of the Project pay to the State a Royalty equal
to two and one half percent 2.5 of the Mine Gate Value of all High Grade Ore and Beneficiated Ore
from the Exploitation Area. During each month during the Term of the Project ninety percent 90 of
the amount of such Royalty shall be estimated and paid to the State at the time such Product is
loaded by the Mineral Terminal Project Company onto a ship for delivery or as otherwise agreed and
the remaining ten percent 10 of such Royalty shall be paid at the end of the month in which the final
value is determined and reflect a true up for actual amounts and prices. 34.2 Weighing and assaying
The Mine Project Company must a b at the Mine Loading Area weigh in wet tonnes and regularly
collect and analyse assays of all Products transported from the Exploitation Area; and at the Mineral
Terminal Area weigh in wet tonnes and regularly collect and analyse assays of all Products
delivered to the car dumper. 34.3 Reporting of assay results a b The Mine Project Company must
regularly provide the State with the weight and assay results obtained under Articles 34.2a and
34.2b. The Mine Project Company may supply the weight and assay results obtained under Articles
34.2a and 34.2b to all Third Parties contributing Other Ore and the governments of the countries
from which Other Ore is derived. 34.4 Audit a At least once in every Calendar Year that the Mine
Project Company pays the Royalty to the State pursuant to this Article 34 the Mine Project Company
must engage a reputable international finn of accountants with demonstrated experience in projects
similar to the Project to conduct an audit of those the Royalty payments made during the Calendar
Year at the sole cost of the Mine Project Company. b The Mine Project Company must provide the
report of the audit described in Article 34.4a to the State in a timely manner. 34.5 Adjustment Where

as a result of the audit referred to in Article 34.4 the amount of the Royalty which has been paid by the Mine Project Company to the State is not correct then a where the amount paid is less than what it should have been then the Mine Project Company must pay the shortfall to the State within fourteen (14) Days of the date of the determination of that amount; or b where the amount paid is greater than what it should have been then the Mine Project Company shall credit that surplus amount against its future obligation to pay the Royalty.

34.6 No Royalty on Certain Iron Ore
Only the Mine Project shall be obligated to pay the Royalty on the iron ore from the Exploitation Area

35 CEMAC 35.1 Approvals If it proves necessary or useful for one or more Project Companies Contractors or Subcontractors to carry out any formality either in accordance with the CEMAC regulation or to obtain any approval from the CEMAC Commission with respect to any legal Tax customs, explosives and exchange control matters provided for under this Convention a b the relevant Project Company Contractor or Subcontractor shall carry out such formalities and provide the documents necessary to assist such a request for approval; and the State shall use its reasonable endeavours to assist the relevant Project Company Contractor or Subcontractor with a view to meeting the requirements of the regulations and the CEMAC authorities within the requisite time limits.

35.2 Restrictions If the CEMAC Commission is considering imposing restrictions or obligations on a Project Company Contractor or Subcontractor in respect of any activities it conducts or proposes to conduct in relation to the Project regardless of whether such restrictions or obligations are imposed by Legislation or are conditions to any approval sought by the State the State shall use its reasonable endeavours to obtain a partial or entire exemption from such restrictions or obligations.

36 FISCAL AND CUSTOMS REGIME 36. 1 Governing law The legal Tax customs and exchanges control regime currently applicable to the activities carried out pursuant to this Convention is contained within a the OHADA Acts; b the Regulation No 2100/CEMAC/UMACCM harmonizing exchanges control regulations in the CEMAC members States; c the Customs Code in force at the Signature Date; d the General Tax Code in force at the Signature Date; e f all the Finance Laws in force at the Signature Date; Law No 634 of 19 July 1963 relating to the

implementation of the regulations of the Franc Area throughout the territory of the Republic of Cameroon; g the Mining Code in force at the Signature Date; h i j the Investment Charter Law N 20044 of 19 April 2002 in force at the Signature Date; Law No 67LF22 of 12 June 1967 relating to the financial relations between the Republic of Cameroon and foreign countries; Decree N 7664 of 19 February 1976 modifying Decree W 75763 of 12 December 1975 which suspend the application of withholding taxes on foreign loans; and k Law No 95 14 of 8 August 1995 establishing the conditions of US Dollars accounts.

36.2 Tax Regime a In addition to the provisions contained in this Convention during the Term of the Project Cam Iron and the Project Companies their Contractors and Subcontractors shall be subject to the provisions of Annex VII in connection with the Project Operations. If a tax fee or similar assessment is not addressed in a Project Agreement including Annex VII then it shall be payable in accordance with the Legislation.

36.3 Bonus Payment a The Parties agree that in order to enjoy Bonus Payment Holiday for the purposes of all assignments and transfers or any restructure or other dealings either directly or indirectly in the shares in Cam Iron or a Project Company including any dealing in any shares in any entity that may directly or indirectly control those companies or any consent the State is required to give to any Finance Document Cam Iron shall pay to the State the sum of eleven million US Dollars on the date that is no more than ten (10) Days following the consummation of the transactions contemplated by the Scheme and these payments will be the only payments required to be made during the Bonus Payment Holiday by or on behalf of Cam Iron or a Project Company for the purposes of section 20 of the Mining Code. The Parties will also provide for the completion of any documents necessary for the Project Companies and their parent companies as the case may be to comply with applicable provisions of Australian legislation regarding such payments. b The Project Companies will be exempt from any Bonus Payment otherwise payable on i transfers of the equity interests of the parent companies of Cam Iron; and ii any security or pledge that the Mine Project Company may create v page 1152 over the Exploitation Permit.

36.4 Offset of Part Payment of Bonus Fee If the Conditions Precedent are not satisfied and as a consequence there is no Date of Entry into Force

then notwithstanding that the balance of the Convention may not have entered into force Cam Iron shall not be entitled to a refund of any of the amounts it has paid to the State pursuant to Article 36.3 however Cam Iron may offset the eleven million 11 000 000 US Dollars it has paid to the State pursuant to Article 36.3 against all amounts it may from time to time owe the State in connection with bonus payments due by Cam Iron for the Project or other mining projects of Cam Iron up to a total sum of eleven million 11 000 000 US Dollars.

36.5 Other requirements a b Cam Iron and each Project Company must comply with any obligations to obtain an importation or exportation license or any other similar permission or authorisation under any CEMAC requirement in respect of which the State has met its obligations pursuant to Article 35.1 but is unable to obtain any partial or total exemption.

spare parts, materials Subject to Article 42 Insurance Cam Iron and each Project Company must comply with any obligations imposed by customs or their representatives to obtain insurance from Cameroonian insurers in relation to any equipment including fixed and movable Mining Exploitation equipment including vehicles used solely within the Exploitation Area and those servicing Mining Operations like cargo trucks buses and light transportation and vehicles processing equipment and materials including handling equipment goods construction materials and materials for intermediate consumption commodities supplies consumables including fuel petroleum products reagents lubricants, gas and power plant including the Beneficiation Facility rolling machines vehicles aircraft including planes and helicopters trains and telecommunication equipment for terrestrial communication, radio communication or satellite communication or any ore minerals or products including iron ore and any subproducts including any requirements to produce an insurance policy or certificate to show that such insurance has been obtained under any CEMAC requirement in respect of which the State has complied with its obligations under Article 35.1 but is unable to obtain a partial or total exemption.

c d Nothing in this Article 36 permits Cam Iron or any Project Company to import into the territory of the State any items which are not permitted to be imported under the Legislation of the territory of the State. The Parties acknowledge that the items listed under Annex V 1 are prohibited imports as of the Signature Date and that such listing may be

amended from time to time. Explosives material required for the Project shall be permitted to be imported into the territory of the State in accordance with the Explosives Agreement. In order to give effect to the exonerations referred to in Article 36 the Parties shall develop appropriate protocols to ensure the operations of Cam Iron and the relevant Project Company are not interrupted or delayed.

page 1153

36.6 Third Parties Subject to Article 6.1 nothing in this Convention shall confer any rights or remedies under or by reason of this Convention on any Third Party beneficiary except to the extent that a specific obligation of a Project Company is passed to such Third Party subject to the terms hereof. Nothing in this Convention shall relieve or discharge the obligation or liability of any Third Party to any Party to this Convention.

36.7 Cross Border Movement The State acknowledges that for the efficient operation of the Project Operations and the Nabeba Project that Goods imported for Cam Iron or a Project Company and Nabeba Goods imported for Congo Iron may have to be exchanged either before being used for the intended importer or after initial delivery to the site of operation. The State shall agree a protocol with each of Cam Iron or an appropriate Project Company and Congo Iron by which those Goods or Nabeba Goods can be exchanged or used in a country of operations which is different to that for which they were imported without either Cam Iron or an appropriate Project Company or Congo Iron having to pay any customs duties excise duties Taxes charges taxation, foreign exchange restrictions inspection costs and the like.

36.8 States Equity Interest. Neither Cam Iron nor any Project Company nor any of Cam Irons shareholders or the Shareholders shall be liable for any Tax registration fee or any other charge or stamp duty attached to the States acquisition of the State Interest.

37 ACCOUNTING

37.1 Accounting Provisions a b c The accounts of Cam Iron and of the Project Companies shall be kept in accordance with the IFRS International Financial Reporting Standards and with the OHADA accounting principles. The Project Companies not registered in the territory of the State shall be entitled to use the US Dollar or any other currency deemed appropriate by Cam Iron for keeping their accounts and undertake all ancillary accounting operations and to denominate their share capital in such currency. The applicable exchange rate to be applied to

conversion of transactions carried out in a currency other than the US Dollar shall be the rate published under the rubric exchange cross rates in the London Financial Times in force on the day of the conversion transaction. If the currency is not indicated in the exchange cross rates or if the London Financial Times is not available the exchange rates obtained from another internationally recognised source published in London or New York. shall be used. If it is impossible to obtain a published rate the applicable rate shall be the mathematical average of the exchange rates each business day of the relevant month for which the rate is available from any of the sources referred to in this Article 37. v page 1S4 3 7.2 Extractive Industries Transparency Cam Iron and the Project Companies shall comply with the requirements of the Extractive Industries Transparency Initiative and CEMAC directives on transparency of financial relations with respect to all payments made by them pursuant to this Convention or Specific Agreement. The Parties shall act in good faith at all times in connection with their obligations under this Convention. SECTION VI MISCELLANEOUS PROVISIONS 38 RELIEF EVENTS PROCEDURES AND REMEDIES 38.1 Relief Events. A Project Company shall be relieved for the time described below in Article 38.1.1 c from its obligation to perform the Project Operations to the extent that any failure to perform results from such Relief Event. 38.1 .1 Relief Event Notice a b c in [fa Project Company is affected by a Relief Event it shall give notice Relief Event Notice to the State and the State Project Committee as soon as practicable and in no event later than thirty 30 Days following the date on which it first became aware of such Relief Event provided that in the case of the same Relief Event being a continuing cause of delay only one notice shall be necessary which notice shall include i a Statement of which Relief Event the claim is based upon ii details of the circumstances from which the delay arises and iii an estimate of the this Convention delay attributable to the said Relief Event and information in support thereof if known at that time. The State shall after receipt of the Relief Event Notice be entitled by notice to require the Project Company to provide the State may such further supporting information or details as reasonably consider necessary. If a Relief Event has not yet occurred but a Project Company knows of any event or circumstances which could reasonably be expected to result in a Relief Event

the Project Company will give notice pursuant to Article 47.1.5 but may later give notice pursuant to this Article when an actual Relief Event occurs. the performance of obligations under The affected Project Company shall notify the State as soon as practicable and in no event later than ten (10) Days following the date on which it first became aware that a Relief Event has ceased. Subject to the affected Project Company giving the Relief Event Notice required in Article 38.1.1 a above a Relief Event shall excuse such Project Company from whatever performance is prevented by the Relief Event referred to in such notice for such appropriate number of Days as the State and such Project Company jointly determine. If the State and the Project Company cannot agree upon the period of delay then the Project Company shall be excused for a reasonable period. This Article 38.1.1c shall not excuse Cam Iron or any Project Company from the performance and observance under the applicable Project Agreements of any obligations and covenants not affected by the Relief Event nor prevent the State or its designee from exercising its rights under the Project Agreements. Notwithstanding the occurrence of a Relief Event page 155 ff the affected Project Company shall continue its performance and observance under the applicable Project Agreements of all of its obligations and covenants to the extent that it is reasonably able to do so and shall use its reasonable efforts obligation de moyens to minimize the effect and duration of the Relief Event. Nothing in this Convention shall permit or excuse noncompliance with a change to the Legislation. d If a Relief Event occurs that also qualifies as a Compensation Event, the Project Company may also pursue its remedies under Article 39. 38.1.2 Role of State Project Committee. Upon the receipt of a Relief Event Notice the State Project Committee shall use its reasonable efforts to respond within twenty one (21) Days to the applicable Project Company and indicate whether or not it is granting or denying temporary relief from the circumstances Adverse Circumstances related to the Relief Event Committee Response. Provided however that if the expected Relief Event is of the type subject to Article 40.3 the procedures of that Article shall govern. a b c If the Committee Response indicates that the State Project Committee is granting temporary relief from the Adverse Circumstances the State Project Committee does not send a Committee Response within twenty one (21) Days or the

Committee Response is silent on whether temporary relief has been granted then to the extent the expected Relief Event is the result of a delayed denied or withdrawn permit beginning at the time of the Relief Event Notice the Project Companies shall be automatically temporarily granted any permit described in the Relief Event Notice for which it has complied with all material requirements under applicable Legislation as needed the Adverse Circumstances other than a new research exploration or exploitation permit under the Mining Code. At any time the State Project Committee may send written notice terminating this temporary relief. to avoid The intent of this provision is to allow the Project Companies to mitigate any potential Relief Event and the Project Companies shall use their reasonable efforts to mitigate any potential Relief Event. Granting the temporary relief provided in this Article 38.1.2 is not intended to be the only method of resolving and mitigating an expected Relief Event and the State and the Project Companies may seek other resolutions the States enforcement of any denial or withdrawal of any permit identified in the Relief Event Notice if the State chooses to do so. including 39 CONVENTION COMPENSATION 39.1 Payment of Convention Compensation. a Except as otherwise provided in Article 40.3 but in all other instances in addition to other notice provisions of this Convention if a Compensation Event occurs the applicable Project Company shall give notice First Notice of such occurrence to the State and the State Project Committee promptly but no later than thirty 30 Days following the date on which the Project Company first became aware of the Compensation Event. If a Compensation Event has not yet occurred but a Project Company knows or has reason to believe in of any event or circumstances which could reasonably be expected to result in a Compensation Event the Project Company will give notice pursuant to Article 47.1.5 but may later give notice pursuant to this Article when an actual Compensation Event occurs. Within thirty 30 Days following the date of delivery of such notice the Project Company shall give the State and the State Project Committee another notice the Notice setting forth i details of the Compensation Event including a specific explanation of the reasons that the event constitutes a Compensation Event under the terms of this Convention and ii the amount claimed as Convention Compensation and details of the If the State wishes to dispute the

occurrence of a calculation thereof. Compensation Event or the amount of the Convention Compensation the CENotice each a Convention Compensation claimed Dispute the State shall give notice of Dispute the CEDispute Notice to the Project Company within ninety 90 Days following the date of receipt of the CENotice stating the grounds for such Dispute. If neither the CENotice nor the CEDispute Notice has been withdrawn within sixty 60 Days following the date of receipt of the CEDispute Notice by the Project Company the matter shall be submitted to the Dispute resolution procedure in Article 56. The State shall pay the Convention Compensation to the Project Company within one hundred twenty 120 Days following the date of receipt of the CENotice or if a CEDispute Notice has been given as provided in the immediately following sentence then not later than one hundred and twenty 120 Days the date of determination of the Convention Compensation; provided that in each case the State may defer any such compensation for an additional period not to exceed one 1 year from the date of the CE Notice if there is no Convention Compensation Dispute and if there is a Convention Compensation Dispute three 3 months after the amount of Convention Compensation is determined if the State reasonably determines that such additional period is necessary to obtain financing or required approvals to make such payment. Notwithstanding the foregoing, in the event of a dispute regarding the amount of Convention Compensation the State shall make available to the Project Company any undisputed portion of such Convention Compensation and any portion of such Convention Compensation that is subsequently agreed between the Parties in each case not later than one hundred and eighty 180 Days following the date that the Parties have agreed to such portion even if a dispute regarding a portion of the amount claimed by the Project Company is still pending provided that the State may defer any such compensation for an additional period not to exceed one 1 year from the date of the CE Notice for such agreed portion. following b Convention Compensation shall be an amount sufficient to compensate Cam Iron or the applicable Project Company for all documented Losses with respect to a Compensation Event in excess of the applicable thresholds in the Definition of Compensation Event after taking into account any insurance proceeds actually received by Cam Iron or such

Project Company in connection with the Compensation Event if applicable. If Cam Iron or the applicable Project Company is required to expend its own funds whether from operating cash flows or the proceeds of any debt or equity financing or otherwise with respect to any Compensation Event prior to receipt of the corresponding Convention Compensation then the determination of Convention Compensation page]157 1f shall in addition to the components described above include interest at a rate equal to the Reference Rate plus four hundred 400 basis points. The Project Companies shall use their reasonable efforts to mitigate any Losses and adverse effects of a Compensation Event.

39.2 Role of State Project Committee. a b c d e If the State wishes to remedy the occurrence of a Compensation Event the State shall give notice thereof to the Project Company within thirty 30 Days following the date of receipt of the CENotice. If the State gives such notice it must remedy the Compensation Event within one hundred twenty 120 Days following the date of receipt of the CE Notice or if a CEDispute Notice has been given within one hundred twenty 120 Days following the final decision that a Compensation Event occurred or in either case within such longer period as may be reasonably required proceeding diligently to remedy such Compensation Event. If the State remedies the occurrence of a Compensation Event within the applicable period of time the right of the Project Company shall be limited to a claim for Convention Compensation calculated up to such remedy date only. In addition upon the receipt of the First Notice the State Project Committee shall use its reasonable efforts to respond within twenty one 21 Days to Ute applicable Project Company and indicate whether or not it is granting or denying temporary relief from the circumstances Adverse Circumstances the Compensation Event related Committee Response. Provided however that if the expected Compensation Event is of the type subject to Article 40.3 the procedures of that Article shall govern. to If the Committee Response indicates that the State Project Committee is granting temporary relief from the Adverse Circumstances the State Project Committee does not send a Committee Response within twenty one 21 Days or the Committee Response is silent on whether temporary relief has been granted then to the extent the potential Compensation Event is the result of a delayed denied or withdrawn permit beginning at

the time of the notice of the Compensation Event the Project Companies shall be automatically temporarily granted any permit described in the notice of a Compensation Event for which it has complied with all material requirements under applicable Legislation as needed to avoid the Adverse Circumstances other than a new research exploration or exploitation permit under the Mining Code. At any time the State Project Committee may send written notice terminating this temporary relief. The intent of this provision is to allow the Project Companies to mitigate any potential Compensation Event and the Project Companies shall use their reasonable efforts to mitigate any potential Compensation Event. Granting the temporary relief provided in this Article 38.1.2 is not to be the only method of resolving and mitigating a intended Compensation Event and the State and the Project Companies may seek other resolutions including the States enforcement of any denial or withdrawal of any permit identified in the notice of the Compensation Event Notice if the State chooses to do so.

1 page 158 . . . IJJJ 40 STABILITY OF ECONOMIC CONDITIONS 40.1 Warranty from the State a b Any Change in Law may be deemed a Compensation Event subject to the definition thereof. The Legislation and the obligations assumed by the Project Companies under the applicable Project Agreements together with in each case any amendment thereto shall apply at all times to the Subsidiaries Contractors and Subcontractors directly or indirectly in charge of all or part of the Project Operations. 40.2 Stabilisation clause Throughout the Term of the Project if there occurs a any new provision or any amendment to the Legislation on the Signature Date; b any new Legislation which does not exist as at the Signature Date; or c Legitimate Cause which meet the definition of a Compensation Event then the affected Party may deem such change a Compensation Event subject to the definition thereof in which case such Party shall have recourse to the remedies set forth in Article 39 or the remedies set forth in Article 40.3. 40.3 Petition from a Project Company Where Cam Iron or a Project Company is of the view that an event has or is about to occur which falls within the scope of Article 40.2 then Cam Iron or such Project Company shall promptly file a petition with the State and the State Project Committee which shall constitute a Compensation Event Notice for purposes of the State Project Committee providing aU necessary

documents in support of the petition and within ninety 90 Days following the date of receipt of the petition the State may either a reject the petition providing reasons therefor; or b accept the petition and propose to Cam Iron or the relevant Project Company to meet with it within a maximum period of thirty 30 Days to discuss but shall have no obligation to reach an agreement regarding i ii the possibility to postpone application of the disputed legislative regulatory or administrative measure; or where the State considers that said measure should apply agree with Cam Iron or the relevant Project Company on modifications to this Convention or the Project Agreement to which it is a party in order to preserve the economics thereof whereupon the relevant parties undertake to act reasonably and use their reasonable endeavours to reach a mutually acceptable solution. page159

40.4 Economic Hardship a In case of an event other than those referred to in Article 40.2 unforeseeable on the Signature Date and outside the Parties control results in a substantial disruption of the economic and financial balance of the Project for a period of at least ninety 90 successive Days Cam Iron provided the Project Companies continue to perform their respective obligations may propose to the State the measures in particular in terms of tax and finance strictly necessary to enable the economic and financial balance to be restored and the manner in which this could be achieved. In providing its proposal to the State Cam Iron must be able to demonstrate that without the State adopting appropriate measures the Project looked at as a whole. will not be cashflow positive for at least twelve 12 months longer than reflected in the Project Economic Model . The State shall notify Cam Iron of its decision on said proposals within ninety 90 Days following the date of notification of the request. If the State does not agree to the proposal for assistance then Cam Iron or the relevant Project Companies are entitled to suspend operations in accordance with Article 51 but subject to Article 50. b The relevant Parties undertake to adopt reasonable and good faith behaviour in applying this Article 40.4. 40.5 Emission Scheme Change Notice a b c Cam Iron shall notify the State as soon as possible after it becomes aware of any actual or imminent Change in Emission Scheme. As soon as practicable and in any event not more than one hundred and eighty 180 Days after the issue of the notice under Article 40.5a Cam Iron may give to the State

notice in respect of a Change in Emission Scheme setting out the estimated liability of the Project Companies under the Change in Emission Scheme and the value of the carbon credits or carbon offsets available from the FMU as contemplated in Article 29.5.2b Change Notice. The Project Companies shall have an additional two (2) years to comply with any Change in Emission Scheme and shall be able to use any carbon credits or reductions generated by the FMU to offset carbon limitations introduced by the Change in Emission Scheme.

40.6 Compensation for a Change in Emission Scheme If a Change in Emission Scheme occurs that directly or indirectly discriminates against the Project Companies then such change may be a Compensation Event if it meets the definitional requirements.

41 EXPROPRIATION NATIONALISATION

41.1 States undertakings a Except with respect to the exercise of its Reserved Rights and applicable Stepin Rights or pursuant to a Project Agreement the State undertakes not to take without consent against either Cam Iron or any Project Company any measure of seizure nationalisation or compulsory acquisition a page 160 Confiscation i u iii of the rights of ownership composing Cam Iron or any Project Companies share capital; of the assets needed for the Project Operations held by Cam Iron or any Project Company in the territory of the State; or of the occupation rights Cam Iron or any Project Company hold in the Project Areas; provided however that such a Confiscation which was not capable of being remedied by a modification of delineation of the relevant Project Area prevents Cam Iron or the relevant Project Company from continuing to conduct the Project Operations of which it is in charge within the relevant Project Area. b It is expressly agreed that the provisions of Article 41.1 a i ii concern the occurrence of expropriation events within the meaning of customary international law and do not prejudice the States rights in terms of nondelivery nonrenewal termination modification withdrawal cancellation or suspension of a Project Agreement a Project Lease or any permit authorization or approval in accordance with the terms thereof of the applicable Project Agreement or of the Legislation; but do not concern an Ordinary Force Majeure or Political Force Majeure event which do not result from an act or omission of the State which shall under no circumstances represent a Confiscation to which the provisions of Article 41.2 do not apply.

41.2 Indemnification a b c Without

prejudice to the provisions of Article 56 any breach by the State of its undertakings under Article 41.1 may qualify as a Compensation Event if it meets the definitional requirements and Cam Iron and one or more Project Companies as applicable shall except to the extent any damages result from a Project Company Fault have the right to request Convention Compensation relating thereto as set forth in Article 39. I. The indemnity value referred to in Article 41.2a shall be agreed between the Parties or in case of failure to reach an agreement; shall be determined in accordance with the procedure set forth in Article 56. The indemnification under this Article 41. paid as the case may be will be calculated in accordance with any applicable principle of compensation recognised under customary international law. 41.3 Parties claiming to have been Confiscated Where the State breaches its undertaking under Article 41.1 then unless it can be demonstrated that the breach affects in a material way the operating performance and profitability both before and after tax or freedom to remit dividends to Cam Iron or its shareholders the Project Companies or their Shareholders then for the loss suffered as a result of such Confiscation only Cam Iron or its shareholders or Project Companies or their Shareholders that are the subject of the expropriation shall be included in the calculation of the loss incurred in each case without duplication. 41.4 Dispute Resolution In Respect to a Confiscation Dispute. Any dispute disagreement controversy or claim arising out of connected with or relating to the States undertakings and indemnification under this Article 41 or to the breach termination invalidity existence or interpretation thereof or to any event action or inaction related to any of the foregoing Confiscation Dispute shall be resolved through amicable settlement or arbitration as set forth in Article 56.4. 41.5 Coordination with Treaties. a b The provisions of this Article 41 shall be effective only when there is not an applicable bilateral investment treaty in place that grants applicable rights regarding expropriation and if there is such a bilateral investment treaty then such treaty and not this Article 41 shall govern. This Convention is intended to provide the remedies regarding indirect expropriation and fair and equitable treatment only when there is not an applicable bilateral investment treaty and accordingly to the extent any bilateral investment treaty provides for

applicable remedies regarding indirect expropriation and fair and equitable treatment or other causes of action that could be brought under the applicable bilateral investment treaty on the same facts the applicable bilateral investment treaty shall govern the claims that may be brought and any additional claims created by this Convention shall no longer be applicable. This subsection is intended to only address the rights to bring claims and the forum for hearing and resolving those claims is addressed in Article 56.

42 INSURANCE 42.1 Principle Cam Iron shall comply with InterAfrican Conference on Insurance Markets CIMA and all applicable legislation concerning insurance and the procurement of appropriate coverages. The Parties recognize that international carriers may be necessary for the insurance of certain major risks but the Project Companies shall use Cameroonian insurers where coverage is available at competitive prices and the State shall reasonably cooperate to permit Cam Iron to cover a portion of this type of risk from CIMA to the extent required. In addition the State shall cooperate and assist Cam Iron in obtaining certain policies outside the territory of the State and from internationally recognized carriers.

42.2 risks covered a Other than as provided for in Article 42.4 Cam Iron the Project Companies the Contractors and its Subcontractors shall take out insurance to cover at least the following risks i loss or damage caused to the Project Facilities and other installations equipment and items existing or built within the Project Area occupied pursuant to the applicable Project Agreement; ii the cost for relinquishment of the Project Facilities and other page [162 installations equipment and items existing or built within the Project Area it occupies pursuant to the applicable Project Agreement damaged as a result of a loss and their replacement value as the case maybe; damage caused to the Environment due to the Project Operations of which it is directly or indirectly in charge; injury loss or damage suffered by Third Parties during or as a consequence of the conduct of the Project Operations of which it is directly or indirectly in charge; injury and damages suffered by its personnel during or as a consequence of the conduct of the Project Operations which it is directly or indirectly in charge and by the authorized engineers and agents including Auditors hired in the context of the administrative and technical supervision of said operations; and iii iv v vi such other insurances as

are reasonably stated by an international insurance consultant as being risks usually covered in the particular circumstances. b Cam Iron shall use commercially reasonable efforts to ensure that the insurance policies required under the terms of this Article 42 contain a provision ensuring that the required coverage cannot be terminated without prior written notification to the State at thirty 30 Days in advance.

42.3 Political risk insurance a b Cam Iron and the Project Companies may obtain and maintain for the whole Term of the Project insurance to cover all potential political risks including, inter alia Political Force Majeure events that can be covered by an insurance against political risks obtained on tbc basis of reasonable commercial terms considering the scope and localisation of the Project. The guarantees referred to in Article 42.3a shall be taken out with tl1e Multilateral Investment Guarantee Agency MIGA or China Export Credit Insurance Corporation or any other internationally recognised company that covers the State.

42.4 Self Insurance Cam Iron may propose, prior to the Date of Entry into Force, and upon such proposal the Parties may agree prior to the Date of Entry into Force on a framework for self insurance insuring against risk which may arise from certain Project Operations. The State recognizes that the need for self insurance in the mining industry is normal to cover certain risks.

42.5 Cessation of Self Insurance If Cam Iron or a Project Company a elects to discontinue; or page 163 b is unable to continue the self insurance referred to in Article 42.4 that Party must effect such insurance with an insurer against the insurable risks which are no longer the subject of self insurance.

43 EXCHANGE CONTROL FOREIGN CURRENCY AND BANKING OPERATIONS 43.1 Other Exchange Control Foreign Currency and Banking Operations. a The Foreign Exchange Agreement will address the foreign exchange control foreign currency and banking operational provisions applicable to the Project Operations and the financing thereof and will provide that in connection with the Project Cam Iron the Project respective Shareholders Affiliates and/or Companies and Contractors Subcontractors shall benefit from a the foreign exchange provisions in the Legislation and the following provisions their i ii iii iv v the opening and domiciliation in the State of a convertible foreign currency bank account. The depositing into this bank account of any amount of money that the Project Companies determine is

to be used to finance part of the costs of the Project Operations and the use of this account for activities related to the execution of the present Convention; the cashing in of all funds acquired or borrowed from abroad, including sales revenue from its share of the Sale Products the preserving of these funds offshore and the freedom to use any supplementary funds which are not necessary for their local businesses in Cameroon; the freedom to transfer out of the State dividends and interest payments of all kinds resulting from capital investments as well as earnings from the liquidation or disposal of any of the Project Companies assets; companies Contractors the offshore payment of Subcontractors and nonresident consultants who provide goods and services necessary to the Project Operations; and foreign Contractors and Subcontractors of foreign nationality and expatriate employees shall also benefit from the exemptions from all foreign exchange restrictions granted and; the right for the expatriates working for Cam Iron and for the Project Companies Affiliates and Contractors and Subcontractors residing in the territory of the State to transfer abroad part or all their earnings and their contributions paid to foreign pension funds by or on behalf of these employees for the purpose of retirement funds life insurance health insurance and other similar purposes.

b The Parties agree to provide a level of support to the Cameroonian banking industry with respect to the implementation of the Foreign Exchange Agreement.

page 164

43.2 Support for Cameroonian Financial Institutions

a b c Cam Iron and U1e State shall cooperate to establish mechanisms which may include credit support from the State by which Cameroonian Companies will be able to meet the financial support obligations for companies wishing to be awarded contracts from the Project Companies to participate in the Project. Cam Iron and the State shall cooperate and use their reasonable efforts to negotiate with the Lenders to allow a portion of the debt financing for the Project to be provided or syndicated among banks regulated by the States national monetary authority Cameroonian Banks. All required bank guarantees provided by the Project Companies to the State will be issued by Cameroonian Banks provided they are available on terms and pricing competitive with international banks.

The State may designate any public entity to bold the State Interest on its behalf in which case such public entity shall be bound with the State to the provisions of this Convention and

of the Specific Agreements to the extent that such provisions relate to the State Interest including the provisions required to apply and implement the provisions relating to the State Interest. 45.4 Additional State Interest a b Subject to the necurrence of the Date of Entry into Force by signing the the associated Project respective Share Transfer Agreements and Agreement with the Project Company in which the State is to acquire the Additional State Interest the State will acquire such Additional Siate Interest in hat Project Company for one I CFA Franc. The State shall be required to participate in all calls for equity contributions on accow1t of the Additional State Interest in a Project Company including for capital necessary to fund i subject to the Loan Carty Cap the required equity contribution as of the Date of Entry into Force necessaty for the initial funding of he Project in connection with the construction and development of the Mining Facilities the Railway and he Mineral Terminal; ii the Expansion Capacity; and iii to the extent required after compliance with Article I 0.8 the Beneficiation Facility; provided that until such time as the aggregate capital required to be contributed by the State equals the result of A sixtythree million 63000000 US Dollars; and B the States Development Costs which such amounts are equal to fifteen million 15000000 US Dollars such amow11 the Loan Carry Cap the State may in its sole discretion elect to fund any or all of its capital obligations not to exceed the Loan Carry Cap only wilh respect to the initial equity requirements of the Project in connection with the construction and development of the Mining Facilities the Railway and the Mineral Terminal lthrough a loan from Cam Iron and not other shareholders of a Project Company or from the Project Company pursuant to a mutually agreeable structure which such loan shall be repaid from the dividends issued and otherwise payable to the State on account of the Additional State Interest but no more han fLfty percent 50 of any particular dividend in the manner contemplated in the applicable Shareholders Agreement and such loan shall be evidenced by a note limited in recourse to the dividends payable on the Additional State Interest which shall accrue interest at a rate per annum equal to lesser of i the Reference Rate plus four hundred 400 v pagoJ170 basis points or ii the interest rate payable by the Project Companies under the Finance Documents. c After such lime as the State bas contributed capital in an amount equal to

the Loan Carry Cap. the State shall no longer be required to participate in the calls for funds on account of the Additional State Interest for any contribution required for the purposes of the initial funding requirements of the Project in connection with the construction and development of the Mining facilities the Railway and the Mineral Terminal and will not be diluted by any additional equity issued for such purpose. d The provisions of Article 45.3c apply to the Additional State Interest

IIIIIfIfiS 1111111111dis. 45.5 Equity funding of the State Interest and Additional State Interest If any equity calls are made by a Project Company on its Shareholders for the purposes of funding the Project in respect of the Project Operations the equity shares associated with the States Interest shall be contributed by the other Shareholders in proportion to their interests in the Project Company requiring the equity call and the equity associated with the States Additional Interest above the Loan Carry Cap with respect to the initial equity requirements of the Project in connection with the construction and development of the Mining Facilities the Railway and the Mineral Terminal shall be contributed by the other Shareholders in proportion to their interest in the Project Company requiring the equity call .. 45.6 Sale of State Interest and Additional State Interest a The State shall not sell all or any part of the State Interest other than to a Subsidiary or Government Entity at any time prior to the BF Commissioning Date and shall not sell all or any part of the Additional State Interest at any time prior to the third 3 anniversary of the Date of Entry into Force. b If the State should sell all or part of the State Interest or Additional State Interest other than to a Subsidiary or Governmental Entity then i ii any such sale is to be subject to the State complying with the terms of both the articles of association of the relevant Project Company and the terms of the relevant Shareholders Agreement; and that portion of the State Interest or Additional State Interest that is sold will lose the right to be free carried and to be non-dilutory and loan carried as applicable. c Where the State sells all of the State Interest and the Additional State Interest it shall cease to have the rights referred to in Article 45.2cv of this Convention. 45 .7 Third Party Equity a Subject to Article 45.3 the share ownership in each of the Project Companies may differ from time to time and without limitation may reflect Third Parties taking equity in a Project Company to assist in the funding or underwriting the

Mining Operations or the construction or page 1171 operation of the Railway or Mineral Terminal. b

If a Third Party that is intending to participate in the construction or operation of the Railway or Mineral Terminal takes equity in the applicable Project Company then its access to the Railway or Mineral Terminal is still subject to the operation of Article 18. 45.8 Role as State. Nothing in any Project Agreement or the States status as an equity holder of any Project Company shall limit the States ability to enforce Ote Legislation. and seek levy and enforce penalties for violations of the Legislation. The State may use Confidential Information and any other information available to it. 46

PROJECT FINANCE 46.1 Terms of Project Finance Cam Iron will be seeking to secure Project Financing which will be a b secured over the assets of Cam Iron the Project Companies the shares in Cam Iron and all the shares in the Project Companies; and to the extent possible limited in recourse to the assets referred to in Article 46.1 a such that the Parties are not required to support such financing by guarantees or other financial support other than as provided for in this Convention. 46.2 Assistance with obtaining Financing Each of the Project Companies and the State as a future shareholder shall use its reasonable endeavours to facilitate the conclusion of the Finance Documents to which it is a party. The State must approve any Finance Documents. 46.3 DebtEquity Ratio The State agrees that for the Term of the Project any introduction of Legislation which will have the effect of imposing upon Cam Iron any Project Company or its shareholders or their Shareholders any requirements to meet a minimum debt to equity ratio shall be deemed a Change in Law Event. 46.4 Shareholder Guarantees Where the conditions of the Project financing refinancing or working capital needs require the provision of guarantees by Sundance Cam Iron or one or more of their shareholders or the Affiliates such guarantees shall be provided without payment of any fees or subordination rights. 47 STATE PROJECT COMMITTEE 47.1 Composition and Purpose. a The State undertakes the administrative formalities relating to the implementation of all phases of the Project. Accordingly within a reasonable time following the Date of to establish conditions facilitate to page172 Entry into Force. the State shall establish a committee the State Project Committee to coordinate with Cam Iron and the Project Companies with respect to

performance of the States responsibilities under the Project Agreements and specifically as set forth in this Article 47. The State Project Committee shall be composed of a number of representatives of the State to be determined by the State collectively with appropriate expertise with respect to the Project. Unless the State determines otherwise the State Representative shall be a member of the State Project Committee. The State shall be entitled to replace its representatives or alternates at any time in its sole discretion by giving written notice to the other Party of such replacement. b c d

47. 1.2 Competence of the State Project Committee a The State Project Committee shall cooperate with Cam Iron and the Project Companies and offer reasonable administrative assistance with performance of the States obligations under this Convention and the Project Agreements where such obligations require the involvement of the State including i issuing Governmental Approvals including any required permits approvals for workers establishment and registration of Project Companies and other similar obligations under or related to Cam Iron the Project or Agreements; the Project Companies performance under ii ensuring that Cam Iron and the Project Companies or their Contractors and Subcontractors enjoy the Tax and other economic advantages set forth in this Convention; and iii generally assisting to minimize any delays associated with State consent and approval where required under the Project Agreements. b Notwithstanding anything to the contrary in the Project Agreements neither the State nor the State Project Committee or the representatives sitting thereon shall be liable for any failure to cooperate with respect to the items set forth in this Article 47 nor for any failure of Cam Iron or the State to obtain the Governmental Approval consent or other approval referenced in this Article 47.

47.1.3 Meetings of the State Project Committee The State Project Committee shall convene at such times as it deems necessary or appropriate in its sole discretion provided that Cam Iron or a Project Company may request that the State Project Committee convene to make a determination with respect to a particular matter for which the State Project Committee has authority. 47.1.4 Funding of State Project Committee v page 1173 I The State shall be responsible for funding the activities of the State Project Committee with respect to meetings and internal interaction among Government Entities. 47.1.5 State Project Committee

Process a b c d c The Project Companies shall promptly give notice Compensation Event Notice to the State Project Committee of any event or circumstances known to any of them which could reasonably be expected to result in a Compensation Event or Relief Event the Adverse Circumstances describing the Adverse Circumstances expected Compensation Event or Relief Event and impact on the Project Companies and the Project For clarification notices of Compensation Events and Relief Events that have already occurred should be given pursuant to Articles 38 and 39. Upon the receipt of a Compensation Event Notice the State Project Committee shall use its reasonable efforts to respond within twenty one 21 Days to the applicable Project Company and indicate whether or not the Adverse temporary it Circumstances Committee Response. Provided however that if the expected Compensation Event or Relief Event is of the type subject to Article 40.3 the procedures of that article shall govern. is granting or denying relief from If the Committee Response indicates that the State Project Committee is granting temporary relief from the Adverse Circumstances the State Project Committee does not send a Committee Response within twenty one 21 Days or the Committee Response is silent on whether temporary relief has been granted then to the extent the expected Compensation Event or Relief Event is the result of a delayed denied or withdrawn permit beginning at the time of the Compensation Event Notice the Project Companies shall be automatically temporarily granted any permit described in the Compensation Event Notice for which it has complied with all material requirements under applicable Legislation as needed to avoid the Adverse Circumstances other than a new research exploration or exploitation permit under the Mining Code. At any time the State Project Committee may send written notice terminating this temporary relief. The intent of this provision is to allow the Project Companies to mitigate any potential Compensation Event and Relief Event and the Project Companies shall use their reasonable efforts to mitigate any potential Compensation Event and Relief Event. Granting the temporary relief provided in this Article 47.1.5 is not intended to be the only method of resolving and mitigating an expected Compensation Event and Relief Event and the State and the Project Companies may seek other resolutions including the States enforcement of any denial or withdrawal

of any pennit identified in the Compensation Event Notice if the State chooses to do so. page 1174

48 OTHER PROVISIONS. 48.1 Security. The Project Companies shall provide reasonable security for the assets of the Project Companies and Project Facil ities. 48.2 Identification of Required Permits. T he Project Companies are responsible for identifying all approvals authorisations consents licences and permits necessary to fulfil their obligations under this Convention including for both the Construction Phase and the Exploitation Phase and the Project Agreemcms in accordance with the requirements contained in this Convention and the Project Agreements provided that the State shall reasonably cooperate upon request with respect to such identification. 48.3 Renewal of Permits. The State shall review in good faith all requests from the Project Companies that comply with the Legislation for required approvals authorisations consents licenses or pennits necessary to enable Cam Iron and lhe Project Companies to fulfil their obligations under this Convention and the Project Agreements. 49 ASSIGNMENTS IND STOCK TRANSFERS 49.1 No Assignments by Project Companies. Neither Cam Iron nor Project Company may assign including for security purposes. pledge or transfer any of its rights and obligations under a Project Agreement without the prior written consent of lhe State except where an Exempt Assignment and where such consent is required the State shall consider the request in a timely manner and shall not unreasonably withhold such consent. 49.2 Assignments by State. The State may assign all or any of its rights and obligations under a Project Agreement to a Govcnunent Entity; provided the State shall remain responsible and Hable for the discharge of all of the obligations assigned by the State to its Government Entity. 50 FAILURE 50.1 Breach Event. The breach events exhaustively listed below may lead to termination of the Contemplated Rights each a Breach or Breach Event; 50.1 .1 Permit Withdrawal Breach Event The events comprise a any material part of the Project Operations arc suspended for more than thirty six 36 months which shall be extended for an additional twelve 12 months at the cud of such thirty six 36 month period if price of High Grade Ore or Beneficiated Ore is less than seventy percent 70 of pago J175 the price of such ore in the Project Economic Model in accordance with Article 51 or otherwise without full scale resumption of work for a continuous period

of at least four weeks or in aggregate for more than seven hundred and twenty 720 Days over the prior ten JO years which shall not be subject to extensions based on price which suspension is not cured within thirty 30 Days of the States notification to Cam [ron or the relevant Project Company thereof; b a Bank Guarantee or Environmental Guarantee is not reestablished in its initial amount as provided for under this Convention within a time frame of ninety 90 Days as from the date of any claim relative to this guarantee filed by the State; c one of the following events affecting any Project Company occurs i the liquidation or windingup of a Project Company is initiated; ii iii a competent jurisdiction has issued a liquidation decision concerning one Project Company which has become definitive and may not be subject to appeal or opposition or a competent jurisdiction has issued a judicial settlement decision concerning one Project Company which became final and is not followed by a composition between the Project Company and the general body of creditors within ninety 90 Days following the said decision subject to the fulfilment by the entity concerned of its obligations under the Project Agreement to which it is a party in particular during the course of the appeal proceedings where required. d c a Delay Breach Liability Threshold was reached; or any item identified as a Permit Withdrawal Breach in any Project Agreement occurs each a Permit Withdrawal Breach or a Permit Withdrawal Breach Event. 50.1.2 Delay Breach Events The events comprise a b c the Project Commissioning has not occurred by the deadline specified in Article 3.6; the Beneficiation Feasibility Study or Beneficiation Power Station Feasibility Study is not prepared and sent to the State by the deadline specified in Article 10.1 d; there was a Positive Beneficiation Determination and the Project the Beneficiation Facility Companies began construction but Commissioning and the commissioning of the Beneficiation Power Station if the State does not elect its option to construct the Beneficiation Power Station does not occur prior to the BF Commissioning Deadline; d the Beneficiation Capacity Expansion Works are not completed in a page176 ;OJ manner enabling the Mine Project Company to reach ninety percent 90 of the Targeted Annual Production Capacity; e f a Report is not prepared and sent to the State by the deadline specified in Article 30.3; a Project Company fails to meet any material obligation to complete any significant

action by the deadline imposed under the Project Agreement to which it is a party or under applicable Legislation or any item identified as a Delay Breach Event in any Project Agreement occurs each a Delay Breach or a Delay Breach Event.

50.2 Notification of Breach a the State to implement Subject to the provisions of the Project Agreements all Breach Events the termination procedure for the entitled Contemplated Rights through a formal notice sent to the Project Company to which the Breach Event is attributable which indicates precisely i the Breaches invoked to which the formal notice pertains and ii the States intention to terminate the Contemplated Rights if within the time limit prescribed by the said formal notice Remedial Period the Notification of Breach.

b The Remedial Period shall not be less than i ii one hundred and twenty 120 Days for any Partial Withdrawal Breach Event in accordance with the provisions of article 352 of the Mining Code Implementing Decree and forty five 45 Days for any Delay Breach Event or where the relevant Project Company pays the daily penalties until the Delay Breach Liability Threshold is reached.

c During the whole Remedial Period activities undertaken pursuant to this Convention Project Agreements and the Project Contracts shall be continued in accordance with the terms of this Convention the other Specific Agreements and the Project Contracts.

50.3 Penalties for Delay Breach Events a In the event of a Delay Breach the State may require from the Project Company concerned and Cam Iron by formal notice sent to the Project Company to which the Delay Breach Event is attributable and to Cam Iron. to pay a per diem delay penalty in an amount equal to i seventy thousand 70000 US Dollars adjusted by the Inflation Adjustment per Day for Delay Breach Events referred to in Article page 1177 1 50.1.2 a b c or d; ii iii live thousand 5000 US Dollars adjusted by the Inflation Adjustment per Day for Delay Breach Events referred to in Articles 50.1.2e and 50.1 .21; or the amount specified in the Project Agreement adjusted by the Inflation Adjustment per Day for Delay Breach Events referred to in Article 50.1.2g.

b The aggregate amount of the penalties that may be received pursuant to Article 50.3a shall not exceed i individually with respect to a particular Breach or group of related Breaches fifty million 50000000 US Dollars adjusted by the Inflation Adjustment; and ii cumulatively adjusted by the Inflation Adjustment] two hundred million

200000000 US Dollars each a Delay Breach Liability Threshold. 50.4 State StepIn Rights If the State reasonably considers that a breach by any Project Company of any obligation under any of the Project Agreements or an event i is likely to create an immediate and serious threat to the health or safety of the public any material property or the Environment or ii is prejudicial to the ability to carry on the States Reserved Rights or other customary rights to a material degree then the State acting reasonably may if it considers that there is sufficient time and that it is likely that the Project Company or the Lenders through a substituted entity shall be willing and able to provide assistance require the applicable Project Company by notice to take such steps as are necessary or expedient to mitigate or rectify such state of affairs including if applicable due to breach of any Project Agreement to suspend a Contractor or Subcontractor and the applicable Project Company shall use all reasonable efforts obligation de moyens to comply with the States requirements as soon as reasonably practicable; a [f the State gives notice to the applicable Project Company under Article 50.4 and the Project Company either i ii does not confirm within five 5 Business Days of such notice or such shorter period as is appropriate in the case of an emergency that it is willing to take such steps as are required in such notice or does not present an alternative plan to the State to mitigate rectify and protect against such circumstances then the State may within a further five 5 Business Days accept or reject such plan acting reasonably; or fails to take the steps as are referred to or required in such notice or accepted alternate plan within such time as set forth in such notice or accepted alternate plan or within such time as the State acting reasonably will stipulate page 178 then the State may take such steps as it considers necessary or expedient to mitigate rectify or protect against such circumstances either itself or by engaging others to take any such steps. Such steps may include the partial or total suspension of the right and obligation of Cam Iron or the applicable Project Company to provide the relevant Project Operations but only for so long as the circumstances referred to in Article 50.4a persist. b c d The applicable Project Company shall ensure that all Finance Documents Project Contracts and contracts with the Contractors and Subcontractors permit the State to exercise its rights w1der this Article 50.4. The exercise by the

State of any of its rights under this Article 50.4 shall not reduce or affect in any way Cam Irons or the applicable Project Company's responsibilities under the applicable Project Agreement to perform the Project Operations. To the extent that any of the circumstances set forth in this Article 50.4 arise as a result of any actual or anticipated breach by any Project Company of its obligations under any Project Agreement then Cam Iron or the applicable Project Company shall pay the State the amount of all costs and expenses reasonably incurred by the State in exercising its rights under this Article 50.4 and an additional markup of twelve per cent 12 of such costs and expenses in respect of indirect costs and overhead not otherwise directly attributable to the exercise of such rights.

50.5 Termination for Breach a If a Project Company or Cam Iron i ii has not within the applicable Remedial Period cured any applicable Breach; or has committed a Permit Withdrawal Breach Event or a Permit Withdrawal Breach Event has occurred upon two 2 Days notice or such shorter period if reasonably warranted by the circumstances the State shall be entitled to exercise its rights the Contemplated Rights to A terminate all or any part of the Project Agreements and revoke all permits authorisations and approvals of Cam Iron and the Project Companies and shall be entitled to draw upon any Bank Guarantee surety or other security provided under any Project Agreement or otherwise collect compensation from Cam Iron or the applicable Project Company to indemnify the State for any actual or reasonably expected Losses resulting from such Permit Withdrawal Breach; and B terminate the Exploitation Permit and upon an election to exercise such rights to terminate such permits authorizations and approvals the Project Companies shall be deemed to have renewed such permits authorizations and approvals in each case pursuant to the provisions of this Article 50.5. b Any Notification of Breach issued pursuant to Article 50.2a shall be immediately deemed null and void if the Breach Events referred to in the Notification of a Breach have been cured prior to the conclusion of the applicable Remedial Period. page 1179 c Notwithstanding the foregoing the State shall not be entitled to terminate the Contemplated Rights if i the alleged Breaches constitute a direct and exclusive consequence of the occurrence of A a Confiscation; B a Force Majeure Event; or C a Legitimate Cause and the Breach results from the failure to comply

with a deadline or the completion of any action by such deadline as a result of the occurrence of such a Legitimate Cause or such a Force Majeure Event the Project Company concerned shall benefit from the automatic extension of this term¹ for a duration equal to the period during which the Force Majeure Event or the Legitimate Cause has lasted and the State shall be automatically reinstated in its rights pursuant to Article 50 if it identifies a Breach after the end of the extended term. ii iii if the Breaches are the result of a Delay Breach Liability Threshold being reached and the underlying breach is that the Project Commissioning has not occurred by the applicable deadline and the Project Companies have expended at least half of the capital expenditures required to reach Project Commissioning the Project Companies are diligently implementing a plan reasonably expected to achieve Project Commissioning within a reasonable time and the Project Companies continue to pay the penalties in Article 50.3 beyond the applicable limits; or if the Breaches are the result of a Delay Breach Liability Threshold being reached and the underlying breach is the Beneficiation Facility Commissioning or commissioning of the Beneficiation Power Station if the State has not elected to construct the Beneficiation Power Station has not occurred by the applicable deadline and the Project Companies have expended at least half of the capital expenditures required to reach the Beneficiation Facility Commissioning and the entity other than the State constructing the Beneficiation Power Station has expended at least half of the capital expenditures required to reach the Beneficiation Facility Commissioning the Project Companies and the entity constructing the Beneficiation Power Station other than the State are diligently implementing a plan reasonably Facility Commissioning and the commissioning of the Beneficiation Power Station within a reasonable time and the Project Companies continue to pay the penalties in Article 50.3 beyond the applicable limits. achieve Beneficiation expected to d If the Permit Withdrawal Breach Event is related to the failure to achieve Beneficiation Facility Commissioning or the commissioning of the Beneficiation Power Station by the required deadline as provided in Article 50.1 .2c termination of Project Agreements related to the Project Companies right to conduct the Railway Operations and Mineral Terminal Operations and termination and deemed renouncing of

the Exploitation Jennit and any other permits and authorizations of the pag.180 .;JJ Project Companies shall be delayed until the tenth I 0111Project Commissioning if such date has not already passed. anniversary of 50.6 Payment of the financial penalties a b Any financial penalties due pursuant to this Article must be paid within the maximum period referred to in the applicable Article or failing a specified date for the financial penalties imposed under Article 50.3 thirty 30 Days following the receipt by the Project Company concerned of a Notification of a Breach. In case of failure by the Project Company concerned to fully pay the financial penalties within the time frames specified in Article 50.6a the State may enforce the provisions of Article 31.1 a. 50.7 Sanctions a b The defaulting Project Company is also liable to the civil and criminal sanctions provided by the Legislation in the event of breach of the Legislation in particular those relating to protection of the Environment. h may not escape any such liability by reason of the participation of the State as shareholder of said Project Company. Infringements sanctioned in accordance with the provisions of the Legislation and those of this Article 50.7 shall be recorded in accordance with the Legislation. 51 DAMAGES Notwithstanding any provision to the contrary in this Convention or another Project Agreement no Party shall be liable for any indirect special punitive or consequential damages including lost opportunities lost profits and similar measures of damages. 52 SUSPENSION OF OPERATIONS 52.1 Suspension Notwithstanding any other provisions in this Convention but subject to Article 50 Cameroon has the right to suspend all or any part of the Project Operations by giving the State thirty 30 Days prior written notice or such lesser period where the circumstances dictate that it is not possible to give such a period of notice specifying a the whole or part of the relevant Project Operations to be suspended; and b the period for which that whole or part of the relevant Project Operations will be suspended and the detailed reasons for the suspension which are to be one of the following causes c Economic Hardship; d Force Majeure; e Legitimate Cause; or v page 181 f Confiscation. provided that in each case such cause must have had a Material Adverse Effect on the Project Company's ability to conduct the Project Operations provided however in the case of Economic Hardship the effect set forth in Article 40.3bii must also have occurred. Such suspensions

shall constitute a formal suspension by a Project Company for the purposes of this Convention and any applicable Project Agreement.

52.2 State Right to Dispute Notice a If within the thirty 30 Day notice period or such other notice period referred to in Article 52.1 the State does not agree that Cam Iron and the relevant Project Company has the bona fide reasons to seek suspension under this Convention and the relevant Project Agreement then it shall put its case to Cam Iron and the relevant Project Company and if those companies do not accept the States position then the matter becomes a Dispute and is then subject to the operation of Article 56. b Where there is a Dispute Cam Iron and the relevant Project Company must not suspend Project Operations until the Dispute is determined unless it is not possible or is impractical to continue Project Operations until the Dispute is resolved or determined.

52.3 Consequences of Suspension As soon as practicable after the commencement of suspension of the whole or any part of the relevant Projection Operations in accordance with Article 52.1. Cam Iron and the relevant Project Companies must use their best endeavours to minimise the costs and expenses associated with the suspension on that part of the Project Operations. For the avoidance of doubt Project Companies shall not be liable for any costs and expenses incurred as a result of the suspension. A suspension may be deemed a Permitted Withdrawal Breach even pursuant to Article 50.1.1 a.

52.4 Resumption Cam Iron shall as soon as they become aware that the reason for any suspension no longer exists promptly recommence the whole or the part of the relevant Project Operations suspended.

52.5 Continuing Obligations In the event of suspension of the whole or any part of the relevant Project Operations under this Article 51 Cam Iron and the relevant Project Companies shall be relieved during the suspension of any continuing obligations to conduct Project Operations under the provisions of this Convention and an applicable Project Agreement but not other obligations that by their terms or nature should continue.

52.6 Extension of delay If, due to suspension under this Article 51 and if applicable confirmation of the necessity of such suspension if Disputed performance of any of the obligations under this Convention or a Project Agreement is delayed the duration of the delay to the extent undisputed or confirmed in accordance with the Dispute Resolution procedures set forth in Article 56 shall be

added to any period provided under this Convention and/or such Project Agreement for the performance of the obligations. page 1182 53 RENUNCIATION OF PROJECT LEASES OR MINING TITLES 53.1 Renunciation of the Project Lease a b c d e f g The Project Company may before the expiry of the term of any Project Lease it holds renounce the operation of all or part of that Project Lease. In the event of a renunciation before Project Commissioning the Project Company concerned shall inform the State of such renunciation without any prior notice being required. In the event of a renunciation of a Project Lease after the Project Commissioning other than for that part of the Project Lease on which the Project Road Agreement to the Railway becomes a Public Road the Project Company shall specify the effective date of the renunciation which shall not be less than three hundred and sixty five 365 Days from the date of notice as to a portion of a Project Lease and seven hundred and thirty 730 Days for the entire Project Lease from the date of notice. In addition for information purposes only the Project Company shall give the State the reasons for such renunciation and the conditions of renunciation. Within sixty 60 Days of the notice the State shall officially notify the Project Company of whether or not it is prepared to accept such a rescission. Where the Project Companies apply to renounce all of the Project Leases as a consequence of the completion of Mining Operations the State must accept the renunciation subject to the memorandum referred to in Article 53.1e. Any renunciation shall not become effective until after the State and the Project Company or Project Companies as the case may be have jointly signed a memorandum in which the State and the Project Company or Project Companies as the case may be shall acknowledge that the terms of withdrawal referred to in this Convention have been complied with. The renunciation shall be confined by decree to the extent required by Legislation. Notwithstanding the foregoing the Project Lease relating to the Railway Area shall be renounced without further action by the Parties and solely with respect to the portions of the Project Road Adjacent to the Railway which will become Public Road pursuant to the Road Plan at such time as the applicable portions of the Project Road Adjacent to the Railway become Public Roads.

53.2 Renunciation of the Exploitation Permit a The Mine Project Company may before expiry of the

term of the Exploitation Permit renounce the operation of all or part of the Exploitation Permit in accordance with Article 32 of the Mining Code Implementing Decree by giving notice of such renunciation to the State at least two 2 years before the proposed date of such renunciation the that said renunciation will not be effective until provided requirements of Articles 53.2c and 53.2d have been completed. v pagt 1183 b The Mine Project Company may not renounce all of the Exploitation Permit in circumstances where both it and the other Project Companies do not renounce all the Project Leases as contemplated in Article 53.1 c The application must provide or indicate i the information required to identify the Exploitation Permit; ii iii iv v the results of the Mining Operations carried out as of the date of filing of the application; the status of Mine Project Companys undertakings and obligations already satisfied and those that remain to be satisfied; the reasons in particular technical and financial on which the application for renunciation is based the undertaking to fulfil all the outstanding obligations with respect to the Mining Operations pursuant to the Mining Legislation and this Convention and in particular the obligations contained in the Environmental and Social Assessment and Management Plan minimum programme of works relinquishment works in terms of protection of the Environment and safety of persons and Goods; and vi in case of partial renunciation A B a geographical map on a scale of 1:200000 of the area that the Mine Project Company wishes to retain specifying the surface area peaks and boundaries of the said delimited area; and a detailed report setting out the works already carried out and their results specifying to what extent the objectives indicated in the initial application have been achieved or altered and justifying the choice of the surface areas the Mine Project Company wishes to retain. d e The Minister may cause the application for renunciation to be supplemented or rectified if need be provided that he sends to the Mine Project Company a request within thirty 30 Days. As from approval of the application for renunciation the Mine Project Company shall cease the mining works and unless the State requires otherwise shall undertake rehabilitation works of the mining site concerned by the renunciation in accordance with the requirements of d1e Environmental and Social Assessment and Managen1ent Plan. Normal closure requirements consistent with the

environmental and safety standards set forth in this Convention and the Legislation shall apply but backfilling of the mine pits will however not be required. f The renounced Exploitation Permit will vest in the State on the date that all rehabilitation works of the mining site under the Environmental and Social Assessment and Management Plan have been completed. page 1184 53.3 Rights of the State Upon Renunciation. Upon renunciation of a Project Lease and Project Agreement with respect to the Railway or Mineral Terminal or the Exploitation Permit the State may terminate all or any part of the Project Agreements and Exploitation Permit and the applicable Handback Requirements set forth in Article 54.2 shall apply. 54 RIGHTS AND OBLIGATIONS AT THE END OF A PROJECT AGREEMENT 54.1 Condition of Project. As at the end of one or more Project Agreements for any reason whatsoever including its expiry or termination under the conditions set forth in this Convention or any renunciation pursuant to Article 53; and unless the rights and obligations resulting from said Project Agreement are taken over by an Assignee in accordance with the provisions of this Convention a the relevant Project Company or Cam Iron shall have or caused a Third Party to have i ii iii iv implemented and fulfilled all its obligations to rehabilitate the Project Area to which it is bound under the Environmental and Social Assessment and Management Plan Project Agreements and Legislation; designed and constructed each of the applicable elements of the Project to have been in accordance with the applicable design life requirements set forth in the Specifications; designed and maintained the condition of the applicable portion of the Project in a manner consistent with the applicable Project Company having performed its obligations under the Project Agreements and in accordance with the Operating Standards; designed and maintained the condition of the applicable portion of the Project in a manner consistent with the useful life standards established by the Specifications compliance with which shall be determined using the methodology and criteria set forth therein. So long as the useful life standards so established for all of the systems and equipment comprising the applicable portion of the Project are complied with on a weighted average useful life basis for all such systems and equipment in the aggregate it shall not be necessary to comply with the standard for each individual system or piece of equipment; and v

complied generally with all other obligations with respect to design construction and maintenance of the applicable portion of the Project under the applicable Project Agreement in each case which shall be controlled, verified and recorded in accordance with Article 54.2.1; and h the relevant Project Company shall release as of the expiration, termination or revocation of any Project Agreement to which it is a party all facilities, equipment and materials located within the relevant Project Area as directed in this Convention and the relevant Project Agreement and as required by Legislation.

54.2 Handback Requirements The requirements of this Article 54.2 constitute the Handback Requirements with respect to the Mineral Terminal Operations, Railway Operations and any other additional Project Operations that are set forth in the Project Agreements as a BOOT.

54.2.1 Handback Survey and Work Plan. In conjunction with the preparation of the maintenance plans for the Assets comprising the Mineral Terminal Facilities and the Railway Facilities commencing at least two (2) years prior to the applicable expiration date, the applicable Project Company shall provide the State an independent report prepared by an independent expert approved by the State, such approval not to be unreasonably withheld, and the State shall conduct a joint inspection and survey of the assets comprising the Mineral Terminal Facilities and Railway Facilities. If such survey provided indicates that any element of the Assets comprising the Mineral Terminal Facilities and the Railway Facilities on such expiration date or over the remainder of the term of the applicable Project Agreement is not in the reasonable discretion of the State reasonably likely to be in a condition consistent with the standards set forth in the applicable Project Agreement, then within sixty (60) Days of completion of the survey, the Project Company shall deliver to the State the Project Company's plan to perform the additional work necessary to meet the Handback Requirements together with a cost estimate for the work.

54.2.2 Determination of Hand back Security. Upon completion of the condition survey and work plan required by Article 54.2.1, the State a b may review and comment on the Project Company's performance plan; and shall after giving due consideration to the Project Company's cost estimate, determine in good faith the amount the Handback Security it reasonably believes necessary to complete the additional work required to

meet the Handback Requirements. 54.2.3 Establishment and Use of Handback Security Account. From time to time together the applicable Project Company shall cause to be deposited a Bank Guarantee letter of credit or mutually acceptable security in an amount equal to the Handback Security from a bank with an Acceptable Bank Rating. The Project Company shall have the right upon the submittal of certified requisitions to the State with full supporting receipts or other evidence of payment to reduce the undrawn amount of the Bank Guarantee letter of credit or other security by the amount of the cost of work performed. 54.2.4 Performance of the Handback Work and Further Inspection. The Project Company shall implement the handback plan proposed under Article 54.2.1 and take all other steps necessary to assure compliance with the Handback Requirements notwithstanding the States participation in the handback survey or the review of the Project Companys work plan or the fact that the actual cost of compliance may be higher than the amount of the Handback Security. At least one hundred and eighty (180) Days prior to the expiration or termination date the Project Company and the State shall conduct a further joint inspection and survey of the condition of the Assets comprising the Mineral Terminal Facilities and the Railway Terminal Facilities and the progress of the handback work. 54.2.5 Final State Condition Assessment. On or within five (5) Business Days after the expiration or termination date the State shall either (a) issue to the Project Company a Project Agreement Termination Certificate confirming compliance with the Handback Requirements and return any remaining Handback Security to the Project Company; or (b) notify the Project Company of its decision not to issue the Project Agreement Termination Certificate setting out each condition with respect to which the Assets comprising the Mineral Terminal Facilities and the Railway Terminal Facilities do not comply with the Handback Requirements and stating the States estimate of the cost of completing all work required for the Assets comprising the Mineral Terminal to comply with the Facilities and the Railway Terminal Facilities Handback Requirements. 54.2.6 Final Project Company Condition Assessment. The Project Company may within thirty (30) Days after receipt of the notice given in accordance with Article 54.2.5b object to any matter set forth in the notice giving details of the grounds of each such objection and setting out the Project

Company's proposals in respect of such matters. 54.2. 7 Final Compliance. If the Project Company did not as of the applicable expiration or termination date comply in all respects with the Handback Requirements the Project Company shall complete any work necessary to cause such compliance within sixty 60 Days of such expiration or termination date or pay to the State no later than sixty 60 Days after the expiration date an amount equal to the cost of completing any outstanding handback work so that the Assets comprising the Mineral Terminal Facilities and the Railway Terminal Facilities are in a condition which complies with the Handback Requirements. 54.2.8 Rehabilitation. All rehabilitation and remediation required by the applicable environmental Legislation and the Environmental and Social Assessment and Management Plan shall be performed regardless of whether the State elects to receive assets of the Project Companies pursuant to its rights under Articles 9.4 10.15. 12.2.1 and 13.4 unless the State gives written notice to the respective Project Company that the Project Company is excused from such rehabilitation and remediation and rehabilitation and remediation in other areas will only be performed if expressly required by another Project Agreement. page 187 55 FORCE MAJEURE AND LEGITIMATE CAUSE 55.1 Principle a If it becomes impossible for i Cam Iron to perform its obligations under this Convention; or ii a Project Company to perform its obligations under a Project Agreement to which it is a party or they can only be performed with delay such nonperformance or delay is not considered a breach of this Convention or other applicable Project Agreement if it results from an Ordinary Force Majeure Event Political Force Majeure Event or Legitimate Cause provided that Cam Iron or the Project Company as the case may be invoking the same duly proves a causal link between the nonperformance or delay and the alleged Ordinary Force Majeure Event Political Force Majeure Event or Legitimate Cause. b c d If it becomes impossible for the State to perform its obligations under this Convention or a Project Agreement to which it is a party or they can only be performed with delay such nonperformance or delay is not considered a breach of said agreement if it results from an Ordinary Force Majeure Event provided that the State duly proves a causal link between the nonperformance or delay and the alleged Ordinary Force Majeure Event. The Ordinary Force

Majeure can under no circumstances be invoked by either Cam Iron or a Project Company in order to avoid any of its payment obligations arising from this Convention or the Project Agreement to which it is a party. The Political Force Majeure and the Legitimate Cause may not in any case be invoked by the State to avoid any of its obligations under the provisions of this Convention or the Project Agreements.

55.2 Procedure a b Where one Party considers that it has been prevented from performing its obligations due to a Force Majeure Event or Legitimate Cause it shall promptly notify the other Parties setting out the cause of such event. If a Party or a Project Company asserts Force Majeure as an excuse for failure to perform one or more of its contractual obligations it must prove that it took reasonable steps to minimize delay or damages caused by foreseeable events that it has substantially performed its obligations not affected by the Force Majeure Event and that the other Party was timely notified of the likelihood or actual occurrence of the Force Majeure Event.

55.3 Extension of delay Termination of Project Agreement a If due to a Force Majeure Event performance of any of the obligations under this Convention or a Project Agreement is delayed the duration of the delay shall be added to any period provided under this Convention f; page 188 tJJ and or such Project Agreement for performance of this obligation. b If the force Majeure Event has lasted more than thirty six 36 months any Party may decide to terminate the relevant Project Agreement subject to the relevant Project Company's compliance with its obligations in terms of termination of the Project Agreement to which it is a party in accordance with the provisions of Article 54.

56 DISPUTE RESOLUTION 56.1 Amicable Settlement and Continued Performance a b c The Parties undertake to seek an amicable settlement of any Dispute Technical Dispute Expropriation Dispute or Convention Compensation Dispute by providing notification as provided under this Convention and by attempting to negotiate an amicable resolution. Nonetheless the parties to the dispute agree that they have no obligation to agree on a settlement. If a Dispute Technical Dispute Expropriation Dispute or Convention Compensation Dispute has not been resolved for any reason within sixty 60 Days following notification or such other period as the parties may agree to in writing any Party may initiate an applicable dispute resolution procedure as provided

in this Article 56. Notwithstanding anything in this Article 56 to the contrary during the pendency of any Dispute Technical Dispute Expropriation Dispute or Compensation Dispute the Project Companies and the Government shall be obliged to continue performance of the Project Operations and their obligations under the Project Agreements except to the extent that actual performance of a specific operation or obligation cannot be undertaken or completed without resolution of a Dispute or a Technical Dispute under the dispute resolution procedures in this Article 56.

56.2 Expert Procedure

a In the event of any Technical Dispute the parties agree to submit the matter to administered expertise proceedings in accordance with the Rules for Expertise of the International Chamber of Commerce the Expert Procedure; provided that the provisions of this Article 56.2 shall govern to the extent they conflict with the ICC Expertise Rules. The Technical Dispute shall be heard by an impartial and independent expert with expertise and other qualifications set forth in this Article 56.2 unless the parties otherwise agree in writing including regarding the language. The party submitting a request Request to the ICC for resolution of a Technical Dispute shall include the name contact details and qualifications of a proposed expert who satisfies the qualifications of this Article 56.2. The responding party or parties shall have ninety 90 Days after receipt of the Request either to agree to the appointment of the proposed expert or to nominate another expert who satisfies the qualifications of this Article 56.2. If within ninety 90 Days after receipt of the response or such other time frame as is otherwise agreed in writing by the parties the parties have not reached agreement on the nomination of an expert for confirmation by the ICC International Centre for Expertise the Centre the Centre shall make the appointment.

b Unless otherwise agreed in writing by the parties the expert shall to the greatest extent possible satisfy the following qualifications:

- i recognized expertise and professional experience in the field of the Project Operations concerned by the Technical Dispute; and fluency in both French and English sufficient to be capable of conducting the Expert Proceeding in French and English.
- c d c f g h i G The expert appointed or confirmed in accordance with the ICC Expertise Rules shall deliver the draft report of its findings to the Parties within ninety 90 Days following appointment or confirmation unless the parties otherwise

agree in writing to extend this deadline. The parties will then have a period of ten 10 Days to comment on the draft report and findings. The expert shall deliver its decision report and findings Decision within ten 10 Days after expiration of the comment period whether or not the expert has received comments from any or all of the parties. Any party that is dissatisfied with a Decision may within thirty 30 Days of receiving it send a written notice expressing its dissatisfaction to the other party or parties. If the expert fails to deliver its Decision within the time periods set out above then any party may within thirty 30 Days after this period has expired send a written notice to the other party or In either event the notice of dissatisfaction parties of its dissatisfaction. shall set out the matter in dispute and the reasons for dissatisfaction. A Decision shall be binding on all parties who shall promptly give effect to it unless and until it is revised in an amicable settlement or in any arbitral award issued pursuant to the arbitration procedure set forth in Article 56.3. If no Party has sent a written notice to the other party or parties expressing its dissatisfaction with the Decision within thirty 30 Days of receiving it the Decision shall become final and binding upon all Parties. If any party fails to comply with a Decision when required to do so the other party or parties may refer the failure itself to arbitration under Article 56.3. If any party submits such a written notice expressing its dissatisfaction with a Decision or if the expert does not issue its Decision within the time limits prescribed in this Article 56.2 the Technical Dispute in question shall be finally settled by arbitration in accordance with Article 56.3. Until the Technical Dispute is finally settled by arbitration or amicable settlement or unless the arbitral tribunal decides otherwise the Parties remain bound to comply with the Decision. An arbitral tribunal established under Article 56.3 in respect to a Technical Dispute that had been submitted to an expert under this Article 56.2 shall have full power to open up review revise or replace the expert's Decision and findings. The parties to any expert procedure under this Article 56.2 and their respective Affiliates shall keep the expert procedure confidential and shall not disclose to any person other than those necessary to the proceedings the existence of the expert proceedings any information submitted during paragraph 1190 k l m n the proceedings any documents submitted in connection with it. any oral submissions or testimony transcripts or any

Decision all of which shall be treated as confidential business information unless disclosure is required by law is part of an arbitration commenced under this Article 56 or is otherwise necessary for permissible court proceedings. The costs of the ICC Centre and the expert shall be borne equally by the parties. Unless the parties otherwise agree the expert procedure shall be conducted in English and French. All written submissions shall be made in both languages. Oral testimony shall be in English or French and shall be simultaneously translated in the other language. Each party shall bear its own translation costs. Notwithstanding anything to the contrary in this Article 56.2 the Parties may refer any technical matter to an expert under this Expert Procedure by mutual agreement. The Parties may adopt one or more separate agreements each a Technical Dispute Resolution Agreement that provides for resolution of one or more technical disputes under the Project Agreements. To the extent adopted such an agreement is anticipated to contain provisions establishing a permanent dispute adjudication board or boards with the authority to make binding decisions to speed the resolution of technical disputes. If a Technical Dispute Resolution Agreement is adopted and by its terms it supersedes this Article 56.2 and such Technical Dispute Resolution Agreement shall govern the Technical Disputes provided for therein. 56.3 Arbitration Procedure a b Any Dispute not amicably resolved under Article 56.1 any Technical Dispute not resolved under Article 56.2 and any Expropriation Dispute or Compensation Dispute or other Dispute not excluded by Article 56.4 shall be finally settled under the Rules of Arbitration Arbitration Rules of the ICC the Arbitration Procedure provided that in the event of conflict between the Arbitration Rules and this Article 56 the provisions of this Article 56 shall control. Any dispute to be resolved under this Arbitration Procedure shall be heard by three 3 impartial and independent arbitrators each of which must be capable of conducting the proceeding in both English and French. The Claimants and Respondents shall nominate one arbitrator each in the Request for Arbitration and the answer to the Request respectively. Where there are multiple claimants or multiple respondents the multiple claimants jointly or the multiple respondents jointly shall nominate their respective arbitrator. To the maximum extent permitted by law the State on the one hand and the Project Companies and all

other parties Project Parties on the other hand. shall retain their respective abilities to nominate one arbitrator each even if additional parties are included or added to the arbitration. If within ninety 90 Days of commencement of the arbitration the claimants have not nominated an arbitrator then the appointment shall be made by the ICC. If within ninety 90 Days after receipt of the answer to the Request the respondents have not nominated an arbitrator then the appointment shall be made by the ICC. The two arbitrators nominated or appointed in accordance with the above process shall then nominate the third arbitrator who shall act as the president of the arbitral tribunal. If within thirty 30 Days after the appointment of the second arbitrator the two arbitrators have not agreed upon the choice for the president then he or she shall be appointed by the ICC. Should any of the arbitrators die resign refuse not be confirmed or become unable to act before an award is issued the vacancy shall be filled by the method set forth in this clause for such arbitrators original nomination and appointment. c No Party shall be required before initiating or taking part in arbitration proceedings under this Article 56 to have first initiated or exhausted any administrative or judicial remedy before the Cameroonian jurisdictions unless the Parties to the Dispute under these particular arbitration proceedings had first specifically so agreed in writing or unless required under any applicable international treaty or customary international law principle. d The seat of the arbitration shall be Paris France. e l g h i The arbitration shall be conducted in English and French. All written submissions shall be made in both languages. Oral testimony shall be in English or French and shall be simultaneously translated in the other Language. Each party shall bear its own translation costs. The arbitration panel shall have authority to resolve its own jurisdiction. Any arbitration award shall be final and binding. Judgment on the award may be entered by any court having jurisdiction thereof. The Parties to any arbitration under this Article 56.3 and their respective Attorneys shall keep the arbitration confidential and shall not disclose to any person other than those necessary to the proceedings the existence of the arbitration any information submitted during the arbitration any documents submitted in connection with it any oral submissions or testimony transcripts or any award all of which shall be treated as confidential business information unless

disclosure is required by law or is otherwise necessary for permissible court proceedings including any recognition or enforcement proceedings. The parties to the arbitration shall pay their own costs related to the arbitration and shall share in equal portions the costs of the arbitrators and the panel. The State within the context of an arbitration commenced under this Article 56.3 waives its right to invoke immunity from jurisdiction of the arbitral tribunal.

56.4 Resolution of An Expropriation Dispute.

a An Expropriation Dispute defined in Article 41.4 shall be subject to amicable settlement under Article 56.1 or arbitration under Article 56.3 unless the dispute or any related expropriation claim could be or has been or could have been submitted for consultation or arbitration under the Convention on the Settlement of Investment Disputes between States and paragraph 192 Nationals of other States ICSID Convention or any applicable bilateral investment treaty and in each of those instances if not resolved by amicable settlement under Article 56.1 a Party may only raise the claim pursuant to the dispute resolution provisions of the ICSID Convention. The Project Parties on their own behalf and on behalf of their successors assigns and investors claiming pursuant to an applicable treaty hereby expressly acknowledge that the State does not consent to parallel successive or duplicative actions under Article 56.3 and before ICSID with regard to any claim or any related claim arising from the same alleged act of expropriation even if the claim or any related claim could be plead under a different body of law or legal theory.

56.5 Stipulations Concerning Dispute Resolution

a The State and Project Parties on their own behalf and on behalf of their successors assigns and investors stipulate that i ii iii the operations contemplated by this Convention constitute an investment within the meaning of article 251 of the ICSID Convention; Cam Iron is a national of a Member State of the ICSID Convention because it is Controlled by an Australian national for the purposes of article 252b of the ICSID Convention; and notwithstanding any applicable bilateral investment treaty any claim properly brought against the State by or on behalf of Cam Iron and the Project Companies or the Project Parties or their successors assigns or investors shall be submitted for resolution to ICSID and not to any domestic tribunal.

b The State and Project Parties stipulate that the operations contemplated by this Convention constitute an investment within the meaning of article 251 of the

ICSID Convention and that Cam Iron is a national of a Member State of the ICSID Convention because it is Controlled by an Australian national for the purposes of article 252b of the JCSID Convention.

56.6 Resolution of A Convention Compensation Dispute A Convention Compensation Dispute and any other Dispute shall be subject to amicable settlement under Article 56.1 or arbitration under Article 56.3 unless the dispute or any related claim could be has been or could have been submitted for consultation or arbitration under the Convention on the Settlement of Investment Disputes between States and Nationals of other States I CSID Convention or any applicable bilateral investment treaty and in each of those instances if not resolved by amicable settlement under Article 56.1 a Party may only raise the claim pursuant to the dispute resolution provisions of the ICSID Convention. The Project Parties on their own behalf and on behalf of their successors assigns and investors hereby expressly acknowledge that the State does not consent to parallel successive or duplicative actions under Article 56.3 and before ICSJD with regard to any claim or any related claim arising from the same alleged acts even if the claim or any related claim could be plead under a different body of law or legal hoory.

1 page]193 57 FUTURE AMENDMENTS

The Parties acknowledge that this Convention evidences a complex long term agreement between the Parties and that there may be circumstances which arise in the future that the Parties have not contemplated or fully or accurately discussed. Each Party agrees to consider a proposal from another Party to amend prior t.o the Date of Entry Into Force but shall have no obligation to enter into such amendment.

58 FURTHER DOCUMENTS AND ACTS The State Cam Iron and each of the Project Companies must in a timely manner execute such contractual documents and perform such acts as shall be reasonably requested by another Party necessary to give full effect to d1is Convention and the Specific Agreements including where an amendment to or modification of. the Project Agreements is required under the terms of this Convention.

59 LEGISLATION IN FORCE Tl1is Convention is govemed and construed in accordance with Legislation and the principles of internationallaw and shall be interpreted according to them.

60 ENTIRE AGREEMENT This Convention and the agreements contemplated in it represent the entire agreement between the

Parties with respect to the transactions contemplated hereby and thereby. This Convention and the contemplated agreements supersede any previous agreements including the Framework Agreement arrangements and understandings and agreements among the parties with respect to such transactions.

61 **NOWAIVER** No failure by either Party in requesting the strict performance by the other Party of the terms and conditions of this Convention or in taking the necessary measures available to it to guarantee such performance shall be deemed to be a waiver of any of the rights granted to it under this Convention. Each Party shall be bound to comply with the undertakings, liabilities and duties imposed on it by this Convention. Each Party shall be bound to perform the terms of this Convention in strict compliance despite any other Party's potential failure to act.

62 **SEVERABILITY** Each and every guarantee, undertaking and agreement contained in this Convention is and shall be construed to be a separate and independent guarantee, undertaking and agreement. If any term or provision of this Convention or the application of this Convention to any Party or in any circumstance shall to any extent be declared invalid or unenforceable by an arbitrator or by a court of competent jurisdiction, the remainder of this Convention or the application of such term or provision to Parties or circumstances other than those as to which it is invalid or unenforceable shall not be affected by it.

63 **PUBLIC ANNOUNCEMENTS** The State Project Companies and Cam Iron shall use their reasonable efforts to coordinate and agree on the language contained in any public announcement regarding this Convention; provided that nothing herein shall be deemed to limit any obligation of Cam Iron if it becomes listed or any controlling Shareholder that is listed on a recognized stock exchange on the one hand or the State on the other may comply with any applicable legislation.

64 **NOTICES**

64.1 **Method of delivery** All communications or notices to the Parties set forth in this Convention shall be drawn up in French and English and if delivered in Cameroon delivered personally with acknowledgement of receipt. Delivery to parties outside of Cameroon shall be delivered personally or sent by reputable internationally delivery company charges prepaid with acknowledgment of receipt. Delivery to parties designated to receive copies of notices shall not constitute delivery to the specified Party.

exploration be undertaken for the discovery and production of Petroleum in Pakistan; and

WHEREAS XYZ and ABC represents that they are financially sound and have adequate technical expertise and experience in exploring for developing and producing Petroleum and recognizes the importance to Pakistan of the development of its Petroleum resources; and WHEREAS XYZ and ABC are desirous of undertaking Petroleum exploration development and production operations; in Pakistan in conjunction with GHPL if applicable and WHEREAS THE PRESIDENT is willing in the lawful exercise of the authorities vested in him and in particular by virtue of his powers under the Regulation of Mines and Oilfield and Mineral Development Government Control Act 1948 XXIV of 1948 as amended and the Rules as hereinafter defined to grant to XYZABC and GHPL if applicable the Concessions and rights hereinafter more particularly set forth; NOW THEREFORE THE PRESIDENT XYZ ABC and GHPL if applicable hereinafter individually referred to as the Party and collectively as the Parties agree as follows Model Petroleum Concession Agreement 2009 5

ARTICLE1 DEFINITIONS Whenever used in this Agreement the following terms shall have the meanings set forth below

1.1 1.2 Accounting Procedure means the procedure as outlined in Appendix A of Annex II. Affiliate means a company or other entity directly or indirectly effectively controlling or effectively controlled by or under direct or indirect effective common control with a specified entity. For the purposes of this definition control when used with respect to any specified entity means the power to direct administer and dictate policies of such entity it being understood and agreed that it is not necessary to own directly or indirectly fifty percent 50 or more of such entitys voting securities to have effective control over such entity but ownership direct or indirect of fifty percent 50 or more of such entitys voting securities shall automatically indicate effective control and the terms controlling and controlled have meanings corresponding to the foregoing.

1.3 Agreement means this Petroleum Concession Agreement and its annexes.

1.4 1.5 Allowed Transportation Cost means the reasonable actual cost as defined in the Rules. Appraisal or Appraisal Programme means an activity or programme carried out to evaluate and appraise a Discovery in the Area pursuant to the Rules and this Agreement.

1.6 Appraisal Well means a well drilled pursuant to an approved Appraisal Programme.

1.7 Arms Length Sales means the sales as

defined in the Rules. 1.8 1.9 Area means the entirety of the area or areas outlined and more particularly described in Annex I less any portion thereof which may be relinquished or surrendered under the terms of this Agreement. Barrel or BBL means a quantity equivalent in volume to fortytwo 42 United States Gallons adjusted to sixty degrees Fahrenheit 60oF and pressure of 14.65 pounds per square inch PSI after correction for basic sediments and water BSW. 1.10 Calendar Month or Month means any of the twelve months of the Calendar Year. 1.11 Calendar Year means the period from January 1 to December 31 both inclusive according to the Gregorian Calendar. Model Petroleum Concession Agreement 2009 1.12 Coal Bed Methane or CBM as defined in the Rules. 6 1.13 Commercial Discovery means a commercial discovery of petroleum as defined in the Rules. 1.14 Commercial Production means commercial production of Petroleum as defined in the Rules. 1.15 Condensate means the liquid Petroleum excluding Crude Oil and LPG produced at surface by processing or separation of Natural Gas from a Gaseous Gas Condensate Reservoir. 1.16 Crude Oil means the liquid Petroleum other than Condensate and LPG produced by separation at the surface from a Liquid Reservoir in its natural state before the same has been refined but after extraction of water and foreign substances. 1.17 Commencement of Commercial Production means the first occurrence of Commercial Production in an Area. 1.18 Contract Year means a period of one Year from the Effective Date or any anniversary thereof 1.19 Date of Commercial Discovery means the date when the Government approves a Commercial Discovery pursuant to Article 1.13. 1.20 Date of Significant Gas Discovery means the date when Operator formally notifies the Director General Petroleum Concessions in accordance with Article 6.4 hereof that a Significant Gas Discovery has been made. 1.21 Day means a continuous period of twentyfour 24 hours beginning at 8 A..M. Pakistan Standard Time or such other time as may be mutually agreed by the Parties. 1.22 Director General Petroleum Concessions DGPC means any officer or authority appointed by the Government to exercise the powers and perform the functions of the Director General Petroleum Concessions under the Rules. 1.23 Designated Area means the area pertaining to a Discovery that does not merit Appraisal or is not a Commercial Discovery or a Significant Gas Discovery as

provided for in Article 6 .2. 1.24 Development or Development Operations means any activity carried out under an approved Development Plan in accordance with the Rules. 1.25 Development Plan means the plan submitted by the Operator for the development of a Commercial Discovery which has been approved by the Government pursuant to the Rules. Model Petroleum Concession Agreement 2009 7 1.26 Development Well means a well drilled in accordance with the approved Development Plan for the purpose of producing Petroleum. 1.27 Discovery means discovery of Petroleum as defined in the Rules. 1.28 Discovery Area means the area as defined in the Rules. 1.29 Dollar or means the lawful currency of the United States of America. 1.30 Effective Date means the later of the date on which the Licence has been granted or this Agreement has been executed. 1.31 Expenditure for purposes other than assessment of Income Tax means expenditure incurred in connection with or inental to the conduct of Joint Operations whether chargeable to the capital or the revenue account including operating costs whether or not with respect to producing wells. Such expenditures are more particularly classified and identified and set forth in the Accounting Procedure. 1.32 Exploration or Exploration Operations means the search for Petroleum in the Area previously not known to have existed using geological geophysical and other methods and the drilling of Exploration Wells as more particularly defined in the Rules. 1.33 Exploration Well means an exploration well as defined in the Rules. 1.34 Field Gate means a point as defined in the Rules. 1.35 GaseousGas Condensate Reservoir means a Petroleum reservoir which under reservoir conditions of original temperature and pressure is predominantly in the gaseous phase. 1.36 Government means the Federal Government of the Islamic Republic of Pakistan. 1.37 Good International Oilfield Practices means as defined in the Rules. 1.38 Joint Account means the set of accounts maintained by the Operator in accordance with the Accounting Procedure and normal accounting practices in which the Operator shall record all charges Expenditures and credit made by it in carrying out the Joint Operations hereunder which are chargeable or creditable to the Working Interest Owners as provided herein. 1.39 Joint Operations means all marine and land activities including but not limited to Petroleum exploration prospection development and production activities

conducted by Working Interest Owners under and pursuant to the terms and provisions of this Agreement and the Joint Operating Agreement. It includes any platform subsea facilities gasoil separation pressure maintenance pipeline and Model Petroleum Concession Agreement 2009 8 other transportation storage or other ancillary activities necessary to facilitate the production processing storage transportation and disposal of Petroleum. 1.40 Joint Operating Agreement JOA means the Joint Operating Agreement attached hereto as AnnexII. 1.41 Lease means any and all Petroleum Development and Production Leases which may be granted by the Government in accordance with the Rules. 1.42 Licence means a licence for Petroleum Exploration granted in accordance with the Rules. 1.43 Liquid Reservoir means a Petroleum reservoir which under reservoir conditions of original temperature and pressure contains hydrocarbons predominantly in the liquid phase. 1.44 Liquefied Petroleum Gas or LPG means a mixture of Propane and Butane separated from Natural Gas by compression extraction or other processes and marketed in conformity with the quality and specifications established by Pakistan Standard Specification No. 17051976 for Commercial Butane Propane Mixture as amended from time to time. 1.45 Minimum Expenditure means the minimum Expenditure referred to in Article 3 in respect of the initial term of the Licence or any renewal thereof. 1.46 Minimum Work or Minimum Work Programme means the minimum work programme referred to in Article 3 in respect of the initial term of the Licence or any renewal thereof. 1.47 Ministry means the Ministry for the time being in charge of Petroleum affairs. 1.48 Natural Gas means all petroleum which at standard atmospheric conditions of pressure and temperature are in a gaseous phase including nonhydrocarbon gases which are in association with and produced together with such gaseous hydrocarbons. 1.49 Operating Committee means the Committee constituted pursuant to this Agreement and the Joint Operating Agreement. 1.50 Operator means the entity designated by the Working Interest Owners to carry out the Joint Operations pursuant to this Agreement and the Joint Operating Agreement and approved by the Government pursuant to the Rules. 1.51 Pakistani Incorporated Petroleum Company means a company incorporated for the purpose of petroleum exploration development and production and

existing under the laws of Pakistan. Model Petroleum Concession Agreement 2009 9 1.52 Petroleum means all liquid and gaseous hydrocarbons as defined in the Rules. 1.53 . Policy means the Petroleum Exploration and Production Policy 2009 1.54 Price Notification Period means six monthly period starting at eight 8 A.M. Pakistan Standard Time on 1st January and 1st July each year except that the first period may commence from the start of Commercial Production till 30th June or 31st December as the case may be. 1.55 Production or Production Operations means activities not being Development Operations undertaken in order to extract save treat measure handle store and transport Petroleum to storage or loading points or both and to carry out any type of primary and secondary operations recompression maintenance of pressure and water flooding and all related activities such as planning and administrative work and shall also include maintenance repair and replacement of facilities and well workovers conducted after the commencement of Commercial Production. recycling including 1.56 Reference Crude means the crude oil or a basket of crude oils imported into Pakistan during the first six months periods of the seventh months immediately preceding the relevant price Notification Period for the purpose of gas price calculation. 1.57 Reference Crude Price or RCP means the weighted average CF price FOB price plus freight on AFRA basis of the Reference Crude. 1.58 Rules means the Pakistan Petroleum Exploration and Production Rules 2009 including all Schedules. Rule means a rule contained within said Rules. 1.59 Significant Gas Discovery means a Discovery of Natural Gas from an Exploration Well in an Area as defined in the Rules. 1.60 Significant Gas Discovery Area means the portion of the Area defined by Working Interest Owners with the approval of the Government pursuant to Article 6.6 covering a Significant Gas Discovery 1.61 Surrender means the termination or expiry or surrender of rights with respect to the whole or any part of the Area including the expiration of rights according to the terms of the Licence the Leases this Agreement and the Rules. 1.62 Surrendered Area means whole or part of the Area with respect to which the rights of a party have terminated by Surrender or by assignment or by termination of the business pursuant to this Agreement. 1.63 Well head Value or Value means the value of the Petroleum as defined in the Rules. 1.64 Work Unit has

the same meaning as specified in Annex X. Model Petroleum Concession Agreement 2009 10 1.65 Working Interest means all or any undivided interest in the entirety of the Petroleum Concessions rights and obligations and liabilities imposed by the Rules this Agreement the Licence and any Leases granted pursuant to the Rules and this Agreement including the enjoyment of the exclusive right to explore and prospect for develop produce sell and otherwise dispose of Petroleum from the Area proportionate to which all working interest owners are obligated to bear and pay its share of all costs and Expenditures including royalties on production and rentals in exploring and prospecting for drilling developing producing selling and otherwise disposing of Petroleum from the Area. 1.66 Working Interest Owner means an owner of a Working Interest. 1.67 Year means a period of twelve consecutive Months according to the Gregorian calendar. Model Petroleum Concession Agreement 2009 11 ARTICLE2 RIGHTS AND LIABILITIES 2.1 THE PRESIDENT hereby grants to XYZ ABC and GHPL if applicable the Petroleum Concessions and other rights more particularly described in this Agreement including but not limited to conducting or causing to be conducted Petroleum exploration prospecting development and Production Operations hereunder including the transportation whether by pipeline or otherwise storage terminalling export and sale of Petroleum subject to the provisions of this Agreement. 2.2 In respect of Joint Operations conducted under the authority of this Agreement the Licence or any Leases granted over any part of the Area a b c XYZ ABC shall be the Operator subject to the provisions of the Joint Operating Agreement and no change in operatorship will take place without the consent of the Government. The Joint Operations shall be conducted diligently with due regard to Good International Oilfield Practices and in conformity with the requirements of the Rules and all applicable laws and regulations. Every important agreement and contract relating to Joint Operations shall be consistent with the provisions of this Agreement and the Rules. 2.3 This Agreement contemplates Joint Operations which may require the construction and operation of temporary or permanent exploration and production facilities including pipelines both within and outside the Area. THE PRESIDENT subject to relevant rules laws and policies agrees to assist the Working Interest Owners in the carrying out of all Joint

Operations contemplated hereunder including the construction and operation of such facilities and in obtaining for the Operator and its contractors and subcontractors such communication permits radio telex telefax telephone PABX etc. or other clearances permits and authorizations as shall be necessary or convenient in this regard including the approval required for opening a branch office in Pakistan. 2.4 This Agreement does not create a partnership or any taxable entity but is solely a joint operating arrangement among the Parties. Model Petroleum Concession Agreement 2009 12

ARTICLE 3 EXPLORATION WORK PROGRAMME 3.1 THE PRESIDENT has prior to or simultaneously herewith granted to XYZ ABC and GHPL if applicable a Licence in accordance with the Rules. 3.2 a The Licence shall be for an initial term of five 5 years. divided into two phases each referred to as a Phase I and Phase II the first having a duration of three Contract Years and the second having a duration of two Contract Years. The Licence shall expire at the end of Phase I if the Licencee does not fulfil its Minimum Work Commitment of Phase I and it does not commit at least one firm exploration well for entering into Phase II. Subject to Working Interest Owners meeting the requirements relating to renewal set forth in the Rules the Licence may be renewed for two 2 further renewal periods not exceeding two years each if the Working Interest Owners request for such a renewal in writing to THE PRESIDENT in accordance with the Rules. Subject to the Working Interest Owners meeting the requirements of the Rules the Licence may be renewed for the purpose of Appraisal of a Discovery and shall be extended for drilling an Exploration Well in progress in accordance with the Rules. The Licence will also remain valid and automatically extended until a decision is made on a pending application for the grant of a Lease in accordance with the Rules. b The Operator shall commence Joint Operations within ninety 90 Days after the Effective Date. 3.3 Subject to the provision of this Article 3 the Minimum Work Programme and Minimum Expenditure to discharge the obligations during the initial term provided for in the Rules shall be as follows a INITIAL TERM i Phase One Contract Years 1 2 and 3 100 Work Units or a bench mark as indicated by the Government at the time of Invitation to bid plus Work Units per Grid Area in the original Area for each of Contract Years and Work Unit offered as bid obligation at the time of bidding ii Phase

Two Contract Year 4 and 5 At least one exploration well to be agreed by the Government before entering into Phase II along with corresponding work units. The above Work Units shall be accomplished at any time prior to the end of respective Phase of the Initial Term. Model Petroleum Concession Agreement 2009 13 3.4 The Working Interest Owners hereby agree to pay to DGPC as compensation for nonperformance an amount equal to the value of total unaccomplished Work Units the value of 1 Work Unit shall be specified at the time of Invitation to Bid during relevant Phase of the Initial Term or during the First Renewal or Second Renewal. In addition if Working Interest Owners do not carry out the Minimum Work during any Phase of the Initial Term or the First Renewal or Second Renewal and do not pay the above compensation as per Rules this Agreement shall automatically terminate upon the termination of the respective Phase or Renewal in which the Minimum Work was not carried out and Working Interest Owners shall not have any right to further extensions or Renewals provided however this Agreement will continue to be valid for any Commercial Discoveries. 3.5 Working Interest Owners shall keep DGPC informed of the progress of each well and shall promptly or forthwith inform DGPC of their proposals for testing; b c test as per Good International Oilfield Practices potentially productive horizons indicated by wireline recording or otherwise; and promptly undertake the technical evaluation of the test results and of all other relevant subsurface data and submit the same to DGPC as soon as possible. 3.6 Where the number of Work Units accomplished during any Period a Period being any Phase of the Initial Term and/or any Renewal exceeds the Minimum Work for that Period the amount of such excess work shall be carried forward and credited against the Minimum Work obligation of the next succeeding Period. 3.7 3.8 Neither Appraisal Wells nor seismic surveys carried out as part of an Appraisal Programme drawn up pursuant to Article 6 shall discharge the Minimum Work set out in Article 3.3. a On the Effective Date and prior to the first Day of commencement of each Phase and where this Agreement has been renewed pursuant to Article 3.2a prior to the first Day of commencement of each Renewal each Working Interest Owners shall provide an irrevocable and unconditional bank guarantee or a parent company guarantee substantially in the form specified in Annex VIII IX hereto

or any other guarantee as required and notified by the DGPC. If DGPC elects to require a bank guarantee the aggregate amount of the unconditional bank guarantees shall be equal to twenty five percent 25 of the product of value of one Work Unit as specified in Article 3.4 above and Total Work Units committed as under i ii for the Phase I of the Initial Term the total number of Work Units as specified in Article 3.3ai and for the Phase II First Renewal or Second Renewal the total number of Work Units as agreed with the Government before entering into the subsequent Phase or renewal.

Model Petroleum Concession Agreement 2009 14 3.9 b The amount of the bank guarantees submitted pursuant to Article 3.8a shall be reduced on prorata basis at the end of each Contract Year on the request of the Working Interest Owners concerned provided that the requirements set forth in Article 25.2 are fulfilled. c As long as the Government holds a majority shareholding in any Working Interest Owners such WIOs will not be required to provide a parent company or a bank guarantee. If the Operating Committee is of the opinion that it is impossible to satisfactorily complete an Exploration Well to the objective depth or formation the Working Interest Owners shall drill a substitute well within 6 months after the abandonment of the Exploration Well in order to discharge the Minimum Work obligation in respect of Phase I II and subsequent Renewals as the case may be. The Phase II of Initial Term or the Renewal Period as the case may be shall be extended in accordance with the Rules for a period of time equal in length to the time needed for drilling and testing the substitute well. In the case of failure to drill the substitute well the obligation to drill a particular well shall be deemed to have been satisfied provided the Working Interest Owners Surrender the area covering such geological structure and pay THE PRESIDENT the amount corresponding to the undischarged work units. 3.10 For the purpose of establishment of a Discovery Area if there is difference of opinion between Working Interest Owners and THE PRESIDENT and the Parties are unable to reach a decision within thirty 30 Days the boundaries of such Discovery Area shall be determined by a recognized Petroleum consultant to be appointed by THE PRESIDENT in consultation with the Working Interest Owners within twenty 20 Days of the expiry of the aforesaid period to provide an independent opinion for the purpose whose opinion shall be

binding on the Parties. The cost of such a consultant will be charged to the Joint Account. Model Petroleum Concession Agreement 2009 15 ARTICLE4 RELINQUISHMENT 4.1 On or before the end of Phase I of the Licence the Working Interest Owners shall relinquish not less than 30 of the original Area. 4.2 4.3 4.4 4.5 The Working Interest Owners shall relinquish an additional area equal to 20 of the remaining Area on or before the end of the Phase II. The Working Interest Owners shall relinquish an additional area equal to 10 of the remaining Area on or before the end of the first renewal. Except as otherwise provided herein or in the Rules the Working Interest Owners shall relinquish the remainder of the original Area at the expiration of the Licence or final renewal thereof. The shape of the Area to be relinquished shall be determined by the Working Interest Owners provided however that a the Working Interest Owners shall inform the Government of the description and the portion or portions of the Area to be relinquished at least ninety 90 Days in advance of the date of relinquishment or such lesser period as DGPC may allow b the Working Interest Owners shall consult with the Director General Petroleum Concessions regarding the shape and size of each individual portion of the Area being relinquished and c the area being relinquished shall be of sufficient size and convenient shape conforming to the grid system in force to enable Petroleum operations to be conducted thereon. 4.6 Working Interest Owners shall not be obligated to relinquish pursuant to Articles 4.1 4.2 and 4.3 any part of the Area which has been made subject to a Lease and for which an application for grant of a Lease has been submitted in accordance with the Rules. 4.7 Upon at least ninety 90 Days written notice to the Government the Working Interest Owners shall have the right to relinquish any portion of the Area subject to Article 4 and Article 7 and such portion can be credited against the mandatory relinquishments pursuant to Articles 4.1 4.2 and 4.3. 4.8 Relinquishment made in accordance with this Article 4 shall not relieve the Working Interest Owners of a b the obligations to make payments to the Government under the Rules and this Agreement prior to such relinquishment; and or the Minimum Work and Minimum Expenditure obligations set out in Article 3. Model Petroleum Concession Agreement 2009 16 ARTICLE5 WORKING INTEREST OWNERSHIP 5.1 As of the Effective Date and during the validity of this

Agreement the Working Interests throughout the Area will be as under Local Company ABC and or GHPL if applicable XYZ 15 ZoneI 20 ZoneII 25 ZoneIII 85 ZoneI 80 ZoneII 75 ZoneIII For the purpose of this Article 5 the Local Company means a company existing under the laws of Pakistan with more than 50 shares held by Pakistanis. 5.2 At all times ABC will maintain the Working Interest which is specified in Article 5.1 Required Minimum Local Working Interest provided however in the event any local EP company other than GHPL subsequently intends to reduce its working interest in a joint venture whereby the collective working interests of local EP companies including that of GHPL becomes lower than the above threshold specified for required minimum local Working Interest GHPL shall have the first right to make up the balance required minimum Pakistani working interest on point forward basis without reimbursement or payment of any past cost GHPL will remain nonoperator in such joint ventures. 5.3 Consortia of companies not meeting the minimum required local working interest can still be granted an exploration licence provided such companies advertise in the press within 15 days of the grant inviting Pakistani incorporated companies and GHPL to participate in the joint venture on the full participation basis under standard Joint Operating Agreement. The Pakistani incorporated companies and GHPL shall have the option to participate in the joint venture within 30 days. 5.4 The foreign EP companies shall be deemed to have fulfilled their obligation with respect to the minimum local participation if Pakistani incorporated companies and/or GHPL do not take any interest. 5.5 Notwithstanding anything contained herein the GHPL may elect to contribute its share of Expenditure out of funds allocated to it from IBRD Loan or any other loan in which event the Operator shall be required to adopt the procedures for procurement of goods and services of such loan funds in accordance with procurement procedures guidelines laid down by loan giving agency provided such terms and conditions are in accordance with the prudent Good International Oilfield Practices and do not hinder or delay the Joint Operations hereunder. 5.6 The Working Interest Owners may produce Petroleum from the Area as test or early production as may be permitted by the Government pursuant to the Rules prior to the grant of a Lease. Model Petroleum Concession Agreement 2009 17 ARTICLE 6 DISCOVERY AND DEVELOPMENT 6.1 6.2

In the event of a Discovery of Petroleum in the Area Operator shall promptly notify the DGPC in accordance with the Rules and by further notice in writing within three 3 Months from the date of termination of drilling and testing of the respective Exploration Well inform the DGPC whether or not the Discovery in the opinion of Operator merits Appraisal. If Operator notifies the DGPC that the Discovery does not merit Appraisal DGPC shall have the option on three 3 Months written notice to require Operator to immediately relinquish the Designated Area unless the Operator has provided valid justification to retain the area covering the Discovery. The Designated Area shall a b not comprise more than the vertical projection to the surface of the geological structure on which the Exploration Well resulting in the Discovery was drilled; and be determined based on geophysical and other technical information obtained from the Discovery. 6.3 If Operator notifies DGPC that the Discovery merits Appraisal Operator shall submit to the DGPC for approval within six 6 Months from the date of completion of the Exploration Well resulting in the Discovery an Appraisal Programme which highlights the Appraisal area and provides for the Appraisal of the Discovery in the most efficient and timely manner. 6.4 Not later than three 3 Months from the date on which the Appraisal Programme has been completed or within such further period as the DGPC may reasonably allow taking into account the relevant technical and economic conditions Operator shall by notice in writing inform the DGPC whether or not in the opinion of Operator the Discovery is a Commercial Discovery or a Significant Gas Discovery. 6.5 Where Operator has not informed the DGPC that the Discovery is a Commercial Discovery or Significant Gas Discovery the DGPC may by notice in writing require Operator to immediately relinquish the Designated Area unless the Operator has provided valid justification to retain the area covering the Discovery. The Designated Area shall be determined as specified in Article 6.2. 6.6 In the event the Operator considers that the Discovery is a Commercial Discovery or a Significant Gas Discovery Operator will select the Discovery Area or Significant Gas Discovery Area which should not exceed the geological entity covering the Commercial Discovery or a Significant Gas Discovery subject to the limitations of the Area. The Operator will request DGPC for retention of Significant Gas Discovery for period as allowed in accordance with the Rules

together with the justification. If the Operator does not declare a Significant Gas Discovery as a Commercial Discovery during the allowed retention period the Operator shall relinquish the Significant Gas Discovery Area and the Licence shall terminate Model Petroleum Concession Agreement 2009 18 automatically upon the termination of the allowed retention period. If Operator declares a Commercial Discovery during the allowed retention period Operator will select the Discovery Area out of the Significant Gas Discovery Area and the provisions of the Agreement and the Rules for grant of approval of Development Plan and the grant of Lease shall apply mutatis mutandis. 6.7 Where the Operator has by written notice notified the DGPC that the Discovery is a Commercial Discovery such notice shall accompany a detailed report on each Commercial Discovery as provided for in the Rules for approval by DGPC. Within a period not later than six 6 Months from the Date of Commercial Discovery or within such time period as may be allowed by DGPC the Operator will submit an application for grant of Lease together with Development Plan for the each Commercial Discovery for approval by DGPC. 6.8 The report on each Commercial Discovery shall cover all the relevant factors as required under the Rules including but not be limited to a b c d e f g the chemical composition physical properties and quality of Petroleum discovered; the thickness and extent of the production strata; petrophysical properties of the reservoirs; the productivity indices for wells tested at various rates of flow; permeability and porosity of the reservoirs; the estimated Production capacity of the reservoirs; and all relevant economic and commercial information which is necessary for the determination of a Discovery as a Commercial Discovery. 6.9 Each Development Plan shall contain detailed proposals by Operator for the construction and establishment of all facilities and services for and inental to the recovery storage and transportation of Petroleum from the Area as required under the Rules including but not limited to a b c description of the nature and characterization of reserves data statistics interpretation and conclusion of all aspects of the geology reservoir evaluation Petroleum engineering factors reservoir models estimates of reserves in place possible Production estimates nature and ratio of Petroleum fluids and analysis of producible Petroleum; proposals for the Development and Production of the

Commercial Discovery including possible alternatives work programmes and budgets and proposals relating to the disposition of Natural Gas. Operator should make specific recommendations as the particular Development proposal that it would prefer. This should include information regarding projections of the economics and profitability of the Joint Operations related to such Development proposals. proposals relating to the spacing drilling and completion of wells the Production and storage installations and transport and delivery facilities required for the Production storage and transport of Petroleum. Such proposals will include but not be limited to to Model Petroleum Concession Agreement 2009 19 for the transportation of i ii iii iv the estimated number size and Production capacity of Production facilitiesplatforms if any; estimated number of Production wells; particulars of Production equipment and storage facilities; particulars of Petroleum including pipelines; particulars of equipment required for the Joint Operations; feasible alternatives v estimate of the rates of Production to be established and projection of the in accordance with Good possible sustained rate of Production International Oilfield Practices under proposed Development proposal andor alternative Development proposals; cost estimates under such Development proposal and alternative Development proposals if any; proposals related to the establishment of processing facilities if any; safety measures to be adopted in the course of the Joint Operations including a contingency plan and measures to deal with emergencies; anticipated adverse impact on environment and measures proposed to be taken for prevention thereof and for general protection of the environment; a description of the organizational set up of Operator in Pakistan; an estimate of the time required to complete each phase of the proposed Development; a description of the measures to be taken regarding the employment and training of Pakistani personnel in accordance with the Rules; a description of the abandonment plan to be implemented whenever a piece of equipment or facility or installation needs to be abandoned prior to or on termination of this Agreement; a map or maps of the outline of the discovered reservoirs together with technical or other back up justification; and a plan for utilization of local goods and services. d e f g h i j k l m n

6.10 When the Government has approved the Development Plan in accordance with the Rules it

shall grant to the Working Interest Owners a Lease covering the Discovery Area in accordance with the Rules promptly provided the Working Interest Owners have furnished all requisite information to DGPC. The said Lease shall on the basis of the available seismic and well data comprise the Discovery Area to enable each Commercial Discovery to be developed and produced efficiently. The duration of the Lease shall not exceed the time limit as indicated in the Rules.

6.11 After approval of a Development Plan Operator shall carry out the Joint Operations substantially to such in accordance with modifications which may be necessary from time to time which are approved by the DGPC in accordance with the Rules.

6.12 Not less than ninety 90 Days prior to the beginning of each Calendar Year following the commencement of regular shipments of Crude Oil Condensate LPG or Natural Gas Operator shall prepare and furnish to DGPC a forecast statement and the basis thereof setting forth by quarters the total quantity of Crude Oil Condensate LPG and Natural Gas by quality grade and gravity that Model Petroleum Concession Agreement 2009 20 Operator estimates can be produced saved and transported hereunder during such Calendar Year.

6.13 Operator shall with respect to each Lease a b c annually update and submit to DGPC maps required under Article 6.10m on the basis of the then most recent well geological and geophysical information indicating on such maps which reservoirs are in Commercial Production including such parts of reservoirs which are required for water injection; within ten 10 Years of the commencement of Commercial Production from each Commercial Discovery relinquish such part of Development Area which does not cover wholly or partially the vertical projections to the surface of reservoirs from which Commercial Production is being obtained or which are not required for water injection as per approved Development Plan; and provide DGPC with a map with description of the relinquished areas and map referred to in Article 6.13a and b upon such relinquishment.

6.14 DGPC shall within ninety 90 Days of receipt of the maps specified in Article 6.13c inform Operator in writing of a b DGPC approval of the relinquished areas or the need for Operator to relinquish further areas which are not vertical projections to the surface of reservoirs from which Commercial Production is being obtained or which are not required for water injection. Operator shall within sixty 60 Days of DGPC

notification under Article 6.14b relinquish such area unless Operator disputes such notification in writing to DGPC in which case dispute resolution proceedings may be initiated by Operator through a sole expert unless mutually agreed otherwise the cost of which will be charged to Joint Account.

6.15 The Operator shall have an organisation in Pakistan with sufficient competence and capacity to conduct the Joint Operations as required under the Rules. 6.16 If following the Discovery of Petroleum a Working Interest Owner considers the Discovery to be a Commercial Discovery it may give notice in writing to the other Working Interest Owners stating in the said notice all the reasons for the evidence supporting its opinion and inviting the other Working Interest Owners to participate in the preparation of a Development Plan. If within ninety 90 Days of receipt of the notice other Working Interest Owners inform the Operator that they agree to participate in the Development of the Commercial Discovery the Operating Committee shall define the Discovery Area and instruct the Operator to proceed with the preparation of the Development Plan. If any Working Interest Owner elects not to join in the Development of the Commercial Discovery it shall assign its Working Interest in the Commercial Discovery on a pro rata basis to the remaining Working Interest Owners as may be mutually agreed. The remaining Working Interest Owners have the right to define the Discovery Area and develop the Commercial Discovery at their own cost and THE PRESIDENT shall in accordance Model Petroleum Concession Agreement 2009 21 with the Rules grant a Lease to the remaining Working Interest Owners. If a Working Interest Owner proceeds to develop the Commercial Discovery at its own cost it shall own all of the production from such discovery and shall bear all the cost of developing and operating such Commercial Discovery and the other Working Interest Owners shall assign to it all their rights title and interest in and to the Petroleum in the Discovery Area in accordance with the Rules provided always that such assignment shall be and remain contingent upon the Working Interest Owners carrying out such development expeditiously. Model Petroleum Concession Agreement 2009 22 ARTICLE7 ASSIGNMENT SURRENDER OF AREAS AND TERMINATION OF AGREEMENT 7.1 In accordance with the Rules neither XYZ ABC nor GHPL if applicable shall sell assign transfer convey or otherwise dispose of all or any part of its

rights or Working Interest under this Agreement the Licence and any Lease without the prior consent in writing of the Government. 7.2 a In the event XYZ or ABC or GHPL if applicable wishes to sell transfer convey or otherwise dispose of or assign all or any part of its rights or Working Interest to a third party or an Affiliate the request for such assignment shall be processed in accordance with the Rules provided however the provisions of this Agreement regarding Required Minimum Local Working Interest will be fully observed before such application for assignment is made to the Government. The terms and conditions of any assignment shall be subject to the approval of the Government. b c d The rights and privileges granted to and obligations assumed by the assignor under and pursuant to this Agreement the Licence and any Lease to the extent of such assignment shall inure to the benefit of and be binding upon the assignee. As a condition to any assignment the assigning Working Interest Owners shall provide to THE PRESIDENT an unconditional undertaking by the assignee to assume all obligations of this Agreement the Licence and any Lease. In the case of a partial assignment notwithstanding such undertaking the assigning Working Interest Owner remains jointly and severally liable with the assignee for performance of its obligations. Any assignment covering less than a five percent 5 Working Interest shall not entitle an increase the number of representatives on the Operating Committee and assignor and assignee shall agree upon a single representative to represent their combined Working Interest. 7.3 If any Working Interest Owner deems it advisable to Surrender his rights in any Licence such Working Interest Owner shall notify THE PRESIDENT and other Working Interest Owners in writing of the proposed Surrender provided that such Surrender shall not take place during the Phase I of the initial three years term of the Licence before due fulfilment of Minimum Work and other obligations. If within thirty 30 Days thereafter the other Working Interest Owners notify such surrendering Working Interest Owner in writing that they wish to retain their Working Interest with respect to such Licence any such Working Interest Owner shall to the extent that it legally may assign all its rights and obligations therein to the other Working Interest Owners prorata to their respective Working Interests or as they may agree otherwise. 7.4 If no Commercial Discovery is made within a period of five 5

years from the Effective Date THE PRESIDENT shall have the right to terminate this Agreement

Model Petroleum Concession Agreement 2009 23 7.5 7.6 7.7 7.8 7.9 provided Working Interest Owners have not applied for extension or renewal pursuant to the Rules. If all Joint Operations are terminated a Working Interest Owner subject to the Rules shall be entitled to its share of non committed remaining funds and other assets of the Joint Account. If the circumstance or circumstances that result in termination under the Rules are remedied by the Working Interest Owners within a period of sixty 60 Days following the notice of termination as aforesaid or where the breach is incapable of remedy and the Working Interest Owners have offered a reasonable compensation in respect thereof such termination shall not be effective. Except as provided for in Article 27.3 if the circumstance or circumstances that would otherwise result in termination under the Rules are the result of Force Majeure then termination shall not take place so long as such Force Majeure continues and for such period thereafter as THE PRESIDENT may determine to be reasonable. The termination of this Agreement for whatever reason shall be without prejudice to the obligations incurred and not discharged by the Working Interest Owners prior to the date of termination. In the event of termination pursuant to the Rules THE PRESIDENT may require the Working Interest Owners for a period not exceeding one hundred eighty 180 Days to continue Petroleum production activities at the cost of the Government until the right to continue such production has been transferred to another entity. 7.10 Within ninety 90 Days after the termination of this Agreement pursuant to Article 7.6 unless THE PRESIDENT has granted an extension of this period the Working Interest Owner shall complete all reasonable and necessary action as directed by THE PRESIDENT to avoid environmental damage or hazard to human life or third party property.

Model Petroleum Concession Agreement 2009 24 ARTICLE8 VALUE FOR ROYALTY PURPOSES

8.1 8.2 Value for all Petroleum produced and saved under a Licence or a Lease will be determined in accordance with the Rules. To facilitate computations the Value of Petroleum shall be determined at the end of each Month as the weighted average value of all such transactions that took place during the Month.

Model Petroleum Concession Agreement 2009 25 ARTICLE9 ROYALTY 9.1 The

Working Interest Owners shall pay to the Government a royalty equal to 12.5 of the Value of Petroleum produced and saved in accordance with the Rules. Model Petroleum Concession Agreement 2009 26 ARTICLE10 RIGHT OF ACQUISITION OF PETROLEUM 10.1 Should THE PRESIDENT require the Working Interest Owners to meet the internal requirements of Pakistan according to the Rules the following shall apply i If in any year there is Projected Domestic Demand as determined by an entity designated by the Government in excess of production from indigenous source THE PRESIDENT may require Working Interest Owners to sell Crude Oil in Pakistan on a prorata basis with other producers in Pakistan according to the Crude Oil production of each producer in a year. The President shall give the Working Interest Owners at least three Months notice in advance of such requirements and term of the supply will be on an annual basis. Whenever a Working Interest Owner is selling Crude Oil to THE ii PRESIDENT or his designee such Working Interest Owner shall be entitled to receive a price in US per barrel for such Crude Oil delivered at its cost to the nearest operating refinery which shall be calculated as under a 1 The arithmetic average of the FOB spot prices during the Month of delivery of a basket of Arabian Persian Gulf Crude Oils or a Crude Oil comparable in quality to Crude Oil produced under this Agreement as mutually agreed; or 2 In the event no agreement is reached as to the basket or a comparable Crude Oil or on related matters then the basis shall be FOB market price of a Crude Oil as may be mutually agreed which can be demonstrated to be applicable to contracts negotiated with unrelated parties for Arms Length Sales under which the consideration is wholly cash payable on normal commercial terms. Plus freight on Average Freight Rate Assessment AFRA basis from Ras Tanura to Karachi as notified from time to time which is deemed chartered rate. Plus or minus a quality yield differential between Crude Oil produced under this Agreement and the Crude Oil referred to in Article 10.1 ii a above. For this purpose the differential shall be determined on yield value based on refinery operating conditions where the Crude Oil will be processed and at mutually agreeable reference prices of Petroleum products prevailing in the ArabianPersian Gulf and published in an internationally recognized publication acceptable to the Parties. b c 10.2 a Working

Interest Owners will be allowed to contract with Natural Gas transmission and distribution companies and third parties other than residential and commercial consumers for the sale of their share of Model Petroleum Concession Agreement 2009 b c d 27 Natural Gas in Pakistan at negotiated prices in accordance with applicable laws rules and regulations. Subject to the considerations of internal requirements and national emergencies Working Interest Owners will be allowed to export their share of Crude oil and Condensate as well as their share of Natural Gas based on export licences to be granted by the concerned regulator. The Windfall levy shall be applicable on such export licences. For the purpose of the grant of such export licenses for Natural Gas the export volumes will be determined in accordance with L15 concept provided a fair market value for such gas is realized at the export point. Under the L15 concept the Natural gas reserves that exceed the net proven Natural Gas reserves in Pakistan including the firm import commitments visvis Natural Gas Projected Domestic Demand for next fifteen years can be considered for export. Once Natural Gas has been dedicated for exports licenses for such export volumes shall not be subsequently revoked. If the foreign Working Interest Owners sell Natural Gas to third parties in Pakistan and want to remit sale proceeds in foreign currency abroad Government shall allow such Working Interest Owners to freely remit a guaranteed percentage of their sale proceeds. The guaranteed percentage shall be 75 of the total gross revenues from any Lease in Zone I 70 in Zone II and 65 in Zone III. The remaining gross income in Rupees can be used to pay royalties taxes and any other payments to the Government as well as to meet local currency expenditures. Subject to overall market demand the Working Interest Owner may request and the Government will purchase their share of pipeline specification gas through a nominated buyer which is effectively controlled by it in acceptable daily monthly and yearly volumes to meet the internal demand in an economical manner provided there are no infrastructure constraints. The delivery point shall be at the Field Gate. The Governmentgas buyer nominated by GOP shall pay the price for gas at the Field Gate as set out hereof. In addition the guaranteed percentage for foreign exchange remittance as contained in Article 10.2c above will apply to such sales. e Where a Nominated Buyer agrees in principle to

purchase Natural Gas pursuant to Article 10.2.d above i. The Working Interest Owners shall construct operate and maintain the gas pipeline connecting the field to the Field Gate in accordance with the Policy applicable law Rules and regulations. All costs associated with such pipeline will be borne by the Working Interest Owners and no transportation tariff will be paid by the Government gas buyer nominated by the Government for this purpose. ii. The gas producer can arrange for the construction and operation of the connecting gas pipeline outlined in i above through an independent Model Petroleum Concession Agreement 2009 28 third party provided the title of such pipeline is transferable to the Government on expiry or early termination of relevant petroleum rights No tariff will be payable by the Government gas buyer nominated by the Government for this pipeline. iii. At the request of the Working Interest Owners the buyer nominated by the Government for purchase of the gas can consider the laying of a pipeline if required from the Field Gate to the nearest transmission system at its own cost. iv. If an interconnecting pipeline is proposed to be constructed by a third party or the buyer the producer will be required to confirm the requisite gas supply volumes pressures technical parameters on standard supply term contract basis for a period to be agreed between the parties and its tariff shall be determined and notified by the regulator in accordance with the Policy applicable law rules and regulations. reserves and other f Whenever a Working Interest Owners is selling pipeline quality Natural Gas of acceptable specification to the Government nominated buyers it shall receive a price per Million British Thermal Unit MMBTU. The price to be paid to a Working Interest Owners shall be determined for a six 6 Monthly period hereinafter referred to as the Price Notification Period starting at eight 8 a.m. P.S.T. on 1st January and 1st July each year except the first period which may commence from the start of Commercial Production till 30th of June or 31st of December as the case may be. a The price of acceptable pipeline quality Natural Gas shall be computed and notified in United States Dollars per MMBTU according to the following formula $P_g - P_m \times D_z \times C_f$ Where P_g is the Gas Price in USD per MMBTU P_m is the Applicable Marker Price in USD per barrel determined as follows When RCP is upto USD 20barrel P_m equals RCP; When RCP is higher than USD 20barrel and not over USD 30barrel P_m

equals 20 plus 50 of the incremental RCP above USD 20barrel; When RCP is higher than USD30barrel and not over USD 40barrel Pm equals 25 plus 30 of the incremental RCP above USD 30barrel; When RCP is higher than USD 40barrel and not over USD 70barrel Pm equals 28 plus 20 of the incremental RCP above USD 40barrel; Model Petroleum Concession Agreement 2009 29 When RCP is higher than USD 70barrel and not over USD 100barrel Pm equals 34 plus 10 of the incremental RCP above USD 70barrel The RCP ceiling of USD 100barrel would be reviewed after every five years or as and when the pricing dynamics significantly change in the international market. Dz is the zonal index which shall have the value of 67.5 for Zone III; 72.5 for Zone II 77.5 for Zone I Cf is the Applicable Conversion Factor the weighted average of the heating values expressed in MMBTU per barrel for the basket of ArabianPersian Gulf Crude Oils imported in Pakistan Illustration of the gas price working under 2009 Policy at CF price of US 35barrel US 140barrel is attached as Annexure XI XII wherein floor price is reflected as US 10 per barrel. b. c. d. e. f. g. Not later than twenty 20 Days prior to the commencement of the Price Notification Period during which the Operator expects first Natural gas production to commence the Operator shall submit to the Authority concerned a calculation of the Reference Crude Price in US Dollars and the Corresponding natural gas price to be fixed on the first Day of such Notification Period. Thereafter Operator shall submit to the Authority concerned the relevant Reference Crude Price and the corresponding natural gas price calculation in US Dollars applicable to each six 6 Month Price Notification Period prior to each preceding 10th December and 10th June respectively. The prices so notified would be after rounding the quotient to four 4 decimal places. THE PRESIDENT shall ensure that details of the quantities and CF prices of the Crude Oils imported into Pakistan as referred to in Article 10.2g hereof are supplied to Operator not later than twenty five 25 Days prior to the commencement of the relevant Price Notification Period for the purpose of calculations to be made pursuant to Article 10.2 fg. Operator shall submit to the Authority concerned a draft pricing notification setting out the US Dollar prices resulting from Article 10.2 fa above for the relevant Price Notification Period at the same time as submitting the calculation pursuant to Article 10.2 fg below

as the case may be Such pricing notification shall be published in US Dollars in the official Gazette for the purposes of the Gas Sales Agreement within forty five 45 Days of the date of receipt of the aforesaid draft pricing notification. Model Petroleum Concession Agreement 2009 30 Price of Natural Gas for Consumers will be adjusted biannually to synchronize with the changes in the producer prices. Where the specification and quality of the gas from an approved EWT is acceptable to the buyer the gas price shall entail a 10 discount from the applicable gas price for that Zone. h For the purpose of notification of gas prices under Article 10.2 above the authority concerned means Oil and Gas Regulatory Authority established under the Oil and Gas Regulatory Authority Ordinance No. XVII of 2002 or any other authority which may lawfully substitute OGRA. 10.3 For purchases of Condensate and LPG to meet internal requirements of Pakistan the price payable to Working Interest Owners subject to Article 10.4 shall be calculated as under a The price in U.S. per Barrel allowed for Condensate shall be equal to the FOB price of internationally quoted comparable condensate delivered at the nearest refinery gate plus or minus a quality yield differential based on the value in the Arabian Gulf spot products market of the crude oilcondensate. No other adjustment or discount will apply other than windfall. The price allowed for Liquefied Petroleum Gas produced from new projects will be determined by the regulator as per Government Policy in vogue. b 10.4 A windfall levy on Crude OilCondensate will be as follows. Windfall Levy WLO on crude oil and condensate using the following formula $WLO = 0.5 \times MR \times PB$ Where WLO Windfall Levy on crude oil and condensate; M Net production produced and saved; R Royalty; P Market Price of crude oil and condensateas stated in Article 10.1 ii 10.3 respectively above; B Base Price of crude oil and condensate. The base price for crude oil and condensate will be USD 30 per bbl. This base price will escalate each calendar year by USD 0.25 per barrel starting from the date of first commercial production in the Area. Notwithstanding above in the event Market Price of Crude OilCondensate exceeds US 100barrel the 100 benefit of Windfall Levy over and above US 100barrel will pass on to the Government. The ceiling would be reviewed as and when pricing dynamics significantly change in the international market. For sale of natural gas to parties other than Government a Windfall Levy

WLG will be applicable on the difference between the applicable Zone price as outlined in Article 10.1 above and the 3rd party sale price using the following formula Model Petroleum Concession Agreement 2009 31 $WLG = 0.5 \times PGBR \times V$ Where WLG Windfall Levy on share of natural gas; PG Third Party Sale Price of natural gas; BR Base Price; V Volume of gas sold to third party excluding Royalty. The base price will be the applicable Zone price as outlined in Article 10.2 above. Where the Third Party Sale Price of gas is less or equal to the base price the windfall price share shall be zero. The windfall price shall not apply on sales of Natural Gas made to the Government. Windfall levy shall be allowable as a tax deductible expense.

10.5 THE PRESIDENT or his designee shall purchase Crude Oil Condensate and Natural Gas at the Field Gate. Title to and risk of loss of the Petroleum purchased by THE PRESIDENT or his designee shall pass at the Field Gate.

10.6 THE PRESIDENT or his designee shall pay to a Pakistani Working Interest Owner up to 30 of their sale proceeds in foreign exchange for all Petroleum purchases in accordance with the provisions of this Article 10 to meet their Day to Day operational requirements. For project financing after Commercial Discovery Pakistani Working Interest Owners will be required to make their own foreign exchange arrangements. The rate of exchange prevailing on the date of transaction except as specifically provided herein will apply. Payments for any Petroleum purchased from the foreign Working Interest Owners by THE PRESIDENT or his designee shall be by remittance in United States Dollars to a bank designated by the foreign Working Interest Owners of an equivalent amount to within 30 Days of receipt of invoice subject to the condition that in the case of sale of Natural Gas such guaranteed percentage as referred to in Article 10.2 c will be applicable. If not so paid the unpaid balance shall bear interest after the due date at the rate of 1.5 percent per annum above LIBOR for one Month deposits of US Dollars as reported in an agreed publication.

10.7 In the event that THE PRESIDENT or his designee is unwilling to purchase all or a portion of any Working Interest Owners share of Petroleum such Working Interest Owner shall have the right to export or otherwise dispose of such Petroleum at competitive prices.

10.8 THE PRESIDENT shall have the right to purchase all or a portion of any Working Interest Owners share of Petroleum in case of a national emergency or war.

The Working Interest Owners shall subject to Article 10 and the Rules be permitted to export their share of Petroleum or to dispose it of otherwise at any time or from time to time the foreign Working Interest Owners shall use their good offices to assist GHPL in disposing of its share of Petroleum produced hereunder at the best available prices; provided that in no event shall foreign Working Interest Owners be required to purchase or otherwise provide a market for the GHPL share of Petroleum produced hereunder. GHPL shall reimburse the foreign Working Interest Owners for all expenses incurred in rendering to GHPL any such assistance on a nonprofit no loss basis. 11.2 The Working Interest Owners shall refrain from exporting Petroleum from Pakistan to countries prohibited by the Pakistani laws regulations and administrative requirements. 11.3 Subject to the Rules the Natural Gas which is not used in Joint Operations and the processing and utilization of which in the opinion of the Working Interest Owners is not economical shall be returned to the subsurface structure or may be flared with the approval of THE PRESIDENT in accordance with the Rules. In the event the Working Interest Owners choose not to process and sell Natural Gas THE PRESIDENT may elect to offtake such Natural Gas at the outlet flange of the gasoil separator and use either itself or through its designee such Natural Gas if it is not required for Joint Operations. There shall be no charge to THE PRESIDENT or his designee for such Natural Gas. Model

The Working Interest Owners shall contribute their share of all Expenditure of exploring developing and producing Petroleum in foreign exchange and in Rupees as required giving due consideration to currency aspect of Expenditure in proportion to their respective Working Interests provided however that local Working Interest Owners shall pay their share of Expenditure in Pak Rupees if their Working Interest is less than or equal to 15 in Zone I 20 in Zone II and 25 in Zone III. However to the extent a foreign Working Interest Owner does not have available sufficient amount in Pakistani Rupees to meet its share of Rupee requirements the Pakistani Working Interest Owners shall pay such amount in Rupees and the foreign Working Interest Owner shall make payments to the same extent in foreign

exchange to the Pakistani Working Interest Owners. 12.2 If a Foreign Working Interest Owner assigns its Working Interest to a foreign entity with the consent of THE PRESIDENT under Article 7 such Working Interest Owner shall be allowed to retain abroad all proceeds resulting from such assignment. 12.3 The Operator shall keep the foreign exchange contributions of the Working Interest Owners in a foreign currency bank account in a scheduled bank in Pakistan and shall be free to utilize the amount thereof for incurring foreign exchange Expenditures in accordance with the relevant foreign exchange rules and Joint Operating Agreement subject to subsequent documentation of the amounts utilized. 12.4 Subject to the domestic supply obligations and export duties each foreign Working Interest Owner shall be entitled to export the Petroleum acquired by them under this Agreement in accordance with the relevant foreign exchange rules and as provided for herein. 12.5 Each foreign Operator and its registered branch in Pakistan shall have the right to retain abroad and to freely make use of sales proceeds from the export of their share of Petroleum produced from any Licence or Lease granted under this Agreement provided the total amount retained abroad and repatriated from Pakistan will not exceed a b c net profits as per its profit and loss account for that Year as subsequently audited by a firm of Chartered Accountants in Pakistan after providing for any and all of its operating expenses for that Year including the sum of payments and taxes on income under this Agreement and the depreciation of its depreciable assets plus the funds representing such depreciation depletion and amortization as charged to its profit and loss account for that Year. all other expenses incurred abroad by the Working Interest Owners in connection with the Joint Operations under the Agreement and charged to its profit and loss and capital account for the Calendar Year. Model Petroleum Concession Agreement 2009 34 12.6 The Operator and the other foreign Working Interest Owners shall remit funds to Pakistan through normal banking channels sufficient to meet all Pakistani Rupee obligations under the Agreement to the extent Pakistani Rupees are not available to them in Pakistan. 12.7 The foreign Working Interest Owners shall not avail of any Rupee borrowing facilities. 12.8 The rate of exchange to be applied to all currency conversion transactions and calculations under this Agreement shall be the official rate

of exchange as established by of the State Bank of Pakistan SBP prevailing on the date of the transaction. [In case SBP ceases to publish this rate the arithmetic average of the average interbank selling rate quoted by the Royal Bank of Scotland National Bank of Pakistan Bank Alfalah Standard Chartered Bank and United Bank Limited may be used]. 12.9 All remittances of funds under this Article shall be permitted by the State Bank of Pakistan to be made without any delay or additional cost to the Operator or the Working Interest Owners. 12.10 Local EP companies will on a case to case basis be entitled during the exploration phase to receive foreign exchange against payment in Pakistani currency to meet their day to day obligations under this agreement. After commercial discovery local EP companies would be paid up to 30 of their sale proceeds in foreign currency to meet their day to day operational requirements. For project financing after commercial discovery local EP companies will be required to make their own foreign exchange arrangements except for companies in which GOP holds majority shareholding. 12.11 The Government will allow foreign Working Interest Owners to remit a guaranteed percentage of their share of sale proceeds provided such guaranteed percentage shall be 75 of the total gross revenues from any Lease Area in Zone I 70 in Zone II and 65 in Zone III. The remaining gross income in Rupees can be used by foreign Working Interest Owners to pay royalties taxes and any other payment to the Government as well as to meet other local currency Expenditures. 12.12 EP company shall have full right of control over movement of funds out of bank accounts established for the purpose of Joint Operations but may be required to provide the SBP or any Government designated office bank statements with an explanation of each deposit or payment from such account and shall supply on quarterly basis in a form acceptable to the SBP or such designated office full particulars of foreign exchange transactions related to an agreement.

Model Petroleum Concession Agreement 2009 35 ARTICLE 13 IMPORTS AND EXPORTS 13.1 a The Operator Petroleum Exploration Production Company its contractors and subcontractors engaged in Joint Operations under this Agreement shall be permitted to import export transfer and dispose the machinery equipment materials specialized vehicles accessories spares chemicals and consumables etc. in accordance with SRO 678 I2004

dated 7th August 2004 AnnexIV along with applicable CGOs and the provisions of this Agreement. No licence or importcum.export authorization fee shall be levied on such imports exports in accordance with Import Policy Order 2004. b The initial list of machinery equipment materials specialized vehicles accessories spares chemicals and consumables etc. required for Joint Operations approved by the relevant Regulatory Authority under Article 13.1 a above is attached as AnnexV hereto. The Operator shall however as provided in the Rules give preference to goods which are produced or are available in Pakistan and services which are rendered by Pakistani nationals and companies provided such goods and services are offered on competitive terms. National firms which appear capable of supplying goods and services of the type demanded shall always be included in invitations to bid. For classification of items imported by the Operator its contractors or subcontractors the harmonized system of classification will be followed. c Foreign employees and consultants of the Operator and its contractors and subcontractors will be entitled to importexport used and bonafide personal and household effects excluding passenger vehicles in accordance with instructions contained in Central Board of Revenues Now Federal Board of Revenues letter C. No. 10 14 93ICMCON dated 13th June 1994 AnnexVI. 13.2 The Operator its contractors or their subcontractors shall be entitled to export such of their items as have been imported into Pakistan and are not required for the Joint Operations without restriction and without the payment of any fee tax or export duty. Drawbacks if admissible will be available as per relevant rules. The Operator shall ensure its contractors or subcontractors under this Article against its importcumexport authorization are exported if all the Joint Operations under this Agreement are terminated unless otherwise permitted in accordance with this Agreement. that equipmentsmaterial imported by it 13.3 The permission required under this Article 13.3a shall not be necessary with respect to the transfer of title to any property made pursuant to or inental to any assignment by the Working Interest Owners of all or any part of its Working Interest under the provision of Article 7 of this Agreement. a The Operator and its contractors and their subcontractors shall maintain proper accounts statements and records of all consumable stores received and expended and send copies

thereof in duplicate to the customs Model Petroleum Concession Agreement 2009 36 authorities concerned by the 15th of January each year and finally within fifteen 15 Days of the closing of operations in Pakistan. b i Commissary stores can be imported after the first arrival of an expatriate employee of the Operator its contractors and their subcontractors in accordance with instructions contained in the Central Board of Revenues Now FBR letter C.No. 101493ICMCON dated 13th June 1994 AnnexVI. Such imports shall be confined to the items shown in AnnexIX excepting such items as are locally available of proper standard. Such items shall be specified annually by the Ministry of Commerce. ii iii As soon as an expatriate employee arrives in Pakistan an application will be made for grant of authorization for the commissary stores required for him indicating the duration of his proposed stay in Pakistan. Account for the sale of tobacco and liquor if imported and medicines will be maintained for each individual while those of the other items will be maintained on an overall basis. iv Items of food and other commissary goods will be stamped clearly to avoid resale in the Pakistani market. v FBR booklets will be maintained by individuals. c Import of any other items such as arms ammunition etc. and pets will not be permitted unless the conditions for their import such as arms licences from district authorities quarantine requirements etc. are complied with. 13.4 Subject to the rights granted under the provisions of this Agreement and particularly those granted under this Article 13 any items which are banned for import into Pakistan under the Import Trade Policy in force from time to time shall not be permitted without specific permission to be obtained before shipment of goods from abroad. 13.5 The Operator and its contractors and subcontractors shall not be liable to pay any tax assessment levy octroi or charge imposed or levied on the transportation or movement of the scheduled machinery and equipment to and from the Area or on any item imported under this Article 13. 13.6 ImportsExports except as provided in this Article 13 shall be affected in accordance with the ImportExport Trade Policy in force on the Effective Date. 13.7 Contracts for at least ten percent 10 of the computer software requested shall be awarded by the Operator to Local Companies to use the local software capabilities subject to such software capabilities being available at competitive prices. Model Petroleum Concession Agreement 2009 37 ARTICLE14

TAXATION 14.1 Income tax on profits or gains derived from the Joint Operations hereunder shall be at the rate of 40 of profit and gains as determined and assessed in accordance with the provisions of the IncomeTax Ordinance 2001 No. XLIX of 2001 hereinafter referred to as the Ordinance and the rules contained in Part I of the Fifth Schedule to the Ordinance hereinafter referred to as the Fifth Schedule as in force on the Effective Date. 14.2 Where any Expenditure allocable to a Surrendered Area or to the drilling of a dry hole is deemed to be lost under rule 22 of the Fifth Schedule such Expenditure shall be allowable as provided in rule 23 of the Fifth Schedule in relation to the Expenditure in question and in accordance with the respective Working Interest at the time such Expenditure was incurred in the Area in the relevant operation; provided that in accordance with clause 3 of Schedule to the Regulation of Mines and Oilfields and Mineral Development Government Control Act 1948 hereinafter referred to as the Schedule to Regulations all Expenditures deemed to have been lost in terms of rule 22 of the said Schedule to Regulations shall be allowed to be set off against all the other income of the Working Interest Owners other than dividend income accruing or arising from or under any separate business or undertaking or this Agreement or from any other past present or future agreement of the Working Interest Owners with THE PRESIDENT for Petroleum exploration and production or from any other activity on a fully consolidated basis in accordance with rule 23 of the Fifth Schedule. 14.3 Depreciation shall be allowed to the Working Interest Owners in accordance with the provisions of the Ordinance and in particular the Third Schedule thereof. 14.4 In case of any disagreement in respect of taxation matters arising from any of the provisions of this Agreement including its Annexes and the provisions now in effect of the Ordinance and the Fifth Schedule thereof read in conjunction with the Regulation of Mines and Oilfields and Mineral Development Government Control Act 1948 as amended that are in force on the Effective Date then the provisions of the Ordinance the Fifth Schedule thereof and the said Regulations in force on the Effective Date shall prevail. Model Petroleum Concession Agreement 2009 38 ARTICLE15 MANAGEMENT AND OPERATIONS 15.1 The Operator shall prepare an annual work programme and budget for each Calendar Year during

the term of this Agreement. Each such work programme and budget shall set out in reasonable details the work to be carried out facilities to be purchased or created training and employment programme establishment salaries and wages social welfare schemes to be undertaken and an estimate of the Expenditure to be incurred. The Operator shall present such work programme and budget to the Government and the Working Interest Owners before the start of each Calendar Year and the implementation of such work programme and budget. thereafter provide a quarterly update on

15.2 The first work programme and budget shall cover one complete Calendar Year as well as the remaining part of the Calendar Year from the Effective Date. Thereafter such annual work programmes and budgets shall be prepared and submitted to the Government and the Working Interest Owners at least ninety 90 Days prior to the first Day of each Calendar Year.

15.3 All important matters concerning Joint Operations hereunder shall be submitted for the approval to the Operating Committee composed of at least one representative of each Working Interest Owner and the Chairman nominated by the Operator. The representative of each Working Interest Owner shall have a vote equal to the percentage Working Interest owned by each Working Interest Owner. All decisions of the Operating Committee shall require a combined voting interest of more than seventy percent 70 for all operations except as stipulated in this Agreement.

15.4 The Operator shall conduct all Joint Operations in accordance with the Rules. In case the Rules do not provide for a specific operation the normal Good International Oilfield Practices shall be followed. The Operator shall set up an organization in Pakistan with sufficient competence and capacity to conduct and perform the Joint Operations in accordance with the provisions of the Rules and this Agreement.

15.5 All pipelines constructed by for the Working Interest Owners shall be operated under open access regime and to the extent that the throughput capacity of any pipeline that may be constructed for the purposes of Joint Operations is not required to be utilized by the Working Interest Owners for the transportation of Petroleum produced for their account such pipeline capacity may be used by the Government for any Petroleum purchased by the Government hereunder from the Working Interest Owners and by any other Petroleum company in Pakistan in

accordance with applicable regulations notified from time to time and each of them shall pay the Working Interest Owners for such use a tariffs as approved by the concerned regulator. Income so derived by a Working Interest Owner shall be assessed for income tax purposes on the same basis as its income from Petroleum produced for its account. Model Petroleum Concession Agreement 2009 39 ARTICLE16 REPORTS AND INFORMATION 16.1 THE PRESIDENT shall allow the Operator access at all reasonable times to all geological geophysical well and other technical data which is in public domain on the Effective Date pertaining to the Area and any free adjoining areas. If and when requested by the Operator THE PRESIDENT shall provide or supply to the Operator copies of such data on payment of actual reproduction and other costs of the data and on such terms and conditions as it may determine. Such data shall not be disclosed to any third party except to Operators employees and consultants including banks and financial institutions for the purpose of financing who shall be similarly bound to treat it as strictly confidential. 16.2 The Operator shall furnish to the Director General Petroleum Concessions all data information record and reports as required in accordance with the Rules. 16.3 Unless otherwise agreed to by THE PRESIDENT in the case of export of any rock or Petroleum samples from Pakistan for the purpose of testing and analysis samples equivalent in size and quantity shall before such exportation be delivered to THE PRESIDENT. 16.4 Originals of records and other data can be exported only with the permission of THE PRESIDENT provided however that magnetic tapes and any other data which must be processed or analyzed outside Pakistan may be exported with the prior approval of the DGPC if a comparable record is maintained in Pakistan and provided that such exported records and data shall be repatriated to Pakistan. 16.5 Any person or persons authorized by the Director General Petroleum Concessions shall subject to reasonable notice be entitled to be present at the cost of the Working Interest Owners during any or all of the Joint Operations provided that such persons abide by the applicable safety rules. 16.6 The Operator shall as far as reasonably practicable correctly label and preserve for a period of twelve 12 Months or such longer period as required by DGPC for reference characteristic samples of strata or water encountered in any borehole or well and samples

of any Petroleum discovered in the Area. The characteristic samples of said strata shall include but not be limited to cuts of all cores and cuts of all ditch samples. All characteristic samples including ditch and core samples shall be supplied by the Operator to THE PRESIDENT.

Model Petroleum Concession Agreement 2009 40 ARTICLE 17 TRAINING AND EMPLOYMENT

17.1 The Operator agrees to employ qualified nationals of Pakistan in its Joint Operations and to undertake their schooling and training for staff positions including administrative and executive management positions. Preference will be given to employment of nationals and unskilled workers from the Area. The operator including its contractors shall ensure the employment of unskilled workers of the area at local district level to the extent of at least 50 of their unskilled workers category. The Operator undertakes to gradually replace its expatriate staff with qualified nationals as they become available. An annual programme for employment and training of nationals of Pakistan shall be established by the Operator and submitted for approval to the Director General Petroleum Concessions at least 90 Days in advance. Such programme shall be included in the annual work programme and budget of the companies. Within thirty 30 Days of the end of each Calendar Year the Operator shall submit a written report to DGPC describing the number of personnel employed their nationality and positions and the status of training programme for nationals of Pakistan.

17.2 The Operator shall also be required to establish a programme satisfactory to THE PRESIDENT the Directorate General of Petroleum Concessions and the Government locally and abroad to develop the capability of such personnel to effectively perform their duties related to the supervision of the Petroleum industry. Such training programme shall cover both technical and e.g. geology geophysics engineering project management disciplines management accounting training and legal and shall training will cover inhouse seminars. The scope of participation internships scholarships and training of the local inhabitants in different institutions. include on the job

17.3 From the Effective Date and up to the date of Commercial Discovery the Working Interest Owners other than GHPL shall subject to the guidelines issued by the Government from time to time spend a minimum of twenty five thousand United States Dollars U.S. 25000 per year during exploration phase and during

development and production phase a minimum of fifty thousand United States Dollars US 50000 per year on training. This Expenditure will be subject to upward review from time to time. The unspent training amount during a year unless agreed otherwise shall be deposited into a special account maintained for the purpose by the Directorate General of Petroleum Concessions. All such expenditure shall be treated for Pakistani income tax purposes as wholly and exclusively incurred for the purpose of the income under rule 23 24 or 25 of the Fifth Schedule as may be appropriate.

Model Petroleum Concession Agreement 2009 41 ARTICLE18 CONTRIBUTION TO JOINT

OPERATIONS 18.1 Except as otherwise provided for in this Agreement all Expenditures on Joint Operations shall be shared and borne by the Working Interest Owners in proportion to their Working Interests provided however that the local Working Interest Owners shall pay their share of Expenditure in Pak Rupee if their Working Interest is less than or equal to 15 in Zone I 20 in Zone II and 25 in Zone III. 18.2 At least thirty 30 Days prior to the first Day of each calendar quarter the

Operator shall submit an itemized estimate of such Expenditures for each Month of the quarter and each Working Interest Owner shall pay to the Operator its proportionate share of such estimated Expenditures in Monthly instalments. Each Monthly installment shall be paid as provided for in the Joint Operating Agreement. Model Petroleum Concession Agreement 2009 42 ARTICLE19

DEVELOPMENT FINANCING 19.1 Any of the Working Interest Owners shall have the right to obtain project financing for the development of a Commercial Discovery. THE PRESIDENT may where possible upon request of a Working Interest Owner use his good offices to assist in all things necessary to facilitate project financing by a consortium of banks for any portion of the development Expenditure. 19.2 Any Working Interest Owner may upon informing the other Working Interest Owners and with the prior approval of THE PRESIDENT create an equitable charge on its Working Interest to any reputable financial institution acceptable to THE PRESIDENT on any or all of its rights hereunder to secure the prompt payment of sums of money principal and interest so borrowed and the full faithful discharge of any and all obligations which it may undertake to obtain financing from such financial institution for the purpose of this Agreement. Model Petroleum Concession

Agreement 2009 43 ARTICLE20 REFINERY LPG AND NATURAL GAS PROCESSING PLANTS

20.1 The Working Interest Owners can setup a refinery in accordance with the relevant Rules and the policy in force. 20.2 The Working Interest Owners renounce any claim to participate on grounds

of production of Crude Oil in Pakistan in a refinery which may be set up by THE PRESIDENT. 20.3

The Working Interest Owners shall have the sole and exclusive right to establish install and operate LPG or Natural Gas processing plants in the Area in accordance with the relevant law rules or regulations provided that if they fail to commence the installation of an LPG or Natural Gas processing plant in the Area within four 4 Years of the grant of the Lease unless otherwise agreed between THE PRESIDENT and the Working Interest Owners their exclusive right to establish such plants within the Area will cease. Thereafter THE PRESIDENT or his designee will have the option

to establish install and operate LPG and Natural Gas processing plants in the Area provided that the Working Interest Owners are given an opportunity to participate in such plants. The public sector companies would however be governed under relevant Policy in vogue. Model Petroleum

Concession Agreement 2009 44 ARTICLE21 OTHER MINERALS 21.1 When any mineral other than

Petroleum and minerals necessary for the generation of nuclear energy is discovered by Operator and THE PRESIDENT does not have a preexisting policy for development and exploitation of such mineral by a nonPakistani company the Operator can elect within six 6 Months after the date on which Operator notifies the Director General Petroleum Concessions of such discovery to develop and exploit such mineral subject to reaching an accord with the appropriate licensing authority as to the terms and conditions of an agreement governing the development and exploitation of such

mineral. 21.2 Discovery of all minerals necessary for the generation of nuclear energy including inter alia Uranium Thorium Zirconium Niobium Hafnium Lithium and Vanadium shall be reported by Operator to the Pakistan Atomic Energy Commission and the Director General Petroleum Concessions. The Working Interest Owners shall have no right to develop and exploit such nuclear minerals unless specific approval concurrence is given by the Pakistan Atomic Energy Commission for the development and exploitation of these nuclear minerals. 21.3 Minerals other than those

necessary for the generation of nuclear energy produced in suspension or combination with Petroleum shall belong to the Working Interest Owners subject to payment of royalty if marketed. Royalty shall be at the rate specified by the appropriate authority. 21.4 The income derived from the minerals produced in suspension or combination with Petroleum shall be governed by Part II of the Fifth Schedule of the Income Tax Ordinance 2001 No. XLIX of 2001 as amended from time to time. 21.5 The rights granted to the holder of a Petroleum right shall not in any way prejudice or affect any of the powers of THE PRESIDENT as provided for in the Rules. Model Petroleum Concession Agreement 2009 45 ARTICLE22 AUDIT 22.1 The Operator shall maintain correct and accurate records and accounts of all Expenditures made for Joint Operations of all production obtained from the Area and of all property acquired for the Joint Account or disposed of in accordance with normal industry practices and the Accounting Procedure. The accounts shall be audited for the period from the Effective Date to the end of the Calendar Year and thereafter annually by an independent firm of chartered accountants selected by the Operator and approved by the Operating Committee. Copies of the audit reports shall be delivered to THE PRESIDENT and to each of the Working Interest Owners within six Months of the end of each Calendar year. If neither THE PRESIDENT nor the Working Interest Owners or any of them shall take exception to any such audited accounts within six Months after their receipt of copies of the report relating thereto the same shall be final and binding on the Working Interest Owners and THE PRESIDENT; provided however that the accounts and support vouchers and documents together with such reasonable facilities as may be required for the audit of the Joint Operations shall be made available to auditor nominated by THE PRESIDENT who may take such action as he deems fit within two years from the date of receipt of the said report by THE PRESIDENT and notwithstanding the above provision regarding finality after six Months THE PRESIDENT and the Working Interest Owners shall where necessary take appropriate action with regard to any matter arising out of the auditor report. 22.2 THE PRESIDENT and/or a nonOperator Working Interest Owners shall have the right at its sole expense to audit the Joint Account and related records for any Calendar Year or portion thereof at any time provided thirty 30 Days advance

notice is given to the Operator. 22.3 The Operator shall retain the records and accounts with this Article for a period as may be provided for in the Rules or for such longer work as may be appropriate under the relevant laws. Model Petroleum Concession Agreement 2009 46

ARTICLE 23 PRODUCTION BONUSES

23.1 The Working Interest Owners other than the GHPL if applicable shall pay THE PRESIDENT on an Area basis the following production bonuses CUMULATIVE PRODUCTION MMBOE At the start of Commercial Production 30 60 80 100 AMOUNT US 600000 1200000 2000000 5000000 7000000 For avoidance of doubt the production obtained during EWT period will be treated as a part of cumulative production for the purpose of determining production bonuses as stipulated in the rules. 23.2 Pakistani Working Interest Owners other than GHPL if applicable will pay their share of Production Bonuses in Rupees equivalent of United States Dollar converted at the prevailing exchange rate on the day of transaction. GHPL will not pay the production bonuses as long as GOP is the majority shareholder of this company. 23.3 Payments due under this Article shall be made within thirty 30 Days from the date on which the respective production bonus becomes payable. Production bonuses will be expensed on social welfare development projects in and around the Area as per Guidelines issued by the Government from time to time. 23.4 Payments made under this Article are not to be amortized expensed or credited for Pakistani Income Tax purposes. 23.5 In the event a Working Interest Owner elects not to join in the development of a Commercial Discovery such a Working Interest Owner shall have no obligation to pay the bonuses provided for in this Article 23. In that case the total amount of production bonus shall be paid by the remaining Working Interest Owners prorata to their Working Interest. Model Petroleum Concession Agreement 2009 47

ARTICLE 24 INSURANCE AND INDEMNIFICATION

24.1 The Operator shall comply with all applicable workmens compensation and employers liability laws and insurance laws of Pakistan. 24.2 To ensure that the Working Interest Owners meet their obligations to third parties and or to Government agencies that might arise in the event of damage and injury including environmental damage or injury removal of wrecks and cleaning up as a result of aents caused by Joint Operations notwithstanding that the damage is acental the Working

Interest Owners through the Operator shall maintain in force a third party liability insurance policy covering their activities and those of their contractors and subcontractors and the employees of all such parties. To the extent that such third party liability insurance is not available or is not obtained or does not cover part or all of any claims or damage caused by or resulting from Joint Operations the Working Interest Owners shall remain fully responsible and shall defend indemnify and hold THE PRESIDENT harmless against all such claims losses and damages of any nature whatsoever. 24.3 The Working Interest Owners shall under the Rules take out and maintain such insurance through the Operator as THE PRESIDENT may approve against any liability which the Working Interest Owners may incur. 24.4 The Working Interest Owners shall in accordance with the Rules effectively indemnify defend and hold harmless THE PRESIDENT at all times against all proceedings costs charges claims losses damages and demands whatsoever including without limitation claims for loss or damage to property or injury or death to persons caused by or resulting from any Joint Operations conducted by or on behalf of the Working Interest Owners by any third party or any thing done or purporting to be done in pursuance thereof provided that the Working Interest Owners shall not be held responsible to THE PRESIDENT under this Article 24 for any loss claim damage or injury caused by or resulting from any negligent action of any concerned personnel of THE PRESIDENT. Model Petroleum Concession Agreement 2009 48 ARTICLE25 PARENT COMPANYBANK GUARANTEE 25.1 Subject to Article 3.8a each Working Interest Owner excluding the GHPL if applicable shall procure and deliver to the Government on or prior to the Effective Date of this Agreement and hereafter before the first day of any subsequent Phase or Renewal a either an irrevocable unconditional bank guarantee from a reputable bank of good standing in Pakistan acceptable to the Government for

such Working Interest Owners share of nonperformance compensation as specified in Article 3.4 in a form and substance acceptable to the Government as set out in AnnexVIII ; or a guarantee in favour of the Government from its Parent Guarantor acceptable to the Government in form and substance set out in AnnexIX as required and notified by Government; or. the President may also consider accepting a proposal of a local Working Interest Owners as to the provision of guarantee as is allowed under the applicable policy which may be in the form of first preferred lien on Petroleum Production and or assets etc. in Pakistan; the President may also consider accepting a proposal of opening joint escrow account against minimum financial obligation of minimum work programme. b c a legal opinion from its legal advisors in a form satisfactory to the Government to the effect that the Parent Company Guarantee has been duly signed and delivered on behalf of the guarantors with due authority and are legally valid and enforceable and binding upon them. an undertaking on judicial paper shall be provided as per AnnexIXA regarding fulfilment of its obligationliabilities under the Rules Licence and the Agreement. 25.2 All bank guarantees shall provide a b that the amount referred to in Article 25.1a shall be reduced on prorata basis at the end of each Contract Year in an amount equal to 25 of the share of Work Units completed in the Area upon presentation to the bank of a certificate signed by DGPC on behalf of the Government that the said guarantee may be reduced in accordance with its terms; and that at the end of the each Phase the guarantee will be released in favour of Working Interest Owner on presentation to the bank a certificate from the Government that the Minimum Work obligation of Working Interest Owner for that Phase has been fulfilled and the guarantee may be released. Model Petroleum Concession Agreement 2009 49 25.3 If Working Interest Owner elects to proceed to the next Phase or to the Renewals of the Exploration Period outlined in Article 3.2 hereof a bank guarantee for the succeeding Phase or Renewal as the case may be shall be delivered to the Government prior to entering into subsequent phase or renewal as per Article 3.8 a and 25.1 with the notice of such election. 25.4 If the documents referred to in Article 25.1 are not delivered within the period specified this Agreement may be terminated by the Government in accordance with the Rules. .. Model

Petroleum Concession Agreement 2009 50 ARTICLE26 EFFECTIVENESS AND DURATION 26.1

This Agreement shall unless mutually agreed otherwise be and remain in full force application and effect from the Effective Date and so long thereafter as the Working Interest Owners continue to own interest in the Licence or any Leases or till a final settlement has been made after the expiration Surrender or termination of Petroleum rights under the Rules. 26.2 Any termination or expiration of this Agreement shall be without prejudice to any accrued liabilities obligations and rights of the Parties and the provisions of this Agreement with respect to confidentiality indemnification arbitration and applicable law shall continue to have effect notwithstanding such termination or expiration.

Model Petroleum Concession Agreement 2009 51 ARTICLE27 FORCE MAJEURE 27.1

Failure of any Party to this Agreement to fulfil any of the terms and conditions of this Agreement or of a Licence or Lease shall not be deemed as a breach or default insofar as such failure arises from Force Majeure provided that the affected Party has taken all appropriate precautions and reasonable measures to the satisfaction of the Government to fulfil its obligations. 27.2 27.3 In this Article the expression Force Majeure includes an act of God war insurrection riot civil commotion flood lightening explosion fire earthquake and any other happening which the affected party could not reasonably prevent or control. If the ability to fulfil its obligations is affected by Force Majeure the affected Party shall without delay give notice to the other Parties in writing supported by necessary justification and documentary evidence stating the cause of such inability and its efforts to remove such cause and remedy its consequences. 27.4 The term of this Agreement and the Licence or Lease as the case may be shall be extended for the duration of the Force Majeure situation and such further period as determined by the Government to resume operations. 27.5 In the event Force Majeure exceeds a period of three 3 years continuously during the initial term or any renewal thereof any of the Parties to the Agreement may terminate this Agreement on three 3 Months notice without any further obligation provided the Force Majeure is declared in good faith and acceptable to DGPC.

Model Petroleum Concession Agreement 2009 52 ARTICLE28 ARBITRATION 28.1

Any question or dispute arising out of or in connection with the terms of this Agreement or the Licence or any Lease

regardless of the nature of the question or dispute shall as far as possible be settled amicably through mutual negotiations between the parties in good faith within thirty 30 days after the date the disputing Parties delivers return notice of the dispute to the other Parties. Failing an amicable settlement within a reasonable period such dispute shall be submitted to the International Centre for Settlement of Investment Disputes ICSID established by the Convention on the Settlement of Investment Disputes Between States and Nationals of Other States of 1965 and THE PRESIDENT and the Working Interest Owners to the extent required by said Convention hereby consent to arbitration thereunder. The venue of the arbitration shall be in Pakistan or elsewhere as mutually agreed between THE PRESIDENT and the Foreign Working Interest Owners. If such mutual agreement cannot be reached the venue shall be decided by the ICSID. The award rendered shall be final and conclusive. The judgment on the award rendered may be entered in court having jurisdiction or application may be made in such court for a judicial acceptance of the award and an order of enforcement as the case may be. The official language of arbitration will be English. 28.2 If for any reason the request for arbitration proceedings is not registered by ICSID or if the ICSID fails or refuses to take jurisdiction over such dispute such difference or dispute shall be finally settled by arbitrators under the Rules of Arbitration of the International Chamber of Commerce the Chamber Rules and by three 3 arbitrators appointed in accordance with the Chamber Rules. The arbitrators shall not be nationals of Pakistan or of the country of the other party to the dispute nor shall any of such arbitrators be employees or agents or former employees or agents of any of the parties to the proceedings. 28.3 This Article is only applicable in case of a dispute between foreign Working Interest Owners inter se or between foreign Working Interest Owners and THE PRESIDENT provided that in the event of a dispute between the Pakistani Working Interest Owners inter se or between the Pakistani Working Interest Owners and THE PRESIDENT the arbitration shall be conducted in accordance with the Arbitration Act 1940. Model Petroleum Concession Agreement 2009 53 ARTICLE 29 PROTECTION OF THE ENVIRONMENT 29.1 The Parties recognise that Petroleum Operations will cause some impact on the environment in the Area. Accordingly in

performance of this Agreement Working Interest Owners shall conduct Petroleum Operations with due regard to concerns with respect to protection of the environment and conservation of natural resources. Towards this end and in furtherance of any laws promulgated or as the Government may require from time to time Working Interest Owners shall 29.2 29.3 a.employ advanced techniques practices and methods of operation for the prevention of environmental damage in conducting Petroleum Operations; and b.take necessary and adequate steps to prevent environmental damage and where some adverse impact on the environment is unavoidable to minimize such damage and the consequential effects thereof to persons property or otherwise. If the Working Interest Owners fails to comply with the provisions of Article 29.1b or contravenes the provisions of the relevant laws and such failure or contravention results in any environmental damage the Working Interest Owners shall forthwith take all necessary and reasonable measures to remedy the failure and the effects thereof. If the Government has on reasonable grounds good reason to believe that any works or installations erected by the Working Interest Owners or any Petroleum Operations conducted by the Working Interest Owners are endangering or may endanger persons or the property of any person or are causing or may cause pollution or are harming or may harm wildlife or the environment to a degree which the Government deems unacceptable the Government may require the Working Interest Owners to take remedial measures within such reasonable period as may be determined by the Government and to rectify any damage to the environment. If the Government deems it necessary it may also require the Working Interest Owners to discontinue Petroleum Operations in whole or in part until the Working Interest Owners has taken such remedial measures or has repaired any damage caused. 29.4 The measures and methods to be used by the Working Interest Owners for the purpose of compliance with the terms of Article 29.1b shall be determined in consultation with the Government upon the commencement of Petroleum Operations and whenever there is a significant change in the scope or method of conducting Petroleum Operations and shall take into account the good international Petroleum industry practices as applicable in similar circumstances and the relevant environmental impact study carried out in accordance with the

relevant laws as provided for in Article 29.5 below. The Working Interest Owners shall notify the Government in writing of the measures and methods finally Model Petroleum Concession Agreement 2009 54 determined by the Working Interest Owners and shall cause such measures and methods to be reviewed from time to time in the light of prevailing circumstances. 29.5 In addition to any requirements under the laws of Pakistan the Working Interest Owners shall cause a person or persons with special expertise and knowledge on environmental matters approved by the Government to carry out two environmental impact studies in order a.to determine at the time of the studies the prevailing situation relating to the environment human beings and local communities the wildlife and marine life in the Area and in the adjoining or neighbouring areas; and b.to establish the likely effect on the environment human beings and local communities the wildlife and marine life in the Area and in adjoining or neighbouring areas in consequence of the relevant Petroleum Operations to be conducted under this Agreement and to submit for consideration of the Parties methods and measures contemplated in Article 29.4 for minimising environmental damage and carrying out site restoration activities. The first of the aforementioned studies shall be carried out in two parts namely a preliminary part which must be concluded before commencement of any drilling in the Exploration Period. The part of the study relating to drilling operations in the Exploration Period shall be approved by the Government before the commencement of such drilling operations. The second of the aforesaid studies shall be completed before commencement of Petroleum Operations under an approved Development Plan and shall be submitted by the Working Interest Owners as part of the Development Plan with specific approval of Government being obtained before commencement of Petroleum Operations under the Development Plan. The studies mentioned in this Article 29.5 shall contain the details of the measures which are required to be taken in order to minimise environmental damage and shall include but not be limited to the following to the extent appropriate to the respective study a.proposed access cutting; b.clearing and timber salvage; c. wildlife and habitat protection; d.fuel storage and handling; e.use of explosives; f. camps and staging; g.liquid and solid waste disposal; h.cultural and archaeological sites; i. selection

of drilling sites; j. terrain stabilization; Model Petroleum Concession Agreement 2009 55 k. protection of freshwater horizons; l. blowout prevention plan; m. flaring during completion and testing of wells; n.abandonment of wells; o.rig dismantling and site completion; p.reclamation for abandonment; q.noise control; and r. mud and debris disposal. 29.6 The Working Interest Owners shall ensure that a.Petroleum Operations are conducted in an environmentally acceptable and safe manner consistent with good international Petroleum industry practices and are properly monitored; b.the pertinent completed environmental impact studies are made available to its employees and to its Subcontractors to develop adequate and proper awareness of the measures and methods of environmental protection to be used in carrying out the Petroleum Operations; and c. the contracts entered into between the Working Interest Owners and Subcontractors relating to its Petroleum Operations shall include the provisions stipulated herein and any established measures and methods for the implementation of the Working Interest Owners obligations in relation to the environment under this Agreement. 29.7 The Working Interest Owners shall a.Prior to conducting any drilling activities prepare and submit contingency plans for dealing with oil spills fires acents and emergencies designed to the achieve rapid and effective emergency response Government. The plans referred to above shall be discussed with the Government and concerns expressed shall be taken into account. for review by b.In the event of an emergency acent oil spill or fire arising from Petroleum Operations affecting the environment the Working Interest Owners shall forthwith notify the Government and shall promptly implement the relevant contingency plan and perform such site restoration and damage control activities as may be necessary in accordance with good international Petroleum industry practices. c. In the event of any other emergency or acent arising from the Petroleum Operations affecting the environment the Working Interest Owners shall take such action as may be prudent and necessary in accordance with good international Petroleum industry practices in such circumstances. Model Petroleum Concession Agreement 2009 56 29.8 In the event that the Working Interest Owners fails to comply with any of the terms contained in Article 29.7 within a period specified by the Government the Government after giving the Working Interest

Owners reasonable notice in the circumstances may take any action which may be necessary to ensure compliance with such terms to recover from the Working Interest Owners immediately after having taken such action all costs and Expenditure incurred in connection with such action together with such interest as may be determined in accordance with this Agreement. Model Petroleum Concession Agreement 2009 57 ARTICLE30 MISCELLANEOUS AND APPLICABLE LAW 30.1 The Operator shall conduct all exploration exploitation drilling development and production operations in accordance with Good International Oilfield Practices and the principles and standards as laid down in the Rules. Consistent with this requirement the Operator shall endeavour to minimize exploration development production and operation costs and maximize the ultimate economic recovery of Petroleum. 30.2 The Operator shall not start production from any well prior to testing and making sure to the satisfaction of THE PRESIDENTs representative that the well has been properly completed. 30.3 The Operator shall not flare Natural Gas but shall use it commercially or for recycling. If Natural Gas is not so used or not planned to be so used the Working Interest Owners shall negotiate an arrangement making it available to THE PRESIDENT or its designee free of cost at the down stream flange of the gasoil separation facilities in accordance with Article 11.3. If THE PRESIDENT for whatever reason is unable or unwilling to take delivery of the Natural Gas that would otherwise be flared as provided for above the Operator will be allowed to flare such gas in accordance with the RulesPolicy without any royalty or excise duty liability until such time as THE PRESIDENT or his designee can take delivery. This Agreement shall be governed by and given effect in accordance with the laws of Pakistan. 30.4 All the rules laws regulations in effect on the Effective Date including the Workers Welfare Fund Ordinance 1971 and the Companies Profits Workers participation Act 1968 shall apply to this Agreement throughout its term whether or not subsequently amended or revised. 30.5 This Agreement sets forth the entire agreement reached between the Working Interest Owners and THE PRESIDENT and it shall remain and continue in force and shall be binding upon each of them throughout its duration without any amendment revision or alteration thereto except as may hereafter be mutually agreed by the Working Interest

Owners with the approval of THE PRESIDENT. The Rules Income Tax Ordinance 2001 Regulations of Mines and Oilfields and Mineral Development Government Control Act 1948 and other laws that are in force on the Effective Date shall remain applicable for purposes hereof whether or not the same are subsequently amended or revised; provided that where any matter is not specifically dealt with in this Agreement or where there is any conflict between the provisions of this Agreement and the laws such matter shall be governed in accordance with the applicable provision of the Rules Income Tax Ordinance 2001 Regulations of Mines and Oilfields and Mineral Development Government Control Act 1948 and other laws as are in force on the Effective Date of this Agreement.

30.6 This Agreement shall inure to the benefit of and be binding upon the respective successors and permitted assigns of the Working Interest Owners. Model Petroleum Concession Agreement 2009 58

30.7 All headings used herein are for the purpose of reference only and shall not be construed as in any way defining or limiting the meaning of any provision.

30.8 The Operator shall observe all laws rules and regulations issued by the Government in respect of protection of the environment and safety of operations including the Oil and Gas Safety in drilling and Production Regulations 1974 the Pakistan Environmental Protection Act 1997 and the Mines Act 1923 as amended from time to time.

30.9 The Working Interest Owners other than GHPL shall be required in consultation with local civil administration Provincial Governments to undertake social welfare programmes such as fight against narcotics promotion of sports rehabilitation of the mentally retarded and handicapped children improvement of educational facilities drinking water health roads and grant of scholarships for local students and shall spend during the exploration phase till the commencement of Commercial Production not less than thirty thousand Dollars US 30000 per annum. The Government will issue necessary guidelines for social welfare programs as deemed appropriate from time to time. After the commencement of Commercial Production in the Area the following minimum amounts will be spent during each year

Production Rate BOE/Day	Less than 2000	2000	5000	5000	10000	10000	50000	More than 50000	Amount/Year US Dollars
Zone I	50000	100000	200000	400000	700000	Zone II	37500	75000	150000
Zone III	300000	525000				These amounts			

will be increased from time to time by mutual agreement of the Working Interest Owners mentioned above and THE PRESIDENT. The Pakistani Working Interest Owners will incur these expenditures in Pak Rupees . Any amounts so spent shall be treated for Pakistani Income Tax purposes as wholly and exclusively incurred for the purpose of the business of the Working Interest Owners and shall be allowed against income under rule 25 of the Fifth Schedule. Model Petroleum Concession Agreement 2009 59 ARTICLE31 NOTICES 31.1 Any notice or advice required or convenient to be given to or by THE PRESIDENT or any Working Interest Owners shall be given in writing in the English language and delivered by hand or by telex confirmed by the correct answerback of the addressee at the foot of such telex. Petroleum Concession Agreement 2009 65 Annexed to and made a part of the Petroleum Concession Agreement Joint Operating Agreement Between XYZ and GHPL if applicable THIS JOINT OPERATING AGREEMENT is made on the Day of 200. BETWEEN 1. XYZ 2. ABC 3. The Government Holdings Private Limited if applicable hereinafter referred to as the GHPL which term shall include its successors and assignees of the second part. WHEREAS THE PRESIDENT of the Islamic Republic of Pakistan THE PRESIDENT and the Parties hereto have entered into a Petroleum Concession Agreement for Block hereinafter referred to as the Concession Agreement dated the Effective Date for the exploration development and production of Petroleum in Pakistan and the purpose of this Joint Operating Agreement is to further define the respective rights and obligations of the Working Interest Owners and to regulate the conduct of their operations; NOW IT IS HEREBY AGREED AS FOLLOWS Model Petroleum Concession Agreement 2009 66 ARTICLE1

DEFINITIONS The terms defined in the Concession Agreement shall have the same meaning whenever used in this Joint Operating Agreement. Furthermore the following terms shall have the meanings as indicated 1.1 Joint Property means all assets of any nature whatsoever the cost of which is chargeable to the Joint Account and shall include but not be limited to buildings lands material equipment and fixtures acquired for the purposes hereof and other rights and all Joint Account funds. NonOperator means any Working Interest Owner not designated as the 1.2 Operator. 1.3 Work Obligations means the work obligations set out in Article 3 of Agreement of the Concession Agreement. In the event of any difference or inconsistency between the terms of this Joint Operating Agreement and those of the Concession Agreement the latter shall prevail. Model Petroleum Concession Agreement 2009 67 ARTICLE2 EFFECTIVENESS OF JOINT OPERATING AGREEMENT 2.1 This Joint Operating Agreement shall come into full force and effect on the

Effective Date of the Concession Agreement. Model Petroleum Concession Agreement 2009 68

ARTICLE3 WORKING INTEREST AND VOTING RIGHTS 3.1 The Working Interests of XYZ ABC and GHPL if applicable throughout the Area for each phase of the Joint Operations shall be governed by the provisions set forth in Article 5 of the Concession Agreement. Each Working Interest Owner shall be liable for all Expenditures to the extent of its Working Interest except as provided for in the Concession Agreement. 3.2 The voting rights of the Working Interest Owners shall be in proportion to their respective Working Interests at the time of the vote. Model Petroleum Concession Agreement 2009 69 ARTICLE4 MANAGEMENT AND OPERATIONS 4.1 4.2 To provide

general administration supervision direction and control of all Joint Operations to be conducted under this Joint Operating Agreement an Operating Committee shall be established consisting of a representative and an alternate representative who shall act in the absence of the representative to be appointed by each of the Working Interest Owners except as otherwise provided in the Concession Agreement. The Operator shall appoint the chairman of the Operating Committee who shall not have any voting rights. Each Working Interest Owner hereby vests its representative and alternate representative with full authority to represent and bind that Working Interest Owner in all matters arising under the Concession Agreement and this Joint Operating Agreement. Each Working Interest Owner shall designate its representative and alternate representative by written notice to the other Working Interest Owners stating the name and address of its representative and alternate representative. Subject to Article 15 of the Agreement each Working Interest Owner may by written notice to the other Working Interest Owners replace its representative or any alternate at any time and such substitute shall have the same powers and duties as the person he replaces. Subject to Article 11 hereof each representative may bring such advisers as it deems fit to any meeting of the Operating Committee. The Operating Committee shall meet quarterly to discuss important matters unless the Operating Committee agrees that any such meeting may be dispensed with and once each Calendar Year for the purposes of presenting the work programme and budget referred to in Article 6 and review thereof and shall meet at such other times as Operator or any

NonOperator may request. Notice of any Operating Committee meeting shall be given by the Operator at least fifteen 15 Days in advance of the proposed date of the meeting stating the time place and agenda to be considered at such meeting together with such supporting information as is practicable and the Operators recommendations if appropriate. Notwithstanding the foregoing when any meeting of the Operating Committee is called to consider any matter related to commerciality or the approval of a Development Plan the notice shall be given at least twenty eight 28 Days in advance. 4.3 No decision on any matters shall be taken at any meeting of the Operating Committee unless either prior notice as provided in Article 4.2 has been given or the representatives of the Working Interest Owners unanimously agree that a matter of which a prior notice has not been given shall be dealt with at such meetings. Operators representative shall prepare minutes covering business conducted at Operating Committee meetings copies of which shall be made available as soon as possible but in any event within fifteen 15 Days of the date of the meeting to all the Working Interest Owners through their representatives. Any Working Interest Owner having any corrections or objections to the minutes shall notify the Operator and other Working Interest Owners thereof. If a Working Interest Owner does not give notice of corrections or objections within thirty 30 Days after receipt of said minutes the same shall be deemed to have been Model Petroleum Concession Agreement 2009 4.4 4.5 4.6 4.7 70 approved. If the Operating Committee does not agree to the minutes such minutes shall be discussed at the next meeting of the Operating Committee. The decision taken by the Operating Committee in accordance with the provisions of Article 4 shall be binding upon all Working Interest Owners. All decisions of the Operating Committee in respect of Joint Operations under this Joint Operating Agreement shall require approval by more than seventy percent 70 of the total Working Interest. Each representative shall have voting rights equal to the Working Interest of his principal as set forth in Article 5 of the Concession Agreement. All meetings of the Operating Committee shall be held in Pakistan unless the Working Interest Owners unanimously agree to change the venue of any such meeting. The expenses of the representatives of the Working Interest Owners incurred in attendance at meetings shall be borne by the respective

Working Interest Owners and shall not be charged to the Joint Account. Any matters requiring Operating Committee approvals shall be submitted to the Operating Committee for consideration and vote without holding a meeting provided that such matter is submitted by notice in writing to all representatives and to the Operator. In such event each said representative shall within fifteen 15 Days after notice is received vote by giving notice of its vote to the Operator. Any Working Interest Owner that does not give notice of its vote as aforesaid shall be deemed to have voted in favour of the matter submitted. Any proposal which thus receives approval of the Operating Committee shall be deemed to be the proposal adopted by the Working Interest Owners and the decision thus taken shall be binding on them. Operator shall report to the Working Interest Owner in writing without undue delay the result of such vote after receipt of the votes of all Working Interest Owners and shall keep a written record thereof. A Working Interest Owner or the Chairman of the Operating Committee receiving notice of a matter to be voted upon without holding a meeting of the Operating Committee may instead of voting request a meeting of the Operating Committee. In that event such matter shall not be considered and deed without holding a meeting. 4.8 No business shall be transacted at any meeting unless a quorum is present. A quorum shall include the Operator and one NonOperator holding seventy percent 70 or more of the total Working Interest related to the matter under consideration. Any other representative not present at a meeting may vote on any item included in the agenda of the meeting in writing addressed to the Operator provided such vote is received by the Operator prior to the submission of such item to a vote at the meeting. 4.9 Notwithstanding other provisions hereof if the Operator shall be required within a period of time of less than fifteen 15 Days to take action which requires authorization of the Working Interest Owners which is not an emergency action as provided for in Article 5.8 the Operator shall give notice to each Working Interest Model Petroleum Concession Agreement 2009 71 Owner by telex or by telephone to be forthwith confirmed in writing of all circumstances pertaining to the taking of such action stating in addition the period of time which shall not be less than 48 hours by which a decision must be made. The action authorized by the appropriate vote of representatives who shall vote within the

time stated in the Operators notice shall be deemed the act of the Operating Committee and where any Working Interest Owner fails to vote within such time that Working Interest Owner shall be deemed to have voted in favour of the proposed action. 4.10 The Operating Committee may establish such advisory subcommittees as it technical or finance to considers appropriate to commerciality or subcommittees or special subcommittees development programs for the purpose of reviewing matters prior to their consideration by the Operating Committee. All such subcommittees shall consist of a representative of each Working Interest Owner. The duties and functions of any such subcommittees shall be as determined by the Operating Committee. time such as in relation from time 4.11 Except as otherwise stipulated in this Joint Operating Agreement all important matters concerning Joint Operations hereunder including but not limited to the following shall be submitted to the Operating Committee for review revision and decision to such extent as it may see fit and all decisions duly and properly taken by the Operating Committee shall be binding on the Working Interest Owners and to the extent applicable shall be executed promptly by the Operator 1. 2. 3. 4. 5. 6. 7. 8. Budgets and work programmes revisions and amendments thereto; Programmes in relation to the location drilling testing deepening plugging back completion reworking and abandonment of wells; Subject to Article 5.3 d the selection of professional consultants technical services award of contracts on bids for Joint Operations; Estimates of reserves of Petroleum; A Petroleum availability forecast giving the total quantities of Petroleum that can be produced from the Area in any quarter taking of recovery of the reserves from the Area in accordance with Good International Oilfield Practices at that time the determination shall be made for each Quarter not less than ninety 90 Days prior to the commencement of that Quarter; The extension or renewal of the Licence or the application for grant extension or renewal of any Leases; Subject to Article 13 hereof the Surrender of any part of the Area or of any Lease; The unitization of any acreage of a Licence or a Lease with acreage outside subject to the approval of THE PRESIDENT; Model Petroleum Concession Agreement 2009 72 9. 10. 11. The exchange of confidential proprietary information to or with third parties notice of which shall be given to THE

PRESIDENT; All press releases and publicity material to be issued by the Operator on behalf of the Working Interest Owners prior to the release of the same by the Operator. This will however be subject to prior approval of THE PRESIDENT; Any other matter that is specifically submitted to the Operating Committee for decision under other provisions of this Joint Operating Agreement or any other matter concerning Joint Operations hereunder not dealt with in this Joint Operating Agreement which may be specifically referred to the Operating Committee by any Working Interest Owner or;

12. Declaration of Commercial Discovery; 13. 14. The Development Plan for any Commercial Discovery and the vertical and horizontal boundaries for any Discovery Area; The selection of any areas outside the Area for which application may be made jointly. 4.12 In respect of the work

obligations set out in Article 3 of the Concession Agreement the Operating Committee shall unless and to the extent that relief from such obligation is sought and obtained from THE PRESIDENT determine the location and the time at which such obligations are to be discharged. Model

Petroleum Concession Agreement 2009 73 ARTICLE5 RIGHTS POWERS AND DUTIES OF

OPERATOR 5.1 5.2 XYZABC is hereby designated as the Operator for all Joint Operations and agrees to serve as such in accordance with the terms provisions conditions and limitations of this Joint Operating Agreement. Subject to the provisions of this Joint Operating Agreement the

Operator shall have the sole authority and responsibility for the direct management and supervision of all Joint Operations and shall have the sole custody and control of all the Joint Property under its care. Moreover the Operator shall perform its duties and carry out its responsibilities in accordance

with the terms and conditions of each approved work programme and budget Concession Agreement and Rules and subject to such instructions as may be given from time to time by the Operating Committee. 5.3 In order to carry out and perform all Joint Operations as aforesaid and in

connection therewith the Operator shall have the following exclusive rights duties and obligations a b To conduct all Joint Operations by its duly authorized officers employees or agents or by such

independent and qualified contractors consultants or service companies as the Operator may engage in accordance with the Concession Agreement and the Joint Operating Agreement. To

acquire and furnish for the Joint Account all materials and equipment required it shall be the duty of the Operator to make every reasonable effort to obtain such required materials and equipment on the terms and conditions most favourable to all of the Working Interest Owners and in accordance with the provisions of the Concession Agreement and the Rules. To allow the representatives of the Working Interest Owners and THE PRESIDENT access to the Joint Operations at all reasonable times provided that reasonable notice is given and that such access does not interfere with the conduct of the Joint Operations at their sole risk and expense with the right to observe any and all the Joint Operations being conducted and their results as well as inspect the records and accounts of such operations being also authorized to examine all data and interpretations thereof including but not limited to cores samples logs and surveys relating to the Joint Operations. The Operator shall promptly furnish each party with a reproducible copy of all logs geophysical data and all other geological geophysical drilling financial information including but not limited to reports on well tests and core analysis; provided however that all such data information and interpretations shall remain the exclusive property and confidential information of the Working Interest Owners to be based in accordance with the Rules and the Concession Agreement. THE PRESIDENT may appoint a representative to observe any or all of the Joint Operations at the expense of Joint Account and provided that the presence of such representative does not interfere with the conduct of the Joint Operations. A NonOperator may from time to time nominate selected staff Model Petroleum Concession Agreement 2009 74 c d to be present at Joint Operations in Pakistan for training on terms to be agreed upon ; To prepare and submit work programmes and budgets to the Operating Committee as provided in Article 6 hereof and make and implement such recommendations from time to time for the carrying out the Joint Operations hereunder efficiently as it may consider expedient; To enter into contracts including services purchases of materials and equipment which are advisable and necessary to carry out the Joint Operations. The Operator shall invite bids through a proper bidding procedure for any contract which will require Expenditure of more than U.S. Dollars one hundred and fifty Thousand US 150000 and such bids shall be opened publically.

Unless the Operating Committee dees otherwise each Party and its Affiliates may also submit a bid for such a contract. i ii In the case of any contract requiring Expenditure of more than U.S. Dollars one hundred and fifty Thousand US 150000but less than U.S. Dollars Five Hundred Thousand US 500000 the Operator shall award such a contract to the most suitable and competitive bidder and all such awards shall be reported to the Operating Committee at its next meeting. In the case of any contract to be awarded to a Working Interest Owner or its Affiliates or a contract requiring Expenditure of more than U.S. Dollars Five Hundred Thousand US 500000 the terms of the recommended bid shall be subject to the approval of the Operating Committee either at a meeting of the Operating Committee or by circulation of such bid to the Working Interest Owners along with the bid evaluation summary and other relevant documents and approval shall be deemed to have been given unless within ten 10 Days from the date of recommendation Working Interest Owners having in aggregate a Working Interest of 20 or 15 as per applicable Zone give notice that they do not support such recommendation. e f g to acquire any and all surface rights on behalf of the Working Interest Owners which may be required for or in connection with the conduct of Joint Operations; to promptly pay and discharge all Expenditures incurred in connection with Joint Operations; to keep and maintain permanent records of all relevant data and information obtained in the course of Joint Operations and to keep the Working Interest Owners currently informed by furnishing them from time to time in the form and frequency established by the Operating Committee statements and information on such Joint Operations; Model Petroleum Concession Agreement 2009 h i 75 To determine in accordance with the policy parameters as may be laid down by the Operating Committee the number of employees needed for the efficient conduct of the Joint Operations their selection the hours of labour and the compensation for service performed and other working conditions; provided however that the Operator shall give priority in employment to Pakistani citizens in conformity with Article 17 of the Concession Agreement and the Rules. To represent the Working Interest Owners before the Government or other authorities with respect to all matters arising under this Joint Operating Agreement subject to the requirement that the prior concurrence of the Working

Interest Owners shall be obtained with respect to representation on any matters materially affecting that Working Interest Owners. Each Working Interest Owner may be represented in meetings with THE PRESIDENT or other authorities on matters materially affecting the said Working Interest Owner provided that the Operator shall be the spokesman. The Operator for and on behalf of all Working Interest Owners shall prepare file and otherwise handle all reports applications and returns other than those relating to taxes based on income or profits which the Working Interest Owners are required to prepare separately which may be required by laws rules or regulations of the Government. However it is agreed that nothing set forth in this Article 5.3i shall prevent any Working Interest Owner from representing itself before any of the aforementioned bodies on matters which are appropriate and necessary provided that such Working Interest Owner shall notify the Operator and the other Working Interest Owners prior to any such representation. The Operator shall conduct the Joint Operations in a proper and workmanlike manner in accordance with methods and practices customarily used by the industry in accordance with Good International Oilfield Practices and with a degree of diligence and prudence reasonably and ordinarily exercised by experienced operators engaged in a similar activity under similar circumstances and conditions. The Operator shall further do or cause to be done with due diligence all such acts and things within its control as may be necessary to keep and maintain the Area in force and effect and shall conduct the Joint Operations in compliance with the requirements of the Concession Agreement the Licence any Leases and any other applicable law and rules and orders framed thereunder. The Operator shall not be liable for any loss or damage which results from Joint Operations unless such loss or damage results from Willful Misconduct of the Operator provided that the Operator shall not be responsible or liable under any circumstances for any consequential loss or damage including but not limited to inability to produce Petroleum lost production or loss of profits. For the purposes of this Joint Operating Agreement the term Wilful Misconduct shall mean such wanton and reckless conduct as amounts to a Model Petroleum Concession Agreement 2009 5.4 5.5 76 wilful and utter disregard consequences. for avoidable and foreseeable harmful 5.6. Each Working Interest Owner agrees to

indemnify the other Working Interest Owners to the extent of its Working Interest share for any claim by or liability to including any costs and expenses necessarily incurred in respect of such claim or liability any person not being a Working Interest Owner arising from or in connection with the Concession Agreement or Joint Operations. 5.7 Operator shall freely consult with the Working Interest Owners and keep them informed of all matters which the Operator contemplates to undertake. 5.8 If the Operator or any other Working Interest Owner is sued on an alleged cause of action arising out of Joint Operations it shall give prompt written notice of such suit to all other Working Interest Owners. The defence of any such suit shall be under the general direction of the Operator through its attorneys at the expense of the Joint Account but each of the other Working Interest Owners shall have the right to participate in the handling of such suit through its attorneys at its own expense. Any such suit may be settled during litigation by the Operator with prior approval of the Operating Committee. 5.9 Any damages claim caused by or arising out of Joint Operations shall be handled by the Operator and its attorneys at the expense of the Joint Account and may be settled by the Operator in its best judgement provided that no such claim shall be settled for an amount exceeding U.S. Dollars Fifty Thousand US 50000 without first obtaining the approval of the Operating Committee. 5.10 Notwithstanding other provisions hereof in case of explosion fire flood or other emergency the Operator shall take action deemed expedient by the Operator to protect and safeguard life and property. The Operator shall promptly report to the Working Interest Owners and the President a full description of the emergency the action taken the damage if any suffered and the expenses incurred hereunder. 5.11 The Operator may resign as the Operator at any time upon giving not less than ninety 90 Days written notice to the Working Interest Owners and the Government. The Operator shall be automatically removed in case of insolvency bankruptcy assignment for the benefit of creditors dissolution sale or transfer of its entire Working Interest to a third party or if the Operator defaults in its duties or obligations or any of them hereunder and does not commence to rectify the default within thirty 30 Days of having been notified in writing by the Operating Committee of the alleged default by not less ninety 90 Days notice provided that in

respect of any vote of the Operating Committee on any such removal the vote of the Working Interest Owner which is the Operator and the votes of any Working Interest Owner which is an Affiliate of the Operator shall be ignored and the percentage figure set out in Article 4.5 shall apply to the total votes available of the remaining Working Interest Owners. The Operator shall continue to serve until a successor Operator is appointed but shall not be required to do so for a period of more than one hundred and eighty 180 Days following the date of commencement of the original notice period for resignation or removal. Model Petroleum Concession Agreement 2009 77 5.12 Upon the resignation or removal of the Operator one of the other Working Interest Owners shall be selected as a successor Operator by the Operating Committee. In the event that no Working Interest Owner is willing to accept appointment as the Operator no Working Interest Owner shall be elected as the Operator without its consent a suitable entity shall be selected and designated as successor Operator and engaged under a written contract approved by the Operating Committee. The successor Operator shall succeed to the powers and duties of the Operator as per the Concession Agreement and Joint Operating Agreement. 5.13 Immediately after the notice of resignation or removal of an Operator is given the Working Interest Owners shall arrange for taking of an inventory of the equipment material and supplies acquired by the Operator for the Joint Account. On the effective date of the resignation or removal of the Operator such outgoing Operator shall deliver to the successor Operator all equipment material supplies and other assets then in its custody and shall account for those it is unable to deliver. The outgoing Operator shall also deliver to the successor Operator any and all data including but not limited to core samples log surveys records data documents and balances of the Joint Account which came into its possession as the Operator. The Working Interest Owners shall also arrange for an audit of the Joint Account before the new Operator takes charge of Joint Account. Model Petroleum Concession Agreement 2009 78

ARTICLE6 WORK PROGRAMME AND BUDGET 6.1 6.2 All Joint Operations conducted by the Operator and all Expenditure incurred for the Joint Account in connection therewith shall be performed and incurred only pursuant to an approved work programme and budget thereto or

pursuant to an approved supplementary work programme and supplementary budget thereto. The Operator shall submit to the Operating Committee a proposed work programme and budget prepared in such detail as is required by the Operating Committee for each Calendar Year and one for the planning purposes of the GHPL if required for the period 01 July to 30 June. The initial budget shall be submitted as soon as possible after activities hereunder are commenced and shall cover the remaining period of the then Calendar Year as well as the next Calendar Year. All budgets thereafter shall be submitted not later than seventy five 75 Days prior to the beginning of each Calendar Year and additional budget at the same time for the GHPL if applicable planning purposes for the period 01 July of that year to thirty 30 June of the succeeding year. In respect of budget items for which sufficient details are not then available to enable the Operating Committee to approve such contingent items the Operating Committee may authorize such items in principle subject to later submission of the required information for approval. The Operating Committee shall agree to the work programme and budget therefor within thirty 30 Days prior to the beginning of each such year. The work programme and budget shall be approved by the Operating Committee except that any well or development programme proposed therein that does not receive approval of the Operating Committee shall be removed from the said work programme and budget and may be subject to the terms of Article 9 hereof. The Operator is hereby authorized to conduct Joint Operations and to incur all Expenditure for the Joint Account to the extent that such work and Expenditures are included within a work programme and budget which have been approved by the Operating Committee. When so approved anticipated Expenditures pursuant to each such budget and Authority For Expenditure AFE issued thereunder shall be the basis for the cash calls by the Operator as provided in the Accounting Procedure. 6.3 The Operator shall undertake all Joint Operations as set forth in each approved annual work programme and budget and incur and pay on behalf of the Joint Account all Expenditure resulting from such work provided that the following work should be performed after the Operator has received written approval of its AFE in respect thereof from the Working Interest Owners and such AFE has been approved by the Working Interest

Owners having in aggregate at least the percentage figure of Working Interest specified in Article 4.5 i ii seismic surveys; Any operation in relation to a well including but not limited to drilling deepening plugging back reworking testing or completion; Model Petroleum Concession Agreement 2009 79 iii iv Any single addition to fixed assets other than a well amounting to U.S. dollars two hundred thousand US 200000 or equivalent or more; and Any single maintenance project amounting to U.S. dollars one hundred and fifty thousand US 150000 or equivalent or more; The Operator shall furnish as early as possible to each Working Interest Owner and THE PRESIDENT a copy of the AFE for any items of Expenditures in excess of U.S. dollars one hundred thousand US 100000. Provided however that any subdivision of a project for the purpose of award of a contract will require specific approval of Operating Committee. 6.4 The Operator shall not undertake any Joint Operation not included in an approved work programme or make any Expenditure in excess of an approved budget therefor except as follows; i ii If necessary to carry out an approved work programme the Operator is authorized to make Expenditures in excess of the budget adopted therefor up to but not exceeding ten percent 10 of such budget provided that such actual or foreseen excess Expenditures shall be reported to the Working Interest Owners by the Operator giving the details and justification for such excessive Expenditures; and In case of emergency the Operator may incur such immediate Expenditures as it deems expedient for protection of Joint Operations life or property and such Expenditures shall be reported promptly to the Working Interest Owners. 6.5 If any Working Interest Owner Defaulting Party fails to pay in full its share of any cash calls by the due date in accordance with the Accounting Procedure i the Operator shall as soon as practicable notify by telex all the Working Interest Owners of such default. ii With the exception of the Defaulting Working Interest Owner each Working Interest Owners Non Defaulting Party shall contribute as hereinafter provided a share of the amount in default in the proportion that its percentage interest bears to the total of the Working Interests of the NonDefaulting Working Interest Owners and pending receipt of such additional contributions the Operator shall make arrangements to meet any commitments falling due by borrowing the necessary finance from outside sources or by making the

necessary finance available itself and all reasonable costs of any such finance shall be charged to the NonDefaulting Working interest owners. Finance made available by the Operator shall bear interest calculated on a Day to Day basis at a rate equal to three 3 per cent above the London Interbank Offer Rate LIBOP from time to time; iii Within three 3 calendar Days following the notification by the Operator under i above the Operator shall notify all the Working Interest Owners of the Model Petroleum Concession Agreement 2009 6.6 6.7 6.8 80 liability of each of the NonDefaulting Working Interest Owners to contribute to the amount in default and shall make a further cash calls accordingly to take effect on the expiry of the six 6 calendar Days specified in iv below; and iv If such default continues for more than six 6 calendar Days after the date of notification by the Operator each of the NonDefaulting Working Interest Owners shall on the Calendar Day next following such sixth calendar Day pay the amount notified under iii above and thereafter shall continue to pay in addition to its share of subsequent cash calls the same proportion of all such subsequent cash calls until Defaulting Working Interest Owners has remedied its default in full or until forfeiture as hereinafter provided and failure by any Working Interest Owners to make such payments shall likewise and with the same results render that Working Interest Owner in default. The Defaulting Working Interest Owners shall have the right to remedy the default at any time prior to forfeiture as hereinafter provided by payment in full to the Operator or if the Nondefaulting Working Interest Owners have paid any amounts under 6.5 iv above the Non defaulting Working Interest Owners in proportion to the amount so paid by them of all amounts in respect of which the Defaulting Working Interest Owner is in default together with interest thereon calculated on a Day to Day basis at the rate of three 3 percent above LIBOR from time to time from and including the due date for payment of such amounts until the actual date of payment If any default continues for more than six 6 calendar Days after the date of notification by the Operator under above clause for so long as the default continues the Defaulting Working Interest Owners shall not be entitled to receive its entitlement of Petroleum attributable to its Working Interest share which shall instead be owned by the Nondefaulting Working Interest Owners in the proportions in

which their respective Working Interests bear to the total of the same. During the continuation of any default the Defaulting Working Interest Owners shall not be entitled to be represented at meetings of the Operating Committee or any subcommittee thereof nor to vote thereat so that the voting interest of each Working Interest Owners other than the Defaulting Working Interest Owners shall be in the proportion which its Working Interest bears to the total of the Working Interests of such Working Interest Owners and shall have no further access to any data and information relating to the Joint Operations. The Defaulting Working Interest Owner shall be bound by decisions of the Operating Committee made during the continuation of the default. i In the event that the default continues for more than sixty 60 Days then each of the NonDefaulting Working Interest Owners shall have the right to have forfeited to it and to acquire by notice to the other Working Interest Owners given within thirty 30 Days after such period of sixty 60 calendar Days the Working Interest of the Defaulting Working Interest Owners in the LicenceLease and under Concession Agreement and this Joint Operating Agreement or if more than one Model Petroleum Concession Agreement 2009 81 ii NonDefaulting Working Interest Owners exercises such right its proportionate share of the Working Interest of the Defaulting Working Interest Owner in the Licence Lease Concession Agreement and this Joint Operating Agreement such share being the proportion in which its Working Interest bears to the total Working Interest of such NonDefaulting Working Interest Owners; If none of the NonDefaulting Working Interest Owners exercises such right as is mentioned above then without prejudice to any rights of the Nondefaulting Working Interest Owners the Working Interest Owners shall be deemed to have deed to abandon the Joint Operations and each Working Interest Owner including the Defaulting Working Interest Owner shall pay its Working Interest share of the costs of abandoning the Joint Operations including but not limited to pay liquidated damages if applicable.

6.9 With respect to above Article any such forfeiture and acquisition of the Working Interest of the Defaulting Working Interest Owner in the Licence Lease Concession Agreement and this Joint Operating Agreement shall be i ii iii iv subject to necessary approvals of the Government under the Rules; without prejudice to any other rights of each Working Interest Owner other than the

Defaulting Working Interest Owner;. so forfeited and acquired as beneficial owner or owners free of any charges and encumbrances Other than rents and royalty under the Licence or the Lease; subject to the Defaulting Working Interest Owner remaining liable and obligated for its Working Interest share of all Expenditure that in any way relate to abandonment of Joint Operations; and v effective as of the date of default. The Defaulting Working Interest Owner shall promptly join in such actions as may be necessary or desirable to obtain necessary approval of the Government under the Rules and shall execute and deliver any and all documents which are necessary to effect such forfeiture and acquisition including for the avoidance of doubt any stamp duty incurred on the document executed to effect such forfeiture and acquisition which shall be the responsibility of the Defaulting Working Interest Owner.

Model Petroleum Concession Agreement 2009 82 ARTICLE7 EXPENDITURES 7.1 7.2 7.3 Subject to of the Concession Agreement each of the Working Interest Owners shall be severally liable for and shall bear all Expenditures incurred by the Operator for the Joint Account in proportion to its Working Interest from time to time. Subject to the provisions of this Joint Operating Agreement each of the Working Interest Owners shall own at any given time an undivided share equal to its Working Interest contribution in all property acquired hereunder. All charges to the Joint Account and all matters of Accounting Procedure between the Working Interest Owners shall be governed by these provisions and provisions of the Accounting Procedure. If any conflict or discrepancy exists between these provisions and those contained in the Accounting Procedure the provisions of this Joint Operating Agreement shall prevail.

Model Petroleum Concession Agreement 2009 83 ARTICLE8 DISPOSAL OF PETROLEUM 8.1 Without prejudice to the right of THE PRESIDENT to take and receive royalty in cash or in kind and subject to the right of the Operator to use Petroleum for Joint Operations each Working Interest Owner shall own and have the right to take in kind and separately dispose of its Working Interest share of Petroleum won and saved after payment of royalty and shall own the Petroleum so taken. 8.2 8.3 8.4 Each of the Working Interest Owners shall have the obligation to lift and separately dispose of its entitlement in all Petroleum produced and/or stored at such times in such quantities and in accordance with such

procedures as may be agreed by all Working Interest Owners prior to the commencement of Commercial Production the Lifting Procedures which have or may have entitlements in respect of the said development in question prior to the commencement of production but so that the rights of each of such Working Interest Owners to lift Petroleum to which it is entitled shall not be prejudiced. In the event that any of the Working Interest Owners having a Working Interest in Field development shall find itself unable for any reason to lift such quantities of Petroleum as are to be lifted in accordance with the Lifting Procedures it shall forthwith notify the other Working Interest Owners having Working Interest in such development to that effect and such quantities of Petroleum shall be dealt with in accordance with the Lifting Procedures. The Working Interest Owners recognize that in the event of the production of Natural Gas and LPG it may become or shall be desirable for them to enter into special arrangements for the disposal of the same and they agree that in such event and upon the request of any of them their respective representatives shall meet as necessary to consider their entry into such arrangements.

Model Petroleum Concession Agreement 2009 84

ARTICLE 9 SOLE RISK

9.1 As used in this Article 9 the terms set out below shall have the following meanings

9.1.1 Sole Risk Well means a well other than a well included in Minimum Work Obligation specified in Article 3 of the Concession Agreement and drilled and completed by less than all the Working Interest Owners hereto in accordance with the provisions of this Article 9 or such other limited well site operation as specified in Article 9.9.

9.1.2 Location means the geographic point at the surface being the vertical projection of the point where the well bore actually encounters the objective formation in the case of an existing well or where the well bore is expected to encounter the objective formation in the case of drilling well or a well included in the currently approved work programme and budget.

9.2 9.3 9.1.3 Commercial Quantities shall have the same meaning as the definition of Commercial Production in Article 1.11 of the Concession Agreement. Any Party shall have the right by complying with the terms of this Article 9 to drill any well within the Area other than a well approved by the Operating Committee and included in the currently approved annual work programme and budget. Any Working Interest Owner proposing to drill a Sole Risk Well shall give

notice thereof Notice to the other Working Interest Owners specifying the Location provided that such Location shall conform to any spacing pattern for the development drilling previously approved by the Operating Committee the drilling operations to be conducted and the objective formations.

9.4 Within thirty 30 Days after the receipt of the Notice except as otherwise provided in Article 9.9 hereof the Operator shall notify each Working Interest Owner of the Operators detailed cost estimates with respect to the drilling of such well and the Operators estimate of the date on which such well may be commenced without interfering with the execution of work programme thereto for approved by the Operating Committee Commencement Date. The Operators estimate shall include the total costs of all operations and equipment necessary for locating drilling testing completing and equipping including necessary flow lines and storage tanks or abandoning said well. 9.5 Within fortyfive 45 Days after receipt of the Notice except as otherwise provided in Section 9.9 hereof each Working Interest Owner shall elect whether or not to participate in drilling the proposed well by giving written notice to the other Working Interest Owners. Failure to give notice within such period of time shall be deemed to be an election by such Working Interest Owner not to participate in the drilling of such proposed well. An election to participate shall be deemed approval of the drilling of such well. Model Petroleum Concession Agreement 2009 85 9.6 If less than all Working Interest Owners elect to participate in the Sole Risk Drilling each Working Interest Owner electing to participate hereinafter called Drilling PartyParties whether one or more shall have a Working Interest in such well in the proportion that its Working Interest bears to the total of the Working Interests of all Drilling Parties or in such other proportion as mutually agreed upon by the Drilling Parties. 9.7 9.8 9.9 This Joint Operating Agreement shall be divisible and shall apply independently in the manner of a separate contract for the drilling and operations of any Sole Risk Well. This Joint Operating Agreement shall cease to apply as an independent and separate contract with respect to a Sole Risk Well when Drilling Party has fully recovered the value referred to in Article 9.10 hereof. The Drilling Party shall cause such well to be drilled as a Sole Risk Well at the sole cost and risk of the Drilling PartyParties. The Working Interest Owner or Working Interest Owners not electing to

participate in the drilling of such well shall hereinafter be called NonDrilling Party whether one or more. The Drilling PartyParties may ask the existing Operator to Drill the Sole Risk Well or may Operate the Sole Risk Well itself and such new Operator shall be obligated to conduct all operations necessary for the drilling of a Sole Risk Well in accordance with the provisions of this Joint Operating Agreement and the Operators cost estimate by the Commencement Date; provided however that with respect to the drilling of a well where the Operator is a NonDrilling Party Drilling Party may within sixty 60 Days after receipt of the Notice as defined in Article 9.3 hereof notify the existing Operator of the election by Drilling Party to conduct by itself all operations with respect to the drilling of such Sole Risk Well and the existing Operator shall be relieved of its obligations to conduct such operations in which case the Drilling Party shall conduct the operations itself as the new Operator. In the event Drilling Party shall elect not to have the Operator drill the Sole Risk Well the Drilling Party must cause the drilling of the Sole Risk Well to commence within six 6 months after the Notice. If the Drilling Party has not commenced the Drilling of such Sole Risk Well within the period specified the Drilling Party shall not be entitled to commence the drilling of such Sole Risk Well until such time as a new Notice shall be given and the provisions of this Article 9 are again complied with. If the Notice described in Article 9.3 relates to a well site operation such as proposed redrilling sidetracking deepening reworking testing or plugging back a well such Notice shall be acted upon within 48 hours if the drilling equipment is on location. The Operator shall perform all redrilling sidetracking deepening reworking testing or plugging back operations in accordance with a Notice approved by all or less than all the Working Interest Owners at the sole cost and risk of the Working Interest Owners who voted in favour of such Notice which Working Interest Owner or Working Interest Owners shall be deemed as Drilling Party. The Working Interest Owner or Working Interest Owners who voted against such Notices shall be deemed NonDrilling Party. If the proposed sole risk drilling operations consist of redrilling sidetracking deepening reworking testing or plugging back a well the Drilling Party shall pay the Non Drilling Partys ownership interest in the salvage value of all equipment installed in said well as may be Model Petroleum Concession Agreement

2009 86 mutually agreed. The Drilling PartyParties shall own all production resulting from such operations until the Drilling PartyParties has fully recovered the value referred to in Article 9.10 hereof with respect to such operations. Only the Working Interest Owner or Working Interest Owners who participate in the last operation with respect to a well shall bear the cost of abandonment. In the event of a disagreement between Drilling PartyParties on the order and manner in which sole risk proposals of redrilling sidetracking deepening reworking testing or plugging back a well are to be undertaken the matter shall be referred to the Operating Committee for a decision. 9.10 If any Sole Risk Well is drilled it shall be operated by the Operator except as provided in Article 9.7 and if completed as a producing well the Drilling PartyParties shall own all of the production from such well and shall bear all the cost of operating such well until the Drilling Party has recovered from production an amount equal to the sum of i ii iii Eighteen Hundred percent 1800 of what would have been the NonDrilling Partys Working Interest share of costs of drilling such well to total depth conducting such production tests as may be carried out with drilling equipment equipping such well for production upto and including the Christmas Tree such amounts to be recovered resulting from such well or wells or from the proceeds from the first sales of production resulting from the discovery of an accumulation of Petroleum by such well or wells; and Four Hundred percent 400 of what would have been the NonDrilling Partys Working Interest share of costs of all production facilities associated with production of petroleum from a Sole Risk Well downstream from the Christmas Tree and necessary to handle treat and bring production from such well to the point where such production is handled by such facilities which are to be used in common with production but not associated with such well or to the point of delivery of such production by the Operator to Drilling Party and shall include but not be limited to the flow lines and storage tanks required for handling production from such Sole Risk Well; and Two Hundred Percent 200 of what would have been the NonDrilling Partys Working Interest share of the costs and expenses incurred and paid by the Drilling Party for the operations of such well until such time as the Drilling Party is reimbursed as provided in paragraphs i and ii above; and thereafter such well shall be owned by all Parties hereto

and each Party shall participate with respect thereto in accordance with such Partys Working Interest herein. 9.11 If a Working Interest Owner initially elects to participate in a Sole Risk Well and subsequently fails to timely meet its payments there for as provided in the Accounting Procedure then at the option of the other Working Interest Owners constituting the Drilling Partys the provisions of this Article 9 shall apply as if that Working Interest Owner were a NonDrilling Party. Model Petroleum Concession Agreement 2009 87 9.12 The Working Interest Owners comprising any Drilling Parties shall in proportion to their respective Working Interests in the Sole Risk Drilling indemnify the NonDrilling Parties against all losses damages and claims against them arising out of Sole Risk Drilling. 9.13 The Drilling Party shall be entitled to use for Sole Risk Drilling any data and information which they own jointly with a NonDrilling Party. Data and information obtained in respect of Sole Risk Drilling shall be made available to the NonDrilling Party but shall remain the property of the Drilling Party subject to the Rules and the Concession Agreement. 9.14 Drilling equipment owned by Working Interest Owners or under contract to the Operator and being used in operations hereunder may not be employed to drill a Sole Risk Well if such equipment is scheduled for other Joint Operations work unless approved by the Working Interest Owners. However in the case of redrilling sidetracking deepening completing plugging back testing or reworking said equipment if on the drilling location shall be used to carry out the desired operation unless agreed otherwise. 9.15 Notwithstanding the foregoing if in the reasonable judgement of the Operator or a Working Interest Owner there is a substantial risk that the proposed operations would appreciably impair the present or potential future production from a producing oil or gas well or well capable of production the Operator or the Working Interest Owner shall so advise the other Working Interest Owners stating the reasons substantiating its judgement and the proposed Sole Risk operations shall not be undertaken unless approved by all Working Interest Owners. 9.16 In the event that less than all the Working Interest Owners participate in the development of a Discovery pursuant to the Concession Agreement any non participating Working Interest Owner shall have the right to acquire a Working Interest in such development equivalent to its Working Interest hereunder by paying in cash an

amount equal to one hundred and seventyfive percent 175 of the amount which it would have paid had it participated in the development from the date of its failure to participate pursuant to the Concession Agreement. Such right shall be exercisable at any time up to one year from the date referred to above by payment of the sum mentioned in cash in full and shall be effective as of the date of such payment. Any non participating Working Interest Owner which fails to exercise such right within the time period specified shall have no further right to elect to participate therein and the Lease relating to any such Discovery Area shall constitute a separate Lease Area and the Working Interests therein and the production of Petroleum there from shall be owned exclusively by the Working Interest Owners participating therein. Model Petroleum Concession Agreement 2009 88

9.17 Following approval of a Development Plan pursuant to Article 6 of the Concession Agreement any Working Interest Owner may request a review of the provisions contained in this Article 9 and if following such review all Working Interest Owners agree that an amendment to such provisions is required it shall be amended accordingly for submission to the Government. Model Petroleum Concession Agreement 2009 89

ARTICLE 10

10.1 The Operator shall for the benefit and protection of the Working Interest Owners obtain insurance with reputable insurers upon reasonable and competitive terms on behalf of the Working Interest Owners as be required by contract applicable laws rules and regulations together with such other insurances which the Operating Committee may determine in accordance with this Joint Operating Agreement; provided that in respect of such other insurance any Working Interest Owner may elect to take out its own insurance provided that it gives written notice to the Operator. The cost of insurance in which all the Working Interest Owners are participating shall be charged to the Joint Account and the cost of insurance in which less than all the Working Interest Owners are participating shall be in proportion of their respective Working Interests.

10.2 The Operator or any Working Interest Owner shall duly file all claims with respect to insurance arranged and maintained by the Operator and shall take all necessary and proper steps to collect the proceeds and properly apply them in accordance with the terms of this Joint Operating Agreement.

10.3 The Operator shall at all times use all reasonable endeavors to require contractors

and subcontractors engaged in operations under this Joint Operating Agreement to obtain and maintain all such insurances pertaining to such work as they may be required to carry by virtue of any applicable law or regulation and such other insurance as the Operator may deem advisable. The policies of any such insurance shall be endorsed with waivers of all explicit or implicit rights of subrogation to the beneficiaries eventual rights against the Working Interest Owners or alternatively to the extent practicable the Operator shall have the other Working Interest Owners or contractors and subcontractors named as additional insured.

10.4 Each Working Interest Owner may for its own account and at its own expense obtain insurance other than the insurance referred to in Article 10.1 pertaining to the Joint Operating Agreement as it may deem expedient provided however that the obtaining of such insurance shall not in any way directly interfere with the Operators placement of insurance for the Joint Account in accordance with the terms of Article 10.1 hereof. The Operator shall use its best endeavours to facilitate in cooperation with the other Working Interest Owners the orderly settlement of claims by their respective insurers.

10.5 All damages losses and liabilities incurred in connection with the Joint Operations which are not recoverable from insurance procured for the Joint Account under this Article shall be charged to the Joint Account.

Model Petroleum Concession Agreement 2009 90 ARTICLE 11 CONFIDENTIAL INFORMATION

11.1 All information acquired by any Working Interest Owner in respect of the Joint Operations hereunder including but not limited to all seismic and well data and related information that pertains to or results from the Joint Operations conducted hereunder or any data or information contributed by any Working Interest Owner to such Joint Operations shall be considered as confidential and shall not be disclosed to any other person or entity which is not a Working Interest Owner except a b c d e To an Affiliate of a Working Interest Owner provided such Affiliate executes a strict undertaking to treat and maintain all such information as confidential; or As required by THE PRESIDENT or any applicable laws or regulations of a stock exchange having jurisdiction over a Working Interest Owner; or its Affiliate; or To contractors including consultants employed by a Working Interest Owner THE PRESIDENT or the Operator where disclosure of such data or information is essential to such

contractors work provided such contractor executes an agreement to treat and to maintain all such information as strictly confidential; or To a bonafide prospective assignee of a Working Interest Owner provided such prospective assignee first executes an agreement to treat and maintain all such information as strictly confidential; or To a bank or lending agency to the extent required by a Working Interest Owner for arranging the funds for its obligations under this Joint Operating Agreement provided that such bank or lending agency first executes an agreement to treat and maintain all such information as strictly confidential. 11.2 The provisions of this Article 11 shall be continuing obligations notwithstanding the fact that a Working Interest Owner ceases to be a Working Interest Owner. 11.3 Subject to Article 11.4 the Operator shall be responsible for the preparation and release of all public announcements and statements regarding this Joint Operating Agreement or the Joint Operations provided always that no such public announcement or statement shall be issued or made unless prior thereto all the Working Interest Owners have been furnished with a copy thereof and the approval of the Operating Committee and THE PRESIDENT has been obtained in accordance with the Rules. 11.4 If any Working Interest Owner shall itself wish to issue or make any public announcement or statement regarding this Joint Operating Agreement or the Joint Operations it shall not do so unless prior thereto it furnishes all the Working Interest Owners with a copy of such announcement or statement and shall obtain the Model Petroleum Concession Agreement 2009 91 approval of the Operating Committee and THE PRESIDENT provided that notwithstanding any failure to obtain such approval no Working Interest Owner or any Affiliate of such Working Interest Owner shall be prohibited from issuing or making a public announcement statement if it is expedient to do so in order to comply with any applicable law or the regulations of a recognized stock exchange. Model Petroleum Concession Agreement 2009 92 ARTICLE12 TRANSFER OF INTEREST 12.1 No Working Interest Owner shall have the right to assign transfer convey encumber hypothecate or otherwise dispose of its Working Interest or part thereof except in accordance with the provisions of Articles 12 and 13 hereof and Article 7 of the Concession Agreement. 12.2 No assignment of any Working Interest shall be binding upon the Operator until the

first Day of the calendar month following the month in which the assignor or assignee shall have furnished the Operator with an executed or photo static copy of the approval of THE PRESIDENT and assignee shall have properly ratified and become a party to this Joint Operating Agreement. Any assignment of interest whether it is expressed or implied shall operate to impose upon the assignee and the assigned interest the proportionate part or share of any unpaid obligations thereto or chargeable hereunder to the assignor and the said assigned interest. An assignment shall not operate to relieve the assigned interest or the assignor from any liability or obligations which accrued prior to such assignment.

12.3 Notwithstanding the provisions of this Article 12 and subject to the provisions of the Concession Agreement any Working Interest Owner shall upon informing the other Working Interest Owners assign transfer convey encumber pledge hypothecate or otherwise mortgage to any financial institution bank or lender any or all of its rights hereunder to secure the prompt payment of sums of money principal and interest so borrowed and the full and faithful discharge of any and all obligations which it may undertake to obtain finance from such financial institution for the purpose of this Joint Operating Agreement. Any such mortgage or hypothecation shall not give rise to a division of the undivided interest in Joint Property.

12.4 Subject to the provisions of Article 7 of the Concession Agreement a Working Interest Owner may transfer or may assign to an Affiliate or to a NonAffiliate all or part of its rights duties and obligations under the Concession Agreement and this Joint Operating Agreement.

Model Petroleum Concession Agreement 2009 93 ARTICLE13 SURRENDER

13.1 If any Working Interest Owner hereinafter referred to as the Surrendering Working Interest Owner desires to Surrender its Working Interest subject to Article 7 of the Concession Agreement it shall notify the other Working Interest Owners of its desire to Surrender as of a specified date not less than two 2 Calendar Months after such notice. The other Working Interest Owners shall have thirty 30 Days after such notice within which to give notice of election to join in such Surrender. The Surrendering Working Interest shall accrue to and be assumed by the Working Interest Owners electing not to Surrender pro rata to their respective Working Interests on the specified date. The Surrendering Working Interest Owner shall execute

and deliver any and all documents and take action necessary to accomplish such assignment. Similarly if all Working Interest Owners shall elect to Surrender each Working Interest Owner shall execute and deliver any and all documents and take all actions to accomplish such Surrender. 13.2 Without the specific consent of the Working Interest Owners other than the Surrendering Working Interest Owner an assignment made under the provisions of Article 13.1 above shall not relieve the Surrendering Working Interest Owner of any liability or obligation created prior to the date of such assignment and any then approved work programme and budget. 13.3 At such time and in such manner as prescribed under the Concession Agreement whenever the Working Interest Owners are required to reduce the extent of the Area the Operating Committee shall determine the Area to be retained.

Model Petroleum Concession Agreement 2009 94 ARTICLE14 RELATIONSHIP OF THE WORKING INTEREST OWNERS 14.1 The rights obligations and liabilities of the Working Interest Owners under the Joint Operating Agreement shall be several and not joint or collective each Working Interest Owner being responsible only for its Working Interest share of costs and liabilities incurred for the Joint Account. 14.2 The relationship between the Working Interest Owners with respect to the Joint Property is that of tenants in common. Neither juridical person or entity is created by this Joint Operating Agreement nor is it the purpose or intention of this Joint Operating Agreement to create any corporation partnership or association nor shall this Joint Operating Agreement and the operations hereunder be interpreted or considered as creating an entity since each Working Interest Owner shall be individually responsible only for its own obligations hereunder.

Model Petroleum Concession Agreement 2009 95 ARTICLE15 TAXES 15.1 The Operator shall subject to the Concession Agreement pay any and all duties other assessments and Governmental charges excluding income taxes on profit whether national or local levied or assessed against any of the Joint Property royalty and other applicable taxes as the case may be on Petroleum produced and saved for the Working Interest Owners the costs of which are charged to the Joint Account. 15.2 The Operator shall contest the validity or payment of any assessment or charge referred to in Article 15.1 above for the Joint Account if so directed by the Operating Committee. Nothing herein

shall prevent a NonOperator at its sole cost and expense from having its own attorney appear and participate in any such contest in addition to the Operators attorney without prejudice to the right of the Operator to direct such contests as determined by the Operating Committee above. Model Petroleum Concession Agreement 2009 96 ARTICLE16 FORCE MAJEURE 16.1 The provisions of Article 27 of the Concession Agreement are herein incorporated by reference and will apply to this Joint Operating Agreement accordingly. Model Petroleum Concession Agreement 2009 97 ARTICLE17 ARBITRATION 17.1 Any dispute arising out of this Joint Operating Agreement shall be dealt with mutatis mutandis in accordance with Article 28 of the Concession Agreement. Model Petroleum Concession Agreement 2009 98 ARTICLE18 LAWS RULES AND REGULATIONS 18.1 This Joint Operating Agreement is subject to the Concession Agreement and all Joint Operations shall be conducted in accordance with its provisions and of all other valid and applicable laws rules regulations and orders of the Government. If this Joint Operating Agreement in any respect shall be found to be inconsistent with or contrary to the terms of the Concession Agreement this Joint Operating Agreement shall be regarded as modified to conform thereto and as so modified shall continue in full force and effect. 18.2 No Working Interest Owner shall resort to any action for partition of the Area or Joint Property except in accordance with the provisions of the Concession Agreement and this Joint Operating Agreement. Model Petroleum Concession Agreement 2009 99 ARTICLE19 TERM 19.1 This Joint Operating Agreement shall become effective on the Effective Date and shall remain in full force and effect until a It is terminated by the written consent of all Working Interest Owners or b All the Working Interests become vested in one Working Interest Owner or c The termination of the Concession Agreement. 19.2 Before this Joint Operating Agreement terminates there shall be a final Audit and settlement of the Joint Account between the Working Interest Owners in accordance thereof. Model Petroleum Concession Agreement 2009 100 ARTICLE20 NOTICES 20.1 Any notice required or permitted to be given hereunder including but not limited to bills statements cash calls reports and notices shall be deemed to have been effectively given to and received by a Working Interest Owner and the Government to whom it is addressed by

telex telegraphic message facsimile or hand delivery. All notices shall be delivered to the Working Interest Owners and the Government so notified at the respective addresses given in or pursuant to the Concession Agreement.

20.2 Any notice or advice required or permitted to be given to or by any Working Interest Owner under this Joint Operating Agreement shall be given in writing in the English language and delivered by hand by telegraph cable or telex or fax confirmed in writing as above.

20.3 Such notices or other communications shall be deemed to be effectively given or made i ii On receipt by the addressee if delivered personally with signed receipt obtained acknowledging delivery; or On transmission to the addressee if transmitted by telex or fax with the correct receipt confirmation during normal business hours at the place of receipt of the addressee or if so transmitted outside such hours on opening of business on the next business Day at such place.

Model Petroleum Concession Agreement 2009 101 ARTICLE21 MISCELLANEOUS 21.1 The heading of each Article hereof and the are for convenience only and shall be disregarded in construing or interpreting this Joint Operating Agreement. 21.2 Except as otherwise provided herein this Joint Operating Agreement shall be binding on and shall inure to the benefit of the Working Interest Owners and their respective successors and assigns. 21.3 Any modification of this Joint Operating Agreement shall not be effective until such modification is executed in writing by the Working Interest Owners. IN WITNESS WHEREOF this Joint Operating Agreement has been duly executed the Day and year first above written Signed for and on behalf of XYZABC BY WITNESSES 1 2 Signed for and on behalf of the GOVERNMENT HOLDINGS PRIVATE LIMITED if applicable BY WITNESSES 1 2 Model Petroleum Concession Agreement 2009 102 APPENDIX A

Agreement 2009 103 APPENDED TO AND MADE A PART OF THE JOINT OPERATING AGREEMENT MADE BETWEEN XYZ ABC AND GHPL if applicable The purpose of this Accounting Procedure is to establish equitable methods of determining charges and credits applicable to operations under the Joint Operating Agreement which will truly reflect the Operators actual costs to the end that the Operator shall neither gain nor lose in relation to the Working Interest Owners by reason of the fact that it acts as Operator. If at any time or from time to time any such methods prove unfair or inequitable to Operator or Nonoperators the Working Interest Owners will meet and in good faith endeavour to agree on changes in methods deemed necessary to correct any unfairness or inequity. Model Petroleum Concession Agreement 2009 104 ARTICLEI GENERAL PROVISIONS 1. DEFINITIONS The terms defined in Article I of the Concession Agreement and in Article I of the Joint Operating Agreement shall have those meanings wherever used in this Accounting Procedure and the following words and phrases shall have the meanings set forth against them below Joint Property means all real property and all assets acquired or created by Expenditures charged to the Joint Account. Materials shall mean personal property equipment or supplies acquired or held for the Joint Account. 2. RECORDS STATEMENTS AND REPORTS A. B. The Operator shall at all times maintain and keep true and correct records of the production and disposition of all Petroleum and of all Expenditures and disposition of Materials under the Concession Agreement and the Joint Operating Agreement as well as all other data necessary or proper for the settlement of accounts between the Working Interest Owners hereto in connection with the Concession their rights and obligations under Agreement and the Joint Operating Agreement and to enable the Working Interest Owners to comply with all applicable income tax and other laws. The Operator shall also establish and maintain a system of internal controls and prepare and present for approval of Working Interest Owners a statement of joint assets and liabilities. Such records shall be open at reasonable times for inspection and copying by authorized representatives of any NonOperator and THE PRESIDENT. The Operator shall submit to each Working Interest

Owner and THE PRESIDENT each month within thirty 30 Days after the close of the relevant month accurate statements of the Expenditures incurred during such months indicating by appropriate classification the nature thereof the portion of such costs charged to each of the Working Interest Owners the amount of funds advanced to the Operator by each of the Working Interest Owners and from such advances. These statements shall include a detailed statement of all charges and credits to the Joint Account summarized by appropriate classification indicative of the nature thereof and the unusual charges and credits. All records kept and reports made shall be in Pakistan Rupees and in United States Dollars. Transactions incurred in currencies other than Pakistan Rupees or United States Dollars shall be converted at the appropriate official rates of exchange. the commitments and Expenditures made Model Petroleum Concession Agreement 2009 105 3. PAYMENTS AND ADVANCES Upon approval of any work programme and budget the Operator will have the right on a current basis only to make monthly advance cash calls to all Working Interest Owners for the period covered by such work programmes and budgets. In the event of a Commercial Discovery a monthly or other suitable time frame for cash calls and the procedures for such calls will be as adopted or determined by the Operating Committee. Each such month cash call shall be equal to Operators estimate of the actual money required by it to perform its duties under the approved work programme and budget therefor during the month concerned. Each such call shall be made in writing detailing the payments the Operator anticipates to be required during the period covered thereby and shall be delivered or sent by telex fax delivered personally to all Working Interest Owners not later than 20 Days prior to the beginning of the month preceding the month when such Expenditures are to be made and each Working Interest Owner hereto shall pay its Working Interest share of the full amount of each such cash call in cash to the Operator not later than the first working Day of the month for which the funds are required and if not so paid the Working Interest Owner in default will pay an additional sum calculated on the unpaid balance at the rate of one and half percent 1.5 per month or any fraction of a month until paid. If a Working Interest Owner is in default of payments due by it under the Joint Operating Agreement the applicable provisions of the

Joint Operating Agreement shall apply. Cash calls shall be increased or decreased as required by the Operator in order to adjust for payments made on behalf of the Joint Venture for services and materials furnished by the Operator or to replace any deficit or eliminate any surplus as the case may be of the cash funds available in the Joint Account. Funds made available to the Operator on trust are for the account of the NonOperators and shall not be subjected to any prior lien in favor of a third party. Subject to Article 8 of the Concession Agreement all payments by Pakistani Working Interest Owners may be made in Pakistan Rupees irrespective of the currencies in which such costs and expenses are to be incurred and by foreign Working Interest Owners in United States Dollars or any other currency in which Expenditures are incurred. Subject to the provisions of the Concession Agreement the Operator shall have the right at any time and from time to time to use the joint funds or to convert the same or any part to other currencies to the extent that such currency is then required for operations and the actual cost of currency loss or gain of any such conversions shall be charged or credited to the Joint Account. Any conversions between United States Dollars and Pakistan Rupees or any other currency shall be stated in the Joint Account at the rate of exchange on the Day of conversion. The Operator shall restrict the funds held in the bank account for Joint Operations to a level consistent with that required for the conduct of Joint Operations. In the event Operator accumulates funds exceeding US Dollars Twenty Thousand US 20000 or Pakistani Rupees Three Hundred and Fifty Thousand Rs. 350000 under this Accounting Procedure Operator if so requested by the Working Inte shall make appropriate refunds to Working Interest Owners within five 5 calendar Days of determination of such excess Model Petroleum Concession Agreement 2009 106 funds. Such determination of excess funds shall be made every quarter and for this purpose any amount representing such excess as reflected in the Operators monthly Expenditure statement shall be refunded by the Operator. ADJUSTMENTS 4. Payments of any advances or cash calls shall not prejudice the right of any NonOperator to protest or question the correctness thereof; provided however all reports and statements rendered to NonOperators during any Calendar Year shall conclusively be presumed to be true and correct after a twentyfour 24

month period unless a NonOperator takes written exception thereto and makes claims on the Operator for adjustment within such period. No adjustment favourable to the Operator shall be made unless it is made within the same prescribed period. The provisions of this paragraph shall not prevent adjustments resulting from a physical inventory of the Joint Property as provided for in Article V hereof.

5. AUDITS a In accordance with Article 22 of the Concession Agreement the Joint Account shall be audited for the period commencing with the Effective Date to December 31 and thereafter annually by one independent firm of Chartered Accountants with the appropriate level of joint venture Petroleum auditing experience to be selected by a subCommittee of Operating Committee comprising a representative each of the Working Interest Owners hereinafter referred as Audit Committee subject to the condition that guidelines issued by the Government from time to time would be followed in the matters connected with the appointment of auditors and the scope of work of the audits. The selection must be made by consensus of all members of the Audit Committee. The firm selected must demonstrate its qualifications in joint venture auditing and independence from all parties involved to the satisfaction of all members of the Audit Committee. In addition once selected a firm can only perform this audit for a period of not more than three consecutive Calendar Years. The selected firm will submit a detailed audit plan including but not limited to procedure for physical verification of inventories for approval before commencement of the aforementioned audit. The audit will commence not more than 90 Days from end of audit year and be completed within 180 Days from the end of the aforementioned audit year. Copies of the audited accounts and report shall be delivered to THE PRESIDENT and to each of the Working Interest Owners. The cost of the audit shall be charged to the Joint Account. b A NonOperator upon at least thirty 30 Days advance written notice to the Operator and other NonOperators shall have the right at its sole expense to audit the Joint Account and related records for any Calendar Year or portion thereof within the twentyfour 24 month period following the receipt Model Petroleum Concession Agreement 2009 107 of the audited accounts of such Calendar Year or portion thereof regardless of the fact that the accounts for the year remain to be audited or are being audited. However the conducting of an audit by a

NonOperator shall not extend the time for taking written exception to and the adjustment of accounts under Sub Article 4 above. Where there are two or more NonOperators the NonOperators shall make every reasonable effort to conduct joint or simultaneous audits. Such NonOperators shall be provided with the accounts supporting vouchers and documents together with such reasonable facilities as may be necessary for the inspection of the financial affairs of the Joint Operations. In case the Operator and NonOperators are unable to reach final agreement on audit exceptions then such exceptions shall be referred to an internationally recognized firm of chartered accountants selected by the Audit Committee.

Model Petroleum Concession Agreement 2009 108 ARTICLE II

CHARGES TO THE JOINT ACCOUNT

1. ALLOCABLE CHARGES In the event any of the Operators employees or field camps suboffices or other facilities in Pakistan serve properties in addition to the Joint Property and costs cannot be identified with the properties served such costs shall be prorated or charged on an equitable basis to be approved by the Operating Committee.

2. DIRECT CHARGES The Operator shall charge the Joint Account with all Expenditures incurred in connection with all Joint Operations under the Concession Agreement and the Joint Operating Agreement and for the performance of its duties hereunder. The Expenditures shall be recorded as required for the settlement of accounts between the Working Interest Owners under the Concession Agreement and the Joint Operating Agreement and for identification to comply with relevant laws.

Chargeable Expenditures shall include

a b All payments to the Government other than income tax and royalty payments made by the Operator and necessary in the performance of its duties under the Joint Operating Agreement. Cost of establishing and maintaining field offices camps warehouses supply bases offices and other facilities including housing in Pakistan devoted exclusively to serving the License or Lease.

A. Labour

a. The Operators employees directly engaged in the Area of operations or outside of the Area shall be charged as follows

i Salaries and wages of personnel located within Pakistan and permanently attached to and engaged in Joint Operations in Pakistan. Labour charges for persons not working fulltime on two or more operations shall be allocated on the basis of time sheets or as may be approved by the Operating Committee. Wages charged should

not exceed the prevailing market rates. Model Petroleum Concession Agreement 2009 b. 109 ii Scientific technical professional employees of the Operator or its Affiliates while directly performing work on specific projects for the sole benefit of the operations costs of which shall not exceed the cost of equivalent services on the open market. The Operators cost of annual leave and other holidays vacation sickness disability benefits living and housing allowances medical allowances travel allowances travel time bonuses and other customary allowances as well as the Operators cost for employees benefits including but not limited to employees group life treatment insurance group medical hospitalization retirement bonuses provident fund gratuity fund and other benefit plans of a like nature all applicable to the salaries and wages are chargeable hereunder. Such costs may be charged on actual basis when and or accrued or on a percentage basis on the amount of salaries and wages chargeable under this Section A. If percentage basis is used the rate will be based on the Operators cost experience and adjusted annually to actual costs. These costs will be competitive and will not exceed the costs generally applicable in the industry. insurance medical c. Expenditures or contributions made pursuant to assessments imposed on the Operator by the Government authority which are applicable to the Operators labor costs of salaries and wages as provided under this Section A. B. Materials Cost of equipment machinery material articles purchased or furnished by the Operator for the Joint Account as per provisions of the Joint Operating Agreement. Price shall include such costs as export brokers fees transportation charges loading unloading fees export and import duties surcharges and license fees associated with the procurement of material and equipment and intransit losses if any not covered by insurance. So far as it is reasonably practical and consistent with efficient and economical operation only such material shall be purchased for or transferred to the Joint Account as may be required for immediate use; and accumulation of surplus stocks shall be kept to a minimum considering the distance of materials in remote locations and the provisions of any relevant law of Pakistan relating to the importation of material and equipment. Model Petroleum Concession Agreement 2009 C. Transportation 110 Transportation of employees equipment materials machinery facilities and supplies necessary for the performance of Joint

Operations including costs of packaging brokerage insurance and other related costs as per normal industry practice. However the transportation of equipment machinery and materials in respect of Section B above shall not be charged hereto. Employee transportation costs to the extent covered by the established policy of the Operator shall include travel expenses for employees and their families to and from the employees point of origin at the time employment commences at the time of final departure and for vacations as well as traveling expenses in Pakistan for employees and their families incurred as a result of transfer from one location to another and traveling expenses relating to the periodical recuperation leaves of field personnel.

D. Services

a. b. The services of consultants contract services utilities and other services procured from outside sources rentals or compensation paid or incurred for the use of any equipment and facilities. The aforesaid services shall be charged to the Joint Account at the actual price paid by the Operator procured on a competitive basis in accordance with the Joint Operating Agreement with approval of the Operating Committee. The actual cost of technical services procured in accordance with as per the provisions of the Joint Operating Agreement on a competitive basis without the following being limited to such as laboratory analyses drawings geophysical and geological interpretation drafting engineering studies and related data processing etc. performed by the Working Interest Owners or their Affiliates for the benefit of the Joint Operations with approval of the Operating Committee.

c. Per diem travel expenses living and accommodation expenses for expatriate employees of the Operator or of the Operators Affiliate companies called on from abroad for periods of short duration as approved by the Working Interest Owners.

E. Working Interest Owners exclusively owned equipment and facilities

Charges for Working Interest Owners exclusively owned equipment facilities and utilities on the basis of actual usage at rates commensurate with the cost of ownership and operation but not in excess of rates currently prevailing for like service and equipment in the area as approved by the Operating Committee.

Model Petroleum Concession Agreement 2009 111 On request the Working Interest Owner shall furnish the Operator and the Operator shall furnish the NonOperators a list of rates and the basis of application. Such rates shall be revised from time to time if found to be either

excessive or insufficient but not more than once every six 6 months. Drilling tools and other equipment lost in the hole or damaged beyond repair may be charged at an agreed value considering depreciation and transportation cost to deliver like equipment to the scene. Model Petroleum Concession Agreement 2009 F. Damages and losses to property 112 All reasonable costs or expenses necessary to replace or repair damages or losses incurred by fire flood storm acent or any other cause not controllable by the Operator through the exercise of reasonable diligence and not covered by insurance carried at the expense of the Joint Account. The Operator shall furnish NonOperators written notice of damages or losses incurred in excess of United States Dollars ten thousand US 10000 as soon as practicable after report of the same has been received by the Operator. All losses shall be listed separately in the monthly statement of costs and Expenditures. G. Litigation expenses Except to the extent the same are to be borne by the Drilling Parties Pursuant to Article 9 of the Joint Operating Agreement there shall be charged to the Joint Account all costs and expenses of litigation or other legal services necessary or expedient for the protection of the Working Interest Owners interest including lawyers fees and expenses as hereinafter provided together with any judgements resulting therefrom and actual expenses incurred by the Operator or NonOperators in securing evidence for the purpose of defending such action or claim. Details will however be provided to the Operating Committee at its next meeting. a. b. c. If NonOperators so agree such actions or claims may be handled by the legal staff of one or more of the Working Interest Owners and a charge commensurate with cost of providing and furnishing such services rendered may be made against the Joint Account but no charge shall be made until approved by the Operating Committee. Fees and expenses of outside lawyers in connection with litigation shall not be charged to the Joint Account unless authorized by the Operating Committee. Fees and expenses of outside lawyers not exceeding United States Dollars fifty thousand US 50000 per year and not involving litigation shall not require the Operating Committee approval. H. Insurance a. Premiums for insurance pursuant to Article 10 of the Joint Operating Agreement any insurance that is not carried for the benefit of all Working Interest Owners the cost of such insurance

Model Petroleum Concession Agreement 2009 113 shall only be charged to the Working Interest Owners participating therein. b. c. Credits for insurance settlements received pursuant to Article 10 of the Joint Operating Agreement any insurance that is not carried for the benefit of all the Working Interest Owners any such credits shall only be made to the Working Interest Owners participating in such insurance. If no insurance is carried all actual Expenditures incurred and paid by Operator in settlement of any and all losses claims damages judgements and any other expenses including legal services shall be charged to the Joint Account. I. Other Expenditures Any other costs and Expenditures incurred by the Operator for the necessary and proper conduct of the operations in accordance with approved work programmes and budgets and not covered in this Article II 2. 3. INDIRECT CHARGES INCLUDED IN OVERHEAD Excluding all expenditures incurred by the Operator to cover the actual cost of services as provided for in Article II 1 2 hereinabove the Operator will incur under the Joint Operating Agreement expenses in the performance and discharges of its functions and duties. Such expenses relate to legal treasury tax [other than corporate income tax] employee relations including management staff and all operating departments having a general action in the operations of the Joint Operations. The carrying out of such functions shall be compensated as a whole by applying the percentages specified below. The overhead charges shall be debited to the Joint Account on a monthly basis and shall be determined on the total annual expenditures as set forth in Article II2 hereof less payments to the Government litigation expense and damages and losses to property as follows a Exploration 3 of Expenditures per calendar year b Development and Production Expenditures From US 0 to US 10000000 2 each calendar year. From US 10000000 to US 50000000 1 each calendar year. Above US 50000000 0.25 each calendar year. Model Petroleum Concession Agreement 2009 114 The above rates have been selected to represent as fairly as possible the overhead of the Operator not otherwise chargeable. These rates shall be reviewed by the Operating Committee from time to time on the basis of actual expenditures and the prevailing conditions. These will also be adjusted reasonably in case the Operator is carrying out operations in two or more blocks. ARTICLEIII BASIS OF CHARGES TO

THE JOINT ACCOUNT 1. PURCHASES Material purchased and services obtained directly for the Joint Operations shall be charged at the price paid by the Operator; however such price shall not exceed that currently prevailing in normal armslength transactions on the open market. Price shall include such costs as export brokers fees transportation charges loading and unloading fees import duties surcharges and license fees associated with the procurement of materials and equipment and applicable taxes. 2. PREMIUM PRICES In the event material is not obtainable at recognized current list prices from general supply sources due to national emergency strikes Governmental regulations or other unusual circumstances over which the Operator has no control and it is so established provisions of prior paragraphs pertaining to pricing of material and costs of transportation shall not apply and the Operator may supply Materials from any available source charging therefor the current replacement cost including the cost of transporting such materials to the Area; provided when practicable a NonOperator who may become an undivided interest owner in such Materials shall be given the opportunity of furnishing its share in kind. 3. MATERIAL FURNISHED BY OPERATOR Materials transferred from the Operators warehouse or staging areas to the Joint Property and charged to the Joint Account shall be priced based on the current replacement cost on a world wide competitive basis for the same brand and specifications of the Materials effective on that date and also adjusted for condition of Material as provided hereunder. A. i Condition A means that which is new; ii Condition B means that which has been used but is sound and is suitable for its original function without reconditioning; iii Condition C means that which has been used and would be suitable for its original function after reconditioning or that which cannot be reconditioned but has a limited service in its original functions; Model Petroleum Concession Agreement 2009 115 iv Condition D means that which is unsuitable for its original function but is usable for another function; and v Condition E means that which is junk. B. All Material furnished to the Joint Property from Operators warehouse or staging areas unless otherwise agreed to by the Parties shall be priced on the following basis and charged or credited to the Joint Account. a Condition A Material at Current Price; b c d Condition B Material at seventyfive percent 75 of Current Price of Condition A Material;

Condition C Material at fifty percent 50 of Current Price of Condition A Material; Condition D and E Material at a value commensurate with its use at current prices. There may be cases where the same items of the Material due to their unusual condition shall be fairly and equitably priced by the Operator subject to the approval of the Operating Committee. C. Operator shall only supply Material for the Joint Account from the Operators warehouse if the ultimate cost of such Material is equivalent to the most economical cost of the same or similar Material currently prevailing in normal arms length transactions on the open market. Model Petroleum Concession Agreement 2009 116

ARTICLEIV DISPOSAL OF EQUIPMENT AND MATERIAL 1. MATERIAL PURCHASED BY THE OPERATOR OR NONOPERATOR The Operator shall be under no obligation to purchase the interest of a NonOperator in surplus new or used Material. The Operator shall dispose of and account for the disposition of surplus Material. 2. SALES TO OUTSIDERS Sales to outsiders of major Material shall be made with the consent of NonOperators as to both terms and price and where made proceeds shall be credited by the Operator at the full amount collected from the purchaser. Any claim by a purchaser for defective Material or otherwise shall be charged back if and when paid by the Operator. Model Petroleum Concession Agreement 2009 117

ARTICLEV INVENTORIES PERIODIC INVENTORIES NOTICE AND REPRESENTATION At reasonable intervals or as directed by the Operating Committee inventories shall be taken by the Operator of all Joint Account stock and installed Material and Equipment on which detailed accounting records are normally maintained for material control purposes. The Operator shall give NonOperators at least thirty 30 Days written prior notice of its intention to take inventory and NonOperators at their sole cost and expense shall be entitled to have a representative present. The failure of any NonOperator to be represented at such inventory shall bind such NonOperator to accept the inventory taken by the Operator who shall in that event furnish each NonOperator with a reconciliation of overages and shortages. Inventory adjustments to the Joint Account shall be made by the Operator for overages and shortages but the Operator shall be held accountable to NonOperators only for shortages due to lack of reasonable diligence. Any adjustments of inventory by one percent 1 or more shall be

brought to the attention of the Operating Committee for review. 2. SPECIAL INVENTORIES

Whenever there is a sale or change of interest in the Joint Property a special inventory may be taken by the Operator provided the seller and/or purchaser of such interest agrees to bear all of the expense thereof. In such case both seller and purchaser shall be entitled to be represented and shall be governed by the inventory so taken. Model Petroleum Concession Agreement 2009 118

ARTICLE VI TERMINATION As soon as practical after termination of the Concession Agreement and the Joint Operating Agreement the Joint Account shall be finally settled and balanced by whatever cash payments between the Working Interest Owners are expedient following presentation by the Operator to all Working Interest Owners of a final statement of the costs and credits in the Joint Account subject to any adjustment that may be required as the result of any final audit performed in accordance with the procedures provided elsewhere in the Concession Agreement and the Joint Operating Agreement. Model Petroleum Concession Agreement 2009 119 ANNEX III

The Lessees shall be entitled to renewal of the Lease as follows The Lessees shall develop the Petroleum deposits in the Lease Area with due diligence and substantially in accordance with the Development Plan dated subject to such modifications thereto as THE PRESIDENT may approve. Model Petroleum Concession Agreement 2009 120 5 When the deposits have been developed Petroleum shall be produced in accordance with the production profile approved from time to time by

THE PRESIDENT. 6 The laws of Pakistan shall govern all activities pursuant to this Lease. In witness whereof the President has set his hand and seal and the Lessees has caused its Common Seal to be affixed hereon this Day of 200. Model Petroleum Concession Agreement 2009 121

ANNEXIV GOVERNMENT OF PAKISTAN MINISTRY OF FINANCE REVENUE AND ECONOMIC AFFAIRS REVENUE DIVISION Islamabad the 7th August 2004. NOTIFICATION CUSTOMSSALES TAX S.R.O. 678I2004. In exercise of the powers conferred by section 19 of the Customs Act 1969 IV of 1969 and clause a of subsection 2 of section 3 of the Sales Tax Act 1990 and in supersession of its Notification No. S.R.O. 448I2004 dated the 12th June 2004 the Federal Government is pleased to exempt 1 machinery equipment materials specialized vehicles or vessels pickups 4x4 helicopters aircraft accessories spares chemicals and consumables as are not manufactured locally imported by the Exploration and Production EP Companies their contractors subcontractors and service companies from customs duty in excess of five per cent ad valorem leviable under the First Schedule to the Customs Act 1969 IV of 1969 and the whole of sales tax leviable under the Sales Tax Act 1990 on their import and subsequent supply subject to the conditions specified under the caption CONDITIONS WITH REFERENCE TO CLAUSES 1 AND 2; 2 machinery and equipment as are not manufactured locally imported by companies other than Exploration and Production Companies from custom duty in excess of five per cent ad valorem leviable under the First Schedule to the Customs Act 1969 IV of 1969 subject to the conditions specified under the caption CONDITIONS WITH REFERENCE TO CLAUSES 1 AND 2; 3 goods as mentioned in CLAUSES 1 and 2 above as are manufactured locally imported by Exploration and Production Companies their contractors subcontractors and service companies other petroleum and public sector companies as is in excess of ten per cent ad valorem leviable under the First Schedule to the Customs Act 1969 IV of 1969 except Xmass trees wellhead and integral components and parts thereof which shall be exempted from so much of the customs duty as is in excess of fifteen per cent ad valorem; imported by EP Companies their contractors subcontractors and service companies provided that goods imported by public sector companies shall be subject to provisions of Notification No. S.R.O.

827/2001 dated the 3rd December 2001 except for projects wherein an investor or multinational company has a Model Petroleum Concession Agreement 2009 122 blocking vote. Components and parts of wellhead and Xmass tree if imported for their otherwise utilization will be allowed on payment of 10 customs duty on the basis of certification of respective EP Company. However items not manufactured locally shall remain subject to 5 customs duty. All items falling under this serial No. 3 shall also be exempt from whole of the sales tax if these are plant machinery equipment and proprietary spares of parent equipment 1[provided such spares are] not manufactured locally. 4 raw materials and components as are not manufactured locally and are imported for use in the manufacture of goods specified in clauses 1 and 2 to be supplied to the petroleum sector companies as specified in the said Notification from whole of customs duty leviable under the First Schedule to the Customs Act 1969 IV of 1969 1[and the whole of sales tax leviable under the Sales Tax Act 1990] subject to the conditions specified under the caption CONDITIONS WITH REFERENCE TO CLAUSE 4. 1[5 Two vehicles Pajero Toyota Land Cruiser etc imported by Exploration and Production EP Companies shall be exempt from whole of customs duty while the 3rd and 4th vehicle shall be exempt from duty as is in excess of 10 and 25 respectively. Similarly one vehicle imported by Service Company shall be exempt from the whole of customs duty and their 2nd vehicle shall be exempt from duty as is in excess of 10 ad valorem; subject to the following conditions namely a b Life of the vehicle shall be five years unless sooner it is damaged to the extent that it cannot be used; and for claiming replacement of any vehicle the vehicle required to be replaced shall be surrendered to the customs authority free of cost.]; CONDITIONS WITH REFERENCE TO CLAUSES 1 AND 2. i Only such goods shall be entitled to the exemption under this notification as have been certified for clause 1 by an EP Company and for clause 2 by a company other than an EP company for its own use or its contractors subcontractors and service companies for its projects of oil and gas exploration and production refinery oil and gas pipeline liquefied petroleum gas LPG compressed natural gas CNG petroleum terminals energy conservation environment and safety controls; the exemption available to EP companies shall be admissible only to such EP companies

who hold permits or licences or leases or concession or Model Petroleum Concession Agreement 2009 123 production sharing agreement and who enter into supplemental agreements with Government of Pakistan; the importers shall maintain an account of all imports alongwith the relevant record as prescribed by the Customs Rules 2001 and Sales Tax Act 1990; iv in the event a dispute arises whether any item is entitled to exemption under this notification the item will be immediately released by the Customs Department against a corporate guarantee valid for a period of nine months extendable by the concerned Collector of Customs on time to time basis. A certificate from the relevant Regulatory Authority that the item is covered under this notification shall be given due consideration by the Customs Department towards finally resolving the dispute. Disputes regarding the local manufacturing only shall be resolved through the Engineering Development Board; v in the event that an emergency condition occurs in connection with operations by a petroleum sector company which seriously endangers life or property of the operations of the project the relevant Regulatory Authority shall declare an emergency and the operating company shall be allowed to import any item or items considered necessary by the said company to deal with the emergency under intimation to the Regulatory Authority without fulfilling such formalities as are likely to cause delay. Payment of duties and taxes if any will be paid upfront based on the calculations by the respective EP Company of the declared value. Such payment can be made at the time of clearance in cash or by opening a current account with customs or by pay order or by a cheque issued by the respective EP company. vi items imported at concessionary rates which become surplus scrap junk obsolete or otherwise shall be disposed of in the following manner namely a in the event an item other than vehicles is sold to another company in the petroleum sector no import duties shall be levied or charged. Otherwise it shall be sold through a public tender and duties shall be recovered at the rate of ten per cent ad valorem of the sale proceeds; b for vehicles there would be a minimum retention period of five years after which the vehicles may be disposed of in the manner provided in a above except that the full rate of import duties net of any import duties already paid shall be charged subject to an adjustment of

depreciation at the rate of two per cent per month up to a maximum of twenty four months; c vehicles can be surrendered at any time to the Government of Pakistan without payment of any import duties under intimation to the Central Board of Revenue; and Model Petroleum Concession Agreement 2009 124 vii d items imported on payment of 5 customs duty ad valorem or above which have been rendered scrap with change in their physical status composition or condition and PCT classification will be dealt with as scrap and shall be chargeable to customs duties and sales tax accordingly at standard rates; all petroleum sector companies corporations and organizations including their contractors and subcontractors and service companies shall be entitled to import machinery equipment helicopters aircrafts drilling bits drilling and seismic on shore or off shore vessels drilling rigs specialized vehicles which fall under PCT heading 87.05 including accessories and spares 1[excluding those for current use] that are part of such vehicles and vessels for the purpose of construction erection exploration and production of petroleum projects on an importcumexport basis without payment of duties and taxes against a corporate guarantee valid for a period of two years equal to the value of import duties and taxes exempted extendable by the Collector of Customs on time to time basis if the importer has a definite contract. Should the goods etc. not be exported on the expiry of the project or transferred with the approval of the Collector of Customs to another petroleum project or the period of stay has been extended by the Collector of Customs then the company or their contractors or subcontractors or service companies as the case may be shall be liable to pay duties and taxes chargeable at the time of import as per clauses 1 2 and 3 above. viii each importer or EP company shall develop a software within a period of one year from the date of issuance of said Notification and shall establish an online connection with the customs authorities for regulating the imports made under this notification. ix any item imported under this notification may be exported for replacement or otherwise repair modification or renovation and may be reimported by paying concessionary duty and taxes only as per serial 1 on the actual cost of repair renovation or modification of the respective items. CONDITIONS WITH REFERENCE TO CLAUSE 4 ABOVE i The manufacturer has suitable inhouse facilities and

registration with the Sales Tax Department for manufacture of such goods or the importer cum manufacturer is in possession of a firm contract for the manufacture of such goods with any other manufacturer having suitable inhouse facilities and registered with Sales Tax Department for the manufacture of such goods; ii the manufacturer cum importer shall furnish to the Collector of Customs and Collector of Sales Tax the list of such goods that he is manufacturing or intends Model Petroleum Concession Agreement 2009 125 to manufacture alongwith the details of raw materials and components required for the manufacture of each item and the total 1[anticipated] annual requirement of all such inputs; iii 1[Omitted;] iv v the clearance of inputs shall be allowed through 1[Karachi Custom House or Port Muhammad Bin Qasim or a part] nearest to the manufacturing unit; the manufacturer cum importer shall at the time of import of raw materials and components make a written declaration on the goods declaration to the effect that the raw materials and components have been imported for manufacturing of goods to be supplied to the petroleum sector companies as specified in condition i under the caption CONDITIONS WITH REFERENCE TO CLAUSES 1 AND 2; vi the manufacturer cum importer shall maintain record of the inputs and the goods manufactured out of them in such form as may be prescribed by the Central Board of Revenue or required under any other law in force by the CBR; 1[vii The manufacturer cum importer shall communicate to the concerned Collector of Customs in writing about the consumption of imported goods within one month of consumption. In case of nonconsumption within a period of one year extendable for another year by the concerned Collector the importer shall pay the customs duty and other taxes involved. The importer may however reexport the unconsumed portion during the validity period;] viii in case the manufacturer cum importer does not provide information regarding consumption or otherwise of the imported goods within a period of one hundred eighty days of import or such extended period as allowed by the Collector or if otherwise deemed necessary the records of importer cum manufacturer shall be audited by the Duty Suspension Audit Organization DSAO or by any other person duly appointed by the Collector. If upon audit consumption of goods is not found satisfactory the Collector of Customs shall initiate proceedings for the recovery of leviable

customs duty and other taxes besides penal action under the relevant provisions of laws in force; and 1[ix The manufacturercumimporter of goods shall furnish a delivery note duly supported with a corresponding purchase order from any petroleum sector companies as prescribed in clauses 1 and 2 of this notification.] Explanation.1. The expression not manufactured locally shall mean the goods which are not included in the list of locally manufactured goods specified in the General Order issued by the Central Board of Revenue. Model Petroleum Concession Agreement 2009 126 Explanation.2. Used and refurbished machinery equipment materials specialized vehicles or vessels their components and parts importable under this notification will be subject to the provisions of Import Trade and Procedures Order in effect. Explanation.3. For the import of 4x4 single or double cabin pickup a committee will be constituted for giving approval. It will comprise nominees of CBR and Pakistan Petroleum Exploration and Production Companies Association. [C.No.110Mach.2004] As Amended Muhammad Ramzan Additional Secretary 1. S.R.O.5711/2005 dated 06.06.2005 Model Petroleum Concession Agreement 2009 127 LIST OF MACHINERY AND EQUIPMENT REQUIRED FOR JOINT OPERATIONS ANNEXV 1. 2. 3. 4. 5. The following items will be required for Joint Operations and not for the personal use of employees Drilling rigs vessels and machinery including prefabricated derricks drawworks rotary tables high pressure hoses kelly stems tongs swivels hooks elevators slips boilers bales traveling blocks crown blocks wire lines wellhead equipment blow out preventers control heads drilling bits reamers thread dope rope wire and hemp and well cementing equipment. Machinery including such items as steam diesel petrol and gas engines electric motors and generators including electric arc welding and gas welding generators and welding torches electrical power switchgear pumps of all types and sizes for drilling and producing Petroleum machine tools as required in connection with exploration drilling or production of Petroleum including lathes grinders planners power saws presses drills and hammers power driven winches air compressors pneumatic tools special cables including steel electric and hemp mechanical power transmitters. control Scientific and engineering instruments including surveyors transits levels Alidades Brunton and prismatic compasses seismic instruments gravity meters magnetometers

instruments and equipment required for well logging and surveying including photographic recording mudtreating and in particular gaschromatograph microscopes ultra violet lamps rocksaw special photographic and such special instruments as will be required to establish geophysical geological engineering and chemical laboratories radio telemetering radio facilities and other electronic equipment and seismic energy sources dynamite etc. and consumables. core analysis and gas testing Tools including drilling tools oil well fishing and speciality tools drill stem test wire line test well surveying and logging well cementing tools and equipment also oil well cement drilling mud and admixtures drilling equipment and all types of support equipment. All forms of vessels heavy hauling and oilfield service vehicles four wheel drive single and double cabin pickups jeeps station wagons trucks and general purpose vehicles built primarily terrain transportation of staff and equipment excluding saloon cars and luxury for offroadrough Model Petroleum Concession Agreement 2009 128 five door jeeps and aircraft required to support the marine drilling units and onshore support operations specialized transportation and earth moving equipment; trailers for field use aircraft boats barges swamp buggies including tires tubes valves and valve stems for the above equipment. for construction of exploration and exploitation facilities. All equipment and working material necessary 6. 7. 8. 9. Steel pipe of all sizes including drill pipe drill collars oil well casing tubing and line pipe and all necessary control valves and fittings. Special prefabricated steel structures including but not limited to marine production facilities fully outfitted all forms of subsea equipment for exploration drilling and production tanks and pressure vessels and all semi finished goods steel plates etc. for their construction on location and all related instruments regulating and measuring equipment controllers gauges indicators etc. Specialized fire fighting equipment for oil field use both mounted and portable fire and smoke detectors and all forms of precautionary devices to protect life and property. Special Petroleum field designed electric communication and cooling equipment computing hardwaresoftware. [For software subject to Article 13.7]. 10. Safety equipment of all kinds including items such as boots coveralls safety helmets gloves protection eyeglasses H2S equipment life rafts life boats safety jackets first aid kits medical supplies transport equipment emergency

lighting radioactive monitoring tools fresh water making equipment gas detection systems blow out preventers etc. 11. Replacement parts for the foregoing. NOTE I II The foregoing enumeration of items is not exhaustive and each category shall be deemed to include articles of similar nature required for the specific purpose of operations on land sea and air for onshore and offshore petroleum exploration production and development projects. The foregoing list shall not include articles which are produced and available in Pakistan at the same delivery date of the same quality at comparable prices as certified by the Director General of Petroleum Concessions and which are banned for import under the Import Export Trade Policy by the Government Model Petroleum Concession Agreement 2009 129 from time to time notwithstanding the fact that such items may be among those described above. III No customs concessions will be allowed on spare parts office equipment stationery articles and other goods items etc. which are locally manufactured and so certified by the Director General Petroleum Concessions. IV It is clarified that the Operator its contractors or subcontractors can import on an import cum export basis the used equipment and machinery such as seismic acquisition equipment drilling rigs and equipment production testing equipment etc. for the purposes of temporary Operations on the recommendations of the Director General Petroleum Concessions but the same will have to be either exported after the operations have been completed or the transfer of the said equipment to another company has been authorized by the appropriate Regulatory Authority the notifications issued by the Central Board of Revenue. the Petroleum Policy and in accordance with Model Petroleum Concession Agreement 2009 130 C.No.101493ICMCON. DATED 13 JUNE 1994 GOVERNMENT OF PAKISTAN CENTRAL BOARD OF REVENUE ANNEXVI C.No.101493ICMCON. Islamabad the 13th June 1994. From Ghulam Ahmad Secretary ICMCon To The Collector of Customs Appraisement Preventive Custom House Karachi. The Collector of Customs and Central Excise Peshawar Rawalpindi Faisalabad Gujranwala Multan Hyderabad Quetta Lahore. SUBJECT EXEMPTION OF CUSTOMS DUTY SALES TAX AND IQRA SURCHARGE ON FOODSTUFF LIQUOR AND HOUSEHOLD EFFECTS OF EXPATRIATE EMPLOYEES OF THE OIL

DRILLING COMPANIES AND THEIR CONTRACTORSSUBCONTRACTORS. The Central Board of Revenue has been pleased to order that henceforth foreign expatriate employees of the Oil Companies and the contractorssubcontractors of the oil companies coming to work on petroleum projects covered following under Petroleum Concession Agreements will be entitled of concessions a Foreign employees and consultants of petroleum sector companies and foreign employees of such companies contractors and subcontractors will be entitled to import free of import duties including customs duties sales tax Iqra surcharge and any other surcharges and licenceauthorization fees used and bonafide personal and household effects excluding passenger vehicles provided that the effects were acquired or were in such persons possession before his arrival in Pakistan or were imported within 6 months of such arrival. Such personal and household effects may thereafter be freely exported free of export duties and fees. Such articles shall not be sold or disposed off or transferred in Pakistan except with the prior permission of Regulatory Authority and on payment of import duties Model Petroleum Concession Agreement 2009 131 at the rate and value operating on the date the goods at the time of import less depreciation 10 per annum.

b Foreign employees and consultants of petroleum sector companies and foreign employees of such companies contractors and subcontractors shall be allowed to import commissary goods free of import duties including customs duty sales tax Iqra surcharge and any other surcharges to the extent of US 1200 each excluding family members per annum or such greater amount notified from time to time subject to the condition that the said goods shall not be sold or disposed off in Pakistan and no foreign exchange from Pakistan shall be involved. Model Petroleum Concession Agreement 2009 133 BANK GUARANTEE ANNEXVIII The President Islamic Republic of Pakistan Through Director General Petroleum Concessions Ministry of Petroleum and Natural Resources Islamabad Gentlemen Regarding Our Irrevocable Bank Guarantee No In compliance with the request of XYZABC the Company we Name of Bank issue this unconditional irrevocable Bank Guarantee in your favour for a sum not exceeding United States Dollars US which represents 25 of the Minimum Financial obligations for the initial exploration period for Block No under the Concession Agreement dated 200 Agreement among the Company XYZABC GHPL if applicable and THE PRESIDENT of the Islamic Republic of Pakistan THE PRESIDENT relating to Petroleum exploration development and production in Pakistan to guarantee the Companys faithful performance of its financial obligations as provided for in the Agreement the said sum of United States Dollars US to be reduced annually by an amount proportionate to 25 of the discharge of Minimum Work Commitment for that year as provided for in the said Agreement as evidenced by a signed certificate from THE PRESIDENT or his designee Director General Petroleum Concessions. The terms and conditions of this Bank Guarantee are as follows 1 The said amount or any part thereof shall be paid to Director General Petroleum Concessions without recourse to any person on receipt of your first written demand that the amount claimed is duly payable under the Agreement. 2 We hereby waive any or all rights and demands including but not limited to diligence presentment demand for payment protest as guarantor of first requiring the President to proceed against or enforce his contractual or legal right against the Company obligations hereunder are continuing absolute and unconditional and will not be in any way affected by giving of time or any forbearance by THE PRESIDENT the waiver or consent by THE PRESIDENT with respect to any provisions of the Agreement and irrespective of the validity regularity enforceability or value of the Agreement or

by any other circumstances which might otherwise constitute a legal or equitable discharge or defence of a surety or guarantor all of which are hereby expressly waived. Model Petroleum Concession Agreement 2009 134 3 Our obligations hereunder shall be paid in United States Dollars to the bank account designated by THE PRESIDENT or his designee Director General Petroleum Concessions free and clear of and without reduction by reason of any and all present and imposts deductions assessments charges or withholdings whatsoever. We shall bear and pay any and all fees and expenses in relation to or in connection with this Bank Guarantee. levies taxes future 4 In order to give effect to this Bank Guarantee we hereby declare that THE PRESIDENT or his designee Director General Petroleum Concessions shall be at liberty to act as though we were the principal debtor and we hereby waive all and any of the rights as surety which may at any time be inconsistent with any of the above provisions. 5 Any claim or demand under this Bank Guarantee shall be presented to us on or before the expiration of the date of the validity of this Bank Guarantee. 6 This Bank Guarantee shall be effective immediately and expire on NB ninety 90 Days after the end of the term and thereafter automatically without any formality become null and void for all its effects and this Bank Guarantee shall be returned to us immediately. 7 Notwithstanding anything contained hereinabove our maximum liability hereunder shall not exceed the sum of US .

Yours very truly Name of Bank Model Petroleum Concession Agreement 2009 135 PARENT COMPANY GUARANTEE GIVEN PURSUANT TO ARTICLE XXV OF THE PETROLEUM CONCESSION AGREEMENT ANNEX IX Whereas XYZ ABC a Company having its registered office at is the owner of the majority of the shares in a party to the Agreement as hereinafter defined and is its parent company. Whereas hereinafter referred to as the Company has entered into a Concession Agreement herein referred to as the Agreement with THE PRESIDENT of the Islamic Republic of Pakistan and GHPL if applicable relating to the Area as defined therein and assumed various obligations in favour of THE PRESIDENT. hereby acknowledges that it is dutifully aware of and understands the legal and contractual obligations undertaken by the Company under the Rules Licence and the Agreement and hereby guarantees that in the case of a default by the Company of

any of its obligations under the Rules Licence and the Agreement it will provide the Company with all necessary financial and other means to enable it to fully perform its aforesaid obligations and rectify the default provided that not less than fourteen 14 Days notices of the alleged default and amount payable thereon have been communicated in writing. This Guarantee will apply as of the Effective Date as defined in the Agreement and as long as the Company is a party to the Agreement. The laws of Pakistan shall govern this guarantee. IN WITNESS whereof this Deed has been executed on the Day of 20 The Common Seal of Model Petroleum Concession Agreement 2009 ANNEX X 136 WORK UNITS ARTICLE 1 1.1 Purpose GENERAL PROVISIONS The purpose of this Annex regarding Work Units is to set out the principles and procedures whereby the work program under Article 3.3 of the Agreement shall be carried out on the basis of Work Units as per Rules as hereinafter defined. 1.2 Definitions The definitions of Article 1 of the Agreement shall apply to this Annex and have the same meaning except that references herein to Article refer to Articles hereof unless otherwise indicated. In addition the following terms will have the meaning given below a Well Depth means the well depth measured along the well bore from the rotary table to the total depth for onshore wells. In case the well is a deepening of an existing well the well depth is measured from the deepest point in the existing well to the new total depth. In case a well is sidetracked the depth shall not include any depth drilled below the kick off point of the side track but shall include the redrilled part of the well from the kick off point to the total depth. In case a well is horizontally drilled or deviated the length of the horizontaldeviated segment well shall be added to the vertical well depth. b Work Unit means a unit of work for the purpose of measuring the quantum of Minimum Work under Article 3.3 of the Agreement as set out in more detail in Articles II and III of this Annex. 1.3 Precedence of Documents In the event of any inconsistency or conflict between the provisions of this Annex III and the provisions of the Agreement the provisions of the Agreement shall prevail. 1.4 Qualifying Work The only work that qualifies for Work Units are new 2D and 3D seismic surveys and Exploration Wells carried out during the Exploration Period in the Area. Work shall include any seismic surveys for the purpose of locating Exploration Well and Exploration Model

Petroleum Concession Agreement 2009 137 Wells drilled in Development Areas during the Exploration Period. Any work carried out as an Appraisal Program or as part of the development of a Commercial Discovery shall not qualify for Work Units.

ARTICLE II VALUE OF WORK UNITS

2.1 Value of Work Units The value of one Work Units is Ten Thousand 10000 Dollars.

ARTICLE III EQUIVALENCY OF WORK UNITS

3.1 Equivalency of Work Units The following equivalency applies in order to equate work that has been carried out with Work Units

a 2D seismic surveys One linekilometer of 2D seismic surveys which has been acquired processed interpreted and mapped 0.3 Work Unit.

b 3D seismic surveys One square kilometer of 3D seismic surveys which has been acquired processed interpreted and mapped 1.0 Work Unit.

c One Exploration Well with a surface location in Zone I or Zone II

Well Depth in meters	Work Units
1000	2000
3000	4000
5000	6000
7000	100
200	400
600	1000
2000	3000

d One Exploration Well with a surface location in Zone III

Well Depth in meters	Work Units
1000	50

Model Petroleum Concession Agreement 2009

Well Depth in meters	Work Units
2000	3000
4000	5000
6000	7000
138	80
100	200
330	600
900	

3.2 Interpolation For Well Depths intermediate to the ones indicated in the tables of Article 3.1 c 3.1 d and 3.1e the Work Units shall be determined on the basis of linear interpolation.

ARTICLE IV MINIMUM WORK UNITS DURING THE EXPLORATION PERIOD

4.1 Minimum Work Units The minimum Work Units required by the Minimum Work programme will be set out in Article 3.3 of the Agreement with respect to Phase One Phase Two and Phase Three of the Initial Term and the First and Second Renewal thereof in accordance with the Rules.

4.2 Work which does not Qualify The following work does not qualify for Work Units

a work carried out prior to the Effective Date

b work carried out after the termination of the Exploration Period

c work carried out outside the Area

d work which is not carried out in accordance with work program stipulated in Article 3 of the Agreement.

e work which does not qualify as Joint Operations under the Agreement.

f g any Exploration Wells which are terminated less than 100 metres below the seabed and the portion of any Well Depth for which no well logs were obtained as a result of blowouts other acentis or drilling problems.

4.3 Completion of Work

Model Petroleum Concession Agreement 2009 139 The work in order to earn Work Units shall be

considered completed where a DGPC has received satisfactory proof from the Working Interest Owner that the work has been executed in accordance with the Agreement and the Rules and b DGPC has received the minimum required information pursuant to the Agreement and the Rules.

4.4 Value of Work The reduction of the irrevocable unconditional bank guarantee pursuant to Article 3.8 of the Agreement or the determination of the non performance compensation/liquidated damages pursuant to Article 3.4 of the Agreement shall be based on the value of the Work Units that have been completed or not completed by the Working Interest Owner irrespective of whether the actual cost of the work has been more or less than the value of the Work Units.

4.5 Free Selection of Work The Working Interest Owner is free to define the work that qualifies for Work Units subject to approval of the work program by the Management Committee.

4.6 Crediting of Work Units Any Work Units executed in excess of the amounts required under the Agreement for each Phase of the Initial Term or the First Renewal can be carried forward to the next period in accordance with the provisions of the Agreement. The value of Work Units which are being transferred to subsequent years shall be adjusted in accordance with Article 2.1 of this AnnexIII.

4.7 Nontransferability of Work Units Work Units cannot be transferred from one Area to another.

4.8 Allocation of Work Units Where seismic surveys are being carried out jointly by several Working Interest Owners in different Areas and/or on open acreage the Working Interest Owner shall only convert to Work Units the work which is carried out inside the Area and shall allocate such work based on the line/kilometres or square kilometres carried out in the Contract Area. Where a Working Interest Owner contributes to or shares in the costs of an Exploration Well drilled outside the Area the Working Interest Owner shall not claim such well or any portion of such well for the earning of Work Units.

Short title This Act may be cited as the Iron Ore Yandicoogina Agreement Act 1996. 2. Commencement 1. This Act comes into operation on the day on which it receives the Royal Assent. 3. Interpretation 1. In this Act Agreement means the agreement a copy of which is set out in Schedule 1 and except in section 41 includes that agreement as amended from time to time in accordance with clause 33 of the agreement and by the First Variation Agreement and the Second Variation Agreement; the First Variation Agreement means the agreement a copy of which is set out in Schedule 2; the Second Variation Agreement means the agreement a copy of which is set out in Schedule 3. [Section 3 amended No. 61 of 2010 s. 22; No. 61 of 2011 s. 20.] As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 1 Iron Ore Yandicoogina Agreement Act 1996 s. 4 4. Agreement ratified and implementation authorised 1 The Agreement is ratified. 2A The First Variation Agreement is ratified. 2B The Second Variation Agreement is ratified. 2 The implementation of the Agreement is authorised. 3 Without limiting or otherwise affecting the Government Agreements Act 1979 the Agreement operates and takes effect despite any other written law or law. 4 To avoid doubt it is declared that the provisions of the Public Works Act 1902 section 96 do not apply to a railway constructed under the Agreement. [Section 4 amended No. 61 of 2010 s. 23; No. 61 of 2011 s. 21.] 5. State empowered under clause 12C9a The State has power in accordance with clause 12C9a of the Agreement. [Section 5 inserted No. 61 of 2010 s. 24.] page 2 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Schedule 1 Agreement [s. 3] THIS AGREEMENT is made this day 22 of October 1996 BETWEEN THE HONOURABLE RICHARD

FAIRFAX COURT B. Com. M.L.A. Premier of the State of Western Australia acting for and on behalf of the said State and its instrumentalities from time to time hereinafter called the State of the first part HAMERSLEY IRONYANDI PTY LIMITED A.C.N. 009 181 793 a company incorporated in Western Australia and having its registered office at Level 22 Central Park 152 158 St Goerges Terrace Perth hereinafter called the Company in which term shall be included its successors and permitted assigns of the second part and HAMERSLEY IRON PTY LIMITED A.C.N. 004 558 276 a company incorporated in the State of Victoria and having its registered office in the State of Western Australia at Level 22 Central Park 152 158 St. Georges Terrace Perth hereinafter called Hamersley of the third part. W H E R E A S a b c the Company has established within the lands the subject of Exploration Licences Nos. E474 and E476 to E4710 inclusive iron ore of tonneages and grades sufficient to warrant economic recovery and marketing; the Company has put forward a project outline for a mining operation which will have capacity to produce up to 15000000 tonnes of iron ore per annum for transportation from the mining lease as markets develop and which will provide accommodation for the mine workforce by way of facilities established in the vicinity of the mining lease; and the parties hereto have agreed to enter into this Agreement for the purpose of assisting the establishment of the mining operation as described above and providing a framework for managing future changes to the project particularly in relation to production and workforce increases and changes in workforce accommodation arrangements. NOW THIS AGREEMENT WITNESSES

As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 3 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Definitions 1. In this Agreement subject to the context accommodation area means an area or areas on or in the vicinity of the mining lease for accommodation and ancillary facilities for the mine workforce; Acquisition Act means the Land Acquisition and Public Works Act 1902; advise apply approve approval consent certify direct notify request or require means advise apply approve approval consent certify direct notify request or require in writing as the case may be and any inflexion or derivation of any of those words has a corresponding meaning; approved proposal means a proposal approved or determined under this

Agreement; beneficiated ore means iron ore which has been concentrated or upgraded otherwise than by washing drying crushing or screening or a combination thereof by the Company in a plant constructed pursuant to an approved proposal or such other plant as is approved by the Minister after consultation with the Minister for Mines and beneficiation and beneficiate have corresponding meanings; Clause means a clause of this Agreement; commencement date means the date the Bill referred to in Clause 3 comes into operation as an Act; Commonwealth means the Commonwealth of Australia and includes the Government for the time being thereof; Companys workforce means the persons and the dependants of those persons connected directly with the Companys activities under this Agreement whether or not such persons are employed by the Company; EP Act means the Environmental Protection Act 1986; fine ore means iron ore excluding beneficiated ore which is nominally sized minus six millimetres; page 4 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement iron ore includes beneficiated ore; Land Act means the Land Act 1933; Land Tenure Plan means the plan marked A initialled by or on behalf of the parties hereto for the purpose of identification; laws relating to native title means laws applicable from time to time in Western Australia in respect of native title and includes the NTA; loading port means the port of Dampier or if iron ore is not shipped or is not shipped from that port then such port which may include the port of Dampier as the Minister may determine for the purpose of this definition; local authority means the council of a municipality that is a city town or shire constituted under the Local Government Act 1995; lump ore means iron ore excluding beneficiated ore which is nominally sized plus six millimetres minus thirty millimetres; metallised agglomerates means the product of a pyrometallurgical iron ore reduction process which has a composition of not less than 85 eighty five per cent total iron excluding carbon; mine site means the mining lease the accommodation area and other areas provided for the facilities of the Company in the vicinity of the mining lease; mine workforce means the Companys workforce engaged for the Companys activities on the mine site but does not include persons visiting the mine site in connection with the Companys mining activities on

a short term basis only or employed for a specific task of limited duration; Mining Act means the Mining Act 1978; mining lease means the mining lease granted pursuant to Clause 11 and includes any renewal thereof and according to the requirements of the context describes the area of land demised as well as the instrument by which it is demised; Minister means the Minister in the Government of the State for the time being responsible for the administration of the Act to ratify this Agreement and pending the passing of that Act means the Minister for As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 5 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement the time being designated in a notice from the State to the Company and includes the successors in office of the Minister; Minister for Mines means the Minister in the Government of the State for the time being responsible for the administration of the Mining Act; month means calendar month; native title and native title rights and interests have the meaning given to them in the NTA; notice means notice in writing; NTA means the Native Title Act 1993 Commonwealth; person or persons includes bodies corporate; private roads means the roads referred to in subclause 1 of Clause 15 and any other roads whether within or outside the mining lease constructed by the Company in accordance with an approved proposal or agreed by the State and the Company to be a private road for the purposes of this Agreement; public road means a road as defined by the Road Traffic Act 1974; said State means the State of Western Australia; subclause means subclause of the Clause in which the term is used; this Agreement hereof and hereunder refer to this Agreement whether in its original form or as from time to time added to varied or amended; washing means a process of separation by water using only size as a criterion.

Interpretation 2. 1 In this Agreement a monetary references are references to Australian currency unless otherwise specifically expressed; page 6 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement b power given under any clause other than Clause 35 to extend any period or date shall be without prejudice to the power of the Minister under Clause 35; c clause headings do not affect the interpretation or construction; d words in the singular shall include the plural and words in

the plural shall include the singular according to the requirements of the context; e one gender includes the other genders; and f reference to an Act includes the amendments to that Act for the time being in force and also any Act passed in substitution therefor or in lieu thereof and the regulations for the time being in force thereunder. Nothing in this Agreement shall be construed to exempt the State or the Company from compliance with or to require the State or the Company to do anything contrary to any law relating to native title or any lawful obligation or requirement imposed on the State or the Company as the case may be pursuant to any law relating to native title. Nothing in this Agreement shall be construed to exempt the Company from compliance with any requirement in connection with the protection of the environment arising out of or incidental to its activities under this Agreement that may be made pursuant to the EP Act.

2 3 Ratification and Operation

3. 1 The State shall introduce and sponsor a Bill in the State Parliament of Western Australia to ratify this Agreement and endeavour to secure its passage as an Act prior to 31 December 1996 or such later date as may be agreed between the parties hereto.

2 The provisions of this Agreement other than this Clause and Clauses 1 and 2 shall not come into operation until the Bill As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 7 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement referred to in subclause 1 has been passed by the Parliament of Western Australia and comes into operation as an Act.

3 If before 31 December 1996 the said Bill has not commenced to operate as an Act then unless the parties hereto otherwise agree this Agreement shall then cease and determine and no party hereto shall have any claim against any other party hereto with respect to any matter or thing arising out of done performed or omitted to be done or performed under this Agreement.

4 On the said Bill commencing to operate as an Act all the provisions of this Agreement shall operate and take effect notwithstanding the provisions of any Act or law. Initial obligations of the Company

4. 1 The Company shall continue its field and office engineering environmental heritage market and finance studies and other matters necessary for the purposes of this Clause and to enable it to finalise and to submit to the Minister the detailed proposals referred to in Clause 6.

2 3 The Company shall keep

the State fully informed in writing quarterly as to the progress and results of its operations under subclause 1 and shall supply to the State such information in relation thereto as the Minister may request. The Company shall cooperate with the State and consult with the representatives or officers of the State regarding matters referred to in subclauses 1 and 2 and any other relevant studies in relation to those subclauses that the Minister may wish to undertake. Surveys of lands 5.

1 For the purposes of Clause 4 and to the extent reasonably necessary to enable the Company to carry out its obligations under that Clause and to carry out surveys of land and other works in relation to its proposed activities under this Agreement and for the purpose of complying with and making applications page 8 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement with respect to land under the Aboriginal Heritage Act 1972 for all of which purposes the Company shall be deemed to be within the expression the owner of any land in section 18 of that Act but subject to the adequate protection of the environment including flora and fauna and the land affected including improvements thereon the Company and its agents and contractors in relation to its proposed activities under this Agreement may subject to sections 82 and 83A of the Acquisition Act and authorisations pursuant to those sections exercise the powers set out in those sections as if such activities were a work under that Act. 2 The land to be granted pursuant to this Agreement whether under the Land Act or the Mining Act will be drawn from within the areas coloured red and blue on the Land Tenure Plan and such other land as may be agreed between the State and the Company.

Company to submit proposals 6. 1 Subject to the provisions of this Agreement the Company shall on or before 31 December 1997 submit to the Minister to the fullest extent reasonably practicable its detailed proposals including plans where practicable and specifications where reasonably required by the Minister with respect to the production of up to 15000000 tonnes of iron ore per annum for transportation from the mining lease and the transport and shipment of iron ore produced which proposals shall make provision for the Companys workforce and associated population required to enable the Company to mine and recover iron ore from the mining lease and transport and ship the

iron ore and shall include the location area layout design quantities materials and time programme for the commencement and completion of construction or the provision as the case may be of each of the following matters namely a the mining and recovery of iron ore including mining crushing screening handling transport and storage of As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 9 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement b c d iron ore and plant facilities and any beneficiation or further processing of iron ore proposed to be carried out; a railway between the mining lease and Hamersleys existing railway from Dampier to Marandoo and works ancillary to or connected with the railway including fencing if any and crossing places; roads within the mining lease and roads serving the mining lease; temporary accommodation and ancillary facilities for the mine workforce on or in the vicinity of the mining lease and housing or other appropriate accommodation and facilities elsewhere for the Companys workforce; e water supply and disposal; f energy supplies; g storage and ship loading of iron ore; h mine aerodrome on or in the vicinity of the mining lease and any other aerodrome facilities and services; i j k l any other works services or facilities desired by the Company; use of local labour professional services manufacturers suppliers contractors and materials and measures to be taken with respect to the engagement and training of employees by the Company its agents and contractors; any leases licences easements and other titles to land required from the State; and an environmental management programme as to measures to be taken in respect of the Companys activities under this Agreement for rehabilitation and the protection and management of the environment.

Order of proposals 2 Each of the proposals pursuant to subclause 1 may with the approval of the Minister or if so required by him shall be page 10 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement submitted separately and in any order as to any matter or matters mentioned in subclause 1.

Additional submissions 3 At the time when the Company submits the said proposals it shall submit to the Minister details of any services including any elements of the project investigations design and management and any works materials plant equipment and supplies that

it proposes to consider obtaining from or having carried out or permitting to be obtained from or carried out outside Australia together with its reasons therefor and shall if required by the Minister consult with the Minister with respect thereto. Consideration of proposals

7. 1 In respect of each proposal pursuant to subclause 1 of Clause 6 the Minister shall

a b c approve of the proposal without qualification or reservation; or defer consideration of or decision upon the same until such time as the Company submits a further proposal or proposals in respect of some other of the matters mentioned in subclause 1 of Clause 6 not covered by the said proposal; or require as a condition precedent to the giving of his approval to the said proposal that the Company make such alteration thereto or comply with such conditions in respect thereto as he thinks reasonable and in such a case the Minister shall disclose his reasons for such conditions PROVIDED ALWAYS that where implementation of any proposals hereunder have been approved pursuant to the EP Act subject to conditions or procedures any approval or decision of the Minister under this Clause shall if the case so requires incorporate a requirement that the Company make such

As at 15 Dec 2011
Version 01c005 Published on www.legislation.wa.gov.au page 11

Iron Ore Yandicoogina Agreement
Act 1996 Schedule 1 Agreement alterations to the proposals as may be necessary to make them accord with those conditions or procedures. Advice of Ministers decision

2 The Minister shall within two months after receipt of proposals pursuant to subclause 1 of Clause 6 give notice to the Company of his decision in respect to the proposals PROVIDED THAT a where a proposal is to be assessed under section 401b of the EP Act the Minister shall only give notice to the Company of this decision in respect to the proposal within 2 months after service on him of an authority under section 457 of the EP Act; and b where implementation of a proposal by the State will require the State to take any native title rights and interests the Minister shall only give notice to the Company of his decision in respect to the proposal within 2 months of the process of taking such native title rights and interests by the State being completed. Consultation with Minister

3 If the decision of the Minister is as mentioned in either of paragraphs b or c of subclause 1 the Minister shall afford the Company full opportunity to consult with him and should it so desire to submit new or revised

proposals either generally or in respect to some particular matter. Ministers decision subject to arbitration 4 If the decision of the Minister is as mentioned in either of paragraphs b or c of subclause 1 and the Company considers that the decision is unreasonable the Company within two months after receipt of the notice mentioned in subclause 2 may elect to refer to arbitration in the manner hereinafter provided the question of the reasonableness of the decision PROVIDED THAT any requirement of the Minister pursuant to the proviso to subclause 1 shall not be referable to arbitration hereunder. page 12 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Arbitration award 5 An award made on an arbitration pursuant to subclause 4 shall have force and effect as follows a b if by the award the dispute is deed against the Company then unless the Company within 3 months after delivery of the award gives notice to the Minister of its acceptance of the award this Agreement shall on the expiration of that period of 3 months cease and determine; or if by the award the dispute is deed in favour of the Company the decision shall take effect as a notice by the Minister that he is so satisfied with and approves the matter or matters the subject of the arbitration. Effect of nonapproval of proposals 6 Notwithstanding that under subclause 1 any proposals of the Company are approved by the Minister or determined by arbitration award unless each and every such proposal and matter is so approved or determined by 31st December 1997 or by such extended date or period if any as the Company shall be granted pursuant to the provisions of this Agreement then the Minister may give to the Company 12 months notice of intention to determine this Agreement and unless before the expiration of the said 12 months period all the detailed proposals and matters are so approved or determined this Agreement shall cease and determine subject however to the provisions of Clause 39. Implementation of proposals 7 The Company shall implement the approved proposals in accordance with the terms thereof. Variation of proposals 8 Notwithstanding Clause 33 the Minister may during the implementation of approved proposals approve variations to those proposals. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 13 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1

Agreement Extension of periods 9 The periods set forth in subclause 1 of Clause 6 and subclause 6 of this Clause will be extended in addition to any extension granted pursuant to Clause 34 or 35 upon request of either the Company or the State for such reasonable period or periods as may be necessary from time to time to enable either of them to comply with laws relating to native title.

Termination of Agreement 10 If either the Company or the State considers the establishment of the mining operations as envisaged in subclause 1 of Clause 6 should not proceed having regard to matters arising out of laws relating to native title or by reason of claims or objections lodged under laws relating to native title that party shall consult with the other in regard thereto. Subject to such consultation either of them may at any time before production of iron ore in commercial quantities is commenced for reasons the subject of such consultation determine this Agreement by notice to the other whereupon this Agreement shall determine and the provisions of Clause 39 will apply. Overall

development 8. 1 Having regard to the geographical relationship and physical association of the mining lease with other iron ore deposits in and to the general development of the central Hamersley Range area the Company in its initial proposals under Clause 6 and any additional proposals pursuant to Clause 9 other than a proposal under that Clause to increase production of iron ore where the total production after such increase will not exceed 15000000 tonnes of iron ore per annum for transportation from the mining lease and the proposal does not involve any significant variation to the mine infrastructure or Clause 10 shall take into account and make provision where it is reasonably practicable so to do for a the economic and orderly overall development of the lands the subject of this Agreement and those other iron ore deposits; page 14 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement b c appropriate infrastructure development in the central Hamersley Range area having regard to then existing iron ore operations and facilities and to other existing infrastructure including the Great Northern Highway; and an open town or other appropriate housing and accommodation arrangements to service the iron ore mines and other developments in the central Hamersley Range area. 2 The Company and the State shall cooperate and consult with

each other regarding the matters referred to in subclause 1 State Government policies planning and development objectives the Companys commercial requirements and any other relevant matters that the Minister or the Company may wish to consider. Additional proposals 9. 1 2 If the Company at any time during the continuance of this Agreement desires to significantly modify expand or otherwise vary its activities carried on pursuant to this Agreement beyond those activities specified in any approved proposals it shall give notice of such desire to the Minister and within 2 months thereafter shall submit to the Minister detailed proposals in respect of all matters covered by such notice and such of the other matters mentioned in subclause 1 of Clause 6 as the Minister may require. The provisions of Clause 6 and Clause 7 other than subclauses 5a and 6 of Clause 7 shall mutatis mutandis apply to detailed proposals submitted pursuant to this subclause with the proviso that the Company may withdraw such proposals at any time before approval thereof or where any decision of the Minister in respect thereof is referred to arbitration within 3 months after the award by notice to the Minister that it shall not be proceeding with the same. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 15 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Limits on mining 10. 1 The Company shall not produce more than 15000000 tonnes of iron ore per annum for transportation from the mining lease nor shall the total number of the mine workforce exceed 150 without the prior consent of the Minister and approval of detailed proposals in regard thereto in accordance with this Clause. 2 a If the Company desires to increase the annual tonnage or the mine workforce beyond that specified in subclause 1 it shall give notice thereof to the Minister and furnish to the Minister with that notice an outline of its proposals in respect thereto including the matters mentioned in subclause 1 of Clause 6. b The Minister shall within one month of a notice under paragraph a of this subclause advise the Company whether or not he approves in principle the proposed increase. An approval by the Minister under this subclause may be given subject to conditions including a condition requiring variations of or additions to this Agreement PROVIDED THAT any such condition shall not without the consent of the Company require variations of i ii the term of the mining lease or the railway lease or the rental

thereunder; the rentals payable under any other lease or licence hereunder; iii the rates of or method of calculating royalty; iv the provisions of Clause 20; or v the provisions of Clause 23. 3 The Company shall not seek approval in principle to proposals in regard to the production of more than 30 million tonnes of iron ore per annum for transportation from the mining lease unless the Minister in accordance with subclause 4 of Clause 23 has approved or is deemed to have approved proposals submitted under subclause 2 of that Clause for the establishment within the State of plant for the production of page 16 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement metallised agglomerates or under subclause 6 of that Clause for an alternative project in lieu of the Companys obligations in respect of the establishment of plant for the production of metallised agglomerates under that Clause or unless the Minister otherwise agrees for the purpose of this subclause to receive a notice under subclause 2a. 4 a If the Minister approves in principle a proposed increase the Company must within three months of that approval submit to the Minister detailed proposals in respect thereof in accordance with any conditions of that approval otherwise that approval shall lapse. 5 b The provisions of subclause 2 of Clause 9 shall apply to detailed proposals submitted pursuant to this subclause. Any proposal under this Clause to increase the annual tonneage to be produced or the number of the mine workforce shall specify the proposed increase and on and after approval or determination of any such proposal pursuant to paragraph b of subclause 4 the provisions of this Clause shall apply mutatis mutandis to the increased tonneage or number of the mine workforce as the case may be and also to any subsequent desires of the Company for an increase in the tonneage or mine workforce. Mining lease 11. 1 On application made by the Company to the Minister in such manner as the Minister may determine not later than 3 months after all its proposals submitted pursuant to subclause 1 of Clause 6 have been approved or determined and the Company has complied with the provisions of subclause 3 of Clause 6 for a mining lease of land within the land depicted by the area coloured red on the Land Tenure Plan then held by the Company or by Hamersley under the exploration licences referred to in recital a of this Agreement

the State shall subject to the conditions set out in the following subclauses and insofar as is permitted by laws relating to native title cause a mining lease of the land so applied for to be granted to the Company. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 17 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Conditions of grant of mining lease 2 The grant of the mining lease referred to in subclause 1 shall be subject to the conditions that a b c d e f the mining lease may be in respect of one or more pieces of land whether contiguous or not provided that the total area leased shall not exceed 777 square kilometres and each piece of land shall be in the form of a rectangle or as near thereto as is practicable; the mining lease may be granted before the area leased has been surveyed but in that case shall be granted subject to the condition that the area leased shall be surveyed by or on behalf of the State at the Companys expense and shall accord with that survey; the mining lease shall permit the Company to mine iron ore only; the mining lease shall only be granted on the surrender of Exploration Licences Nos. E474 and E477 to E4710 and any part of Exploration Licence No. E476 which is to be included in the mining lease; the rental payable in respect of the mining lease shall be that prescribed from time to time in the Mining Act otherwise than under regulation 28A; from and after the date 15 years after the first transportation from the mining lease of iron ore on which royalty is payable under subclause 2 of Clause 12 the Company in addition to the rental already referred to in paragraph e shall pay to the State an additional rental in respect of the mining lease equal to 25 cents per tonne on all iron ore in respect of which royalty is payable under subclause 2 of Clause 12 such additional rental to be paid in respect of the same periods and at the same times as such royalty is payable; and g the mining lease shall be granted under and except as otherwise provided in this Agreement subject to the Mining Act but in the form of the Schedule hereto. page 18 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Term of mining lease 3 Subject to the performance by the Company of its obligations under this Agreement and the Mining Act and notwithstanding any provisions of the Mining Act to the contrary the term of the mining lease shall be for a period of 21 years commencing from the date

of receipt of the application therefor under subclause 1 with the right during the currency of this Agreement to take two successive renewals of the said term each for a further period of 21 years upon the same terms and conditions subject to the sooner determination of the said term upon cessation or determination of this Agreement such right to be exercisable by the Company making written application for any such renewal not later than one month before the expiration of the current term of the mining lease.

Exemption from expenditure conditions 4 The State shall ensure that during the currency of this Agreement and subject to compliance with its obligations hereunder the Company shall not be required to comply with the expenditure conditions imposed by or under the Mining Act in regard to the mining lease.

Reports 5 The Company shall lodge with the Department of Minerals and Energy at Perth mineral exploration reports in accordance with section 115A of the Mining Act but shall not be required to lodge any operations reports in accordance with that section.

Access over mining lease 6 The Company shall at all times permit the State and third parties with the consent of the State with or without stock vehicles and rolling stock to have access to and to pass over the mining lease by separate route road or railway so long as that access and passage does not unduly prejudice or interfere with the activities of the Company under this Agreement.

Surrender of part of mining lease 7 Notwithstanding the provisions of this Clause and the Mining Act with the approval of the Minister the Company may from As at 15 Dec 2011 Version 01c005

Published on www.legislation.wa.gov.au page 19 Iron Ore Yandicoogina Agreement Act 1996

Schedule 1 Agreement time to time with abatement of future rent in respect to the area surrendered but without any abatement of rent already paid or any rent which has become due and has been paid in advance surrender to the State all or any portion or portions of the mining lease. Additional areas 8 9 10 Notwithstanding the provisions of the Mining Act the Company may from time to time during the currency of this Agreement apply to the Minister for areas held by the Company under a mining tenement granted under the Mining Act to be included in the mining lease but so that the total area of the mining lease shall not at any time exceed 777 square kilometres. The Minister shall confer with the Minister for Mines in regard to any such application and if they in their discretion

approve the application the Minister for Mines shall upon the surrender of the relevant mining tenement include the area the subject thereof in the mining lease subject to such of the conditions of the surrendered mining tenement as the Minister for Mines determines but otherwise subject to the same terms covenants and conditions as apply to the mining lease with such apportionment of rents as is necessary and notwithstanding that the survey of such additional land has not been completed but subject to correction to accord with the survey when completed at the Companys expense. The Company shall not mine or carry out other activities other than exploration bulk sampling and testing on any area of areas added to the mining lease pursuant to subclause 8 of this Clause unless and until proposals with respect thereto are approved or determined pursuant to the subsequent provisions of this Clause. If the Company desires to commence mining of iron ore or to carry out any other activities other than as aforesaid on the said areas it shall give notice of such desire to the Minister and shall within 2 months of the date of such notice or thereafter within such extended time as the Minister may allow as hereinafter provided and subject to the provisions of this Agreement submit to the Minister to the fullest extent reasonably practicable its detailed proposals which proposals page 20 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement shall include plans where practicable and specifications where reasonably required by the Minister with respect to such mining or other activities as additional proposals pursuant to Clause 9. Other mining tenements 11 a Notwithstanding anything contained or implied in this Agreement or in the mining lease or the Mining Act mining tenements may subject to the provisions of this Clause be granted to or registered in favour of persons other than the Company under the Mining Act in respect of the areas the subject of the mining lease unless the Minister for Mines determines that such grant or registration is likely unduly to prejudice or interfere with the current or prospective operations of the Company hereunder with respect to iron ore assuming the taking by the Company of reasonable steps to avoid the prejudice or interference or is likely unduly to reduce the quantity of economically extractable iron ore available to the Company. b A mining tenement granted or registered as a result of this Clause

shall not confer any right to mine or otherwise obtain rights to iron ore on the tenement. c i In respect of any application for a mining tenement made under the Mining Act in respect of an area the subject of the mining lease the Minister for Mines shall consult with the Minister and the Company with respect to the significance of iron ore deposits in on or under the land the subject of the application and any effect the grant of a mining tenement pursuant to such application might have on the current or prospective iron ore operations of the Company under this Agreement. ii Where the Minister for Mines after taking into account any matters raised by the Minister or the Company determines that the grant or registration of the application is likely to have the effect on the operations of the Company or the iron ore referred As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 21 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement to in paragraph a of this subclause he shall notwithstanding any recommendation of any mining registrar or warden by notice served on the mining registrar with whom the application was lodged refuse the application. iii Before making a determination pursuant to d i subparagraph ii of this paragraph the Minister for Mines may request the warden of the mineral field or district thereof in which is situated the mining tenement for which the application was made to hear the application and any objections thereto and as soon as practicable after the hearing of the application to report to the Minister for Mines on the application and the objections and the effect on the current or prospective operations of the Company or the quantity of economically extractable iron ore that a grant of the application might have. Except as provided in paragraph c of this subclause no mining registrar shall deal with an application for a mining tenement in respect of an area the subject of the mining lease unless and until the Minister for Mines has notified him that it is not intended to refuse the application pursuant to paragraph c of this subclause. Following such advice to the mining registrar the application shall be disposed of under and in accordance with the Mining Act save that where the warden has heard the application and objections thereto pursuant to subparagraph iii of paragraph c of this subclause the application may be dealt with by the warden without further hearing. ii The Company may exercise in respect of any application for a mining tenement lodged

with a mining registrar any right that it may have under the Mining Act to object to the granting of the application. page 22 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011

Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement iii Any mining tenement granted pursuant to such application shall in addition to any covenants and conditions that may be prescribed or imposed be granted subject to such conditions as the Minister for Mines may determine having regard to the matters the subject of the consultations with the Minister and the Company pursuant to subparagraph i of paragraph c of this subclause and any matters raised by the Company before the warden pursuant to subparagraph iii of paragraph c of this subclause or to subparagraph ii of this paragraph. e i On the grant of any mining tenement pursuant to an application to which this subclause applies the land the subject thereof shall thereupon be deemed excised from the mining lease with abatement of future rent in respect of the area excised but without any abatement of rent already paid or of rent which has become due and has not been paid in advance. ii On the expiration or sooner determination of any such mining tenement or if that tenement is a prospecting licence exploration licence or retention licence and a substitute tenement is granted in respect thereof pursuant to an application made under section 49 or section 67 or section 70L of the Mining Act then on the expiration or sooner determination of the substitute title the land the subject of such mining tenement or substitute title as the case may be shall thereupon be deemed to be part of the land in the mining lease with appropriate adjustment of rental and unless the Minister otherwise directs shall be subject to the terms and conditions of the mining lease and this Agreement. Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Royalties 12. 1 In this Clause agreed or determined means agreed between the Company and the Minister or failing agreement within three months of the Minister giving notice to the Company that he requires the value of a quantity of iron ore to be agreed or determined as determined by the Minister and in agreeing or determining a fair and reasonable market value of such iron ore assessed at an arms length basis the Company and/or the Minister as the case may be shall have regard to the prices for

that type of iron ore prevailing at the time the price for such iron ore was agreed between the Company and the purchaser in relation to the type of sale and the market into which such iron ore was sold and where prices beyond the deemed f.o.b. point are being considered the deductions mentioned in the definition of f.o.b. value; deemed f.o.b. point means on ship at the loading port; deemed f.o.b. value means an agreed or determined value of the iron ore as if the iron ore was sold f.o.b. at the deemed f.o.b. point as at i ii in the case of iron ore the property of the Company which is shipped out of the said State the date of shipment; in any other case the date of sale transfer of ownership disposal or use as the case may be; f.o.b. value means i in the case of iron ore shipped and sold by the Company the price which is payable for the iron ore by the purchaser thereof to the Company or where the Minister is not satisfied that the price payable in respect of the iron ore represents a fair and reasonable market value for that iron ore assessed at an arms length basis such amount as is agreed or determined less all export duties and export taxes payable to the Commonwealth on the export of the iron ore and all costs and charges properly incurred and payable by the Company from the time the iron ore shall

24 Version 01c005 Published on
www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule
1 Agreement be placed on ship at the loading port to the time the same is delivered and accepted
by the purchaser including 1 ocean freight; 2 marine insurance; 3 port and handling charges at the
port of discharge; 4 5 6 7 8 all costs properly incurred in delivering the iron ore from port of
discharge to the smelter and evidenced by relevant invoices; all weighing sampling assaying
inspection and representation costs; all shipping agency charges after loading on and departure of
ship from the loading port; all import taxes by the country of the port of discharge; and such other
costs and charges as the Minister may in his discretion consider reasonable in respect of any
shipment or sale; ii in all other cases the deemed f.o.b. value. For the purpose of subparagraph i of
this definition it is acknowledged that the consideration payable in an arms length transaction for
iron ore sold solely for testing purposes may be less than the fair and reasonable market value for
that iron ore and in this circumstance where the Minister in his discretion is satisfied such

consideration represents the entire consideration payable the Minister shall be taken to be satisfied that such entire consideration represents the fair and reasonable market value. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 25 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 2 The Company shall during the continuance of this Agreement pay to the State royalty on all iron ore from the mining lease other than iron ore shipped solely for testing purposes and in respect of which no purchase price or other consideration is payable or due as follows a for the period ending on 31 December 2010 i on lump ore at the rate of 7.5 of the f.o.b. value; ii on fine ore at the rate of 5.625 of the f.o.b. value; iii on beneficiated ore at the rate of 5.0 of the f.o.b. value; and iv on any other iron ore at the rate of 7.5 of the f.o.b. value b for the period commencing on 1 January 2011 on all iron ore at the rate or rates from time to time prescribed under the Mining Act PROVIDED HOWEVER in respect to paragraphs a and b of this subclause c where iron ore sold or intended to be sold as fine ore includes lump ore nominally sized minus 10 millimetres the royalty payable on such iron ore shall be the royalty payable on fine ore; and d where iron ore from the mining lease is processed in the said State into pellets sinter metallised agglomerates or steel by the Company or a third party the rates applicable pursuant to this subclause shall be reduced in respect of that iron ore by i ii 0.5 in respect of iron ore processed into pellets or sinter; 1.0 in respect of iron ore processed into metallised agglomerates; iii 2.0 in respect of iron ore processed into steel. page 26 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 3 The Company shall a within fourteen days after the quarter days the last days of March June September and December in each year commencing with the quarter day next following the first transportation of iron ore from the mining lease furnish to the Minister a return showing the quantity of all beneficiated ore produced and all fine ore lump ore and other iron ore the subject of royalty hereunder and sold transferred or otherwise disposed of or used as the case may be during the quarter immediately preceding the due date of the return and shall not later than 2 months after such due date pay to the Minister the royalty payable in respect thereof or if the f.o.b. value is not

then finally calculated agreed or determined pay to the Minister on account of the royalty payable hereunder a sum calculated on the basis of invoices or provisional invoices as the case may be rendered by the Company to the purchaser which invoices the Company shall render without delay simultaneously furnishing copies thereof to the Minister of such iron ore or on the basis of estimates as agreed or determined and shall from time to time in the next following appropriate return and payment make by return and by cash all such necessary adjustments and give to the Minister full details thereof when the f.o.b. value shall have been finally calculated agreed or determined; b permit the Minister or his nominee to inspect at all reasonable times the books of account and records of the Company including contracts relative to any shipment or sale of iron ore hereunder and records of iron ore in stockpile or transit and to take copies of extracts therefrom and for the purpose of determining the f.o.b. value in respect of any shipment sale transfer or other disposal or use or production of iron ore hereunder the Company will take reasonable steps i to provide the Minister with current prices for iron ore and other details and information that may be required by the Minister for the purpose of agreeing or determining the f.o.b. value; and As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 27 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement to satisfy the State either by certificate of a competent independent party acceptable to the State or otherwise to the Ministers reasonable satisfaction as to all relevant weights and analyses and will give due regard to any objection or representation made by the Minister or his nominee as to any particular weight or assay or iron ore which may affect the amount of royalty payable hereunder; ii and c as and when required by the Minister for Mines from time to time install and thereafter maintain in good working order and condition meters for measuring quantities of iron ore and iron ore products of such design or designs and at such places as the Minister for Mines may require. Protection and management of the environment 13. 1 The Company shall in respect of the matters referred to in paragraph I of subclause 1 of Clause 6 which are the subject of approved proposals carry out a continuous programme of investigation research and monitoring to ascertain the effectiveness of the measures it is taking both generally and pursuant to

such approved proposals as the case may be for rehabilitation and the protection and management of the environment. 2 The Company shall during the currency of this Agreement submit to the Minister a not later than the 30th day of June 1998 and the 30th day of June in each year thereafter except those years in which a comprehensive report is required to be submitted pursuant to paragraph b of this subclause a brief report concerning investigations and research carried out pursuant to subclause 1 and the implementation by the Company of the elements of the approved proposals relating to the rehabilitation protection and management page 28 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement b of the environment in the year ending the 30th day of April immediately preceding the due date for the brief report; and not later than the 30th day of June 2000 and the 30th day of June in each third year thereafter if so requested by the Minister from time to time a comprehensive report on the result of such investigations and research and the implementation by the Company of the elements of the approved proposals relating to the rehabilitation protection and management of the environment during the three year period ending the 30th day of April immediately preceding the due date for the detailed report and the programme proposed to be undertaken by the Company during the following three year period in regard to investigation and research under subclause 1 and the implementation by the Company of the elements of the approved proposals relating to the rehabilitation protection and management of the environment. 3 The Minister may within 2 months of receipt of a detailed report pursuant to paragraph b of subclause 2 notify the Company that he a approves the report and programme if any; or b c requires amendment of the report andor programme if any for the ensuing 3 years; or requires additional detailed proposals to be submitted for the rehabilitation protection and management of the environment. The Company shall within 2 months of receipt of a notice pursuant to paragraph b of subclause 3 submit to the Minister an amended report andor programme as required. The Minister shall afford the Company full opportunity to consult with him on his requirements during the preparation of any amended report or programme. The Minister may within

1 month of receipt of an amended report or programme pursuant to subclause 4 notify the Company that he requires additional detailed proposals to be 4 5 As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 29 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement submitted for the rehabilitation protection and management of the environment. 6 The Company shall within 2 months of receipt of a notice pursuant to paragraph c of subclause 3 or subclause 5 of this Clause submit to the Minister additional detailed proposals as required and the provisions of subclauses 1 2 3 4 5 and 7 of Clause 7 shall mutatis mutandis apply to those proposals. Use of local labour professional services and materials 14. 1 The Company shall for the purposes of this Agreement a b c except in those cases where the Company can demonstrate it is impracticable so to do use labour available within Western Australia using all reasonable endeavours to ensure that as many as possible of the contractors workforce be recruited from the Pilbara or if such labour is not available then except as aforesaid use labour otherwise available within Australia; as far as it is reasonable and economically practicable so to do use the services of engineers surveyors architects and other professional consultants experts and specialists project managers manufacturers suppliers and contractors resident and available within Western Australia or if such services are not available within Western Australia then as far as practicable as aforesaid use the services of such persons otherwise available within Australia; during design and when preparing specifications calling for tenders and letting contracts for works materials plant equipment and supplies which shall at all times except where it is impracticable so to do use or be based upon Australian Standards and Codes ensure that suitably qualified Western Australian and Australian suppliers manufacturers and contractors are given fair and reasonable opportunity to tender or quote; page 30 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement d e give proper consideration and where possible preference to Western Australian suppliers manufacturers and contractors when letting contracts or placing orders for works materials plant equipment and supplies where price quality delivery and service are equal to or better than that obtainable

elsewhere or subject to the foregoing give that consideration and where possible preference to other Australian suppliers manufacturers and contractors; and if notwithstanding the foregoing provisions of this subclause a contract is to be let or an order is to be placed with other than a Western Australian or Australian supplier manufacturer or contractor give proper consideration and where possible preference to tenders arrangements or proposals that include Australian participation. Except as otherwise agreed by the Minister the Company shall in every contract entered into with a third party for the supply of services labour works materials plant equipment or supplies for the purposes of this Agreement require as a condition thereof that such third party shall undertake the same obligations as are referred to in subclause 1 and shall report to the Company concerning such third partys implementation of that condition. The Company shall submit a report to the Minister at monthly intervals or such longer period as the Minister determines commencing from the date of this Agreement concerning its implementation of the provisions of this Clause together with a copy of any report received by the Company pursuant to subclause 2 during that month or longer period as the case may be PROVIDED THAT the Minister may agree that any such reports need not be provided in respect of contracts of such kind or value as the Minister may from time to time determine. The Company shall keep the Minister informed on a regular basis as determined by the Minister from time to time or otherwise as required by the Minister during the currency of this Agreement of any services including any elements of the project investigations design and management and any works 2 3 4 As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 31 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement materials plant equipment and supplies that it may be proposing to obtain from or have carried out or permit to be obtained from or carried out outside Australia together with its reasons therefor and shall as and when required by the Minister consult with the Minister with respect thereto. Roads Private roads 15. 1 Except with the consent of the Minister private roads providing access to the mining lease shall be restricted to a b a road between the mining lease and the accommodation area; a road between the mining lease and the mine aerodrome serving the mining

lease; and c a railway maintenance road within the railway lease. Construction of private roads 2

The Company shall a b c be responsible for the cost of the construction and maintenance of all private roads which shall be used in its activities hereunder; at its own cost erect signposts and take other steps that may be reasonable in the circumstances to prevent any persons and vehicles other than those engaged upon the Companys activities and its invitees and licensees from using the private roads; and at any place where any private roads are constructed by the Company so as to cross any public roads or private railways provide at its cost such reasonable protection and signposting as may be required by the Commissioner of Main Roads or the owner of the private railway as the case may be. Maintenance of public roads 3 The State shall maintain or cause to be maintained those public roads under the control of the Commissioner of Main Roads or page 32

Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement a local authority which may be used by the Company for the purposes of this Agreement to a standard similar to comparable public roads maintained by the Commissioner of Main Roads or a local authority as the case may be. Upgrading of public roads 4 In the event that for or in connection with the Companys activities hereunder the Company or any person engaged by the Company uses or wishes to use a public road whether referred to in subclause 3 or otherwise which is inadequate for the purpose or any use by the Company or any person engaged by the Company of any public road results in excessive damage to or deterioration thereof other than fair wear and tear the Company shall pay to the State or the local authority as the case may require the whole or an equitable part of the total cost of any upgrading required or of making good the damage or deterioration as may be reasonably required by the Commissioner of Main Roads having regard to the use of such public road by others. Acquisition of private roads 5 Where a road constructed by the Company for its own use is subsequently required for public use the State may after consultation with the Company and so long as resumption thereof shall not unduly prejudice or interfere with the activities of the Company under this Agreement resume and dedicate such road as a public road. Upon any such resumption the State shall pay to the Company

such amount as is reasonable. Aerodrome 16. 1 The Company shall confer with the Minister on any upgrading of existing aerodrome facilities and services in the Pilbara region that the Minister after consultation with the relevant local authority may consider to be required as a result of the Companys activities under this Agreement. 2 The Company shall not without the approval of the Minister propose or construct any mine aerodrome of a standard greater As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 33 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement than the standard requirements for aircraft with a maximum take off weight of 20000 kg. Electricity purchase of electricity 17. The Company may in accordance with its approved proposals hereunder and subject to the provisions of the Electricity Act 1945 and any other relevant Act a b install and operate without cost to the State at an appropriate location or locations equipment of sufficient capacity to generate electricity for its activities on the mine site; and transmit power within the mine site subject to the provisions of the Electricity Act 1945 and any other relevant Act. Water mining lease 18. 1 a To the fullest extent reasonably practicable the Company shall use water obtained from dewatering on the mining lease for its purposes under this Agreement. b Nothing in this Agreement shall be construed to exempt the Company from any liability to the State or to third parties arising out of or caused by extraction of water from the mining lease by dewatering or any discharge or escape from the mining lease of water obtained by dewatering. Water requirements 2 The State and the Company shall agree upon the amounts and qualities thereof of the Companys annual and maximum daily water requirements for use in its activities hereunder at the mine site which amounts or such other amounts as shall from time to time be agreed between them to be reasonable are hereinafter called the mining water requirements and amounts required to be withdrawn in dewatering. page 34 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Rights to water and water services 3 Except as otherwise specifically provided for under this Clause the mining water requirements shall be obtained in accordance with laws applicable from time to time in Western Australia in respect of rights in water and the supply of water

and water services. Grant of licence 4 Subject to and in accordance with the approved proposals and the Rights in Water and Irrigation Act 1914 the State shall grant or cause to be granted to the Company a licence to develop and draw from the source specified in those proposals at the Companys cost but without fee the mining water requirements less any withdrawal amounts included therein and withdrawal amounts on such terms and conditions as are necessary to ensure good water resource management as the Minister may from time to time require and during the continuance of this Agreement grant renewals of any such licence PROVIDED HOWEVER that should that source prove hydrologically inadequate to meet the mining water requirements on a continuous basis the State may on at least 6 months prior notice to the Company or on at least 48 hours prior notice if in the opinion of the Minister an emergency situation exists limit the amount of water which may be taken from that source at any one time or from time to time to the maximum which in the opinion of the Minister that source is hydrologically capable of meeting as aforesaid.

Minimisation of water consumption 5 The Company shall to the extent that it is practical and economical design construct and operate all plant and equipment used in its activities under this Agreement so as to minimise water consumption and shall at all times use its best endeavours to minimise the consumption of water in its activities under this Agreement and ensure the most efficient use of the available water resources. As at 15 Dec 2011 Version 01c005 Published on

www.legislation.wa.gov.au page 35 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1

Agreement Provision of accommodationhousing 19. 1 Accommodation for the mine workforce at the mine site when the Company is producing not more than 15000000 tonnes of iron ore per annum for transportation from the mining lease and the total number of the mine workforce is not more than 150 shall be by way of temporary accommodation units not caravans and ancillary facilities of a standard generally used in the mining industry located in the vicinity of the mining lease and a b c the accommodation units and facilities ancillary to the accommodation units which may include a messwet mess amenities blocks and offices for Company management personnel may be provided by the Company or a contractor to the Company but shall be subject to the prior approval of the

Minister as to nature and type; all accommodation units on the mine site shall be removed from the mine site upon the mine workforce being accommodated elsewhere than at the mine site; only the mine workforce and persons visiting the mine site in connection with the Companys mining activities on a short term basis or employed for a specific task of limited duration shall be permitted to stay at the accommodation area; and d no dependants or pets shall be allowed on the mine site. 2 If and whenever the Company proposes a b c to give a notice of proposed increase of tonneages or workforce pursuant to Clause 10; to substantially add to upgrade replace or relocate accommodation units; or to use its own workforce in place of a contractor workforce or to use a contractor workforce in place of its own workforce in its mining activities; or page 36 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement d to construct an additional accommodation area separate from that already established it shall confer with the Minister with respect to the future accommodation of the mine workforce including those members of the mine workforce then accommodated at the accommodation area which may include expansion or alteration of the accommodation area establishment of or assimilation into a new townsite and assimilation into an existing town before submitting any proposal in regard thereto to the Minister. The Company shall likewise confer with the Minister at the request of the Minister if the State proposes an open town in the central Hamersley Range area and shall cooperate with the State on any studies in relation to such a proposal that may be required to select a site for the town. If the State and the Company agree that the mine workforce can be located in the proposed open town then the Company will relocate the workforce to the open town within an agreed period of time at no cost to the State and make such contributions to the infrastructure and community facilities in the open town as are agreed between the State and the Company to be required to service the needs of the Companys workforce. As and when required by the Minister after consultation with the relevant local authority the Company shall confer with the Minister with a view to assisting in the cost of providing any appropriate community recreation civic or social amenities at any existing town required for the Companys workforce and

associated population. 3 4 5 Railway 20. 1 Subject to and in accordance with approved proposals the Company shall in a proper and workmanlike manner and in accordance with recognised standards for railways of a similar nature operating under similar conditions construct along the route specified in the approval proposals but subject to the provisions of the Acquisition Act to the extent that they are As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 37 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 2 3 applicable a standard gauge railway specified in the approved proposals connecting the mining lease to Hamersleys existing Dampier Marandoo railway and shall also construct inter alia any necessary deviations loops spurs sidings crossing points bridges signalling switches and other works and appurtenances and provide for crossings and where appropriate and required by the Minister grade separation or other protective devices all of which together with the specified railway is referred to in this Agreement as the railway and shall operate the railway with sufficient and adequate locomotives freight cars and other railway stock and equipment for the purposes of the Companys activities under this Agreement. The Company shall during the continuance of this Agreement operate the railway in a safe and proper manner and shall provide crossings for livestock and also for any roads and other railways which now exist and where it can do so without unduly prejudicing or interfering with its activities hereunder the Company shall allow such crossings for roads and railways which may be constructed for future needs and which may be required to cross the railway. The Company shall if and when reasonably required so to do transport passengers and carry the freight of the State and third parties over the railway where it can do so without unduly prejudicing or interfering with its activities under this Agreement and subject to the payment to it of the charges prescribed by and for the time being payable under any bylaws made by the Company in respect of the transporting of passengers and the carriage of freight over the railway and subject to the due compliance with the other requirements and conditions prescribed by such bylaws or should there be no such bylaws for the time being in force then subject to the payment of such charges and the due compliance with such requirements and conditions as in either case shall be reasonable having

regard to the cost to the Company of the construction and operation of the railway. 4 In relation to its use of the railway when transporting passengers or carrying freight pursuant to subclause 3 the Company shall not be deemed to be a common carrier at law or otherwise. page 38 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 5 6 The Company shall not enter into any agreement or other arrangement for the use of or the carriage of iron ore or iron ore products of the Company over any railway not established by the Company pursuant to this Agreement other than Hamersleys existing Dampier Marandoo railway without the prior approval of the State thereto and to the proposed terms and conditions including charges for such use or carriage. The Minister may upon recommendation by the Company make alter and repeal bylaws for the purpose of enabling the Company to fulfil its obligations under this Clause upon terms and subject to conditions including terms and conditions as to user charging and limitation of the liability of the Company as set out in such bylaws consistent with the provisions hereof. Should the Minister at any time consider that any bylaw made hereunder has as a result of altered circumstances become unreasonable or inapplicable then the Company shall recommend such alteration or repeal thereof as the Minister may reasonably require or in the event of there being any dispute as to the reasonableness of such requirement then as may be deed by arbitration hereunder. 7 a Where the railway crosses the Great Northern Highway the Company shall be responsible at its cost for the construction operation and maintenance of level crossing warning signs and such extra warnings to Highway users as may be reasonably required by the Commissioner of Main Roads. b The Company and the State shall cooperate and consult with each other on additional works and actions which may be required from time to time to ensure safe operation of the railway crossing referred to in paragraph a and the Company shall be responsible at its cost for carrying out such additional works and actions. Lands 21. 1 On application made by the Company not later than 3 months after a proposal submitted pursuant to subclause 1 of Clause 6 has been approved or determined or not later than 3 months As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 39 Iron Ore Yandicoogina Agreement Act

1996 Schedule 1 Agreement after proposals submitted under subclause 1 of Clause 9 or subclause 3 of Clause 10 have been approved or determined the State shall in accordance with the Companys approved proposals and insofar as is permitted by laws relating to native title grant to the Company or arrange to have the appropriate authority or other interested instrumentality of the State grant from within the land depicted by the area coloured blue on the Land Tenure Plan and in respect of other land approved for the purposes of this Clause by the Minister for such periods and on such terms and conditions including rentals and renewal rights as shall be reasonable having regard to the requirements of the Company leases and where applicable licences for the use of land easements and rights of way for all or any of the purposes of the Companys activities hereunder including any of the following namely accommodation area aerodrome railway private roads tailing areas water pipelines pumping installations and reservoirs power transmission lines radio and communication sites plant site areas and pits for obtaining stone sand clay and gravel. Modification of Land Act 2 For the purpose of this Agreement in respect of any land the subject of or proposed to be the subject of a lease or licence granted by the State to the Company under subclause 1 a b c d the Minister for Lands may lease to the Company any lot being town or suburban lands without offering that land to the public; the Minister for Lands may grant a lease of land to the Company without giving notice of the Companys application for that land or of the purpose or term for which it is proposed to be granted; an application for land made by the Company under subclause 1 shall take priority over any other application made for that land under the Land Act; it shall not be a prerequisite to the validity of any transfer mortgage or sublease permitted under this Agreement of any lease or licence that the approval to the transfer mortgage or sublease of the Minister for Lands or of an

page 40 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement e f officer of the department of the State government assisting him in the administration of the Land Act be obtained; the Minister for Lands may grant occupancy rights over land on such terms and conditions as the Minister for Lands may determine; the Minister for Lands may grant leases or licences for terms or periods and on

terms and conditions including renewal rights and in forms consistent with the provisions of this Agreement in lieu of the terms or periods terms and conditions and forms referred to in the Land Act. The provisions of this subclause shall not operate so as to prejudice the rights of the State to determine any lease licence or other right or title in accordance with the other provisions of this Agreement. Stone sand clay and gravel 3 The State shall in accordance with approved proposals grant to the Company a mining lease or mining leases for the obtaining of stone sand clay and gravel for the construction of works the subject of approved proposals such mining lease or mining leases to be granted under and except as otherwise provided herein subject to the Mining Act but limited in term to a reasonable period required for construction of the works and rehabilitation in accordance with the proposals. No royalty shall be payable under the Mining Act in respect of stone sand clay and gravel obtained from any such mining lease. Resumption for the purposes of this Agreement 22. 1 The State pursuant to the Acquisition Act may for the purpose of conferring interests therein on the Company take and resume any land within the areas coloured red and blue on the Land Tenure Plan the subject of approved proposals and any other land as specified in approved proposals and may grant leases licences or easements in respect of the whole or portions of that land to the Company. The Company shall pay to the State on As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 41 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 2 demand the costs to the State of and inental to the taking of any land pursuant to this Clause including the cost of any compensation due to any holder of native title or native title rights and interests in the land. For the purposes of this Agreement and in the Acquisition Act when construed for the purposes of this Agreement a reference to land shall be read as extending to any land or to any portion of any land and to the subsoil surface or airspace relating thereto and to any estate right title easement lease licence privilege native title right or interest or other interest in over under affecting or in connection with that land or any portion stratum or other specified sector of that land. Further processing 23. 1 During the continuance of this Agreement the Company shall undertake ongoing investigations into the technical and economic feasibility of

establishing within the said State plant for the production of metallised agglomerates and shall on or before the earlier of a b the date 7 years after the date on which iron ore from the mining lease other than iron ore transported solely for testing purposes and in respect of which no purchase price or other consideration is payable or due is first transported from the mining lease; and the date on which the 100 millionth tonne of such iron ore from the mining lease is transported from the mining lease submit to the Minister detailed reports of such investigations to the date of the report and its program budget and timetable for the preparation of the proposals referred to in subclause 2. 2 The Company shall a on or before the earlier of i the date 10 years after the date on which iron ore from the mining lease other than iron ore transported solely for testing purposes and in page 42 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement respect of which no purchase price or other consideration is payable or due is first transported from the mining lease; and ii the date on which the 150 millionth tonne of such iron ore from the mining lease is transported from the mining lease which date is hereinafter called the m.a. date; or b if proposals under this subclause are postponed for a 3 year period pursuant to subclause 3 on or before the third or subsequent third anniversary as the case may require of the m.a. date submit to the Minister detailed proposals for the establishment within the said State of plant for the production of metallised agglomerates containing provisions that such plant will within 3 years of the date on which the proposals are submitted have the capacity to produce not less than two million tonnes of metallised agglomerates per annum and will within 8 years of the date on which the proposals are submitted have the capacity to produce not less than three million tonnes of metallised agglomerates per annum. 3 a If the Company believes that the submission of proposals pursuant to subclause 2 on the m.a. date or a third anniversary of the m.a. date where a 3 year postponement has been allowed pursuant to this subclause should be postponed because the establishment of the said plant is not then economically feasible the Company may apply to the Minister not more than 6 months nor less than 3 months before the date for submission of those proposals for postponement for a period of 3 years of the date for

submission of proposals under subclause 2 and shall provide to the Minister with such application all relevant information and supporting data available to the Company relating to such application. b The Company shall supply to the Minister such other information and data as the Minister may reasonably require in relation to its application. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 43 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement c d If the Minister is satisfied that there are reasonable grounds for the postponement applied for the requirement on the Company to submit proposals under this subclause shall be postponed for a period of 3 years. If the Minister notifies the Company that he does not agree with its submission then at the request of the Company made within two 2 months after receipt of the Company of the notification from the Minister the Minister will appoint a tribunal hereinafter called the Tribunal consisting of one person if the Company and the State agree on that person or failing such agreement consisting of three persons one of whom shall be a Judge of the Supreme Court of Western Australia or failing him or her a Commissioner appointed pursuant to section 49 of the Supreme Court Act 1935 or a Queens Counsel and the others of whom shall have appropriate technical or economic qualifications to dee in accordance with clause 37 whether or not the metallising operation is feasible and the Tribunal in reaching its decision shall take into account inter alia the Companys submission the amount of capital required for the metallising operation the availability of that capital at that time on reasonable terms and conditions the likelihood of the Company being able to sell metallised agglomerates at sufficient prices and in sufficient quantities and for a sufficient period to justify the metallising operation having regard to the amount and rate of return on total funds that would be involved in or in connection with the production and sale of metallised agglomerates and the weighted average cost of capital to the Company. 4 The Minister shall within two 2 months of receipt of proposals under subclause 2 give to the Company notice of his approval of those proposals which approval shall not be unreasonably withheld or of any objections raised or alterations desired thereto and in the latter case shall afford the Company an opportunity to consult with and to submit new proposals to the Minister. If within two 2 months of

receipt of such notice agreement is not reached as to the proposals the Company may within a further period of two 2 months elect by notice to the page 44 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 5 State to refer to arbitration as provided in Clause 37 any dispute as to the reasonableness of the Ministers decision. If by the award on arbitration the question is deed in favour of the Company the Minister shall be deemed to have approved the proposals of the Company. The Company shall except to the extent otherwise agreed with the Minister before the end of the respective times specified in subclause 2 complete the construction of plant in accordance with the Companys proposals as finally approved or determined under this Clause and shall thereafter continue to produce metallised agglomerates from such plant at not less than the rates provided for in subclause 2 for so long as the Company continues to ship from the said State iron ore from the mining lease. 6 a The Company may at any time before the time for submission of proposals pursuant to subclause 2 apply to the Minister for approval that an alternative project be accepted by the State in lieu of all or some part of the Companys obligations in respect of the establishment of plant for the production of metallised agglomerates pursuant to this Clause. b Where the Minister approves an application under paragraph a of this subclause the Company shall implement the alternative project in accordance with that approval and upon completion thereof or earlier with the agreement of the Minister the provisions of subclause 2 or that part of those provisions which pursuant to the said approval are to be satisfied by the alternative project shall cease to apply PROVIDED FURTHER that the provisions of subclause 2 shall cease to apply upon completion of an alternative project which represents or alternative projects which together represent economic development in the said State either alone or in the aggregate with other alternative projects of value approximately equivalent to a plant for the production of two million tonnes of metallised agglomerates per annum. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 45 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 7 For the purposes of subclause 6 alternative project means a project under which the

Company or a related body corporate within the meaning of the Corporations Law of the Company undertakes to establish and operate plant in the said State which processes and adds to the value of minerals mined in the said State. Training levy exemption 24. The provisions of the Building and Construction Industry Training Levy Act 1990 and the Building and Construction Industry Training Fund and Levy Collection Act 1990 shall have no application to the Company when acting pursuant to and in accordance with this Agreement. Commonwealth licences and consents 25. 1 The Company shall from time to time make application to the Commonwealth or to the Commonwealth constituted agency authority or instrumentality concerned for the grant to it of any licence or consent under the laws of the Commonwealth necessary to enable or permit the Company to enter into this Agreement and to perform any of its obligations hereunder. 2 On request by the Company the State shall make representations to the Commonwealth or to the Commonwealth constituted agency authority or instrumentality concerned for the grant to the Company of any licence or consent mentioned in subclause 1. Subcontracting 26. The State shall ensure that without affecting the liabilities of the parties under this Agreement the State and the Company shall have the right from time to time to entrust to third parties the carrying out of any portions of the activities which it is authorised or obliged to carry out hereunder. page 46 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Zoning 27. Rating 28. The State shall ensure after consultation with the relevant local authority that the mining lease and any lands the subject of any lease licence easement or other title granted to the Company under this Agreement shall be and remain zoned for use or otherwise protected during the currency of this Agreement so that the activities of the Company hereunder may be undertaken and carried out thereon without any interference or interruption by the State or by any State agency or instrumentality or by any local or other authority of the State on the ground that such activities are contrary to any zoning bylaw regulation or order. The State shall ensure that notwithstanding the provisions of any Act or anything done or purported to be done under any Act the valuation of all lands the subject of this Agreement except the accommodation area and any

other parts of the lands the subject of this Agreement on which accommodation units or housing for the Company's workforce is erected or which is occupied in connection with such accommodation units or housing and except as to any part upon which there stands any improvements that are used in connection with a commercial undertaking not directly related to the mining activities carried out by the Company pursuant to approved proposals shall for rating purposes under the Local Government Act 1995 be deemed to be on the unimproved value thereof and no such lands shall be subject to any discriminatory rate. No discriminatory charges 29. Except as provided in this Agreement the State shall not impose nor shall it permit or authorise any of its agencies or instrumentalities or any local or other authority of the State to impose discriminatory taxes rates or charges of any nature whatsoever on or in respect of the titles property or other assets products materials or services used or produced by or through the activities of the Company in the conduct of its business hereunder nor will the State take or permit to be taken by any such State authority any other discriminatory action which would As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 47 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement deprive the Company of full enjoyment of the rights granted and intended to be granted under this Agreement. No resumption 30. Subject to the performance by the Company of its obligations under this Agreement the State shall not during the currency of this Agreement without the consent of the Company resume nor suffer nor permit to be resumed by any State instrumentality or by any local or other authority of the State any of the works installations plant equipment or other property for the time being belonging to the Company and the subject of or used for the purpose of this Agreement or any of the works on the lands the subject of any lease or licence granted to the Company in terms of this Agreement and without such consent which shall not be unreasonably withheld the State shall not create or grant or permit or suffer to be created or granted by any instrumentality or authority of the State as aforesaid any road rightofway water right or easement of any nature or kind whatsoever over or in respect of any such lands which may unduly prejudice or interfere with the Company's activities under this Agreement. Indemnity 31. The

Company shall indemnify and keep indemnified the State and its servants agents and contractors in respect of all actions suits claims demands or costs of third parties arising out of or in connection with any work carried out by or on behalf of the Company pursuant to this Agreement or relating to its activities hereunder or arising out of or in connection with the construction maintenance or use by the Company or its servants agents contractors or assignees of the Companys works or services the subject of this Agreement or the plant apparatus or equipment installed in connection therewith PROVIDED THAT subject to the provisions of any other relevant Act such indemnity shall not apply in circumstances where the State or its servants agents or contractors are negligent in carrying out work for the Company pursuant to this Agreement. page 48 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Assignment 32. 1 2 Subject to the provisions of this Clause the Company may at any time assign mortgage charge sublet or dispose of to any person with the consent of the Minister the whole or any part of the rights of the Company hereunder including its rights to or as the holder of the mining lease or any other lease licence easement or other title and of the obligations of the Company hereunder subject however in the case of an assignment subletting or disposition to the assignee sublessee or disponee as the case may be executing in favour of the State unless the Minister otherwise determines a deed of covenant in a form to be approved by the Minister to comply with observe and perform the provisions hereof on the part of the Company to be complied with observed or performed in regard to the matter or matters the subject of such assignment subletting or disposition. Notwithstanding anything contained in or anything done under or pursuant to subclause 1 the Company shall at all times during the currency of this Agreement be and remain liable for the due and punctual performance and observance of all the covenants and agreements on its part contained in this Agreement and in the mining lease or any other lease licence easement or other title the subject of an assignment mortgage subletting or disposition under subclause 1 PROVIDED THAT the Minister may agree to release the Company from such liability where the Minister considers such release will not be contrary to the interests of the State. 3 Notwithstanding

the provisions of the Mining Act and the Transfer of Land Act 1893 insofar as the same or any of them may apply a no assignment mortgage charge sublease or disposition made or given pursuant to this Clause of or over the mining lease or any other lease licence easement or other title granted under or pursuant to this Agreement by the Company or any assignee sublessee or disponent who has executed and is for the time being bound by deed of covenant made pursuant to this Clause; and As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 49 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement b no transfer assignment mortgage or sublease made or given in exercise of any power contained in any such mortgage or charge shall require any approval or consent other than such consent as may be necessary under this Clause and no equitable mortgage or charge shall be rendered ineffectual by the absence of any approval or consent otherwise than as required by this Clause or because the same is not registered under the provisions of the Mining Act. Variation 33. 1 2 3 The parties to this Agreement may from time to time by agreement in writing add to substitute for cancel or vary all or any of the provisions of this Agreement or of any lease licence easement or other title granted under or pursuant to this Agreement for the purpose of more efficiently or satisfactorily implementing or facilitating any of the objects of this Agreement. The Minister shall cause any agreement made pursuant to subclause 1 in respect of any addition substitution cancellation or variation of the provisions of this Agreement to be laid on the Table of each House of Parliament within 12 sitting days next following its execution. Either House may within 12 sitting days of that House after the agreement has been laid before it pass a resolution disallowing the agreement but if after the last day on which the agreement might have been disallowed neither House has passed such a resolution the agreement shall have effect from and after that last day. Force majeure 34. This Agreement shall be deemed to be made subject to any delays in the performance of the obligations under this Agreement and to the temporary suspension of continuing obligations under this Agreement that may be caused by or arise from circumstances beyond the power page 50 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement and control

of the party responsible for the performance of those obligations including without limiting the generality of the foregoing delays or any such temporary suspension as aforesaid caused by or arising from act of God force majeure earthquakes floods storms tempest washaways fire unless caused by the actual fault or privity of the party responsible for such performance act of war act of public enemies riots civil commotions strikes lockouts stoppages restraint of labour or other similar acts whether partial or general acts or omissions of the Commonwealth shortages of labour or essential materials reasonable failure to secure contractors delays of contractors inability to sell iron ore or metallised agglomerates profitably factors due to overall world economic conditions factors due to action taken by or on behalf of any government or governmental authority other than the State or any authority of the State or factors that could not reasonably have been foreseen PROVIDED ALWAYS that the party whose performance of obligations is affected by any of the said causes shall promptly give notice to the other party of the event or events and shall use its best endeavours to minimise the effects of such causes as soon as possible after the occurrence. Power to extend periods 35. Notwithstanding any provision of this Agreement the Minister may at the request of the Company from time to time extend or further extend any period or vary or further vary any date referred to in this Agreement or in any approved proposal for such period or to such later date as the Minister thinks fit whether or not the period to be extended has expired or the date to be varied has passed. Consultation 36. The Company shall during the currency of this Agreement consult with and keep the State fully informed on a confidential basis concerning any action that the Company propose to take with any third party including the Commonwealth or any Commonwealth constituted agency authority instrumentality or other body which might significantly affect the overall interest of the State under this Agreement. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 51 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Arbitration 37. 1 2 3 Any dispute or difference between the State and the Company arising out of or in connection with this Agreement the construction of this Agreement or as to the rights duties or liabilities of either of them under this Agreement or as to any matter to be agreed

upon between them under this Agreement shall in default of agreement between them and in the absence of any provision in this Agreement to the contrary be referred to and settled by arbitration under the provisions of the Commercial Arbitration Act 1985 and notwithstanding section 201 of that Act each party may be represented before the arbitrator by a duly qualified legal practitioner or other representative. Except where otherwise provided in this Agreement the provisions of this Clause shall not apply to any case where the State the Minister or any other Minister in the Government of the said State is by this Agreement given either expressly or impliedly a discretionary power. The arbitrator of any submission to arbitration under this Agreement is hereby empowered upon the application of either of the parties to the arbitration to grant in the name of the Minister any interim extension of any period or variation of any date referred to herein which having regard to the circumstances may reasonably be required in order to preserve the rights of that party or of the parties to the arbitration and an award may in the name of the Minister grant any further extension or variation for that purpose.

Determination of Agreement 38. 1 If a i the Company makes default which the State considers material in the due performance or observance of any of the covenants or obligations of the Company in this Agreement or in the mining lease or any other lease licence easement or other title or document granted or assigned under this page 52 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Agreement on its part to be performed or observed; or ii the Company abandons or repudiates this Agreement or its activities under this Agreement and such matter is not remedied within a period of 180 days after notice is given by the State as provided in subclause 2 or if the matter is referred to arbitration then within the period mentioned in subclause 3; or b the Company goes into liquidation other than a voluntary liquidation for the purpose of reconstruction and unless within 3 months from the date of such liquidation the interest of the Company is assigned to an assignee approved by the Minister under Clause 32 the State may by notice to the Company determine this Agreement. The notice to be given by the State in terms of paragraph a of subclause 1 shall specify the nature of the default abandonment or repudiation so entitling the State to exercise

such right of determination and where appropriate and known to the State the party or parties responsible therefor and shall be given to the Company and all such assignees mortgagees chargees and disponees for the time being of the Companys said rights to or in favour of whom or by whom an assignment mortgage charge or disposition has been effected in terms of Clause 32 whose name and address for service of notice has previously been notified to the State by the Company or any such assignee mortgagee chargee or disponent. 2 3 a If the Company contests the alleged default abandonment or repudiation referred to in paragraph a of subclause 1 the Company shall within 60 days after notice given by the State as provided in subclause 2 refer the matter in dispute to arbitration. b If the question is deed against the Company the Company shall comply with the arbitration award within a reasonable time to be fixed by that award PROVIDED THAT if the arbitrator finds that there was a bona fide As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 53 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 4 dispute and that the Company was not dilatory in pursuing the arbitration the time for compliance with the arbitration award shall not be less than 90 days from the date of such award. If the default referred to in paragraph a of subclause 1 shall not have been remedied within a period of 180 days after receipt of the notice referred to in that subclause or within the time fixed by the arbitration award as aforesaid the State instead of determining this Agreement as aforesaid because of such default may itself remedy such default or cause the same to be remedied for which purpose the State by agents workmen or otherwise shall have full power to enter upon lands occupied by the Company and to make use of all plant machinery equipment and installations thereon and the actual costs and expenses incurred by the State in remedying or causing to be remedied such default shall be a debt payable by the Company to the State on demand. Effect of cessation or determination of Agreement 39. 1 On the cessation or determination of this Agreement a b c except as otherwise agreed by the Minister the rights of the Company to in or under this Agreement and the rights of the Company or of any assignee of the Company or any mortgagee to in or under the mining lease and any other lease licence easement or other title or right granted hereunder or pursuant hereto but

excluding townsite lots which have been granted to or acquired by the Company and which are no longer owned by it shall thereupon cease and determine but without prejudice to the liability of any of the parties hereto in respect of any antecedent breach or default under this Agreement or in respect of any indemnity given under this Agreement; the Company shall forthwith pay to the State all moneys which may then have become payable or accrued due; save as aforesaid and as otherwise provided in this Agreement neither the State nor the Company shall have

page 54 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement 2 any claim against the other of them with respect to any matter or thing in or arising out of this Agreement. Except as otherwise determined by the Minister and subject to the provisions of subclause 3 upon the cessation or determination of this Agreement all buildings erections and other improvements erected on any land then occupied by the Company under the mining lease or any other lease licence easement or other title made under or pursuant to this Agreement shall become and remain the absolute property of the State without the payment of any compensation or consideration to the Company or any other party and freed and discharged from all mortgages and other encumbrances and the Company shall do and execute all such deeds documents and other acts matters and things including surrenders as the State may reasonably require to give effect to the provisions of this subclause.

3 a In the event of the Company immediately prior to the cessation or determination of this Agreement or within 3 months therefrom desiring to remove any of its fixed or movable plant and equipment or any part thereof from any part of the land occupied by it at the date of such cessation or determination it shall give to the State notice of such desire and thereby shall grant to the State the right or option exercisable within 3 months thereafter to purchase in situ such fixed or moveable plant and equipment at a fair valuation to be agreed between the State and the Company or failing agreement determined by arbitration under this Agreement.

b If the State does not exercise the right or option referred to in paragraph a the Company may on the expiry of the 3 month period referred to or sooner with the consent of the Minister remove the fixed or movable plant and equipment to which the right or option refers. As at

15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 55 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement Term of Agreement 40. Subject to the provisions of subclauses 6 and 10 of Clause 7 and Clauses 38 and 39 this Agreement shall expire on the expiration or sooner determination or surrender of the mining lease. Notices 41. Any notice consent or other writing authorised or required by this Agreement to be given or sent shall be deemed to have been duly given or sent by the State if signed by the Minister or by any senior officer of the Public Service of the said State acting by the direction of the Minister and forwarded by prepaid post or handed to the Company at its address hereinbefore set forth or other address in the said State nominated by the Company to the Minister and by the Company if signed on its behalf by any person or persons authorised by the Company or by its solicitors as notified to the State from time to time and forwarded by prepaid post or handed to the Minister and except in the case of personal service any such notice consent or writing shall be deemed to have been duly given or sent on the day on which it would be delivered in the ordinary course of post. Stamp Duty 42. The State shall exempt the following instruments from any stamp duty which but for the operation of this Clause would or might be assessed as chargeable on them a b c this Agreement; any instrument executed by the State pursuant to this Agreement granting to or in favour of the Company or any permitted assignee any licence lease easement or other title; any assignment sublease or disposition other than by way of mortgage or charge made by the Company arising from a proposal submitted to the Minister and consented to by the Minister under subclause 1 of Clause 32 page 56 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement PROVIDED THAT this Clause shall not apply to any instrument or other document executed or made more than 2 years after the commencement date. Guarantee 43. Notwithstanding any addition to or deletion or variation of the provisions of this Agreement or any time or other indulgence granted by the State to the Company whether or not notice thereof is given to Hamersley by the State Hamersley hereby guarantees to the State the due performance by the Company of all of the Companys obligations to be performed hereunder.

Applicable law 44. This Agreement shall be interpreted according to the law for the time being in force in the State of Western Australia. THE SCHEDULE WESTERN AUSTRALIA MINING ACT 1978 IRON ORE YANDICOOGINA AGREEMENT ACT 1996 MINING LEASE MINING LEASE NO. The Minister for Mines a corporation sole established by the Mining Act 1978 with power to grant leases of land for the purposes of mining in consideration of the rents hereinafter reserved and of the covenants on the part of the Lessee described in the First Schedule to this lease and of the conditions hereinafter contained and pursuant to the Mining Act 1978 except as otherwise provided by the Agreement hereinafter called the Agreement described in the Second Schedule to this lease hereby leases to the Lessee the land more particularly delineated and described in the Third Schedule to this lease for iron ore subject however to the exceptions and reservations set out in the Fourth Schedule to this lease and to any other exceptions and reservations which subject to the Agreement are by the Mining Act 1978 and by any Act for the time being in force deemed to be contained herein to hold to the Lessee this lease for a term of twenty one years As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 57 Iron Ore Yandicoogina Agreement Act 1996 Schedule 1 Agreement commencing on the date set out in the Fifth Schedule to this lease subject to the sooner determination of the said term upon the cessation or determination of the Agreement upon and subject to such of the provisions of the Mining Act 1978 except as otherwise provided by the Agreement as are applicable to mining leases granted thereunder and to the terms covenants and conditions set out in the Agreement and to the covenants and conditions herein contained or implied and any further conditions or stipulations set out in the Sixth Schedule to this lease the Lessee paying therefor the rents for the time being and from time to time prescribed pursuant to the provisions of the Mining Act 1978 at the times and in the manner so prescribed and royalties as provided in the Agreement with the right during the currency of the Agreement and in accordance with the provisions of the Agreement to take two successive renewals of the term each for a further period of 21 years upon the same terms and conditions subject to the sooner determination of the term upon cessation or determination of the Agreement PROVIDED ALWAYS

that this lease shall not be determined or forfeited otherwise than in accordance with the Agreement.

In this lease Lessee includes the successors and permitted assigns of the Lessee. If the Lessee be more than one the liability of the Lessee hereunder shall be joint and several. Reference to an Act includes all amendments to that Act for the time being in force and also any Act passed in substitution therefor or in lieu thereof and to the regulations and bylaws for the time being in force thereunder.

Subject to the context the words and expressions used in this Agreement have the same meanings respectively as they have in and for the purpose of the Principal Agreement. The State shall sponsor a Bill in the Parliament of Western Australia to ratify this Agreement and shall endeavour to secure its passage as an Act prior to 31

December 2010 or such later date as the parties may agree. 3. a Clause 4 does not come into operation unless or until an Act passed in accordance with clause 2 ratifies this Agreement. b If by 30 June 2011 or such later date as may be agreed pursuant to clause 2 clause 4 has not come into operation then unless the As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 63 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement parties hereto otherwise agree this Agreement shall cease and determine and none of the parties shall have any claim against the other parties with respect to any matter or thing arising out of or done or performed or omitted to be done or performed under this Agreement. 4. The Principal Agreement is hereby varied as follows 1 in clause 1 a by deleting the existing definitions of beneficiated ore fine ore loading port lump ore and metallised agglomerates; b by inserting in the appropriate alphabetical positions the following new definitions associated company means a any company notified in writing by the Company to the Minister which is incorporated in the United Kingdom the United States of America or Australia and which is i ii the Company within a subsidiary of the meaning of the term subsidiary in section 46 of 2001 the Commonwealth; Corporations Act promoted by the Company for all or any of the purposes of this Agreement and in which the Company holds not less than 2000000 of the issued ordinary capital; iii a company in which the Company holds not less than 20 of the issued ordinary share capital; iv a related body corporate within the meaning of the term related body corporate in section 9 2001 of Commonwealth of the Company or of any company in which the Company holds not less Corporations Act the page 64 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement than 20 of the issued ordinary share capital; and b any other company approved in writing by the Minister for the purpose of this Agreement which is associated directly or indirectly with the Company in its business or operations under this Agreement; iron ore beneficiated ore means that has been concentrated or upgraded otherwise than solely by crushing screening separating by hydrocycloning or a similar technology which uses primarily size as a criterion washing scrubbing trommelling or drying or by a combination

of 2 or more of those processes by the Company in a plant constructed pursuant to proposal approved pursuant to an Integration Agreement or such other plant as is approved by the Minister after consultation with the Minister for Mines and beneficiation and beneficiate have corresponding meanings; fine ore means iron ore not being beneficiated ore or pisolite fine ore which is screened and will pass through a 6.3 millimetre mesh screen; Government agreement has the meaning given in the Government Agreements Act 1979 WA; Integration Agreement means a b c the agreement approved by and scheduled to the Iron Ore Hamersley Range Agreement Act 1963 as from time to time added to varied or amended; or the agreement approved by and scheduled to the Iron Ore Robe River Agreement Act 1964 as from time to time added to varied or amended; or the agreement approved by and scheduled to the Iron Ore Hamersley Range Agreement Act Amendment Act 1968 as from time to time added to varied or amended; or As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 65 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement d e f g h i j k the agreement ratified by and scheduled to the Iron Ore Mount Bruce Agreement Act 1972 as from time to time added to varied or amended; or the agreement ratified by and scheduled to the Iron Ore Hope Downs Agreement Act 1992 as from time to time added to varied or amended; or the agreement ratified by and scheduled to the Iron Ore Yandicoogina Agreement Act 1996 as from time to time added to varied or amended; or the agreement approved by and scheduled to the Iron Ore Mount Newman Agreement Act 1964 as from time to time added to varied or amended; or the agreement approved by and scheduled to the Iron Ore Mount Goldsworthy Agreement Act 1964 as from time to time added to varied or amended; or the agreement ratified by and scheduled to the Iron Ore GoldsworthyNimingarra Agreement Act 1972 as from time to time added to varied or amended; or the agreement authorised by as scheduled to the Iron Ore McCameys Monster Agreement Authorisation Act 1972 as from time to time added to varied or amended; or the agreement ratified by and scheduled to the Iron Ore Marillana Creek Agreement Act 1991 as from time to time added to varied or amended; Integration Proponent means in relation to an Integration Agreement the Company or the Joint Venturers as the

case may be as defined in and for the purpose of that Integration Agreement; loading port means a the Port of Dampier; or b Port Walcott; or c the Port of Port Hedland; or page 66 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement d e any other port constructed after the variation date under an Integration Agreement; or such other port approved by the Minister at the request of the Company from time to time for the shipment of iron ore from the mining lease; lump ore means iron ore not being beneficiated ore or pisolite fine ore which is screened and will not pass through a 6.3 millimetre mesh screen; metallised agglomerates means products resulting from the reduction of iron ore by any method whatsoever and having an iron of not less than 85; pisolite fine ore means iron ore not being beneficiated ore derived from channel iron deposits that appear to be chemically precipitated sedimentary deposits comprised of a pisolitic texture of hematite grains rimmed with goethite in a goethitic matrix and a having a product grade loss on ignition of 8.5 or greater; and b which is screened and will pass through an 9.5 millimetre mesh screen; Related Entity means a company in which a as at 21 June 2010; and b after 21 June 2010 with the approval of the Minister a direct or through a subsidiary or subsidiaries within the meaning of the Corporations Act 2001 Commonwealth indirect shareholding of 20 or more is held by c Rio Tinto Limited ABN 96 004 458 404; or d BHP Billiton Limited ABN 49 004 028 077; or e those companies referred to in paragraphs c and d in aggregate; variation date means the date on which clause 4 of the variation agreement made on or about 17 November 2010 As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 67 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement between the State the Company and Hamersley comes into operation; c d in the definition of iron ore by inserting without limitation after includes; in the definition of mining lease by inserting and includes any areas added to it pursuant to clause 118; 2 by inserting after clause 23 the following new subclause 4 Nothing in this Agreement shall be construed to exempt the Company from compliance with the provisions of the Aboriginal Heritage Act 1972 WA.; 3 in clause 91 by a deleting If and substituting Subject to clause 10 if; and b inserting other than under clause 12C after

pursuant to this Agreement; 4 by deleting subclause 2 of clause 9 and substituting the following new subclauses 2 A proposal may with the consent of the Minister except in relation to an Integration Agreement and that of any parties concerned being in respect of an Integration Agreement the Integration Proponent for that agreement provide for the use by the Company of any works installations or facilities constructed or established under a Government agreement. 3 Each of the proposals pursuant to subclause 1 may with the approval of the Minister or shall if so required by the Minister be submitted separately and in any order as to any matter or matters in respect of which such proposals are required to be submitted. 4 At the time when the Company submits the said proposals it shall submit to the Minister details of any services including any elements of the project investigations design and management and any works materials plant equipment and supplies that it proposes to consider obtaining from or having carried out or permitting to be obtained from or carried out outside Australia together with its reasons therefor and shall if required by the Minister consult with the Minister with respect thereto. 5 The Company may withdraw its proposals pursuant to subclause 1 at any time before approval thereof or where any decision in respect thereof is referred to arbitration as referred to in clause 9A within 3 months after the award by notice to the Minister that it shall not be proceeding with the same.; 5 by inserting after clause 9 the following new clauses Consideration of Companys proposals under clause 9 9A. 1 In respect of each proposal pursuant to subclause 1 of clause 9 the Minister shall a b c d subject to the limitations set out below refuse to approve the proposal whether it requests the grant of new tenure or not if the Minister is satisfied on reasonable grounds that it is not in the public interest for the proposal to be approved; or approve of the proposal without qualification or reservation; or defer consideration of or decision upon the same until such time as the Company submits a further proposal or proposals in respect of some other of the matters mentioned in clause 91 not covered by the said proposal; or require as a condition precedent to the giving of his approval to the said proposal that the Company make such alteration

thereto or comply with such conditions in respect thereto as he thinks reasonable and in such a case the Minister shall disclose his reasons for such conditions As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 69 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement PROVIDED ALWAYS that where implementation of any proposals hereunder has been approved pursuant to the EP Act subject to conditions or procedures any approval or decision of the Minister under this clause shall if the case so requires incorporate a requirement that the Company make such alterations to the proposals as may be necessary to make them accord with those conditions or procedures. In considering whether to refuse to approve a proposal the Minister is to assess whether or not the implementation of the proposal by itself or together with any one or more of the other submitted proposals will i affect orderly detrimentally development in the said State including without limitation infrastructure development in the said State; or economic and ii be contrary to or inconsistent with the planning and development policies and objectives of the State; or iii detrimentally affect the rights and interests of third parties; or iv detrimentally affect access to and use by others of the lands the subject of any grant or proposed grant to the Company. The right to refuse to approve a proposal conferred by paragraph a may only be exercised in respect of a proposal where the Minister is satisfied on reasonable grounds that a purpose of the proposal is the integrated use of works installations or facilities as defined in subclause 7 of clause 12A for the purpose of that clause as contemplated by clause 12A. It may not be so exercised in respect of a proposal if pursuant to clause 9B5 the Minister prior to the submission of the proposal advised the Company in writing that the Minister has no public interest concerns as defined in that clause with the single preferred development as referred to in clause 9B5a the subject of the submitted proposals and those proposals are consistent as to their substantive scope and with the information provided page 70 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement to the Minister pursuant to clause 9B5 in respect of that single preferred development. 2 The Minister shall within 2 months after receipt of proposals pursuant to clause 91

give notice to the Company of his decision in respect to the proposals PROVIDED THAT where a proposal is to be assessed under Part IV of the EP Act the Minister shall only give notice to the Company of his decision in respect to the proposal within 2 months after service on him of an authority under section 457 of the EP Act. 3 4 If the decision of the Minister is as mentioned in either of paragraphs a c or d of subclause 1 the Minister shall afford the Company full opportunity to consult with him and should it so desire to submit new or revised proposals either generally or in respect to some particular matter. If the decision of the Minister is as mentioned in either of paragraphs c or d of subclause 1 and the Company considers that the decision is unreasonable the Company within 2 months after receipt of the notice mentioned in subclause 2 may elect to refer to arbitration in the manner hereinafter provided the question of the reasonableness of the decision PROVIDED THAT any requirement of the Minister pursuant to the proviso to subclause 1 shall not be referable to arbitration hereunder. A decision of the Minister under paragraph a of subclause 1 shall not be referable to arbitration under this Agreement. 5 If by the award made on the arbitration pursuant to subclause 4 the dispute is decided in favour of the Company the decision shall take effect as a notice by the Minister that he is so satisfied with and approves the matter or matters the subject of the arbitration. 6 The Company shall implement accordance with the terms thereof. the approved proposals in 7 Notwithstanding clause 33 the implementation of approved proposals approve variations to those proposals. the Minister may during As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 71 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement Notification of possible proposals 9B. 1 If the Company upon completion of a prefeasibility study in respect of any matter that would require the submission and approval of proposals pursuant to this Agreement being proposals which will have as their purpose the integrated use of works installations or facilities as contemplated by clause 12A for the matter to be undertaken intends to further consider the matter with a view to possibly submitting such proposals it shall promptly notify the Minister in writing giving reasonable particulars of the relevant matter. 2 Within one 1 month after receiving the notification the Minister may if the Minister so wishes inform

the Company of the Ministers views of the matter at that stage. 3 If the Company is informed of the Ministers views it shall take them into account in deciding whether or not to proceed with its consideration of the matter and the submission of proposals. 4 Neither the Ministers response nor the Minister choosing not to respond shall in any way limit prejudice or otherwise affect the exercise by the Minister of the Ministers powers or the performance of the Ministers obligations under this Agreement or otherwise under the laws from time to time of the said State. 5 a This subclause applies where the Company has settled upon a single preferred development a purpose of which is the integrated use of works installations or facilities as defined in subclause 7 of clause 12A for the purpose of that clause as contemplated by clause 12A. b For the purpose of this subclause public interest concerns means any concern that implementation of the single preferred development or any part of it will i detrimentally affect economic and orderly including development the said State in page 72 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement without limitation infrastructure development in the said State; or ii be contrary to or inconsistent with the planning and development policies and objectives of the State; or iii detrimentally affect the rights and interests of third parties; or iv detrimentally affect access to and use by others of lands the subject of any grant or proposed grant to the Company. c At any time prior to submission of proposals the Company may give to the Minister notice of its single preferred development and request the Minister to confirm that the Minister has no public interest concerns with that single preferred development. d The Company shall furnish to the Minister with its notice reasonable particulars of the single preferred development including without limitation i ii iii as to the matters that would be required to be addressed in submitted proposals; and its progress in undertaking any feasibility or other studies or matters to be completed before submission of proposals; and its timetable for obtaining required statutory and other approvals the to submission and approval of proposals; and relation in iv its tenure requirements. e If so required by the Minister the Company will provide to the Minister such further information regarding the single preferred development as the Minister may require from time

to time for the purpose of considering the Companys request and also consult with the Minister or representatives or As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 73 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement officers of the State in regard to the single preferred development. f Within 2 months after receiving the notice or if the Minister requests further information within 2 months after the provision of that information the Minister must advise the Company i ii the Minister has no public the single that concerns with development; or interest preferred that he is not then in a position to advise that he has no public interest concerns with the single preferred development and the Ministers reasons in that regard. g If the Minister gives the advice mentioned in paragraph fii the Company may should it so desire give a further request to the Minister in respect of a revised or alternate single preferred development and the provisions of this subclause shall apply mutatis mutandis thereto.; 6 in clause 104b by deleting subclause 2 of Clause 9 and substituting clauses 92 to 5 and 9A; 7 in clause 118 by a b c inserting after total area of the mining lease the words any land that may be included in the mining lease pursuant to this Agreement and of any other mining lease granted under or pursuant to this Agreement as aggregated; inserting by endorsement after thereof in the mining lease; and by inserting the following sentence at the end of the clause The Minister may approve upon application by the Company from time to time for the total area referred page 74 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement to in this subclause to be increased up to a limit not exceeding 1000 square kilometres;; 8 9 in clause 1110 by inserting or clause 10 as the case may be before the full stop; by inserting after subclause 11 of clause 11 the following new subclauses Blending of iron ore 12 a The Company may blend iron ore mined from the mining lease with any i ii iron ore mined from a mining tenement or other mining title granted under or pursuant to an Integration Agreement; or iron ore mined from a Mining Act 1978 mining lease located in or proximate to the Pilbara region of the said State which is held by a Related Entity alone or with a third party or parties excluding any mining lease granted pursuant a held to Government agreement; or under or iii with the prior

approval of the Minister iron ore mined in or proximate to the Pilbara region of the said State under a Government agreement excluding an Integration Agreement; or iv with the prior approval of the Minister iron ore mined by a third party from a Mining Act 1978 mining lease located in or proximate to the Pilbara region of the said State excluding under a Government agreement which has been purchased by an Integration Proponent from the third party. As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 75 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement b to for the and controls The authority given under paragraph a is subject the Minister being reasonably satisfied that there are in place adequate systems correct apportionment of the quantities of iron ore being blended as between each of the sources referred to in paragraph a which systems and controls monitor production processing transportation stockpiling and shipping of all such iron ore. If at any time the Minister ceases to be so satisfied he may after consulting the Company and provided the Company has not within three 3 months after the commencement of such consultation addressed the Minister to his satisfaction by notice in writing to the Company suspend the above authority in respect of the relevant blending arrangements until he is again satisfied in terms of this paragraph b. the matters of concern to c If any blending of iron ore occurs as contemplated by this subclause then for the purposes of clauses 122 and 3a a portion of the iron ore so blended being equal to the proportion that the amount of iron ore from the mining lease used in the admixture of iron ore bears to the total amount of iron ore so blended shall be deemed to be produced from the mining lease. Shipment of and price for iron ore 13 The Company shall during the continuance of this Agreement ship or procure the shipment of all iron ore mined from the mining lease and sold a from a wharf in a loading port which has been constructed under an Integration Agreement; or b with the Ministers approval given before submission of proposals in that regard from page 76 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement any other wharf in a loading port which wharf another has been Government the Integration Agreements constructed agreement under excluding and use its best endeavours to obtain for all iron ore from

the mining lease the best price possible having regard to market conditions from time to time prevailing provided that iron ore from the mining lease may be sold by the Company prior to or at the time of the shipment under this Agreement at a price equal to the production costs in respect of that iron ore up to the point of sale if i ii iii the Minister is notified before the time of shipment that the sale is to be made at cost providing details of the proposed sale; and the Minister is notified of the proposed arms length purchaser in the relevant international seaborne iron ore market of the iron ore the subject of the proposed sale at cost; and there is included in the return lodged pursuant to clause 123a particulars of the transaction in which the ore sold at cost was subsequently purchased in the relevant international seaborne iron ore market by an arms length purchaser specifying the purchaser the seller the price and the date when the sale was agreed between the arms length purchaser and the seller; and iv the arms length purchaser referred to in iii above is not then a designated purchaser as referred to below. If required by notice in writing from the Minister the Company must provide the Minister within 30 days after receiving the notice with evidence that the transaction as included in the return pursuant to paragraph iii of the proviso above was a sale in the relevant international seaborne iron ore market to an independent participant in that market. If no evidence As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 77 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement is provided or the Minister is not so satisfied on the evidence provided or other information obtained the Minister may by notice to the Company designate the purchaser to be a designated purchaser and that designation will remain in force unless and until lifted by further notice from the Minister to the Company. For the avoidance of doubt the parties acknowledge that marketing entities forming part of the corporate group including the Company or part of the parallel corporate group if the Company is part of a duallisted corporate structure are not independent participants for the purposes of this subclause.; 10 in clause 121 by a in the definition of agreed or determined i if requested by the inserting following Company consultation with the Company and its consultants thereto after regard determined by the Minister; in ii deleting assessed at and

substituting assessed on; and iii deleting all the words after shall have regard to and substituting a colon followed by i in the case of iron ore initially sold at cost pursuant to the proviso to clause 1113 the prices for that type of iron ore prevailing at the time the price for such iron ore was agreed between the arms length purchaser referred to in paragraph iii of that proviso and the seller in relation to the type of sale and the relevant international seaborne iron ore market into which such iron ore was the sold and where prices beyond deemed f.o.b. point are being considered the deductions mentioned the definition of f.o.b. value; and in page 78 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement ii in any other case the prices for that type of iron ore prevailing at the time the price for such iron ore was agreed between the Company and the purchaser in relation to the type of sale and the market into which such iron ore was sold and where prices beyond the deemed f.o.b. point are being considered the the deductions mentioned definition of f.o.b. value;; in b in the definition of deemed f.o.b. point by inserting relevant before loading port; c in the definition of f.o.b. value by i in paragraph i A B C inserting subject to paragraph ii before in the case of; deleting assessed at and substituting assess on; and inserting reference to loading port; relevant before each ii renumbering paragraph ii as paragraph iii; and iii inserting after paragraph i the following new paragraph ii the arms in the case of iron ore initially sold at cost pursuant to the proviso to clause 1113 the price which is payable for the iron ore by length purchaser as referred to in paragraph iii of the Minister considers following advice from the appropriate Government department that the price payable in respect of the iron ore does not represent a fair and reasonable market value for that type of that proviso or where As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page 79 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement iron ore assessed on an arms length basis in the relevant international seaborne iron ore market such amount as is agreed or determined as representing such a fair and reasonable market value less all duties taxes costs and charges referred to in paragraph i above;; 11 after clause 121 by deleting the heading period to 31 December 2010; 12 in clause 122 by a b

deleting a for the period ending on 31 December 2010; inserting in paragraph i and on fine ore and pisolite fine ore where such fine ore and pisolite fine ore is not sold or shipped separately as such after lump ore; c inserting in paragraph ii and on pisolite fine ore sold or shipped separately as such after fine ore; d deleting paragraphs b; and c; and e f deleting paragraphs PROVIDED HOWEVER; and a and b of after inserting after paragraph d the following new paragraphs e Where beneficiated ore is produced from an admixture of iron ore from the mining lease and iron ore from elsewhere a portion and a portion only of the beneficiated ore so produced being equal to the proportion that the amount of the iron in the iron ore from the mining lease used in the production of that beneficiated ore bears to the total amount of iron in the iron ore so used shall be deemed to be produced from iron ore from the mining lease. page 80 Version 01c005 Published on www.legislation.wa.gov.au As at 15 Dec 2011 Iron Ore Yandicoogina Agreement Act 1996 Schedule 2 First Variation Agreement f Where for the purpose of determining f.o.b. value it is necessary to convert an amount or price to Australian currency the conversion is to be calculated using a rate excluding forward hedge or similar contract rates that has been approved by the Minister at the request of the Company and in the absence of such request as determined by the Minister to be a reasonable rate for the purpose. g The provisions of regulations 85AA Effect of GST etc. on the Mining Regulations 1981 WA shall apply mutatis mutandis to the calculation of royalties under this clause.; royalties of 13 in clause 123 by a in paragraph a i inserting and also showing such other information in relation to the abovementioned iron ore as the Minister may from time to time reasonably require in regard to and to assist in verifying in accordance with subclause 2 after the due date of the return; and the calculation of royalties ii deleting all the words after calculated on the basis of and substituting a colon followed by i ii in the case of iron ore initially sold at cost pursuant to the proviso to clause 1113 at the price notified pursuant to paragraph iii of that proviso; cases any other the Company in invoices or provisional invoices as the case may be rendered by the purchaser which invoices the Company shall delay simultaneously furnishing copies thereof to the Minister of such iron ore or on without render to As at 15 Dec 2011 Version 01c005 Published on www.legislation.wa.gov.au page

v n

Production Statement Conditions i ii The Licensee shall submit daily production statements to the Minister in respect of Stabroek Block production including such particulars as the Minister may from time to time direct. The production statements required to be submitted by the Licensee to the Minister in keeping with the Act Regulations and Petroleum Agreement shall include such other particulars as the Minister may from time to time direct. iii The Minister may serve notice in writing on the Licensee determining any iv other manner in which any quantity of petroleum or any qua form of petroleum is to be expressed in production stat manner to be in keeping with good international oilfield prac Production statements shall state separately in the case of in the form of gas the specific gravity of the petroleum and i Petroleum Production Licence Page I 7 of 20 20200925 4 . .

substantially different specific gravities has been won and saved the respective quantities of petroleum of each specific gravity. o Local and Participation i ii iii iv v Not less than sixty 60 days prior to the beginning of each year the Licensee shall submit to the Minister a yearly Local Plan which shall detail Licensees objectives utilisation levels activities and programs aimed at compliance with its obligations under the Petroleum Agreement applicable law and government policy. Following the submission of the plan the Contractor shall meet with the Minister to discuss and consider the effectiveness of the plan. Within twentyone 21 days of receipt from the Minister of any proposed modifications to the Local Plan the Licensee shall submit to the Minister a final Local Plan for approval inclusive of any agreed modifications. The Minister shall determine final approval of the Local Plan. The Licensee shall gather information on progress in achieving the objectives utilisation levels activities and programs described in their yearly Local Plan sufficient to inform halfyear and

endofyear Local Reports to the Minister. This information shall be retained by the Licensee in sufficient detail to facilitate verification for a period of five 5 years. The Licensee shall provide to the Minister at a minimum halfyear and endofyear Local Reports submitted within thirty 30 days of the end of each half calendar year detailing and quantifying its achievements in respect of the objectives utilisation levels activities and programs described in its yearly Local Plan. The Licensee shall permit an agent designated by the Minister to access records of the Licensee and its primary contractors for the purpose of assessment and verification of the information provided in Licensees Local Plans and Local Reports. The Licensee shall include the necessary provisions in contractual arrangements with primary contractors to enable such assessment and verification by the Min1iJ i;.Qt..... hisher agent. ofif tIATuThe Licensee shall identify all opportunities available for loc J9 e the fabrication requirements of the Payara Development e subsurface facilities and supporting services. The Licensee t Petroleum Production Licence Page I 8 of 20 20200925 . .J 4 g components of fabrication that can be performed using local and detail plans for the Licensee to develop the capacity for such local . p Health Safety and the Environment i ii The Licensee shall abide by the Environmental Protection Act 1996 Regulations made thereunder and the terms and conditions of the Environmental Permit issued by the Environmental Protection Agency Reference No. 20181204PPOIX and dated 24 September 2020. The Licensee shall abide by Occupational Health and Safety Act 1997 Regulations made thereunder and all applicable laws and regulations of Guyana relating to occupational health and safety in effect from time to time as amended enacted and augmented. iii The Licensee shall at all times maintain adequate expert personnel and equipment to prevent and or respond to any spillage of petroleum into the marine environment. iv The Licensee shall ensure that standards in keeping with the laws and regulations of Guyana and good international oilfield practices are implemented upgraded from time to time and continuously adhered to so as to ensure the safety of all personnel and ensure the protection of the marine environment. q Dispersants i Within ninety 90 days from the date of the Licence the Licensee shall provide a report calculating the appropriate volume of dispersants sufficient for immediate

deployment for any Tier 3 event. The report shall not be deemed final until approved by the Minister. Thereafter the Licensee shall maintain throughout the Licence term such volume of dispersants and the required deployment equipment so as to sufficiently and effectively deal with any Tier 3 event. ii r Capping Stack i The Licensee shall maintain access to one or more subscription necessary to allow mobilization of a Capping Stack to the Pa Petroleum Production Licence Page I 9 of 20 20200925 V.TU . ii iii iv v vi I location within five 5 days or less of an uncontrolled well event consistent with the Capping Stack Report. Within thirty 30 days of the date of the Environmental Permit the Licensee shall submit to the Minister and EPA for approval terms of reference for a study detailing the implementation of a system that allows for deployment of a Capping Stack and Debris Removal Systems within three 3 days and four 4 days of an uncontrolled well event including the costs timing feasibility and benefits of implementing each such system. The Licensee shall within three 3 months of the date of Licence supplement its incountry First Response Toolkit to include all elements of the Essential First Response Toolkit as outlined in the Capping Stack Report excluding those elements requiring longer manufacturing times or otherwise not readily available. Such longerlead elements will be identified within thirty 30 days of the date of the Licence and shall be promptly completed and delivered to Guyana but in no event shall delivery be later than nine 9 months from the date of the Licence. Within one hundred and eighty 180 days of the date of the Ministers approval of the terms of reference the Licensee shall complete the studys final report. During the pendency of the study the Licensee shall meet with the Minister andor his representatives no less than every thirty 30 days or more frequently on request to provide an update on the progress of the study discuss the issues raised by the study and come to agreement on resolution of issues andor concerns regarding the study. Thirty 30 days before completion of the study the Licensee will issue a draft final report to enable the Minister to input into the final report. The final report shall not be deemed final until approved by the Minister takine into account whP.thP.r thP. rP.port mP.P.ts the terms of reforenr.e and all related best practice technical standards. s Flaring i Routine flaring of gas by the Licensee is strictly prohibi approval. Flaring is only permissible under the following c defined in the Licensees

Commissioning and Startup the Licensee shall not exceed sixty 60 days of flaring during Startup; and Special Circumstances including i Emergencies; ii Maintenance; and iii Restart or as allowed under the Environmental Permit or approved by the Environmental Protection Agency. ii Flaring to maintain oil production should any part of the gas handling system have failed will not be permitted save and except where approval has been obtained to flare from the Environmental Protection Agency. iii Within thirty 30 days of the date of Licence the Licensee shall submit to the Minister for approval terms of reference for such study that will show in detail how the objective described above will be achieved whilst maintaining to the extent practical currently predicted project production profiles. v iv During the pendency of the study the Licensee shall meet with the Minister and or his representatives no less than every thirty 30 days or more frequently on request to provide an update on the progress of the study discuss the issues raised by the study and come to agreement on resolution of issues and or concerns regarding the study. Thirty 30 days before completion of the study the Licensee will issue a draft final report to enable the Minister to input into the final report. Within one hundred and eighty 180 days of the date of approval of the terms of reference the Licensee shall submit the studys final report to the Minister. The final report shall not be deemed final until approved by the Minister. vi The Licensee shall report to the Minister within twentyfour 24 hours all inences of gas flaring whether within or without the parameters set forth herein and the reasons for such flaring. vii The Licensee shall pay all fines imposed in respect of flaring in violation of the Environmental Permit Petroleum Production Licence Page | 11 of 20 20200925 1U4 J ;; . .

l..... a. bylaw; b. by the EPA; and c. in accordance with the terms of a framework to be established by the Minister to compensate the Government. The fine shall be calculated by applying the Governments profit gas and royalty percentage share for a given month to the flared volumes multiplied by the lower of the following i the Inside FERC Henry Hub Index price as published by Platts each month or ii the sales price agreed for gas from the Stabroek block such price netted for the cost of pipeline transportation to shore per thousand standard cubic feet of gas. t Produced

Water i The Licensee shall update its base design for the Project to include i tie in points and ii space for produced water injection equipment. ii Within thirty 30 days of the date of Environmental Permit the Licensee shall submit to the Minister and EPA for approval terms of reference for a study detailing a. the costs benefits and feasibility of implementing a system for the re injection of produced water save and except in defined unavoidable situations as the primary disposal method; and b. the minimization of the effects of discharging produced water into the ocean in keeping with accepted international standards. Within one hundred and eighty 180 days of the date of the Ministers approval of the terms of reference the Licensee shall complete the studys final report. iii During the pendency of the study the Licensee shall meet with the Minister and or his representatives no less than every thirty 30 days or more frequently on request to provide an update on the progress of the study discuss the issues raised by the study and come to agreement on resolution of issues and or concerns regarding the study. iv Thirty 30 days before completion of the study the Licens draft final report to enable the Minister to provide input report. The final report shall not be deemed final until ap Petroleum Production Licence Page I 12 of 20 20200925 otu. 1...;c G Minister taking into account whether the report meets the terms of reference and all related best practice technical standards. u Formation Integrity i ii Except for periods where fracture tests are conducted on injection wells to estimate formation fracture pressures injection well pressures must be targeted to operate at least fifty 50 psi below the most recently estimated formation fracture pressure as periodically estimated through injection tests or other surveillance techniques. The Licensee shall within ninety 90 Days of the date of the Licence provide a plan to conduct the fracture tests and to implement this in its operations. iii The plan shall not be deemed final until approved by the Minister taking into account whether the report meets the terms of reference and all related best practice technical standards. v Block Seismic Activity i Licensee shall complete an analysis of natural seismic activity and magnitude from events such as earthquakes volcanoes etc. The analysis must consider the potential impact of the injection of fluids on such activities. ii Within thirty 30 days from the date of the Licence the Licensee will propose for approval by the Minister terms of

reference for a study to investigate and analyse seismic activity including events such as earthquakes volcanoes etc. such study to include the potential contributory impact of the injection of fluids on the triggering of such P.VP.nts. Snrh stncly shall also inrlule assessments of geology engineering environment cost and economics. iii Within one hundred and eighty days 180 days of the approval of the terms of reference the Licensee will complete the studys final report. iv During the execution of the study the Licensee will meet with the 1.a.... andor his representatives at least once in each thirty 30 da more frequently as requested to provide an update on the p study discuss the issues raised by the study and come to a resolution of issues and or concerns regarding the study. Petroleum Production Licence Page I 13 of 20 20200925 5 v Thirty 30 days before completion of the study the Licensee will issue a draft final report to enable the Minister to input into the final report. The report shall not be deemed final until approved by the Minister taking into account whether the report meets the terms of reference and all related best practice technical standards. w Abandonment Agreement Programme; Decommissioning Security i Within thirty 30 days of the date of the Licence the Minister and or his representatives and the Licensee shall meet to discuss and determine the key principles to be addressed in the Stabroek Block Decommissioning Security Agreement. ii Within thirty 30 days from the conclusion of the discussions described in subparagraph i above the Licensee shall submit to the Minister for review and further development a draft Stabroek Block Decommissioning Security Agreement such draft to contemplate timely posting of security for anticipated decommissioning costs following the methodology and approach contained in the United Kingdom Industry Model Form Decommissioning Security Agreement NonPRT October 2015 or consistent with other similar international best practice standards. iii Within thirty 30 days of the Minister providing comments on the draft Stabroek Block Decommissioning Security Agreement the Licensee and the Minister and or his representatives shall meet for further discussions such discussions to be had through meetings which may include a workshop discussion forum. iv Within nine 9 months of the date of completion of the further discussions the Joint Venture Licensees shall use reasonable commercial efforts to

agree and no later than 31st March 2022 shall agree on a final version of the Stabroek Block Decommissioning Security Agreement which shall contemplate timely posting of security for anticipated decommissioning costs the methodology and approach contained in United Kingdom Industry Model Form Decommissyi ... Security Agreement NonPRT October 2015 or consistent. similar international best practice standards and they will later than the said 31st March 2022 the mutually accepta t . Block Decommissioning Security Agreement to the Minister io . 4. . . . following . Petroleum Production Licence Page I 14 of 20 20200925 U C . . . t 5 prior to signing by the Joint Venture Licensees and the Agreement shall be signed by the Licensees no later than twenty 21 days after the Minister indicates completion of his review. x Licence Transfer i ii This Licence shall not be transferred without the written consent of the Minister. Further the Licensee shall furnish all details of any proposed transfer at the time of making the application for the transfer. The Licensee may apply to the Minister for the transfer of this Licence in accordance with requirements set forth by the Minister by the Act by Regulation and the Petroleum Agreement and shall fulfill any other financial obligations andor requirements under the laws of Guyana. iii The Licensee shall in a timely manner submit all documentation and make available such information as the Minister shall reasonably require to enable the Minister to dispose of the application. iv The Minister may refuse the application for the transfer of this Licence if in his opinion the person to whom the Licence is proposed to be transferred does not meet the same qualifications and capability to do the work as the Licensee if there has been a failure or refusal to furnish documents and information as requested or for such other reason as the Minister shall determine. v Where the Minister approves the transfer of this License the person to whom the Licence is transferred the Transferee shall be required to comply with the provisions of the Act Regulations this Licence the Petroleum Agreement the Development Plan and any other instrument to which this Licence may be subject as though the Transferee was the original Licensee. y Insurance Licensee shall effect at all times during the term of this Licence insurance as required by and in accordance with Article 20.3 of the Petroleum Agree Petroleum Production Licence Page I 15 of 20 20200925 z Duties of the Licensee i ii The Licensee

undertakes to and shall carry out all activities under this Licence in compliance with the provisions of the Act Regulations this Licence the Petroleum Agreement the Development Plan any other law and or instrument and or agreement with the Government to which this Licence may be subject as may be amended enacted or modified from time to time and in keeping with good international oilfield practice. The Licensee may with the written approval of the Minister amend the Development Plan with respect to work and expenditure contained in the Development Plan but the amendment shall not have effect so as to reduce any minimum requirements.

aa Independent Audit i The Licensee shall facilitate and fully cooperate with annual audits of Safety Critical Drilling and Production Operations including waste management and compliance conducted by the Chief Inspector pursuant to Section 61 of the Act. ii Within thirty 30 days of this Licence and annually on such date thereafter for a total of five 5 consecutive years the Licensee shall pay to an account held and controlled by the Government the amount of four hundred thousand USD USD400000.00 to be used by the Government for procurement of third party auditors to supplement the Chief Inspectors resources and develop institutional capacity for the ongoing conduct of audits under this paragraph. The Licensee shall verify such account and the Minister agrees to cooperate assist and provide the Licensee any information it requires to conduct such verification. iii The first such audit shall be targeted to conduct an assessment for calendar year 2020 and shall be conducted annually thereafter. iv The Licensee shall meet with the Chief Inspector at his request to ensure any issues concerns andor recommendations arising out of the aud complied with and or addressed in a manner satisfactory to the i as being in keeping with good international oilfield practices.

f 6 . 1 Petroleum Production Licence Page I 16 of 20 r.. u tq . r 4 0. ... 20200925 Z. ;. i. bb Reserves Reporting ii i Within twelve 12 months the Licensee shall submit to the Minister the necessary data and information in the Licensees possession required for the Government to utilize in its own PRMS. The Minister shall request more data or information to support such effort as he deems necessary. The Licensee agrees to cooperate with the Chief Inspector andor the Chief Inspectors procured reserves assessor in developing the Governments independent assessment of reserves. This

cooperation shall include providing reasonable access to the required petroleum data in the Licensees possession necessary to the Chief Inspector and/or the Chief Inspectors procured reserves assessors evaluation and/or reports. iii The Licensee shall no less frequently than biannually review its development planning activities with the Minister. cc Legal Conditions i ii iii iv v vi The Licensee shall comply with the terms of the Petroleum Agreement in all material respects; The Licensee shall comply with all lawful orders and decisions of the Minister and such other officers and functionaries of the Government with applicable authority; This Licence and all activities of the Licensee are subject to the laws and regulations of the Cooperative Republic of Guyana in force at any given time. Accordingly the Licence does not limit the general right of the state to impose taxes nor the authority of the state to propose general provisions in respect of specific aspects of petroleum activities. The Licence does not exempt the Licensee from obtaining other licences permits and approvals which are necessary according to the Act or other applicable laws. The Licensee shall abide by all applicable laws and regulations of the Cooperative Republic of Guyana. This Licence and its conditions shall be interpreted and applied .. 1il it..q manner that is consistent with and gives effect to the terms and of the Petroleum Agreement. Petroleum Production Licence Page I 17 of 20 20200925 Q0 . V VI 0 C ; i o . l .. . oc.. t 3. 1 The Licensee shall pay to the Government within the period specified therefor by the Chief Inspector royalty in respect of petroleum obtained by him in the production area to which this Licence relates at the rate of two 2 per centum of the production won and saved from the production area or where arrangements are made in the Petroleum Agreement for payment of royalty in kind wholly or in part by making such payment and or deliveries in accordance with aforesaid arrangements. 2 Subject to the provisions of the Petroleum Agreement all petroleum that is proved to the satisfaction of the Minister to have been used by the Licensee within the production area for fuel or transportation in petroleum operations shall be free of royalty. 4. The annual licence rental charge referenced in Article 10 of the Petroleum Agreement includes and satisfies the rental charge payable in respect of the production area to which this Licence relates. 5. Unless the context otherwise requires the terms and expressions used

in this Licence shall have the same meaning as in the Act and Regulations and if not therein defined in the Petroleum Agreement. [Remainder of Page Intentionally Blank] Petroleum Production Licence

Doug St. Clair Attention Allen White Participation Agreement El Toro Prospect West Cameron Block
57 OCSG 21534 No. 3 Offshore Gulf of Mexico Gentlemen This Participation Agreement PA when
executed by each of the Parties hereto being Chevron Midcontinent L.P. formerly named Pure
Resources L.P. Pure Marlin Coastal L.L.C. Marlin Helis Oil and Gas Company LLC Helis Houston
Energy L.P. Houston Energy hereinafter Pure Marlin Helis and Houston Energy being referred as the
Coowners and Ridgewood Energy Corporation Ridgewood all inclusive parties sometimes
hereinafter referred to as the Parties will evidence the agreement between the Parties to
explore develop and operate certain rights in the Contract Area as defined below. The Parties hereby
agree to the following terms and conditions 1. CONTRACT AREA. The Contract Area is the
leasehold acreage that covers the following described property West Cameron Block 57 OCSG
21534 as said lease covers depths from the surface of the earth down to the base of the Cris R2
sand at a depth of 15500 vertical subsea or to the base of the stratigraphic equivalent of the Cris R2
sand as seen in the Stone West Cameron Block 45 OCS 299 20 By Pass 1 whichever is the deeper
but limited to the following acreage aliquots hereinafter referred to as the Contract Area. Page 1 of
16 Ridgewood El Toro PA September 5 2007

It is the intent of the Parties that the Contract Area shall be divided into four equal parts as follows: N2 NW4 SW4; S2 SW4 NW4; NE4 SW4 NW4; SW4 SE4 NW4; SW4 NW4 NE4; S2 NE4 NW4; SE4 NW4 NW4; N2 SE4 NW4; The Coowners leasehold and that certain Joint Operating Agreement between IPPetroleum Company Inc. as Operator and The William G. Helis Company L.L.C. et al as NonOperators covering West Cameron Area Block 57 dated July 12 2000 OA attached hereto as Exhibit B being both the Coowners leasehold and the OA interest in the Contract Area to the best of our information and belief is set out as shown in Exhibit A attached hereto and the Contract Area is hereinafter referred to as the El Toro Prospect. The division of interest in Exhibit A shall control in any conflict between this agreement and Exhibit A. The Working Interest w Leverage Percentage column as shown under the Division of Interest on said Exhibit A sets forth the promoted interest to be borne by Ridgewood and the leveraged interests to be borne by the Coowners as described in the rights and obligations

of Article 3 and Article 4 herein below. It is stipulated by all Parties that the interest of Houston Energy in the El Toro Prospect has been committed to and assumed by the parties such that Houston Energy will be deemed to participate in the exploration of such prospect through the delivery of its interest in such prospect and in the Contract Area to the Parties for its Working Interest After Leverage Percentage rights and interests but will not participate in and will not be obligated for the costs or risk of the well for the El Toro Prospect until Ridgewood has earned an interest in the Contract Area pursuant to this PA and the Working Interest After Leverage Percentages apply. In the event this PA terminates without an earning or Ridgewood does not earn and this PA expires the Co-owners' interests in the Contract Area will revert to the OA working interests shown on Exhibit A. The Working Interest After Leverage Percentage column shown under the Division of Interest on said Exhibit A sets forth the interest of the Parties in the well and the Contract Area once and if Ridgewood has earned an interest in the Contract Area pursuant to this PA. Subject to Article 6 herein below, Ridgewood shall be provided access to land records and files at the offices of Pure or Marlin during business hours for its own independent review of the title materials related to the interest of the Co-owners and to any unrestricted geologic and geophysical data for its own independent review and analysis. Ridgewood may withdraw from this PA for material title defects which cannot be timely cured or which Co-owners decline to cure at any time prior to Marlin accepting a turnkey bid proposal from Applied Drilling Technology Inc. ADTI for the drilling of the well contemplated hereunder. Any Ridgewood withdrawal shall terminate this Agreement as to and among all Co-owners. Ridgewood shall supply each of the Co-owners a copy free of cost to the Co-owners of any Contract Area title analysis conducted by Ridgewood. Page 2 of 16 Ridgewood El Toro PA September 5 2007

2. INITIAL WELL AND OBJECTIVE. Subject to the other terms hereof as well as weather delays delivery of materials e.g. pipe rig availability and obtaining all requisite permits Marlin as the designated drilling operator shall use reasonable businesslike efforts to commence or cause to be commenced on or before November 1 2007 the drilling of the West Cameron Block 57 OCSG 21534 No. 3 well hereinafter sometimes referred to as the Initial Well.

Except as otherwise provided herein and after execution of this PA the Parties hereby obligate themselves to participate in or support in the case of Houston Energy the drilling of the Initial Well for the exploration and production of oil and gas according to the terms and conditions of this PA. The Initial Well will be drilled and logged with due diligence and in accordance with good oilfield practice as per the final executed and approved Marlin Authority for Expenditure AFE and well plan as attached hereto as Exhibit C within the Contract Area on West Cameron Block 57 OCSG 21534. The Initial Well will be drilled and logged at a surface and bottomhole location 6215 FNL and 2684 FWL at the target location of LAS NAD27 State Plane Coordinates X1290829 Y358059 of West Cameron Area Block 57 to a depth of 15500 vertical subsea or the base of the stratigraphic equivalent of the CrisR2 sand formation where this sand top is expected to occur between 14600 and 14900 vertical subsea elevation as seen in the Stone West Cameron Block 45 OCS299 20 ByPassI whichever depth is lesser hereinafter referred to as the Objective. Until that time the Initial Well has reached the Objective and all logging testing and evaluation contemplated in the AFE has been completed and a recommendation has been made by Marlin Ridgewood does not have the right to propose any operation but will hold a voting rights interest for its Working Interest w Leverage Percentage in operations proposed by others. Upon reaching the Objective and when all logging testing and evaluation contemplated in the AFE has been completed and a recommendation has been made by Marlin any recommendation or proposals by the Parties will be subject to all appropriate terms and conditions of the OA regarding subsequent operations priority of operations voting rights and penalties. After earning Ridgewood will become a rights holder under the OA for its Working Interest After Leverage Percentage and operations conducted after that earning shall be subject to the OA provisions including nonconsent voting rights and penalty. For any Party including Ridgewood electing not to participate in any proposed operation after reaching the Objective and completion of all logging testing and evaluation its Working Interest After Leverage Percentage will be subject to the OA penalty for any exploratory well and its working interest only after satisfaction of the OAs nonconsent conditions and penalties will be that as set out in Exhibit A of this PA Division

of Interest in the column labeled Working Interest After Leverage Percentage. Unless otherwise agreed by the Parties each Party electing to participate in the operation after reaching the Objective may but is not obligated to elect to participate in any operations and bear that portion of the costs and risks attributable to the interests of the Nonparticipating Party in the ratio that the Participating Party's interest listed in the column labeled Working Interest After Leverage Percentage in Exhibit A bears to the total interest of all participating Parties under the same column. Such nonconsent operation shall not proceed unless 100 of the costs and risks of that operation are assumed by the participating Parties and any penalty recoupment shall inure only to the participating Parties in proportion to its or their participation. As between the Parties the Initial Well is proposed as an exploratory well as to financial penalties of the Contract Area during any recoupment period Page 3 of 16 Ridgewood El Toro PA September 5 2007It;PAGEgt; and is to be drilled and logged pursuant to the terms and conditions of the AFE and OA. Such limited rights grant is not intended to vest ownership in the Contract Area in Ridgewood until such vesting of ownership to Ridgewood is earned as set out in Article 5 below. Upon earning an interest in the Contract Area pursuant to this PA Ridgewood agrees to adopt and ratify the OA effective as of the date of earning. The terms and provisions of the OA are incorporated herein as if set forth in full are not by that incorporation intended to create any operating rights area in which Ridgewood owns an interest in the Contract Area and apply prior to any earning by Ridgewood but solely to recognize the rights privileges and protections of Marlin as the drilling operator and each of the non operating Coowners and for preearning notices and election periods and access by Ridgewood to the rig floor but not otherwise.3. PROSPECT WELL COST SHARING. Marlin has proposed and each of the Coowners and Ridgewood have approved and agreed to participate for a share of the costs for or support in the case of Houston Energy the drilling and logging of the Initial Well in the Contract Area as set forth in the attached Exhibit C AFE. By executing this PA and obligating itself to participate in the Initial Well Ridgewood holds the right to earn 33.4917 of 100 working interest of the Coowners interest in the Contract Area upon meeting the obligations herein and in particular those set forth in

Article 5 below for the Initial Well or Substitute Well by paying 50.2375 its Working Interest w Leverage percentage of the costs to the extent applicable under this PA of drilling and logging to the Objective andor plugging and abandoning as a dry hole if applicable of the Initial Well or Substitute Well up to seventeen million two hundred thousand dollars 17200000.00 gross of the dry hole costs without regard to the AFE amount. If the Initial Wells actual costs of drilling and logging to the Objective andor plugging and abandoning as a dry hole if applicable exceeds the amount of seventeen million two hundred thousand dollars 17200000.00 gross or upon reaching the Objective whichever occurs first Ridgewood will thereafter pay and bear 33.4917 its Working Interest After Leverage Percentage of the costs and risks of all subsequent operations in such well for further drilling andor plugging and abandoning operations. Ridgewood will not hold the right to assume sole ownership of the Initial Well or become a sole participating party until it earns as set out in Article 5. Marlin as drilling operator shall conduct any Ridgewood sole account operations. The Parties agree that should a Substitute Well as specified in Article 10 below be approved by the Parties and commenced Ridgewoods obligation to pay 50.2375 of the AFE costs will cease at the point in time that the actual costs of drilling and logging to the objective andor plugging and abandoning as a dry hole if applicable incurred in the Initial Well plus the actual costs incurred in the Substitute Well combined equal seventeen million two hundred thousand dollars 17200000.00 gross; provided however once the aggregate costs of the Initial Well and Substitute Well equal seventeen million two hundred thousand dollars 17200000.00 gross Ridgewoods share of all subsequent drilling and logging costs will be 33.4917 subject to further rights elections and provisions of this PA or the OA as applicable. Effective upon and after reaching the Objective but not before the right to nonconsent further or subsequent drilling or logging operations provided by the overexpenditure provision of the OA shall apply to subsequent operations. Prior to reaching the Objective the Parties remain Page 4 of 16 Ridgewood El Toro PA September 5 2007lt;PAGEgt; bound to the obligations of the PA subject to the other terms of Article 2. It is the intention of the Parties subject to this Article 3 and Article 4 below that the 1.51 promote borne by Ridgewood in favor of the Coowners under the PA

for the costs and risk of drilling and logging operations conducted under the PA shall end upon the earlier of earning as detailed in Article 5 below or the aggregate expenditure of seventeen million two hundred thousand dollars 17200000.00.

4. ADDITIONAL PROMOTE. The Parties further agree that unless Ridgewood conducts sole account operations in the Initial Well under its Article 3 right then otherwise if the Initial Well or Substitute Well is completed for production as a successful well that Ridgewood agrees to pay an additional promote by paying 50.2375 its Working Interest w Leverage Percentage of the costs to the extent applicable under this PA of completion tieback flowback and hookup up to ten million four hundred thousand dollars 10400000.00 gross costs of the completion tieback flowback and hookup costs. If the completion tieback flowback and hookup actual cost exceeds the amount of ten million four hundred thousand dollars 10400000.00 gross Ridgewood will thereafter pay and bear 33.4917 its Working Interest After Leverage Percentage of the costs and risks of all subsequent operations in such well over such completion tieback flowback and hookup costs for further operations.

5. EARNING ASSIGNMENT TIMING amp; INTEREST TRANSFERRED. Ridgewood shall earn Pure shall prepare and the Coowners shall timely deliver a mutually acceptable Assignment of Operating Rights Assignment in the form attached hereto as Exhibit F in the Contract Area to Ridgewood if and only if a the Initial Well or Substitute Well is drilled and logged to the Objective as described in Article 2 above or b if the Initial Well or its Substitute Well either fails to reach the Objective or reaches the Objective but the Parties have expended at least seventeen million two hundred thousand dollars 17200000.00 whether such well is completed or not then Ridgewood will be entitled to an Assignment of the Coowners operating rights for its Working Interest After Leverage Percentage as set forth on Exhibit A as provided for herein and c Ridgewood complies with all of the terms of this PA. Within thirty 30 days of satisfying a and c or b and c of the above referenced events the Coowners will assign without warranty of title express or implied and effective as of the date of its earning to Ridgewood 33.4917 of 88ths gross and 26.1235 of 88ths net of the Coowners operating rights within the Contract Area from the surface of the earth to the sub sea true vertical depth of 15500 or to the stratigraphic equivalent of the base

of the CrisR2 sand as seen in the Stone West Cameron Block 45 OCS299 20 ByPassI whichever is the lesser depth. Such interest is further subject to and burdened by all of the contracts agreements and dedications recited herein or of public record and lessors royalty and the overriding royalty interests as set out on Exhibit A or in this PA. Notwithstanding a and b above but if the Initial Well or Substitute Well fails to reach the Objective but encounters as mutually agreed by all Parties a zones or formations capable of producing in paying Page 5 of 16 Ridgewood El Toro PA September 5 2007It;PAGEgt; quantities above the Objective that is within the Contract Area and is completed for production under the PA where Ridgewood participates and the Coowners mutually agree to cease further drilling operations prior to reaching the Objective Ridgewood will thereafter be entitled to an Assignment of operating rights within the Contract Area for its Working Interest After Leverage Percentage but limited to the total depth drilled and logged plus 100 feet. Rights under the OA in the event of an election by any of the Coowners to nonconsent to operations above Objective where the Initial Well has not reached Objective or the Parties have not expended at least seventeen million two hundred thousand dollars 17200000.00 are reserved solely to and among the Coowners. That is Ridgewood shall not hold any right to penalty recoupment.6. WARRANTY. The transfer of any interest in the Contract Area pursuant to this PA to Ridgewood shall be made by the Coowners without express or implied warranty of any kind. The Coowners shall grant and convey to Ridgewood full subrogation and substitution to all the Coowners rights in warranty against the predecessors in interest of the Coowners and its affiliates or merged entities. The Coowners shall subject to Article 1 provide Ridgewood full access to the Coowners files and records related to the Contract Area for independent review and analysis by Ridgewood. Such files and records are not warranted as complete or accurate but were maintained as business records upon which the Coowners relied. Any reliance by Ridgewood is at its own risk.7. NO NEW LEASE BURDENS. Until Ridgewood earns an interest under this PA or until the right to earn a portion of the Coowners interest in the Contract Area pursuant to this PA terminates Ridgewood and the Coowners except as specified in Article 15 agree that they have not and will not create any additional lease burdens or

dedications on the Contract Area. No mortgage or pledge or financing arrangement by Ridgewood of this PA or any interest earned whether before or after any such interest is earned or assigned is ever permitted without the prior written consent of each of the Coowners which consent shall not be unreasonably withheld. Such condition shall be made express in any Assignment of earned area made to Ridgewood.

8. TRANSFER SUBJECT TO APPLICABLE APPROVALS. In the event that the transfer of any interest in and to the Contract Area requires approval of the lessor or of any federal agency having jurisdiction the obligation to obtain such pertinent approval shall be Ridgewood's at its cost and risk. The Coowners agree to assist Ridgewood as necessary to help Ridgewood secure such approvals including but not limited to the preparation of mutually agreeable assignments or conveyance instruments appropriate for filing and recordation purposes with the MMS and/or applicable parish records. Notwithstanding anything to the contrary but excluding any lessor consent or approval the Coowners represent to Ridgewood that any consent to assign requirements that may effect a transfer of interest into Ridgewood upon its earning will be the responsibility of the Coowners to effectuate on behalf of Ridgewood.

9. ACCOUNTING MATTERS. As to the Contract Area all costs and expenses which are accrued or incurred pursuant to this PA and under any transfer of interest in the Contract Area executed pursuant hereto if any shall be determined and accounted for in accordance with the Accounting Procedure which is in Exhibit C of the OA attached hereto as Exhibit B.

Page 6 of 16 Ridgewood El Toro PA September 5 2007

10. SUBSTITUTE WELL. If the Initial Well is drilled and prior to reaching the Objective Marlin encounters mechanical difficulties gulf coast conditions or other conditions which render further drilling impractical or if the Parties agree per Article 5 above to complete the Initial Well above but without reaching the Objective then without limiting the Parties rights pursuant to Article 5 then any of the Parties shall have the right to propose the drilling of another well to the Objective hereinafter referred to as a Substitute Well at and to any legal location in the Contract Area but such operations must commence within 180 days after the date the rig was released from the last operation on the Initial Well. If such well is proposed and Ridgewood participates and the Substitute Well is timely

and properly commenced and drilled in compliance with all terms and conditions provided herein for the Initial Well then such Substitute Well shall in all respects but in any event shall be subject to the Article 3 and Article 4 cumulative cost sharing limitation for the Initial Well and Substitute Well be considered as if it was the Initial Well and any references in this PA to the Initial Well shall also include any Substitute Well.

11. SUBSEQUENT OPERATIONS. Should Ridgewood earn hereunder as provided above and the Parties mutually agree to complete the Initial Well in the Objective or should the Parties mutually agree per Article 5 above to complete the Initial Well above but without reaching the Objective any such permitted wells and operations shall be conducted in accordance with the OA. Should Ridgewood earn hereunder and the Initial Well be deemed a dry hole a subsequent well may be proposed by any of the Parties at any time as a Substitute Well in accordance with the provisions of the OA but also subject to the other provisions of this PA bearing upon a Substitute Well.

12. DESIGNATIONS. The Parties agree to execute the necessary designation of operator forms and any other forms required by the MMS or other regulatory authorities to carry out their operations and to make Marlin the drilling operator under the PA if required and Pure the Operator under the OA with any earning by Ridgewood.

13. OPERATING AGREEMENT. Before any earning by Ridgewood under this PA and any ratification or execution of the Exhibit B OA after earning under the PA Ridgewood acknowledges the Coowners interest available to Ridgewood hereunder remains bound under this PA and the OA. Should Ridgewood earn hereunder Ridgewood shall formally ratify the OA attached hereto as Exhibit B only as it pertains to the Contract Area and earned rights. Notwithstanding any other provision of this PA that might indicate to the contrary if there is any conflict between any other provision of this PA and a provision of the OA the other provisions of this PA shall prevail as between the Parties prior to any earning.

14. TERM. This PA shall automatically terminate without liability or obligation in the event the Initial Well is not commenced on or before November 1 2007 subject only to weather delays delivery of materials e.g. pipe rig availability and obtaining all requisite permits.

Page 7 of 16
Ridgewood El Toro PA September 5 2007

in which Ridgewood participates and earns and which participation entitles Ridgewood to an Assignment as provided above in Article 5 those PA rights and obligations surviving the earning and the OA shall remain in effect as to such Contract Area so long as any obligations between the Parties remain unsatisfied. Unless otherwise provided the PA shall terminate with an earning by Ridgewood as a dry hole and the end of the right to propose a Substitute Well or with the completion tieback and flowback and hookup for a successful completion. Matters arising after either such event shall be governed by the OA with the exception that the Tax Partnership and all obligations not satisfied under the PA the Dispute Resolution as set out in Article 27 and Confidentiality Agreement and AMI as set out in Article 15.C 3 shall survive any such termination of this PA.15.

REPRESENTATIONS. The business records of the Coowners reflect with respect to the Contract Area and El Toro Prospect that A. The Contract Area is dedicated and committed to the following Contracts and Agreements; 1 Natural Gas Processing Agreement Gulf of Mexico between Chevron U.S.A. Inc. Texaco Exploration and Production Inc. predecessor in interest to Chevron U.S.A. Inc. and Dynegy Midstream Services Limited Partnership now called TARGA Midstream Services Limited Partnership as amended effective March 1 2002. 2 Reserve Dedication and Discount Commodity Rate Agreement between Stingray Pipeline Company L.L.C. and Pure Resources L.P. effective June 15 2003. 3 Amendment to Reserve Dedication and Discount Commodity Rate Agreement June 15 2003 between Pure Resources L.P. and Stingray Pipeline Company L.L.C. effective April 29 2005. 4 Reserve Dedication Agreement between Stingray Pipeline Company L.L.C. and Marlin Coastal LLC effective April 1 2006. B. All required filings have been made with the applicable regulatory authorities and Coowners are not aware of any notices pending or threatened violations of any applicable regulation. C. The Contract Area is subject to the following Contracts and Agreements 1 Oil and Gas Lease dated July 1 2000 from the U.S. Department of the Interior Minerals Management Service as Lessor to IP Petroleum Company Inc. The William G Helis Company L.L.C. and Houston Energy Inc. as Lessee being Serial Number OCSG 21534 covering All of Block 57 West Cameron Area OCS Leasing Map Louisiana Map No. 1 subject to; a.

Assignment of Overriding Royalty and Reversionary Interest in Oil and Gas Lease from IP Petroleum Company Inc. The William G Helis Company L.L.C. and Houston Energy Inc. to Louisiana Offshore Ventures II effective July 1 2000. b. Assignment of Record Title from IP Petroleum Company Inc. to Duke Energy Hydrocarbons LLC effective July 1 2000. Page 8 of 16 Ridgewood El Toro PA September 5 2007<it>PAGEgt; c. Assignment of Record Title from IP Petroleum Company Inc. to Pure Resources L.P. effective October 1 2000. d. Assignment of Record Title from The William G Helis Company L.L.C. to Pure Resources L.P. effective July 1 2001. e. Assignment of Record Title from Pure Resources L.P. to Houston Energy L.P. effective July 1 2001. f. Assignment of Record Title from Marlin Energy Offshore L.L.C. to Marlin Coastal L.L.C. effective April 1 2005. 2 Joint Operating Agreement between IP Petroleum Company Inc. as Operator and The William G Helis Company L.L.C. et al as NonOperators covering West Cameron Area Block 57 dated July 1 2000 as amended May 30 2001 Memorandum of Joint Operating Agreement to which has been recorded under File Number 267001 Conveyance Book 918 Mortgage Book 254 of the Official Public Records of Real Property of Cameron Parish Louisiana and under File Number 12267001 of the UCC records of the State of Louisiana and further amended by Amendment to Joint Operating Agreement Outer Continental ShelfGulf of Mexico dated December 17 2004. 3 MOPU Lease Agreement dated February 28 2003 between Union Oil of California and Blake Offshore L.L.C. as amended and extended. 4 Confidentiality Agreement and AML dated July 31 2007 between Pure Resources L.P. and Ridgewood Energy Corporation. 5 Counter Proposal to Ridgewoods Offer to Participate letter dated August 21 2007 as Parties agreed and accepted on August 21 2007. D. The Coowners represents to the best of its knowledge that with respect to that portion of the Lease the Coowners are contributing to the Contract Area that 1 The Coowners are in material compliance with the terms and conditions of the Lease. 2 The Lease is not subject to any royalty overriding royalty net profits interest or other similar burden on production except as referenced above or of public record and the lessors royalty. 3 There are no liens mortgages deeds of trust judgments or other encumbrances of any kind or nature on the Lease or the Coowners

working interest in the Lease. 4 There are no pending claims or litigation relative to the Lease. 5 There are no preferential purchase rights consents to assign or other restrictions on the Coowners ability to enter into this Agreement or they are waived by the execution of this PA by each of the Coowners. 6 There are no other owners of working interests in the Lease included within the Contract Area who are not a party to this PA.16. INTEGRATED AGREEMENT. Except as provided in Article 18 below this PA and the Exhibits attached hereto comprise the entire agreement between the Parties and supersedes all prior agreements and understandings relating to the subject matter hereof including the Counter Proposal to Ridgewoods Offer to Participate letter dated August 21 2007 between the Parties. Further excepting what is provided in Article 18 below in the event of any conflicts between the provosions of this PA and any other agreement including any operating Page 9 of 16 Ridgewood El Toro PA September 5 2007lt;PAGEgt; agreement or any agreement referenced herein as an exhibit or to be executed by the Parties hereafter the provisions of this PA shall control as between the Parties prior to any earning by Ridgewood.17. TAX PARTNERSHIP. The Parties understand and agree that the arrangement and undertakings evidenced by this PA taken together result in a partnership for purposes of Federal income taxation and for purposes of certain state income tax laws which incorporate or follow Federal income tax principles as to tax partnerships. Such partnership for tax purposes is hereinafter referred to as the Tax Partnership. For every other purpose of this PA however and notwithstanding any other provision of this PA express or implied to the contrary the Parties understand and agree that their legal relationship to each other under applicable state law with respect to all property subject to this PA is one of tenants in common or undivided interest owners or lesseesublessees and not one of partnership; that the liabilities of the Parties shall be several and not joint or collective; and that each Party shall be solely responsible for its own obligations. The Tax Partnership shall be governed by Exhibit D as attached to this PA. Except as provided in such Exhibit D the Parties agree not to elect to have the Tax Partnership excluded from the application of all or any part of Subchapter K of Chapter One of Subtitle A of the Internal Revenue Code of 1986 as amended the Code from any successor

provisions thereto under the Code or from any provisions of state income tax laws of substantially the same effect. The Parties agree that the election to be excluded from the application of Subchapter K of Chapter One of Subtitle A of the Code made in Article 20.1 of the OA is no longer operative for the El Toro Prospect Contract Area and that the provisions of Exhibit D will survive the termination of this PA.

18. AREA OF MUTUAL INTEREST. Notwithstanding any other agreement to the contrary and both prior to and after any Ridgewood earning of any interest in the Contract Area described herein in Article 1 the Confidentiality Agreement and AMI dated July 31 2007 between Pure Resources L.P. and Ridgewood Energy Corporation as referenced above in Article 15.C.3 shall survive and will control any AMI obligations between the Parties and the Parties further agree that the provisions of the referenced Confidentiality Agreement and AMI shall take precedence over the PA.

19. PRODUCTION HANDLING AGREEMENT. Whereas the Coowners may continue to utilize the MOPU under terms of agreement referenced above or install a permanent production facility to handle earned area production and others the Parties agree to handle and process Ridgewood production as set forth below. a It is recognized that the MOPU Lease requires at least 90 days notice of termination prior to March 3 2008. Pure for the Coowners will continue to utilize the MOPU to handle earned area production if any up until that time. Should it be deemed economic by the Coowners the Coowners may propose a permanent facility at the cost and risk of the Coowners solely and not Ridgewood or terminate the MOPU Lease as of March 3 2008 at the sole election of Pure with the consent of the Coowners. If warranted by the facts as of November 26 2007 and in the good faith opinion of Pure Pure for the Parties agrees to seek Page 10 of 16 Ridgewood El Toro PA September 5 2007It;PAGEgt; to negotiate a monthtomonth MOPU Lease extension or exercise its right to extend the MOPU Lease under its terms for an additional year. In the event of a dry hole under this PA the Coowners are freed from any obligations to Ridgewood for and Ridgewood releases any right to the MOPU Lease and its utilization. Pure and the Coowners make no representation and disclaim that any extension of the MOPU Lease beyond March 3 2008 is assured; and b In the event Ridgewood participates in a completion for production under this PA

and during any period Ridgewood production is handled by and at the MOPU Ridgewoods charges and expenses for the receipt handling and redelivery into a departing transportation pipeline at the MOPU host facility of its share of production will be calculated invoiced and paid on a throughput basis on its share of the allocated production from the West Cameron Block 57 OCSG 21534 No. 3 El Toro prospect well being the Initial Well or a Substitute Well at the Ridgewood after earning interest of 33.4917 in the production from and for such well as to all production handled at the MOPU under the Accounting Procedure attached to the Operating Agreement as and for facilities supplied by the operator. If Ridgewoods share of Contract Area production is handled by and at any permanent facility set by and the cost risk and expense of the Coowners Ridgewood will not be required to contribute capex towards such facility however Ridgewood shall enter into a mutually acceptable production handling agreement with the Coowners prior to first production handling into an permanent facility in which the following handling terms and fees shall be incorporated into the production handling agreement; 1 0.15 MCF gas 2 1.00bbl oil 3 1.00bbl water 4 0.05 per stage of compression 5 annual escalation of such production handling fees and any monthly minimum fee to adjust for inflation based on the Annual Wage Index Percentage Adjustment recommended each year by the Council of Petroleum Accountants Society COPAS 6 a monthly minimum fee of 5000.00 for any month the cumulative production handling fees are less than that dollar amount 7 an allocation of natural gas for fuel vent flare and loss borne in kind or alternatively at the cost of replacement if Ridgewood volumes are insufficient 8 a reservation by the CoOwners as owners of such permanent facility for renegotiation of the production handling fees for any unusual market condition materially increasing the costs bearing upon the materials or services provided under the PHA and 9 a unilateral indemnity and insurance obligation in favor of Coowners as processor for losses and claims arising from the receipt handling and redelivery of the production. Other generally accepted PHA terms shall be incorporated but as to financial matters Coowners shall be limited to the terms and fees above.20. REASSIGNMENT. Ridgewood agrees to reassign the interest assigned as per Article 5 above in the event that 1 Ridgewood has earned by reaching Objective or

expenditure of obligated funds but where no well drilled hereunder is mutually deemed as capable of producing in paying quantities from any portion of the Contract Area within 180 days from the lapse of the right to propose a Substitute Well under the PA or 2 at any time after production in paying quantities is established on and Ridgewood has earned in the Contract Area should there be a cessation of all production in paying quantities from the Contract Area Ridgewood will have one hundred eighty 180 days after cessation of production in which to commence additional Page 11 of 16 Ridgewood El Toro PA September 5 2007lt;PAGEgt; drilling completion or reworking operations and should operations fail to result in production in paying quantities attributable to any of the Contract Area the Coowners shall hold the right to elect that Ridgewood reassign to the Coowners holding an interest in the Lease and in proportion to that Lease ownership all of the Ridgewood interest in the Contract Area where Ridgewood retains all prior obligations until satisfied. This reassignment obligation due to cessation of operations or production as described above shall apply for so long as the Coowners their successors or assigns an interest in the Contract Area. In the event of any reassignment to the Coowners their successors or assigns the Contract Area or portion thereof shall be reassigned free from any overriding royalty lien encumbrance dedications or other burden placed thereon by Ridgewood. In addition reassignment shall not relieve Ridgewood of liability for obligations assumed which accrued prior to said reassignment including without limitation the obligation to plug and abandon any well in which Ridgewood participated in or on the Contract Area.21. GOVERNING LAW. This PA shall be governed by and in accordance with the laws of the State of Louisiana without regard to any choice of law or rule thereof that would direct the application of the laws of any other jurisdiction.22. INDIVIDUAL LIABILITY. The rights duties elections obligations and liabilities of the Parties shall be several and not joint or collective and nothing contained herein is intended to create nor shall it be construed as creating a partnership of any kind except the tax partnership specified in Article 17 above joint venture association or other business entity recognizable by law for any purpose. The Parties shall be individually responsible only for their own obligations except as herein described.23. NOTICES. All notices required

1 PETROLEUM AGREEMENT This Agreement is made on the Jf..day 1999 between the
Government of the Cooperative Republic of Guyana represented herein by the Minister hereinafter
referred to as the Minister or the Government as the case may be of the One Part and ESSO
EXPLORATION AND PRODUCTION GUYANA Ltd. hereinafter referred to as ESSO or Licensee a
Company incorporated in the Commonwealth of the Bahamas with its registered office at 233
Benmar Houston Texas 77060 United States of America and registered in Guyana under the

Companies Act 1991 with its registered address in Guyana situated at 80 Cowan Street Kingston Georgetown Guyana of the Other Part WHEREAS By virtue of the Petroleum Production Act Cap. 6505 petroleum existing in its natural condition in strata in Guyana is vested in the State; the Petroleum Exploration and Production Act No. 3 of 1986 hereinafter referred to as the Act and the Petroleum Exploration and Production Regulations 1986 hereinafter referred to as the Regulations make provision with respect to prospecting for and production of petroleum and for matters connected therewith. 2 The Guyana Geology and Mines Commission hereinafter referred to as GGMC a body corporate established under the Guyana Geology and Mines Commission Act No. 9 of 1979 has been seised with the responsibility inter alia of planning and securing the development exploitation and management of petroleum as defined in the Act in Guyana so as to ensure for the people of Guyana the maximum benefits therefrom and for doing such things in relation thereto; With respect to prospecting for and producing petroleum and for matters connected therewith the Act and Regulations subject to certain limitations and conditions contained therein authorize the Minister to grant petroleum prospecting licences and petroleum production licences; Section 10 of the Act authorises the Minister to enter into an agreement with any person with respect to inter alia the grant of a licence the conditions to be included in a licence the procedure to be followed by the Minister while exercising any discretion conferred upon her by or under the Act and the manner in which the discretion shall be exercised and any matter inental to or connected therewith; ESSO has submitted to the delegatee a proposal the Proposal for a Production Sharing Agreement and in respect of prospecting in a certain area offshore Guyana on terms and conditions specified in the Proposal. 3 GGMC has been authorised by the Minister to negotiate this Agreement subject to the provisions of the Act and Regulations and to the final written approval of the Minister of its and execution thereof and to assist in the administration and implementation thereof; ESSO will have or will acquire the financial resources the managerial technical and industrial competence and the experience to carry out petroleum operations and will provide an affiliate company guarantee in accordance with section 13 of the Act; Pursuant to the aforesaid recitals ESSO made an application

to the Minister for a petroleum prospecting licence in accordance with regulation 13 of the Regulations as hereinafter defined over the area described in Annex A and shown on the map attached as Annex B subject to the terms and conditions herein set forth and subject to the provisions of the Act and Regulations and ESSO has agreed by execution of this Agreement to accept the said licence on the said terms and conditions and provisions; NOW THEREFORE in consideration of the premises and covenants and conditions herein contained IT IS HEREBY AGREED between the Parties as follows

4 Article 1 Definitions

1.1 In this agreement unless the context otherwise accounting procedure means the procedure set out on Annex C; Act means the Petroleum exploration and Production Act 1986 No.3 of 1986; affiliated company in relation to the Contractor means a company or corporation i which is directly or indirectly controlled by the Contractor; or ii which directly or indirectly controls the Contractor; or which is directly or indirectly controlled by a company or corporation that also directly or indirectly controls the Contractor. For the purpose of this definition control means the right to exercise votes of fifty per cent 50 or more of all the voting shares; agreed interest rate means interest compounded daily $1365 \times \text{rate}$ at an annual rate equal to the average London Interbank Offer Rate LIBOR for six 6 months United States dollars quoted at 1100 hours 11.00 a.m. London time on the first business day of such month by the London Office of the Bank of America or as the Parties may agree plus three 3 percentage points; 5 Agreement means this Agreement and the Annexes hereto attached and made a part hereof; appraisal programme means a programme carried out following a discovery of petroleum in the contract area for the purpose of delineating the petroleum reservoir as defined in the Act to which that discovery relates in terms of thickness and lateral extent and estimating the quantity of recoverable petroleum therein prior to declaration of its commerciality; appraisal well means a well drilled for the purpose of an appraisal programme; Article means an Article of this Agreement; associated gas means all natural gas produced from any petroleum reservoir the predominant production of which is with crude oil and includes gascap gas which overlies and is in contact with crude oil; barrel means a quantity consisting of fortytwo 42 United States gallons liquid measure

measured at standard conditions of atmospheric pressure and temperature 14.7 lbssq. inch absolute or 1 Kgsq. cm. absolute and corrected to a temperature of sixty 60 degrees Fahrenheit or fifteen 15 degrees Celsius; calendar month or month means any of the twelve months of the Calendar Year; calendar quarter or quarter means a period of three 3 consecutive months beginning on the first day of January April July or October; 6 calendar year or year means a period of twelve 12 consecutive months commencing on January 1 and ending on the succeeding December 31 provided however that a year of a term of a licence shall be the period specified in section 2 2 b of the Act; commercial discovery means any discovery which the Contractor in its sole judgement considers economic to develop and produce pursuant to the terms of the Agreement; contract area means on the effective date the area described in Annex A and shown on the map in Annex B and the subject of the petroleum prospecting licence granted to the Contractor pursuant to Article 3; and thereafter any areas which at any particular time are subject to the petroleum prospecting licence or petroleum production licences granted to the Contractor under Article 8; contract costs means exploration costs development costs operating costs service costs general and administrative costs and annual overhead charge; Contractor means ESSO and includes its successors and assignees; cost oil has the meaning assigned in Article 11; 7 crude oil or oil means crude mineral oil asphalt ozokerite distillates condensates and all kinds of hydrocarbons and bitumens both in solid and liquid forms whether in their liquid state at the well head or field separator or liquified from produced natural gas by chemical treatment condensation or extraction; delivery point means the fob point of export in the Cooperative Republic of Guyana either offshore or onshore which shall be agreed to by the Contractor and the Minister; development costs means the expenditure so categorised in Annex C; development plan means the plan referred to in Article 8.4; development well means any well drilled as part of a development plan; discovery area means an area which is part of a prospecting area consisting of a discovery block or blocks in respect of which the Minister has been informed under section 30 of the Act; discovery block means that as defined in the Act; discovery of petroleum means that as defined in the Act; effective date means the date on which this Agreement

comes into force pursuant to Article 30; 8 expatriate employee means any employee other than a Guyanese citizen not permanently resident in Guyana who is engaged under a contract of service for the purpose of petroleum operations; exploration costs means those expenditures so categorized in Annex C exploration period means the initial period or the first renewal period or both; or the first renewal period; or the second renewal period or both; or the initial and all renewal periods referred to in Article 4.1 as the case may be; exploration well means a well drilled which is not a development well with the objective of exploring for petroleum on a geological entity be it of structural stratigraphic facies or pressure nature to a depth or stratigraphic level specified in the work programme for the exploration work programme; field means an area within the contract area consisting of a petroleum reservoir or multiple petroleum reservoirs all grouped on or related to the same individual geological structural features or stratigraphic conditions from which petroleum may be produced commercially; general and administrative costs and annual overhead charge means the expenditures so categorised in Annex C; geologic basement means any igneous or metamorphic rock or any stratum in and below which the geological structure or physical characteristics of the rock sequence do not have. 9 the properties necessary for the accumulation of petroleum in commercial quantities and which reflects the maximum depth at which any such accumulation can be reasonably expected; Government means the Government of the Cooperative Republic of Guyana and its ministries and agencies; GGMC means the Guyana Geology and Mines Commission established under section 3 of the Guyana Geological and Mines Commission Act 1979; licence means the petroleum prospecting licence or the petroleum production licence or; both as the context requires; lifting entitlement means the quantity of crude oil to which a Party shall be entitled in any given period pursuant to Article 11; Minister means the Minister assigned responsibility for petroleum or where there is no such Minister the President; natural gas or gas means all hydrocarbons which at standard conditions of temperature and pressure 60 degrees Fahrenheit or 15 degrees Celsius and 14.7 lbssq. in or 1 Kgsq. cm is in a gaseous state including but not limited to wet mineral gas dry mineral gas and casing 10 head gas all substances contained therein including helium which are

produced from an oil or gas well in their natural state or residue gas remaining after extraction of liquid crude oil from wet gas; nonassociated gas means natural gas or gas other than associated gas; operating costs means those costs so categorized in Annex C; operator shall have the meaning assigned to it in Article 2.2 a; Parties means the Government ESSO and includes its successors and assign and a Party shall mean any of the Parties; petroleum operations means prospecting operations or production operations as defined in the Act or both; petroleum prospecting licence means a licence issued by the Government under the Act and the Regulations to ESSO for carrying out prospecting operations and as set forth in Form C of the Schedule to the Regulations; petroleum production licence means a licence to be issued by the Government under the Act and the Regulations to ESSO for carrying out production operations and as set forth 11 in Form D of the Schedule to the Regulations; profit oil has the meaning assigned in Article 11; recoverable contract costs has the meaning assigned in Article 11; Regulations means the Petroleum Exploration and Production Regulations 1986; service costs means the expenditures so categorized in Annex C; subcontractor means any company or entity which provides services to the Contractor in connection with petroleum operations; third party sales means third party arms length sales transacted in foreign exchange; The words and expressions used in this Agreement but not defined herein shall if meanings have been assigned to them under the Act have for the purposes of this Agreement the same meanings.

1.4 The provision of this Agreement relating to the petroleum prospecting licence shall be read as part of the provisions of such licence.

13 Article 2 Agreement the Operator.

Liabilities and Indemnities Agreement. This Agreement constitutes an agreement made under section 10 of the Act consistent with the Act and the Regulations and is a production sharing agreement the objective of which is the exploration for development and production of petroleum in the contract area by the Contractor subject to the terms hereof and the provisions of the Act and Regulations under which the Contractor shall have an economic interest in the development of petroleum from the contract area. The operator. a ESSO shall be the operator charged with conducting the day to day activities of the Contractor under this Agreement. No transfer of

operatorship to another not comprising the Contractor shall take effect unless it has been approved by the Minister which approval shall not be unreasonably withheld b The Minister shall be notified of any change of operatorship to another Party comprising the Contractor c The Contractor shall provide the Minister with a memorandum summarizing the operating arrangements between the operator and the Contractor including any Party comprising the Contractor for the conduct of petroleum operations which will include inter alia a provision whereby the operator agrees to conduct the petroleum operations in accordance with this Agreement the licences and any applicable laws of Guyana. Liability. The duties obligations and liabilities of the Parties including an assignee of ESSO under this Agreement and under any licence issued pursuant hereto shall be joint and several. 14 Indemnity. The Contractor shall at all times keep Government indemnified against all actions claims and the demands that may be brought or made against Government by a third party by reason of negligence any act or omission by reckless disregard of harmful consequences which results in damage to a third party by the Contractor or the operator in the exercise or purported exercise of the rights of the Contractor under the Act or the licence provided however that nothing in this Article shall require the Contractor to give the said indemnity for any claim or demand in respect of petroleum taken by the Minister pursuant to Article 11 after title has passed to the Minister at the delivery point or in respect of assets acquired by the Minister pursuant to Article 20 from and after the date of acquisition. Liability by the Contractor to the Government for damages in respect of petroleum operations under this Agreement is limited to insurance required in accordance with Article a provided however that the Contractor shall not be liable to the Government for indirect punitive or consequential damages including but not limited to production or loss of profits. 15 Article 3 Petroleum Prospecting Licence and Guarantee 3.1 Petroleum Prospecting Licence. a On the date of this Agreement the Minister in accordance with the Act the Regulations and the terms of this Agreement shall grant to the Contractor the petroleum prospecting licence for an initial period of four 4 years commencing six 6 months from the effective date over the area described in Annex A and shown on the map attached as Annex B hereto. b Subject to Article 4 and the other terms of this

Agreement such petroleum prospecting licence may be renewed but not more than twice at the election of the Contractor for consecutive periods of three 3 years each in accordance with the provisions of the Act and the Regulations. Guarantee. The Contractor shall on or before the sixtieth 60th day prior to the commencement of data compilation review and reprocessing during year one 1 of phase one 1 of the initial period in accordance with Article 4.1 a i hereunder and thereafter no later than ninety 90 days after the commencement of all subsequent work commitment periods as specified in Article 4.1 provide an affiliate company guarantee or other form of guarantee acceptable to the Minister in the amount of ten percent 10 of the budget submitted by the Contractor pursuant to Article 7.1 for each specific work commitment period. Notwithstanding the foregoing if the Contractor exceeds its minimum work commitment in any phase specified in Article 4.1 the completion of such work commitment shall constitute a waiver of such proportion of the requirement of the guarantee by the Minister which is the equivalent of the excess work previously done but which is applicable to the subsequent work commitment phase. 16 If the guarantees are of affiliate company guarantees they shall be in lieu of and satisfy any obligation to provide a guarantee or bond or both pursuant to the Act Regulations or this Agreement on the part or on behalf of the Contractor 17 Article 4 Exploration Programme and Expenditure Obligation 4.1 Exploration Programme. Subject to the provisions of this Agreement in discharge of its obligations to carry out prospecting operations in the contract area the Contractor shall carry out the minimum work described herein during the periods into which prospecting operations are divided hereunder After the preparation period of six 6 months from the effective date the initial period of four 4 years shall commence. The initial period shall be divided into two 2 phases each phase consisting of two 2 years duration. i Phase One 2 years aa During phase one of the initial period the Contractor shall acquire 2150 kilometres of 2D seismic acquire potential field data and conduct radar imagery and geological and geophysical studies. bb At the end of phase one of the initial period the Contractor shall elect either to relinquish the contract area or to enter phase two of the initial period. 18 ii Phase Two 2 years aa Subject to Article 5 during phase two of the initial period the Contractor shall acquire 3000 kilometres of 2D seismics conduct a

seabottom geochemical sampling study and conduct geological and geophysical studies. bb At the end of the initial period of four 4 years the Contractor shall elect either to relinquish the entire contract area or to renew the petroleum prospecting licence for a three 3 year period. The first renewal period of three 3 years shall be divided into two 2 phases with phase one consisting of two 2 years duration and phase two consisting of one 1 year duration. i Phase One 2 years aa Subject to Article 5 during phase one of the first renewal period the Contractor shall possess the option to either acquire 1250 square kilometres of 3D seismic or alternatively drill one 1 exploration well to depth of 3600 metres subsea or to test the Tertiary age deep water reservoir section whichever depth is lesser. 19 bb At the end of phase one of the first renewal period the Contractor shall elect either to relinquish the contract area except for any discovery areas in respect of which the Minister is informed under section 30 of the Act and the area contained in any petroleum production licence or to enter phase two of the first renewal period. ii Phase Two 1 year aa Subject to Article 5 during phase two of the first renewal period the Contractor shall drill one 1 exploration well to depth of 3600 metres subsea or test the Tertiary age deepwater reservoir section which ever depth is lesser. bb At the end of the first renewal period of three 3 years the Contractor shall elect either to relinquish the contract area except for any discovery in respect of which the Minister is informed under section 30 of the Act and the area contained in any petroleum production licence or to renew the petroleum prospecting licence for a second three 3 year period. The second renewal period of three 3 years shall be divided into two 2 phases each phase consisting of one and onehalf 1 years in duration. 20 Phase One 1 years aa Subject to Article 5 during phase one of the second renewal period the Contractor shall drill one 1 exploration well to depth of 3600 metres subsea or to test the Tertiary age deepwater reservoir section which ever depth is lesser. bb At the end of phase one of the second renewal period the Contractor shall elect either to relinquish the contract area except for any discovery area in respect of which the Minister is informed under section 30 of the Act and the area contained in any petroleum production licence or to enter phase two of the second renewal period. Phase Two 1 years aa Subject to Article 5 during phase two of the second renewal period the

Contractor shall drill one 1 exploration well to depth of 3600 metres subsea or test the Tertiary age deepwater reservoir section which ever depth is lesser. 21 bb At the end of the second renewal period of three 3 years the Contractor shall relinquish the entire contract area except for any discovery area in respect of which the Minister is informed under section 30 of the Act the area contained in any petroleum production licence and any other portion of the contract area on which the Minister agrees to permit the Contractor to conduct further exploration activities. The minimum work commitment for a given phase or period referred to in Article 4.1 b and c may be undertaken in an earlier phase or period in whole or in part and in such a case the work commitment with respect to the subsequent period shall be deemed to be satisfied accordingly in whole or in part as the case may be. The Minister may extend any exploration period pursuant to a showing of good cause by the Contractor. No exploration well drilled by the Contractor shall be treated as discharging any obligation of the Contractor to drill such exploration well unless either it has been drilled to the depth or formation agreed with the Minister and specified in the annual work programme or before reaching such depth or formation 22 the Contractor has expended on such well and any substitute well drilled pursuant to Article 4 d below the amount for such work commitment in the budget submitted by the Contractor and approved by the Minister as specified in Article 7.1; or the geologic basement is encountered; or a discovery is made and the Minister is informed thereof; or insurmountable technical problems are encountered which in accordance with good oilfield practice make further drilling impractical provided that if the said well is abandoned owing to the said problems before reaching the geologic basement the Contractor shall drill a substitute well in the contract area to the same minimum depth as aforesaid unless otherwise agreed with the Minister or until the amount in Article 4 a less any amounts actually expended on the abandoned well is reached or one of the criteria listed at Articles 4 b to d is satisfied. Expenditure Obligation. The sum actually spent in fulfilment of the work obligation in a specific phase or period shall be deemed to have satisfied the Contractors minimum expenditure obligation for that phase or period. 23 Article 5 Relinquishment of Areas Prior to the end of phase one of the initial period of the petroleum

prospecting licence issued to the Contractor under Article 3.1 the Contractor shall relinquish at least twentyfive percent If prior to the end of the second phase of the initial period of the petroleum prospecting licence an application is made by the Contractor for renewal of the licence under section 24 1 of the Act the Contractor shall relinquish at the end of the initial period an area equal to at least twentyfive percent 25 of the original contract area less the exclusions provided for in Article 5.4 b and c. If prior to the end of the second phase of the first renewal period of the petroleum prospecting licence an application is made by the Contractor for a second renewal of the licence under section 241 of the Act the Contractor shall then relinquish at the end of this first renewal period an area equal to at least twenty five percent 25 of the original contract area less the exclusions provided for in Articles 5.4 b and c. The areas to be relinquished pursuant to Articles 5.1 5.2 and 5.3 shall comprise of blocks as defined in the Act; exclude any discovery area together with a reasonable area of protective ac 25 of the contract area less the exclusions provided for in Article 5.4 b and c. surrounding the discovery area; 24 exclude any production area; be selected by Contractor so that i the area relinquished shall comprise not more than three discrete areas having regard to any representations made by the Minister with respect to location shape and size; ii the blocks to be retained for and during the first and second phase of the initial period pursuant to Articles 5.1 and 5.2 shall constitute not more than two 2 discrete areas unless otherwise agreed to by the Minister. In the event that an area or areas cannot be identified for relinquishment in accordance with this Article without including in such area or areas in whole or in part a subsisting discovery area or production area or the Minister is of the opinion that the areas to be relinquished will not enable licensing separately or jointly with contiguous unlicensed areas then the Minister and Contractor shall consult together with a view to agreeing on the areas to be relinquished in the light of the circumstances then prevailing. If after sixty 60 days from receiving notice of the Contractors proposed relinquishments the Parties cannot agree on a proposed relinquishment the Parties shall refer the matter to a sole expert pursuant to Article 26. For the purpose of this Article a discovery area shall not include any discovery block which relates to a discovery in respect of which the Contractor has

notified the Minister that the discovery is not of potential commercial interest pursuant to section 31 of the Act unless such discovery block forms a part and only to that extent of another subsisting discovery area. 25 If a petroleum prospecting licence ceases to have effect pursuant to section 32 of the Act with respect to discovery blocks reduction in size of the contract area shall be treated as an advance relinquishment under this Article and consequently shall reduce the area next required to be relinquished. 5.8 Without prejudice to the obligations undertaken in Article 4 the Contractor may at any time during the period of the petroleum prospecting licence on giving the Minister no less than three 3 months notice in writing of its intention to do so relinquish any block or blocks in the contract area pursuant to section 28 of the Act and in accordance with Articles 5.4 and 5.5. Any such relinquishment shall count towards any subsequent mandatory relinquishments required under Articles 5.1 5.2 or 5.3 as the case may be. 26 Article 6 Delegation Cooperation between Contractor and Delegate The Minister may subject to the provisions of the Act or any other law delegate any public officer to exercise and perform any of his functions under this Agreement and anything done by the delegatee in pursuance of the delegation shall have the same validity and effect as it would have if done by the Minister. The delegatee shall perform inter alia the following functions to monitor the petroleum operations carried out by the Contractor; to review any proposed exploration work programme and budgets presented by Contractor under Article 7 and any appraisal programme presented by the Contractor under Article 8; to review any development plan submitted by the Contractor in connection with an application for a petroleum production licence pursuant to section 34 of the Act; to ensure the maintenance and availability for inspection of operating records and reports for petroleum operations in accordance with this Agreement; to ensure the accounting procedures specified in Annex C of this Agreement are followed; to ensure compliance with the provisions of this Agreement Act and Regulations. 27 The Contractor and the delegatee shall cooperate in good faith in the exercise of the Ministers functions delegated pursuant to this Article and the Contractor shall keep the delegatee advised of all activities taking place during the course of petroleum operations and shall provide the delegatee with all available information relating to

petroleum operations as the Minister or the delegatee may reasonably require. Towards this end the delegatee and the Contractor shall meet at regular intervals but at least once every six 6 months to review the progress and results of the petroleum operations and to discuss the work programme and other activities to be undertaken in the ensuing months. With respect to the matters to be reviewed pursuant to Article 6.2 should the delegatee wish to make any specific proposals or revisions thereto the delegatee shall so notify the Contractor specifying its reasons therefor; within reasonable time thereafter the Contractor and the delegatee shall meet and endeavour to agree on the proposals or revisions. The Contractor shall consider and take into account the proposals of the delegatee and shall attempt in good faith to reach agreement on such proposals. If the Contractor and the delegatee fail to agree within sixty 60 days of submission by the Contractor the exploration work programme and budget including as appropriate any minimum work programme to be undertaken pursuant to Article 4 submitted pursuant to Article 7 and the appraisal programme except in the case of gas to which the provision of Article 12 shall apply submitted pursuant to Article 8 revised in accordance with any amendments or additions thereto agreed by the delegatee and the Contractor shall be deemed adopted. 28 Any approvals required by the Minister or delegates shall not be unreasonably withheld. If the Contractor requests a requisite approval from the Minister or delegates such approval shall be deemed as granted if no response is provided within sixty 60 days of making the request. The Minister or the delegatee shall upon request either provide to the Contractor or assist the Contractor in obtaining the assistance required for Contractor to fulfill requirements of the contract including but not limited to the following approvals required from the Government agencies or provincial or local government for conducting hydrocarbon operations including approvals necessary to import goods and services free from duties and taxes; approvals for easements and right of way to enable Contractors to conduct operations; approval relating to security for field operations and personnel; permission for entry and exit visas and working permits for Contractors employees subcontractors and their dependents; supply of reports analyses samples geological geophysical and production data necessary to Contractor from areas inside and outside

the contract area; and 29 approvals to export hydrocarbons and use essential infrastructure necessary for the economic export of hydrocarbons at normal commercial terms. 30 Article 7 Annual Work Programme and Budget Within sixty 60 days after the effective date the Contractor shall prepare and submit to the Minister in detail a work programme and budget setting forth the prospecting operations which the Contractor proposes to carry out including as appropriate any minimum work obligations to be undertaken pursuant to Article 4 during the remaining portion of the calendar year. In subsequent years no less than one 1 month before the beginning of the calendar year the Contractor shall prepare and submit to the Minister a work programme and budget setting forth petroleum operations which the Contractor proposes to conduct during the upcoming calendar year. The Contractor may for good cause amend the details of any work programme or budget submitted to the Minister pursuant to Article 7.1 provided that a notice of the details of the reasons for the amendments is given to the Minister; b such amendments shall not have the effect of reducing the minimum work obligations undertaken under Article 4 without the prior consent in writing of the Minister; c any proposed amendment shall be subject to review pursuant to Article 6.

31 Article 8 Discovery and Development Where pursuant to section 30 of the Act notice has been given to the Minister of a discovery in the contract area the Contractor shall forthwith inform the Minister of the steps it proposes to take to satisfy the requirements of section 30 1 a iii of the Act. Where the Contractor pursuant to section 31 1 of the Act has informed the Minister that in its opinion the discovery is of potential commercial interest the Contractor shall as soon as practicable thereafter submit for the consideration of the Minister its proposals for an appraisal programme to meet the requirements of section 30 1 b of the Act. Where an appraisal programme has been adopted by the Contractor pursuant to Article 8.2 the Minister may on application by the Contractor pursuant to section 31 2 of the Act stating reasons therefor extend the period within which application may be made by the Contractor for a petroleum production licence. 8.4 Where the Contractor has made an application to the Minister for a petroleum production licence in respect of any part of the contract area in accordance with section 34 1 of the Act such application shall be

accompanied by the proposals required under section 34 3 of the Act hereinafter referred to as the development plan and shall satisfy the provisions of section 36 of the Act and the Regulations. The development plan shall provide that not later than six 6 months after the grant of the first petroleum production licence the Contractor shall in consultation with delegatee prepare and implement a programme for training and 32 employment of Guyanese nationals in each phase and level of petroleum operations and for the development of management and technical skills for the safe and efficient conduct of petroleum operations. Where the Minister considers that the application has not met the requirements of Article 8.4 he shall so notify the Contractor within sixty 60 days of receipt of the application and delegatee and Contractor shall meet to discuss the application with a view to ensuring that the requirements of Article 8.4 are met. In the event that the Parties are unable to agree on amendments to the application to meet such requirements within sixty 60 days from the date of aforesaid application or such longer period as the Parties shall agree or where the Minister fails to respond to or act on the aforesaid application within sixty 60 days the Contractor may refer the matter to a sole expert pursuant to Article 26 for determination within sixty 60 days of appointment of such expert or such other time period as may be agreed between the Contractor and the Minister. Where the Minister considers that the aforesaid application has met the requirements of Article 8.4 he shall within sixty 60 days of receipt thereof so notify to the Contractor. In such an event or where in the event of a dispute it is determined by the sole expert pursuant to Article 26 that the Contractor has made an application which meets the requirements of Article 8.4 provided the Contractor is not in default under this Agreement the Minister shall grant within sixty 60 days of such notification or determination as the case may be to Contractor a petroleum production licence in the Form D of the Schedule to the Regulations over the area for which the application has been made on terms and conditions 33 consistent with this Agreement and the Act and Regulations which will enable the Contractor to carry on petroleum operations in the production area in accordance with the development plan wherein the level of production set shall be consistent with the maximum efficient rate of production which conforms to sound reservoir engineering principles in accordance

with good international petroleum industry practice. While the Contractor holds a petroleum prospecting licence or has made an application pursuant to Article 8.4 and in accordance with section 34 1 of the Act the Minister shall not grant a petroleum production licence in respect of all or part of the contract area or area covered by such application whether on a geographical or geological basis to any third party. Where the Contractor pursuant to section 31 1 of the Act has served notice on the Minister that in its opinion a discovery made in the contract area is not of potential commercial interest the provisions of section 32 1 of the Act shall apply. The Contractor may apply for a renewal of a petroleum production licence for a maximum period of ten 10 years. The Minister shall not refuse to grant the renewal of a petroleum production licence under section 401 of the Act without first providing the Contractor a notice stating the grounds of the intended refusal; and a reasonable period to respond to or remedy the stated grounds for refusal. 34 Article 9 Records. Reports and Information; Confidentiality Records Reports and Information. a The Contractor shall at all times while this Agreement is in force maintain and submit to the Minister in accordance with the provisions of the Act and the Regulations the petroleum production licence and this Agreement full and accurate reports records returns and accounts of petroleum operations in the contract area. All data well logs maps magnetic tapes cuts of core and cutting samples and all other geological and geophysical information obtained by the Contractor in the course of carrying out petroleum operations hereunder and all geological technical financial and economic reports studies and analyses generated in relation thereto hereinafter referred to as petroleum data shall be submitted to the Minister in accordance with the Regulations. The Contractor may freely export for processing or laboratory examination or analysis samples or other original materials constituting petroleum data provided that samples equivalent in size and quality or where such material is capable of reproduction copies of equivalent quality have first been delivered to the Minister. d Petroleum data shall be the joint property of the Minister and the Contractor but shall become the sole property of the Minister with respect to any area which ceases to be part of the contract area whether as result of relinquishment or expiry surrender or termination of a licence or otherwise in

accordance with the Act from the date on which such area ceases to be part of the contract area. e The Minister through duly appointed representatives upon providing the Contractor with at least seven 7 days notice shall be entitled to observe the petroleum operations conducted by the Contractor at his sole cost and expense and at all reasonable times to inspect all assets records and data kept by the Contractor relating to such petroleum 35 operations. In the exercise of such rights under this paragraph the Minister shall not unduly interfere with the Contractors petroleum operations under this Agreement. f Nothing in this Article shall be construed as requiring the Contractor or any of the Parties comprising the Contractor to disclose any of its proprietary technology or that of its affiliated companies which is not acquired in the course of petroleum operations under this Agreement. Confidentiality. a All petroleum data information and reports obtained or prepared by the Contractor hereunder shall so long as they relate to any part of the contract area be treated as confidential and each of the Parties undertakes not to publish reproduce or otherwise deal with such petroleum data or to disclose the same or the thereof to any other person without the consent in writing of the other Parties such consent not to be unreasonably withheld provided however that subject to Article 9.2 b this Article shall not i prevent disclosure by the Contractor aa to an affiliated company for the purpose of carrying out petroleum operations; bb to consultants professional advisers data processing centres laboratories and subcontractors in connection with the petroleum operations; 36 cc to a bank or other financial institution in connection with financing for petroleum operations; dd to the extent required by any applicable law or the regulations of any stock exchange upon which the shares of the Contractor or an affiliated company are quoted; ee to bona fide prospective assignees or transferees of an interest hereunder of the Contractor or in connection with a sale of stock of the Contractor or an affiliated company thereof; or ff in connection with data trades; gg of data information and reports already known to the Contractor prior to the effective date; hh of data information and reports acquired independently from a third party that represents that it has the right to disseminate such data at the time it is acquired by the Contractor; prevent disclosure pursuant to section 4 of the Act provided however that neither the

Minister nor Contractor shall disclose petroleum data relating to 37 any area subject to a licence to a competitor of the Contractor without the prior written consent of the other Party; or be construed as imposing on any Party any obligation hereunder with respect to any petroleum data information or reports which are without disclosure by such Party generally known to the public. Any petroleum data information or reports disclosed by the Contractor pursuant to this Article shall be disclosed on terms which ensure that the data information or reports aforesaid are treated as confidential by the recipient except for disclosures made pursuant to Article 9.2 a i dd and prompt notice of all disclosures shall be given to the Minister. All petroleum data which becomes the sole property of the Minister pursuant to Article 9.1 d shall continue to be treated as confidential by the Contractor for a period of one 1 year from the date on which it became the sole property of the Minister but may be used by the Contractor in connection with data trades with the prior written consent of the Minister such consent not to be unreasonably withheld subject however to Article 9.2 b. Where a licence ceases to be in force with respect to any area the Contractor shall deliver to the Minister originals of all petroleum data and other information relating to such area pursuant to regulation 26 of the Regulations provided however that on d 38 application duly made to him pursuant to regulation 28 of the Regulations the Minister shall permit the Contractor to retain copies of petroleum data and information relating to the contract area subject to Article 9.2 b. e Notwithstanding the provisions of Article 9.1 d all Contractor proprietary technology except technology for which the cost of development has been approved as recoverable contract cost under this Agreement shall remain the property of the Contractor. 39 Article 10 Annual Licence Rental Charge The Contractor shall on the effective date of the petroleum prospecting licence or the date of grant of any petroleum production licence as the case may be and thereafter so long as the said licence remains in force on each anniversary date thereof pay without demand to the Government an annual licence rental charge in respect of the contract area as provided below for the entire exploration period and such payments shall apply to those areas remaining after taking into account any relinquishments pursuant to Article 5 Period Initial Initial First Renewal First Renewal Second Renewal Second

Renewal Phase 1 Rental Fee U. 120000. 2 1 2 1 2 180000. 240000. 240000. 240 000. 240000. 40

Article 11 Cost Recovery and Production Sharing Subject to the terms and conditions of this Agreement the Contractor shall bear and pay all contract costs incurred in carrying out petroleum operations and shall recover contract costs only from cost oil as herein provided. All recoverable contract costs incurred by the Contractor shall subject to the terms and conditions of any agreement relating to NonAssociated gas made pursuant to Article 12 be recovered from the value determined in accordance with Article 13 of a volume of crude oil hereinafter referred to as cost oil produced and sold from the contract area and limited in any month to an amount which equals seventyfive percent 75 of the total production from the contract area for such month excluding any crude oil used in petroleum operations or which is lost. Recoverable contract costs means such costs as the Contractor is permitted to recover as from the date they have been incurred pursuant to the provisions of Annex C. To the extent that in any month recoverable contract costs exceed the value of cost oil determined in accordance with Article 13 the unrecovered amount shall be carried forward and subject to the limitation stipulated in Article 11.2 shall be recoverable in the immediately succeeding month and to the extent not then recovered in the subsequent month or months. 41 The balance of crude oil available in any month after recoverable contract costs have been satisfied to the extent aforesaid hereinafter referred to as profit oil shall be shared between the Government and the Contractor for each field in the following proportions Contractor fifty percent 50 and Minister fifty percent 50. The quantity of cost oil actually utilized in satisfying the recoverable contract costs may be allocated by the Contractor to production from any field or fields. Subject to the provision of Article 14 the profit oil shall be shared between the Government and Contractor on a monthly basis according to their respective entitlements as specified in Article 11.4. To the extent that the actual quantities and costs required to determine cost oil and profit oil for the month in question are not known crude oil sharing shall be calculated on an interim basis each month taking the following factors into account unrecovered recoverable contract cost; estimated current recoverable contract cost by reference to the agreed work programme and budget supplemented by any other relevant

documents or information which are accepted by Contractor and Minister as being reliable indicators of the actual position for the month in question; estimated production for the month in question; and 42 crude oil price from the previous month calculated. Retroactive adjustments shall be made to the crude oil entitlements and shall be agreed with the Minister based on recalculations utilizing actual quantities of crude oil produced and saved and recoverable contract costs. Any revised entitlements shall be made subject to any applicable lifting agreements as soon as practicable after such elements have definitely been determined. The Contractor shall have the right to use in any petroleum operations as much of the production as may reasonably be required by it therefor and the quantities so used or lost shall be excluded from any calculations of cost oil and profit oil entitlement.

43 Article 12 Associated and Non Associated Gas. 12.1 Associated Gas. a The associated gas produced from any oil field within the contract area shall be with priority used for the purposes related to the operations of production and production enhancement of oil fields such as gas injection gas lifting and power generation. b Based on the principle of full utilization of the associated gas and with no impediment to normal production of crude oil a plan of utilization of the associated gas shall be included in the development plan of each oil field. If there is any excess associated gas in the oil field after utilization pursuant to Article 12.1 a the Contractor shall carry out a feasibility study regarding the utilization of such excess associated gas of such oil field. Such feasibility study if carried out before submission of the development plan of an oil field shall be included in the development plan. In the event that the Contractor conducts a further feasibility study of the utilization of the excess associated gas of such oil field such further feasibility study shall be submitted to the GGMC for review and discussion. If the excess associated gas in any oil field is utilized the construction of facilities for such utilization and the production of excess associated gas shall be carried out while a petroleum production licence continues in force. c If the Parties agree that the excess associated gas of an oil field has no commercial value then such gas shall be disposed of by the Contractor provided that there is no impediment to normal production of the crude oil in the most economic manner consistent with good international petroleum industry

practice including flaring pursuant to regulation 6.3 of the Regulations. d If either Party to the Agreement considers unilaterally that the excess associated gas of an oil field has commercial value such associated gas may be utilized by that Party provided there is no impediment to normal production of crude oil. All handling from the point of separation of crude oil shall be at the 45 sole risk and expense of the Party utilizing such associated gas and will not affect the amount of cost oil and profit oil due to the other Party to the Agreement. e If the Parties agree that excess associated gas of an oil field has commercial value Contractor shall be entitled but not required to make further investment to utilize such excess associated gas subject to terms at least as attractive as those established for crude oil in Article 11 including but not limited to cost recovery for such further investment. If Contractor believes improved terms are necessary the Parties shall carry out friendly negotiations in a timely manner to find a new solution to the utilization of the said excess associated gas and reach an agreement in writing. f Expenses incurred by the Contractor in the production and use of the associated gas of an oil field as stipulated in Article 12.1 and those incurred in carrying out any feasibility study on the utilization of the excess associated gas shall be charged to the development cost of the oil field. The time period between the notice of discovery provided for by section 311 of the Act and the application for grant of a petroleum production licence may be extended pursuant to section 312 of the Act if necessary to provide reasonable time to conduct an appraisal programme and to develop a gas market.

12.2 Non Associated Gas. a When the Contractor in accordance with Article 8.2 has informed the Minister of any non associated gas discovery within the contract area that is of potential commercial interest the Parties shall promptly carry out friendly negotiations to reach agreement on the additional terms necessary for commercial development and production of the discovery. The agreement which shall form an annex to this Agreement shall be based on and include the following principles 45 The petroleum production licence shall be extended as may be required to allow for commitment of the reserves for the life of the gas project and consistent with the terms for marketing that may be negotiated with the buyers of the gas. The cost recovery rate and the Contractors profit gas share shall be negotiated by the

Parties taking into consideration the actual conditions in the gas field and the markets for such gas so that the Contractor shall be able to obtain an economic benefit acceptable to the Contractor. If the Parties fail to reach an agreement within three 3 years after the date of commencement of negotiations the Government shall have the right unilaterally to put up the gas field for bidding but shall keep as confidential the substance of any previous and future negotiations undertaken with Contractor. In such case Contractor shall be entitled to participate in the bidding. b Following the signature of the agreement herein the Contractor shall work out an appraisal programme for the discovered gas field according to the terms and conditions determined in the said agreement and submit it to the GGMC for review pursuant to Article 6.4. The Contractor shall carry out the appraisal programme 46 which was reviewed and agreed upon with GGMC. The expenses incurred in carrying out the said appraisal programme by the Contractor shall be charged to the exploration costs of the contract area. After completion of the appraisal programme of a gas field the Contractor shall submit a report on the appraisal programme to GGMC for its review and discussion. If Contractor dees that a gas field is non commercial the corresponding area covered by the gas field may be retained in the contract area during the exploration period. However at the expiration of the exploration period if Contractor still considers the said gas field non commercial the area covered by the said gas field shall be excluded from the contract area. With respect to a gas field which has potential commercial value but has not been developed because the market and consuming facilities are not available the period during which the gas field is retained in the contract area shall be extended at the request of the Contractor. Such extended period however shall not be more than five 5 consecutive contract years after the date of expiration of the exploration period hereunder. In case the time necessary for the market to develop and for the consuming facilities to be constructed for the gas field exceeds such extended period Contractor shall then have the right to request from the Minister a grant of further extended period. Prior to expiration of the exploration period if the Parties agree that any commercial gas field needs to be reappraised because of some favourable factors the Contractor shall work out and submit a new evaluation report on the gas field and submit

it to 47 the GGMC for its review pursuant to Article 6.5 and any expenses incurred in doing so shall be cost recoverable. D If the Contractor retains a gas field beyond the expiration of the exploration period pursuant to Article 12.2 c the Contractor shall pay to the Minister at the commencement of each year of the retention period an annual rental to be arrived at through friendly negotiations but which shall be no less than two hundred thousand United States Dollars U.S.200000.. The holding fee shall be applied on a pro rata daily basis in the event the Contractor relinquishes the gas field or declares such gas discovery to be a commercial discovery prior to the end of the such year. 12.3 General Conditions Applicable to Natural Gas. a The Contractor shall have the primary responsibility for marketing all the available natural gas from the contract area and for negotiating for the sale thereof on a joint basis at fair market prices and terms common to both the Minister and the Contractor. The Contractor will pursue markets both within and outside Guyana and seek to market natural gas to the highest realization outlets after deduction of transportation costs. The Contractor will seek to recognize natural gas potential value at the international value of alternative fuels in the end user market of the buyers. b The Contractor shall have the right but not the obligation to process natural gas for conversion to liquids chemicals or similar gas utilization projects and Contractor shall have the right to dispose of the liquids or products therefrom. The Contractor shall have the right to process natural gas for recovery of the liquids contained therein and such liquids sold shall be treated as crude oil. The Parties shall carry out friendly negotiations to reach 48 an agreement on the valuation of such liquids when the Contractor submits a proposal for such development. The agreement shall be based on principles for valuation of crude oil provided in Article 13 taking into consideration the specific components of the liquids recovered from the natural gas. c The Contractor shall have the right to use natural gas both associated gas and nonassociated gas as may be required for oil field and gas field operations including the right to reinject for pressure maintenance and enhanced recovery without charge fee or royalty. Hi 49 Article 13 Valuation of Crude Oil 13.1 For the purpose of this Agreement the value of a barrel of crude oil shall be the average fair market price determined as follows as soon as practicable after the end of each

calendar month in which crude oil has been produced and sold from any field pursuant to this Agreement an average price in terms of United States dollars per barrel fob delivery point for each field shall be determined in respect of production during that calendar month. It is understood that production from different fields may be of different quality and that separate average prices may accordingly be determined for any calendar month in respect of production from each field; the prices aforesaid shall be determined as follows in the event that fifty percent 50 or more of the total volume of sales by the Contractor during the calendar month of crude oil of a given quality produced hereunder from a field were third party sales as hereinafter defined the price of all crude oil from such field of that quality shall be deemed to be the simple arithmetic average price actually realised calculated by dividing the total receipts from all such sales calculated fob the delivery point by the total number of barrels of crude oil sold from such field in such sales; 50 in the event that less than fifty percent 50 of the total volume of sales by the Contractor during the calendar month of crude oil of a given quality produced hereunder from a field were third party sales the price of all crude oil from such field of that quality will be determined by the arithmetic average of aa the simple arithmetic average price actually realised in the third party sales during the calendar month of such crude oil produced hereunder if any calculated by dividing the total receipts from all such sales calculated fob the delivery point by the total number of barrels of crude oil sold in such sales from such field; and bb the simple arithmetic average price per barrel at which one or more crude oils of similar quality to the crude oil are being sold such price being determined by calculating the average for the month in which production takes place of the mean of the high and low fob price or prices for each day of those crude oils as quoted in Platts Crude Oil Market Wire daily publication. In the event that Platts ceases to be published or is not published for a period of thirty 30 consecutive days then the Parties shall agree on an appropriate alternative publication. 51 In determining the final price account shall be taken of any differences between the crude oil and the crude oils quoted in Platts for quality API gravity sulphur pour point product yield as well as differences in quantity delivery time payment and other contract terms to the extent known. Allowance will also be made to take account

of the market area into which the crude oil is sold should it be different from the area used for Platts. The selected crude oils will be agreed between Contractor and the Minister in advance for each calendar year and in making the selection preference will be given to crude oils of similar quality to crude oil from the relevant field. The arithmetic average aforesaid will be determined by the percentage volume of total sales of crude oil by Contractor that are and that are not as the case may be third party sales during the calendar month in question. all such prices will be adjusted to fob delivery point. for the purposes of this Article third party sales of crude oil made by the Contractor shall include any third party sales made by the Contractor on the Ministers behalf pursuant to Article 14 but shall exclude 52 aa sales whether direct or indirect through brokers or otherwise of any seller to any affiliated company of such seller unless at demonstrably arms length price; bb crude oil exchanges barter deals or restricted or distress transactions or any crude oil transaction which is motivated in whole or in part by considerations other than the usual economic incentives for commercial arms length crude oil sales; cc Government to government sales. The Contractor shall be responsible for determining the relevant prices in accordance with this Article. The calculation basis of calculation and the price arrived at shall be supplied to the Minister and shall be subject to agreement by the Minister before it is finally determined. Pending final determination the last established average crude oil price shall be used. During the first calendar year of production from the contract area the Contractor and the Minister will meet in order to establish a provisional selection of the crude oils and an appropriate mechanism for the purposes of giving effect to Article 13.1 bii. This selection will be reviewed annually and modified if necessary. In the event of any difference or dispute between the Contractor and the Minister concerning selection of the crude oils the calculation or the basis of calculation of the prices and the prices arrived at or generally about the manner in which the prices are determined according to the provisions of this Article the matter or matters in issue shall finally be resolved by a sole expert appointed pursuant to Article 26.3. 53 For the purposes of this Article in determining the quality of a crude oil regard shall be given to all relevant characteristics including but not limited to gravity sulphur and metal pour point and product

yield. 54 Article 14 Disposal of Production Each of the Parties shall have the right to take in kind at the delivery point and separately dispose of its share of the total quantities of production available under this Agreement. The Contractor shall have the right to use as much production as may be needed in any petroleum operations within the contract area and also within the transportation and terminal system. In the event of third party usage of the transportation terminal systems the quantities so used or lost outside the contract area shall be proportionate to aggregate use of that transportation and terminal system. All quantities so used or lost shall be excluded from any calculations of entitlement pursuant to Article 11. The quantity of production to which the Minister is entitled pursuant to Article 11 shall be measured and delivered to the Minister at the delivery point and the Minister shall be responsible for all costs and risks associated with the Ministers lifting entitlement from and after the delivery point. Within twelve 12 months after the Ministers approval of a development plan or within a later period as may be agreed between the Parties but in any event no longer than three 3 months before the first scheduled lifting of crude oil the Contractor shall propose to the Minister offtake procedures to govern the method whereby the Parties will nominate and lift their respective shares of crude oil. The details of such procedures shall be discussed and agreed upon between Minister and Contractor. The major principles of such procedures shall include the following lifting shall be carried out so as to avoid interference with petroleum operations.

55 in the event that any Party shall find itself unable for any reason to lift such quantities of crude oil as are to be lifted in accordance with procedures it shall forthwith notify the other Parties to that effect. Such procedures shall include such deterrents as the Parties may agree to prevent a Party from delaying the lifting of any quantities of crude oil not so lifted to a later period; and in the absence of any agreement to the contrary between the Parties the Contractor and the Minister shall share in each type of grade of crude oil in proportion to their respective lifting entitlement. The Contractor shall if requested by the Minister use reasonable efforts to market abroad on competitive terms all or part of the Ministers lifting entitlement subject to payment by Minister of costs normally borne by a seller in such transactions and on other terms to be agreed including an agreed

marketing fee in respect thereof. The Minister shall provide the Contractor with at least six 6 months notice before changing between receiving payment in kind as provided under Article 14.1 and seeking the Contractor to market the Ministers lifting entitlement under this Article. Subject to the provisions of Article 17 hereof the Contractor shall have the right to export at the export point chosen for this purpose all petroleum to which it is entitled under this Agreement free of any duty tax or other financial impost and to receive and retain abroad all proceeds from the sale of such petroleum.

14.5 All Guyanas export laws regulations orders directives and notifications of the Minister will apply as these relate to export destinations. The Contractor agrees to abide by the said laws regulations orders directives and notifications which shall also apply to its affiliated companies engaged in petroleum operations in Guyana. In connection with the above the Minister shall concurrently with the effective date and thereafter from time to time advise the Contractor of these destinations to which exports of crude oil shall be contrary to the said regulations orders directives and notifications. The Contractor shall be free always to sell or deliver or sell and deliver petroleum to third parties in the United States of America. Contractors terms of sale to third parties shall contain a stipulation that the regulations orders directives and notifications as set forth in this Article shall apply.

57 Article 15 Taxation and Royalty 15.1 Except as provided in Article 15.2 and 15.8 and except as otherwise set forth in this Article 15.1 no tax duty fee charge or other impost shall be levied at the date hereof or from time to time thereafter on the Contractor in respect of income derived from petroleum operations or in respect of any property held or thing done for any purpose authorised or contemplated hereunder other than a subject to the provisions of Article 21 import duties at the rates specified from time to time in the Customs Act Cap. 8201; b taxes duties fees or other imposts for specific services rendered on request or to the public or commercial enterprises generally; c rents due to Government in respect of any land rights granted or assigned to the Contractor; d annual licence rental charges due under Article 10; e subject to Article 15.7 local government rates or taxes being rates or taxes not calculated by reference to income not in excess of those generally applicable in Guyana; and 58 f stamp duties registration fees licence fees and

any other tax duty fee or other impost of a minor nature. 15.2 The Contractor affiliated companies subcontractors and individuals who are expatriates shall be subject to the income tax laws of Guyana including the Income Tax Act of Guyana Cap. 8101 and the Corporation Tax Act of Guyana Cap. 8103 and shall separately comply with the requirements of those laws in particular with respect to filing returns assessment of tax and keeping and showing of books and records. 15.3 The taxable income of the Contractor arising in each year of assessment under this Agreement for purposes of the income tax laws of Guyana including the Income Tax Act and the Corporation Tax Act referred to in Article 15.2 shall include the amounts of Contractors income tax and corporation tax paid pursuant to Article 15.4. Based on the thirtyfive percent 35 income tax rate the amount grossup that shall be included as the additional taxable income of the Contractor shall be the amount resulting from multiplying the Contractors taxable income based on fifty percent 50 of the production subject to the profit share computed without regard to any grossup by a factor of 0.53846 where such grossup factor is computed as follows The grossup factor equals Applicable Guyana tax rate Applicable Guyana tax rate or; 0.35 10.35 59 The above can be illustrated by the following example. Assuming the taxable income of the Contractor before application of Article 15.3 equals 1000 the Contractors grossedup taxable income under Article 15.3 shall be equal to 1538.46. That is 1000 plus the Contractors taxable income multiplied by the grossup factor of 0.53846 or 538.46. Likewise the Contractors tax burden under the income Tax Act and the Corporate Tax Act referred to in Article 15.2 which shall be payable by the Minister shall be equal to 538.46 or 35 of the Contractors grossedup taxable income i.e. 1538.46×0.35 . 15.4 The Minister hereby agrees a that the appropriate portion of the Governments share of profit oil delivered in accordance with provisions of this Agreement shall be accepted by the Minister as payment in full by the Contractor of Contractors share of each of the following levies whatsoever the applicable rate of such levies may be and in respect of Article 15 .4 a ii which the Minister shall then pay on behalf of the Contractor to the Commissioner of Inland Revenue i. the share of royalty payable by Contractor pursuant to Article 15.6; ii. the Contractors share of the income taxes imposed by the laws of Guyana including but not

limited to income tax imposed by the Income Tax Act and corporation tax imposed by the Corporation Tax Act and payable at the date hereof or from time to time thereafter and any other levy or charge on 60 income or profits which may become payable from time to time under any laws acts statutes regulations or orders by the Government; and iii. any other similar charge imposed and payable in respect of petroleum operations at the date hereof or from time to time hereafter except charges of the type specified in Article 15.1 ad. 15.5 The Contractor shall provide the Minister with the Contractors income tax returns who shall submit same on his behalf to the Commissioner of Inland Revenue. On receipt of notice of assessment issued by the Commissioner of Inland Revenue the Minister shall pay corporation tax on behalf of the Contractor as provided under Article 15.4 aii and shall be entitled to receive on behalf of the Contractor from the Commissioner of Inland Revenue properly prepared receipts required under this Article 15.5. Within one hundred and eighty 180 days following the end of each year of assessment the Minister shall furnish to Contractor proper tax certificates in the Contractors name issued by the Commissioner of Inland Revenue acting in accordance with the Income Tax Act and the Corporation Tax Act respectively. Such certificates shall state the amount of tax paid and other particulars customary for such certificates.

15.6 The Governments share of profit oil specified in Article 11 includes royalty payable by the Contractor at the rate of one percent 1 of crude oil produced and sold and delivery to the Minister pursuant to Article 14 of his share of profit oil equivalent to royalty shall constitute payment of such royalty in kind. Within one hundred and eighty 180 days following the 61 end of each year of assessment receipts evidencing payment of Contractors royalty shall be furnished by the Minister to the Contractor stating the amount and other particulars customary for such receipts.

15.7 Subject to the conditions of section 49 of the Act the Minister may remit in whole or in part or defer payment of any royalties payable by Contractor.

15.8 Nothing in this Agreement shall be construed to place an obligation on the Government to file a tax return declaring its share of production or profit share or to regard such profit share as income within the meaning of section 5 of the Income Tax Act Cap. 8101 or section 4 of the Corporation Tax Act Cap. 8103.

15.9 The Minister hereby agrees that the

Contractor shall be exempt from the Property Tax Act pursuant to section 51 of the Act and any other act which amends or replaces in part or in whole the Property Tax Act. 15.10 The Minister agrees that for the duration of the exploration period and for any area within the contract area where exploration activity is in progress the provisions of section 10 b of the Corporation Tax Act Cap. 8103 shall not apply to the Contractor with respect to payments made any affiliated companies or subcontractors. The affiliated companies and subcontractors shall however be subject to withholding tax in accordance with the provisions of section 39 8 of the Income Tax Act Cap. 8101 with respect to profits remitted or deemed remitted to its head office. 62 15.11 The expatriate employees of the Contractor affiliate companies and the subcontractor shall be liable to pay personal income tax in Guyana on income earned in Guyana. Guyana represented herein by the Minister shall cause the proper authorities to issue appropriate tax certificates to expatriate employees when required. If an expatriate employee is liable to pay income tax in Guyana on income earned in Guyana he shall pay such income tax at a rate equal to the lesser of i the rate of income tax currently prevailing for individuals under the Income Tax Act Cap. 8101 being a maximum effective rate of 26.67 and ii the rate of tax prevailing at the relevant time. Likewise the amount of tax payable shall be calculated in accordance with the rules set forth in the Income Tax Act Cap.8101 as they apply as of the effective date of this Agreement to the exclusion of such rules less favourable to the taxpayer as may be enacted in the future. However should any subsequent amendment to the Income Tax Act result in the enactment of any rule or rules regarding the calculation of taxes payable which are more favourable to the taxpayer than that which is or those which are in effect on the effective date of this Agreement the taxpayer shall be entitled to invoke such amended rule or rules for the purpose of calculating his income tax liability hereunder. 15.12 An order shall be made giving effect to the provisions of this Article in statutory form and language as specified in section 51 of the Act. 63

Article 16 Contracts and Assignments 16.1 The Contractor shall upon request provide to the Minister copies of a contracts with respect to the sale or disposal of petroleum including invoices issued thereunder; b any deed of assignment of an interest of the Contractor under this Agreement

pursuant to Article 25 c any instrument by which the Contractor pledges mortgages encumbers or hypothecates its interest under this Agreement or the contract area. 64 Article 17 Domestic SUDDIV

Obligation 17.1 If the requirements of the domestic market in Guyana exceed the Ministers total entitlement from all crude oil production in Guyana then the Contractor if requested by the Minister shall sell crude oil in Guyana on the basis of the ratio which the Contractors lifting entitlement bears to the sum of Contractors lifting entitlement plus the total entitlement of all other producers in Guyana subject to Article 17.3. The volume of crude oil which the Contractor shall be required to sell under this Article shall not exceed the Contractors share of profit oil. The Minister shall give the Contractor notice on or prior to April 1 of the year preceding the calendar year in which the Government will have the said requirement and the term of the supply shall be on a calendar year basis unless otherwise agreed. 17.2 The Contractor shall in any year have a right to supply out of Contractor lifting entitlement the proportion of the crude oil requirements of Guyana that the quantity produced from the contract area bears to the total production at the time in Guyana to the extent that such requirement is not satisfied from any contract entered into prior to the date of commencement of production from the contract area. For the purpose of this paragraph the term the crude oil requirements of Guyana means the amount by which in any year domestic demand exceeds the Ministers total entitlement to all crude oil produced in Guyana. The Contractor shall give the Minister notice on or prior to April 1 of the calendar year preceding the calendar year in respect of which Contractor wishes to exercise the aforesaid right and the term of the supply shall be on a calendar year basis unless otherwise agreed. Notwithstanding the foregoing the Contractor shall have the right to supply the total amount calculated pursuant to the foregoing provisions. 65 17.3 The price payable for the sale of crude oil pursuant to this Article shall be paid in United States dollars or other currency as may be agreed at a place specified by the Contractor within thirty 30 days of receipt of the Contractors invoice by the Minister and shall be determined in accordance with Article 13. All sums overdue shall bear interest at the agreed interest rate 17.4 Any sale of crude oil as provided for in Article 17.1 and 17.2 shall occur at the delivery point or such other point as the

Minister and the Contractor may mutually agree. 17.5 All terms and conditions for the sale of crude oil pursuant to this Article shall be specified in a contract of sale entered into between the Minister and the Contractor.

Article 18 Guyana Resources 66

18.1 In the conduct of petroleum operations pursuant to this Agreement the Contractor shall give preference to a the purchase of Guyanese goods and materials provided that such goods and materials are available on a timely basis of the quality and in the quantity required by the Contractor at competitive prices; and b the employment of Guyanese subcontractors in so far as they satisfy the Contractors financial and technical requirements and meet the requirements of Article 18.1a.

18.2 The Contractor shall establish appropriate tender procedures for the acquisition of goods materials and services which shall ensure that Guyanese suppliers and subcontractors are given adequate opportunity to compete for the supply of goods and services.

18.3 Within ninety 90 days after the end of each calendar year the Contractor shall provide the Minister with a report outlining its achievements in utilizing Guyanese resources during that calendar year.

Article 19 Employment and Training 67

19.1 Subject to the requirements of any law relating to immigration the Government shall provide necessary work permits and other approvals required by the Contractor for employment of expatriate employees in Guyana for the purpose of petroleum operations.

19.2 Without prejudice to the right of the Contractor to select employees and determine the number thereof in the conduct of petroleum operations the Contractor shall to the maximum extent practicable employ and encourage subcontractors to employ Guyanese citizens having appropriate qualifications and experience.

19.3 During each year of the term of the petroleum prospecting licence or any renewal thereof the Contractor shall make available to the delegatee the following amounts

Period	Initial	Initial First	Renewal	First Renewal	Second Renewal	Second Renewal	Renewal Phase
1	2	1	2	1	2	1	2

for one or more of the following purposes

Training Fee	U.S	30000	35000	40000	40000	45000	45000
68 a							

to provide a mutually agreed number of Guyanese personnel nominated by the delegatee with onthejob training in Contractors operations in Guyana and overseas or practical training at institutions abroad or with onthejob training in Contractors operations in Guyana and overseas and practical training at

institutions abroad particularly in the areas of logistical planning for undertaking petroleum operations seismic acquisition and interpretation economic analysis petroleum accounting and contract administration; b to send qualified Guyanese personnel selected by the delegatee on courses not exceeding one year at universities colleges or other training institutions mutually selected by Contractor and the delegatee; c to send Guyanese personnel selected by the delegatee to conferences and seminars related to the petroleum industry; d to purchase advanced technical books professional publications scientific instruments or other equipment required by the delegatee.

69 Article 20 Rights to Assets and Insurance 20.1 Rights to Assets. a The Contractor shall have the right to use free of charge assets previously installed by the Contractor in relinquished areas which are required for its operations in the remaining portion of the contract area provided that in the event of relicensing of the relinquished area such licence shall exclude the aforesaid assets. b Subject to Article 20.1 c upon expiry or termination of this Agreement in accordance with the provisions hereof the Contractor shall upon notification by the delegatee pursuant to Article 20.1 d i. deliver to the Minister free of charge in good order and condition fair wear and tear excepted all installations works pipelines pumps casings tubings engines and other equipment machinery or assets of a fixed or permanent nature constructed used or employed by the Contractor or the operator in the contract area; ii. deliver to the Minister free of charge any fixed assets relating to petroleum operations outside the contract area and movable assets owned by the Contractor or the operator and used or employed in connection with petroleum operations and located in Guyana for which costs have been fully recovered in accordance with Annex C herein; where costs have not been fully recovered the provisions of Article 20.1 biii shall apply; iii. sell to the Minister any other assets owned by the Contractor or operator and 70 used or employed by the Contractor or operator in the contract area or elsewhere in Guyana in connection with petroleum operations at a price equivalent to the unrecovered cost of the assets. c The above provisions of Article 20.1 b shall not apply to i. assets which are still required by the Contractor or operator for use in respect of an area in Guyana subject to another petroleum Agreement at the time of expiry or termination of this Agreement; ii. equipment

and other assets rented or leased by Contractor in Guyana; iii. equipment and other assets rented or leased by Contractor and imported in Guyana for use in petroleum operations and subsequently exported therefrom; iv. equipment and any other assets owned or leased by a subcontractor; v. household goods which are the personal property of employees of the Contractor; vi. equipment and assets otherwise not owned by Contractor. 71 d The Contractor shall notify the Minister of all assets acquired as provided in section 4 of Annex C to this Agreement. i. At least six 6 calendar months before expiry of the term of this Agreement within three 3 calendar months following notice of termination of this Agreement or promptly following cancellation of all licences the delegatee shall notify the Contractor of the assets to be delivered or sold to the Government. ii. Subject to the terms and the provisions of this Article the Contractor shall not within one 1 year of the date upon which it estimates that termination of this Agreement will occur remove from the contract area or sell any assets of a fixed or permanent nature which might be deliverable to the Government under this Article without the consent of the Minister such consent not to be unreasonably withheld. iii. Abandonment Programme and Budget. aa Within sixty 60 days after the expiration of the term of this Agreement or the sooner relinquishment of some or all of the contract area the Contractor shall carry out to the Ministers satisfaction an abandonment programme agreed with the Minister for all installations and pipelines provided by Contractor under this Agreement that the Minister elects not to have delivered up to him in accordance with Article 72 20.1b. With respect to the area being relinquished or with respect to the area being relinquished and facilities thereon such abandonment programme shall comply with and be limited to internationally accepted standards prevailing at the time of abandonment. bb Concurrent with the submission of a development plan as provided in Article 8.4 the Contractor shall submit for the Ministers approval a proposed abandonment programme and budget covering all such installations and pipelines provided by Contractor under this Agreement. cc The Minister shall act without unreasonable delay in reaching a decision on the Contractors proposal under Article 20. Idiiibb and may approve or modify or impose conditions thereon. Before modifying or imposing conditions on the proposal the Minister shall notify the

Contractor of the proposed modification or conditions and give the Contractor the opportunity to make written representations within sixty 60 days thereafter about the proposed modifications or conditions. After taking into consideration such representations the Minister and the Contractor shall make their best efforts to mutually agree on the proposed modifications or conditions of the abandonment programme and budget. In the event that the Minister and Contractor cannot mutually agree on the proposed abandonment programme and budget either Party may by written notice to the other Party propose that the dispute be referred for determination in accordance with the provisions of Article 26. dd In the event that the Contractor does not present a timely proposal to the Minister under Article 20.1diiibb the Minister after giving thirty 30 days notice to the Contractor of his intention 73 to do so may prepare an abandonment programme and budget for the contract area if the Contractor does not present a proposal by the end of the thirty 30 day period. When the Minister has so prepared the abandonment programme and budget it shall have the same effect as if it had been submitted by the Contractor and approved by the Minister. ee The Contractor shall have the right on an annual basis to propose a revised abandonment programme and budget. Such proposal shall be subject to the approval process in Article 20. Idiiicc. Any revisions to the abandonment programme and budget shall result in a revision to the guarantee referred to in Article 20.1diiihh. ff All funds required to carry out the approved abandonment programme shall be made available by Contractor when the cost for abandonment are incurred. gg All cost included in the approved abandonment programme and budget shall be recoverable as operating costs on a unit of production basis commencing during the period when the abandonment programme and budget is approved. The amount to be recovered in a respective period shall be calculated by dividing the approved abandonment budget by the estimated units of production to be produced and sold by the Contractor between the date of the Ministers approval and the anticipated date of abandonment and multiplying the result by the units produced in the period. hh The Contractor shall deliver to the Minister within seven 7 days after the date the abandonment programme and budget are approved an undertaking from Contractors immediate parent company stating that such parent company shall

ensure provision of financial and technical resources necessary to conduct the approved abandonment programme. The amount of the financial undertaking shall be equal to the amount recovered under Article 20.1diiigg less any amounts spent under the approved abandonment programme. ii Notwithstanding the provisions of Article 20.1diiiff in the event the Minister elects to have all or a portion of the facilities delivered up to him in accordance with Article 20.1b the Contractor shall pay the Minister at the time of transfer the amounts stipulated in the latest approved abandonment budget for the transferred facilities. Upon transfer and receipt of the funds the Minister shall assume all responsibilities for the transferred facilities and their abandonment and shall hold the Contractor harmless against any liability with respect thereto accruing after the date of such transfer to the Minister. iv. Subject to Article 20.1 c in the event that the Government acquires any assets pursuant to this Article the Government shall assume all liabilities with respect to such assets arising from and after the date of acquisition and shall not direct the Contractor to remove or abandon any such assets pursuant to regulation 9 1 a of the Regulations. The Government shall indemnify and hold Contractor harmless for any and all costs and claims which may arise from the use or abandonment of any asset from and after the date of acquisition by the Government. 75 v. Assets not acquired by the Government pursuant to this Article may be sold or otherwise freely disposed of by the Contractor subject to Article 21.2 and the Regulations. 20.2 Insurance. a The Contractor shall effect and at all times during the term of this Agreement maintain for petroleum operations hereunder insurance as required by applicable laws rules and regulations and of such type and in such amount as is customary in the international petroleum industry in accordance with good oil field practice in respect of but not limited to i. any loss or damage to all assets used in petroleum operations; ii. any pollution caused in the course of petroleum operations for which the Contractor or the operator may be held responsible; iii. any loss or damage to property or bodily injury suffered by any third party in the course of petroleum operations for which the Contractor may be liable to provide an indemnity pursuant to Article 2.4; iv. the Contractors liability to its employees engaged in petroleum operations. The insurance may be provided to the extent permitted by

applicable laws rules and regulations through Contractors affiliate insurance company. 76 b The Contractor shall require the operator to carry and to endeavour to have its subcontractors carry insurance of such type and in such amount as is customary in the international petroleum industry in accordance with good oil field practices. 77 Article 21 Import Duties 27.1 The Contractor affiliated companies and the subcontractors engaged in petroleum operations subject to Article 21.1a hereunder shall be permitted to import free of duty or other taxes or imposts machinery equipment vehicles materials supplies consumable items other than foodstuffs or alcoholic beverages or fuel and movable property where imports in any of the said categories have been certified by the Chief Inspector designated as such under section 3 of the Act to be for use solely in carrying out petroleum operations. The Contractor shall give prior notification to the Minister of subcontractors engaged in petroleum operations. a Subject to Article 21.1 and for as long as this petroleum Agreement remains in force the Contractor affiliated companies and subcontractors engaged in petroleum operations hereunder shall be required to pay to the relevant authority a ten percent 10 consumption tax on any fuel imports where such imports have been certified by the Chief Inspector designated as such under section 3 of the Act to be used solely in carrying out petroleum operations in any area within the contract area. 21.2 Subject to Article 20 any of the items imported into Guyana may if no longer required for petroleum operations hereunder be freely exported at any time by the importing party without the payment of any export duty or impost; provided however that on the sale or transfer by the importer of any such item to any person in Guyana other than the Government import duty shall be payable by the importer 78 on the value thereof at the date of such sale or transfer as determined by the Customs and Excise Department in accordance with their applicable rules. Each expatriate employee of the Contractor including any affiliated company and of subcontractors shall be permitted subject to the limitations and conditions set out in the Customs Act to import into Guyana free of import duty within six 6 months on first arrival his personal and household effects including one 1 motor vehicle; provided however that no property so imported by the employee shall be sold by him in Guyana except in accordance with Government regulations

and upon the payment of the prescribed customs duties. Any importation or replacement of motor vehicles shall be a matter for consultation with the Minister. Article 22 Foreign Exchange Control 79

22.1 The Contractor shall during the term of this Agreement have the right a to retain abroad all foreign exchange obtained from the export sales of Contractors petroleum and to remit and retain abroad all foreign exchange earned from sales of petroleum or assets in Guyana; b to finance petroleum operations hereunder in any currency through any combination of equity interaffiliate or third party loans intercompany open accounts or production payments but no payments of principal or interest in respect thereof shall be made from any source in Guyana other than the bank accounts referred to in Article 22.1 c; c to open and maintain bank accounts denominated in Guyanese dollars United States dollars or both in Guyana and freely dispose of the sums deposited therein without any restriction provided that the said accounts are credited only with sums deposited in foreign currency or with the proceeds of the sale of foreign currency being credits relating to or derived from petroleum operations; d to open and maintain bank accounts in any foreign currency outside Guyana which may be credited without restriction and freely dispose of any sums deposited therein without restriction and without any obligation to convert 80 into Guyana currency any part of the said amounts save that such accounts shall not be credited with the proceeds of the sale of any Guyanese currency without the consent of the Bank of Guyana; e to purchase and with the approval of the Bank of Guyana to sell Guyanese currency through the authorized banks without discrimination at the rate of exchange determined by the Bank of Guyana for authorized banks at the time of purchase or sale. 22.2 The expatriate employees of the Contractor or of affiliated companies and of subcontractors engaged in petroleum operations shall be subject to all Exchange Control Regulations that may be in effect from time to time. The expatriate employees of the Contractor affiliated companies and subcontractors should be entitled to remit freely abroad any portion of their salaries paid in Guyana and any investment income that may be earned on the portion of their salaries paid in Guyana. 22.3 Where the Contractor affiliated company or subcontractor by notice in writing to the Commissioner of Inland Revenue has guaranteed the full

and proper discharge by an expatriate employee engaged in petroleum operations of his liability to income tax under the laws of Guyana that expatriate employee shall be entitled to receive payment of the whole or any part of his remuneration in the country in which he is normally resident. Article 23 Accounting and Audits 81 23.1 The Contractor shall be responsible for maintaining accounting records relating to petroleum operations under this Agreement in accordance with the accounting procedures set out in Annex C hereto. 23.2 The Minister shall have the right to audit the accounting records of the Contractor in respect of petroleum operations in accordance with accounting procedure. 23.3 Nothing in this Article shall be construed as limiting the right of Government or any officer of Government pursuant to any statutory power to audit or cause to be audited the books of the Contractor. 82 Article 24 Force Majeure 24.1 Any nonperformance or delay in performance by any Party hereto on any of its obligations under this Agreement or in fulfilling any condition of any licence granted to such Party or in meeting any requirement of the Act or Regulations and any licence issued thereunder shall except for the payment of monies due by Government to Contractor or monies due to Government under section 43 4 of the Act unless such failure to pay is prevented by any action of the Government not be a breach of this Agreement the licence or the Act and Regulations if and to the extent that such nonperformance or delay is caused by force majeure as defined in this Article. 24.2 In this Article the term force majeure shall mean any event beyond the reasonable control of the Party claiming to be affected by such event which has not been brought about at its instance and which has caused such nonperformance or delay in performance and without limitation to the generality of the foregoing includes natural phenomena or calamities epidemics fires wars declared or undeclared hostilities invasions blockades riots strikes insurrection civil disturbances mining of the seas international disputes affecting the extent of the contract area and any governmental action that would prevent the performance of an obligation or ability of the Contractor to export petroleum except as provided in Article 14.5. 24.3 Where any Party is claiming suspension of its obligations on account of force majeure such Party shall promptly notify the other Parties in writing of the occurrence thereof giving particulars of the force majeure and obligations

affected. The Parties shall promptly carry out friendly discussions regarding the impact of the force majeure and possible remedies to the force majeure. If any Party then determines that on account of the force majeure in a portion of the contract area they 83 are unable to perform their obligations in the remaining portion of the contract area in a manner consistent with good oil field practices the force majeure shall apply to the entire contract area. Each Party shall promptly notify the other Parties as soon as the force majeure has been removed or no longer prevents it from carrying out its obligations hereunder.

24.4 Where a Party is prevented from exercising any rights or performing any obligations under this Agreement due to a force majeure the Minister hereby agrees pursuant to section 43 3 of the Act subject to the proviso therein that a period equivalent to the period of such force majeure and any additional time necessary for restoration of damages caused during a force majeure delay shall be added to the time allowed under this Agreement for the performance of such obligation and for the performance of any obligation or the exercise of any right dependent thereon and to the term of any licence issued pursuant to this Agreement. The Contractor shall have the option of terminating this Agreement without any further obligation if force majeure exceeds one 1 year.

24.5 Without prejudice to the other provisions of this Article the Parties shall meet to discuss the consequences of the force majeure and the course of action to be adopted in the circumstances.

24.6 The Government shall not invoke force majeure due to any order regulation or written directive of the Government which affects the Governments performance of its obligations under this Agreement.

84 Article 25 Assignment

25.1 Subject to the regulation 20 of the Regulations the Contractor shall not assign or transfer in whole or in part any of its rights privileges duties or obligations under this Agreement or any licence issued pursuant to this Agreement to any person firm or corporation without the prior written consent of the Minister.

25.2 The Minister shall give his consent under Article 25.1 where a the assignment or transfer will not adversely affect the performance or obligations under this Agreement; b the assignment is not contrary to the interests of Guyana; c subject to a above the assignment or transfer is to an approved affiliated company.

25.3 In the event that the Minister does not give his consent or does not refuse a request for an

assignment or transfer by Contractor within sixty 60 days of receipt of such request consent shall be deemed to have been given by the Minister. 25.4 Any assignment made pursuant to this Article shall bind the assignee to all the terms and conditions hereof and the terms and conditions of any licence issued pursuant to this Agreement unless otherwise agreed and as a condition to any assignment the assignee shall provide an unconditional undertaking to the Minister to assume all obligations by the Contractor under this Agreement or any licence issued pursuant to this Agreement.⁸⁵ 25.5 An application for assignment or transfer of a licence shall be made in accordance with Form E of the Schedule to the Regulations. The applicant shall submit such additional information relating to the intended assignee which the Minister may reasonably require to enable him to dispose of the application.

Article 26 Sole Expert. Conciliation and Arbitration ⁸⁶ 26.1 The Parties shall use their best efforts to settle amicably all disputes arising out of or relating to this Agreement. 26.2 Except for matters referred to in Articles 812 and 13 and any other matter which the Parties agree to refer to a sole expert any dispute arising out of or relating to this Agreement which cannot be settled amicably may be submitted by any Party to arbitration pursuant to Article 26.4 or Article 26.6 whichever applies. 26.3 The sole expert referred to in Article 26.2 shall be appointed by agreement between the Parties and in the event the Parties fail to agree on the sole expert within sixty 60 days after receipt of the written notice from any Party proposing the appointment of a sole expert such expert shall be appointed by the Minister of the Institute of Petroleum of the United Kingdom. The decision of the sole expert on matters referred to him shall be final and binding on the Parties. The Parties shall refer any dispute arising out of or relating to such expert decision including enforcement thereof to arbitration pursuant to Article 26.4 or Article 26.6 whichever applies. 26.4 Subject to the provisions herein the Parties hereby consent to submit to the International Centre for the Settlement of Investment Disputes ICSID any dispute relating to or arising out of this Agreement for settlement by arbitration pursuant to the rules of the Convention on the Settlement of Investment Disputes between States and Nationals of Other States hereinafter referred to as the Convention. The Government hereby irrevocably waives any claim to immunity with regard to any arbitration pursuant

to this Article 26 and to any proceedings to recognise or to enforce this Article 26 or any proceeding to recognise or enforce an arbitral award 87 rendered in an arbitration thereunder. Without prejudice to the generality of the foregoing the waiver of immunity shall include immunity from service of process and immunity from jurisdiction of any competent court and immunity of any of the Governments property from execution of any arbitration award or judgement entered thereon. 26.5 Subject to Article 26.6 prior to submitting a dispute for arbitration a Party may submit the dispute to conciliation under the Convention by a sole conciliator to be appointed by agreement of the Parties. If the Parties fail to agree on a conciliator in accordance with the Convention the dispute may be submitted for arbitration. No arbitration proceedings shall be instituted while conciliation proceedings are pending. 26.6 If the SecretaryGeneral of the International Centre for the Settlement of Investment Disputes refuses to register a request for conciliation or arbitration or if a tribunal of arbitrators constituted pursuant to Article 26.4 above determines that a dispute is outside of the jurisdiction of the International Centre for the Settlement of Investment Disputes either Party may request arbitration of the dispute before three arbitrators pursuant to the Arbitration Rules of the United Nations Commission on International Trade Law UNCITRAL. The American Arbitration Association shall administer the arbitration under the Arbitration Rules of the United Nations Commission on International Trade Law and shall act as the appointing authority when the Rules of the United Nations Commission on International Trade Law call for an appointing authority. 88 26.7 If the SecretaryGeneral of the International Centre for the Settlement of Investment Disputes refuses to register a request for conciliation and neither Party has requested arbitration under the Arbitration Rules of the United Nations Commission on International Trade Law pursuant to Article 26.6 above either Party may request conciliation pursuant to the Conciliation Rules of the United Nations Commission on International Trade Law prior to submitting the dispute to arbitration. 26.8 Conciliation or arbitration proceedings pursuant to this Article 26 shall be held in Washington DC United States of America or PortofSpain Trinidad and conducted in the English language. The Parties shall select the location from between the above mentioned options and failing agreement

between them the arbitrators shall make such selection in their stead. 26.9 The fees and expenses of a sole expert or conciliator as well as the charges for the use of the International Centre for the Settlement of Investment Disputes or other facilities shall be borne equally by the Contractor and the Minister. Each Party shall bear any other expenses it incurs in connection with expert or conciliation proceedings. In the case of arbitration proceedings the arbitrators shall assess the expenses incurred by the Parties the fees and expenses of the arbitrators the charges for the use of the facilities and any other costs related 89 to the arbitration and shall decide by whom such costs shall be paid. The arbitrators shall render a decision within six 6 months after having been appointed. 26.10 The decision of a majority of the arbitrators shall be final and binding on all the Parties and shall be enforceable in any court of competent jurisdiction. 90 Article 27 Applicable Law 27.1 This Agreement shall be governed by interpreted and construed in accordance with the laws of the Cooperative Republic of Guyana. 91 Article 28 Protection of the Environment 28.1 In accordance with the Environmental Protection Act 1996 No. 11 of 1996 the Contractor shall obtain an environmental authorization as required from the Environmental Protection Agency established under section 3 of the Environmental Protection Act 1996 No. 11 of 1996 and comply with the provisions of that Environmental Protection Act 1996 in relation to any activity of this Agreement that is governed by that Environmental Protection Act 1996 No. 11 of 1996 28.2 The Contractor is precluded from initiating any exploration or development activity on those areas outside of the contract area which the Environmental Protection Agency may determine to be sensitive or protected. 28.3 In furtherance of regulation 6 of the Regulations in the conduct of petroleum operations the Contractor shall take necessary and adequate precautions in accordance with good international petroleum industry practice against pollution and for the protection of the environment and the living resources of the sea. 28.4 If the Contractor's failure to comply with the provisions of Article 28.1 results in pollution or damage to the environment or marine life or otherwise the Contractor shall take all reasonable measures in accordance with good international petroleum industry practice to remedy the failure and the effects thereof and shall where pollution occurs treat or disperse it in an

environmentally acceptable manner. The Contractor shall not be obligated to remedy or clean up pollution or environmental damage of any type that existed prior to the commencement of petroleum operations by the Contractor or arises as a consequence of preexisting environmental conditions.

28.5 The Contractor shall notify the Minister forthwith in the event of any emergency or accident arising from petroleum operations affecting the environment and shall take such action as may be prudent and necessary in accordance with good international petroleum industry practice in such circumstances. 28.6 If the Contractor does not act promptly pursuant to Article 28.3 so as to control

or clean up any pollution within a reasonable period specified by the Minister the Minister may after giving the Contractor reasonable notice in the circumstances take any actions which are in accordance with good international petroleum industry practice and the necessary reasonable costs and expenses of such actions shall be borne by the Contractor. Article 29 Termination and

Cancellation 29.1 This Agreement shall be deemed to have been terminated if the petroleum prospecting licence granted to the Contractor pursuant to Article 3 and every petroleum production licence granted to the Contractor under Article 8 has either expired or under and in accordance with the Act and any relevant provision of this Agreement been surrendered by the Contractor or lawfully cancelled by the Minister pursuant to section 42 of the Act but save as aforesaid shall continue in full force and effect so long as Contractor continues to hold any of the said licences. 29.2 Should

any issue arise between the Parties as to whether the Contractor is in default and such issue cannot be amicably settled by consultation between the Parties and a dispute thereon is referred for resolution pursuant to Article 26 this Agreement and the aforesaid licences shall continue in force pending resolution of such dispute. 29.3 Pursuant to section 42 of the Act the Minister shall not

cancel a licence on the basis of default unless the Minister has by notice served on the licensee given not less than thirty 30 days notice of such intention and the basis of default. In the notice the Minister shall specify a reasonable date before which the licensee may submit a written response or remedy the default. 94 29.4 On termination of this Agreement or cancellation of any licence as

aforesaid the rights and obligations of the Parties shall cease by the termination or cancellation shall

not affect any right of action existing or liabilities incurred by a Party before the date of termination or cancellation and any legal proceedings that might have been commenced or continued against a Party may be commenced or continued against it. 95 Article 30 Effective Date 30.1 The effective date shall be the date on which this Agreement is duly signed. 96 Article 31 Miscellaneous 31.1 The Government assures the Contractor that the contract area lies entirely within the territorial limits of Guyana and that Guyana has sovereignty over such area. The Government shall continue to assert its right to the entire contract area and seek to resolve current or future claims if any by other States that impugn any portion of the contract area. The Government shall also use its best efforts to permit due observance of the terms and conditions of this Agreement by both Parties. Both Parties undertake not to take any action inconsistent with the terms and conditions of this Agreement. 31.2 This Agreement shall not be amended or modified in any respect except by written agreement entered into by all the Parties which shall state the date upon which the amendment or modification shall become effective. 31.3 In the event of any conflict between any provisions in the main body of this Agreement and any provisions in the Annexes the provision in the main body shall prevail. 31.4 The headings of this Agreement are for convenience of reference only and shall not be taken into account in interpreting the terms of this Agreement. 31.5 A reference to the singular in this Agreement includes a reference to the plural and vice versa. 31.6 The provisions of this Agreement shall inure to the benefit of and be binding upon the Parties and their permitted assigns and successors in interest. 97 31.7 No waiver by any Party of any one or more obligations or defaults by any other Party shall be construed as a waiver of any other obligations or defaults whether of a like or of a different character. 31.8 This Agreement supersedes and replaces any previous Agreement or understanding between the Parties whether oral or written on the subject matter hereof prior to the date of this Agreement. 98 Article 32 Stability of Agreement 32.1 The Government shall not after the effective date unilaterally increase the contractual obligations of the Contractor under this Agreement or diminish the contractual rights of the Contractor hereunder as such obligations and rights exist as of the effective date. If the Government promulgates new or amended laws makes

orders or regulations which negatively impacts the Contractors economic benefits the Parties shall promptly make revisions and adjustments to this Agreement as necessary to maintain the Contractors economic entitlements at the level existing as of the effective date.

99 Article 33 Notices

33.1 All notices and other communications to be given under this Agreement shall be deemed to have been made properly if delivered in person in writing mailed with charges prepaid or sent by telex or telecopier by one Party to the other at their respective addresses in Guyana as set forth below and copied to their overseas addresses. Any such notice or communication given as aforesaid shall be deemed to have been given and received at the time of delivery if delivered by hand or by courier or at the time of receipt if transmitted by facsimile

The Minister Responsible for Petroleum do Guyana Geology And Mines Commission Upper Brickdam Stabroek P.O.BOX 1028 Georgetown GUYANA. Attention Commissioner GGMC Facsimile 02 53047

Environmental Permit Issued under the Environmental Protection Act Cap. 20:05 Laws of Guyana the Environmental Protection Amendment Act 2005 and the Environmental Protection Authorisations Regulations 2000. Reference No. 20181204PPOIX Fees Extra Large C1 US 15500 5 years i.e.US 3100 per po year a Fees Paid USD 15500 September 24 2020 September 23 2025

Addressees Mr. Alistair Routledge President Esso Exploration and Production Guyana Limited 86

Duke Street Kingston Georgetown Guyana. Activity Payara Development Project Stabroek Block Offshore Guyana Esso Exploration and Production Guyana Limited EEPGL hereinafter referred to as the Permit Holder is hereby authorised by the Environmental Protection Agency EPA hereinafter referred to as the Agency in accordance with the Environmental Protection Act Cap 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and the Environmental Protection Regulations 2000 to undertake the Payara Development Project hereinafter referred to as the Project which includes but is not limited to drilling of subsea development wells installation and operation of subsea equipment use of a Floating Production Storage and Offloading FPSO vessel to process store and offload the recovered crude oil during production operations as well as the use of shorebase facilities and marine aviation services in support of these activities in the manner indicated in the Application submitted on December 04 2018 the Environmental Impact Assessment submitted on July 22 2020 and the Environmental and Socioeconomic Management Plan submitted on July 22 2020 which includes the Revised Oil Spill Response Plan submitted on July 22 2020 and Wildlife Response Plan all of which may be updated from time to time and are subject to the terms and conditions set forth herein and any existing or forthcoming regulations best practices guidelines and standards relevant to this project. The Permit Holder Shall

1.0 GENERAL

1.1 Comply with any directions of the Agency where compliance with such directions is necessary for the implementation of any obligations of Guyana under any treaty or international law related to environmental protection.

1.2. Ensure onshore and offshore contractors contracted by the Permit Holder are duly authorised by the Agency to conduct any activities relative to any phases associated with the project.

1.3 Restore or rehabilitate the environment to an acceptable state after any impacts resulting from any breach of the conditions of this Permit.

1.4 Comply with the approved Payara Environmental Impact Assessment Environmental and Socioeconomic Management Plan and Oil Spill Response Plan.

1.5 Comply with any forthcoming

guidelines standards best practices and the National Oil Spill Contingency Plan. 1.6 The Permit Holder shall submit within one 1 year of issuance of this Permit an updated Payara Environmental and Socioeconomic Monitoring Plan including protocols performance standards and responsibilities in Consultation with and jointly implemented by the Permit Holder and the Agency. Capacity e.g. training within the EPA shall be supported by the Permit Holder where necessary and practicable. External expertise local and international may be sourced by the EPA as may be required to augment this monitoring plan and/or conduct associated audits. The Permit Holder will be responsible for all reasonable and jointly agreed fees. Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 upon costs associated with this monitoring plan and its implementation and any associated independent audits. 1.7. The Permit Holder shall notify the Agency in writing and obtain its approval for ANY proposed changes to the operation at least 21 calendar days prior to making the change. 1.7.1. The notification shall contain a description of the proposed change in operation. It is not necessary to make such a notification if an application to vary this permit has been made and the application contains a description of the proposed change. In this condition change in operation means a change in the nature or functioning or an extension or any additional installation which may have consequences for the environment. Changes to operation may include but not limited to the following i. Changes in vessels equipment or technology; ii. Installation of new and/or changes excluding routine maintenance to equipment machine apparatus mechanism system or technology serving the facility or operation; iii. Any change of technology used or installed at the facility from which effluent may be discharged or any changes in the nature composition concentration or quantity of the discharge; or iv. Any other variance prescribed by Regulation 203 of the Environmental Authorisations Regulations 2000 1.8 Comply with all applicable laws and regulations including but not limited to the following a. Environmental Protection Act Cap 2005 Laws of Guyana and associated Regulations; b. Petroleum Exploration and Production Act 1986; c. Petroleum

Exploration and Production Amendment Act 1992; d. Pesticides and Toxic Chemicals Act No. 13 of 2000; e. Pesticides and Toxic Chemicals Regulations No. 8 of 2004; f. Pesticides and Toxic Chemicals Amendment Regulations No.8 of 2007; g. All applicable policies, laws and regulations of Guyana; and h. International conventions and protocols.

1.9 The best available techniques and technologies which consider economic and technical feasibility as well as the facilities and controls described in the EIA shall be used to prevent or mitigate pollution in relation to any aspect of the operation which is not regulated by any other condition of this Permit.

1.10 The Permit Holder shall use an effective Environmental Management System with policies and procedures for environmental compliance and improvements and shall perform internal audits on at least an annual basis. The Permit Holder shall share the results of the internal audits with the Agency. The Agency at its discretion may require other independent environmental audits in accordance with applicable International Conventions and Protocols during the course of this Permit.

1.11 Employ effective operational and maintenance systems on all aspects of the facility whose failure could impact the environment. A schedule of maintenance of all vessels, equipment and/or plant shall be kept on site and made available for inspection on request by the Agency. Maintenance shall be carried out in accordance with the relevant manufacturers' specification.

1.12 Comply with the following Legislation, Guidelines, Conventions as indicated under 3.0 Administrative Framework as well as Section 6, 7 and 8 in the Environmental Impact Assessment dated July 2020 and under the following headings: Environmental Protection Act Cap.2005 Laws of Guyana; National Legal Framework; Environmental Permits and Licenses; Laws and regulations enacted by Guyana to implement the National Policy Framework; International Conventions and Protocols; and EEPGLs Operations Integrity Management System.

2 NOISE MANAGEMENT

2.1. Where practicable ensure that soundmaking devices or equipment are equipped with silencers or mufflers and are enclosed and/or utilise softstart procedures e.g. pile driving, vertical seismic profiling activities

etc. to reduce noise to levels that do not cause material harm or injury to marine species. 2.2 Implement engineering controls administrative controls and training to protect offshore workforce from high noise levels in offshore work environment. Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000

3 AIR QUALITY MANAGEMENT

3.1 Annually quantify aggregate greenhouse gas GHG emissions as well as emissions from the use of fossil fuels primarily natural gas and diesel from all offshore facilities and offshore support activities which are directly owned or controlled by Permit Holder or its dedicated contractors and is directly or indirectly related to the Project. The information must be included in the annual report required under Condition 12.5 along with the methodology employed to calculate the emissions.

3.2 Ensure all reasonable attempts are made to implement appropriate methods for controlling and reducing fugitive emissions in the design operation and maintenance of offshore facilities and to maximize energy efficiency and design facilities for lowest energy use with the overall objective to reduce air emissions. Environmentally effective and technically feasible best practices for reducing emissions must be evaluated and adopted as far as practicable.

3.3. Utilize low sulphur fuels and/or natural gas on all vessels including the FPSO in turbines reciprocating engines or boilers used for heat or power generation or to drive machinery such as compressors or pumps.

3.4 Routine flaring and venting is strictly prohibited excludes tank flashing emission standing working breathing losses low pressure streams during any developmental drilling or production activities without EPA approval. Flaring is only permissible under the following conditions Commissioning Startup or Special Circumstances as defined below

i. Commissioning shall be defined as the process of ensuring that all systems and components are designed installed tested operated and maintained according to the operational requirements or manufacturers specifications. This condition shall also apply to the commissioning of any new units or systems postproduction or the renovation of existing units or systems which may require flaring. During commissioning all gas systems must be properly installed fully leak tested and

able to receive gas before startup. ii. Startup shall be defined as the activity that occurs at the end of commissioning where production operations are initiated. The Permit Holder shall not exceed sixty 60 days of flaring during Startup unless approved by the EPA subject to Condition 3.15. fe Be35 3.6 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 The Permit Holder shall notify the Agency of the expected flaring volumes expected during startup and commissioning at least six 6 months before Startup. iii. Special Circumstances a. Emergencies i. Controlled any unavoidable expected event including inclement weather conditions strictly requiring the flaring of gas; and ii. Safety Response any unplanned event requiring the flaring of gas for safety purposes or flaring required to maintain the flare system in a safe and ready condition purge gasmakeup gasfuel gas and pilot flame. b. Maintenance i. Plannedunplanned maintenance and inspections on gas handling system and related processes and construction activities. ii. Scheduled unloading or cleaning of a well or well workover well testing production testing other wellevaulation testing or the necessary blow down to perform these procedures; and maintenance required during and after an emergency shutdown or restart. c. Restart the instance of resumption of oil production following a shutdown event. 3.4.1 Except where unplanned and required for safety where any of the abovementioned Special Circumstances conditions is expected to exceed fortyeight 48 cumulative hours the Permit Holder shall seek approval from the EPA for Flaring within the first fortyeight 48 hours of the commencement of flaring unless otherwise approved by the EPA. Ensure associated gas brought to the surface with crude oil during oil production is reinjected into the reservoir and utilized as fuel gas on the FPSO. However all feasible alternatives for gas utilization must be evaluated and adequately documented to the EPA upon request. Adopt risk assessment processes e.g. hazard and operability study HAZOP hazard identifications study HAZID etc. to assess risks associated with process upset and lossofcontainment events which could impact the environment. fic37 3.8 39 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of

Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 Adopt measures as far as practicable in accordance with the Global Gas Flaring and Venting Reduction GGFVR Partnership when considering venting and flaring options under emergency or upset conditions. Notify the Agency within twentyfour 24 hours of all process upset events or unplanned maintenance occurrences which result in a flaring event on the FPSO. The following conditions must be complied with when flaring from the FPSO is necessary in accordance with Condition 3.4 3.9.1 3.9.2 3.9.3 3.9.4 3.9.5 3.9.6 ii. iii. iv. Submit the following documents as soon as practical after seeking approval for flaring Description of conditions which includes but is not limited to commissioning schedule startup schedule and/or maintenance schedule; where applicable; Detailed schedule for flaring; Justifications for required approval; and Daily projected flare volumes. Employ a metering system with an accuracy of plus or minus five 5 percent to determine the quantity of gas to the flare system. Calibrate and maintain flare metering system in accordance with the manufacturers recommendations. The calibration certificate must be submitted to the EPA upon completion of calibration. Maintain a consolidated record of all flaring events regardless of size and duration including begin times end times and volumes and meter calibration and maintenance records for six 6 years. The records must be kept on the FPSO for two 2 years and be available for inspection by the EPA upon request thereafter. Ensure flare equipment and gas handling systems are inspected and correctly installed function tested and monitored maintained according to manufacturers specifications and certified for use under operation conditions prior to oil production and throughout operations. Ensure flaring stack is installed a safe distance from storage tanks containing flammable liquids or vapours and accommodation units.

Environmental Permit Ref. No. 20181204PPOIX ssued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 3.9.7 3.9.8 3.9.9 3.9.10 3.9.11 3.9.12 3.9.13 3.9.14 Ensure that flare equipment gas handling systems and all combustion equipment is designed and built to appropriate engineering codes and certified standards. Flaring system must only be operated within

manufacturers recommended specifications. Use efficient flare tips and optimize the size and number of burning nozzles. Ensure use of a reliable pilot ignition system. The burner must have a continuously burning pilot system or other automatic ignition system that ensures that it is lit and gives the operator immediate warning if it fails to operate. Minimize risk of pilot flare blowout by ensuring sufficient exit velocity and providing wind guards. Determine the minimum exit velocity required to avoid pilot flare blowout and submit information to the EPA one hundred and eighty 180 days before planned Startup. Install high integrity instrument pressure protection systems to reduce overpressure events and avoid or reduce flaring situations. Operate flaring to control odour and smoke emissions where practicable. Ensure the volumes of hydrocarbons flared are recorded and submitted to the Agency in a monthly report as required by Condition 12.20 and the estimated quantity of specific pollutants emitted from flaring including but not limited to carbon dioxide CO₂ carbon dioxide equivalent CO₂ e nitrogen oxides NO_x sulfur oxides SO_x carbon monoxide CO particulate matter hydrogen sulfide H₂S volatile organic compounds VOCs; methane and ethane; benzene ethyl benzene toluene and xylenes BTEX; glycols and polycyclic aromatic hydrocarbons PAHs must also be reported. The report must include methodology used to determine the concentration of each pollutant. Implement burner maintenance and replacement programs in accordance with manufacturers recommendations to ensure continuous maximum flare efficiency.

3.10 3.11 3.12 313 3.14 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 3.9.15 Maximize flare combustion efficiency by controlling and optimizing flare fuel air and stream flow rates to ensure the optimum ratio of assist stream to flare stream. Determine the optimum ratio of assist stream to flare stream. 3.9.16 Minimize liquid carryover and entrainment in the gas flare stream with a suitable liquid separation system with sufficient holding capacity for liquids that may accumulate and which must be designed in accordance with good engineering practice. Employ all reasonable efforts to prevent equipment breakdowns and plant upsets which could result in flaring and provisions must be made

for equipment sparing and plant turndown protocols. All equipment relating to the gas handling water handling and oil handling systems on the FPSO must be supplemented in accordance with the reliability study outcomes under Condition 3.16 which includes evaluation of equipment sparing to be stored at a shorebase facility in Guyana or on the FPSO. Equipment spares must be located in Guyana before the Startup and shall be maintained in accordance with Condition 1.11. Ensure there is no use of chlorofluorocarbons CFCs and polychlorinated biphenyls PCBs on the FPSO; except as may be authorised by the Agency. Monitor exhausts daily for smoke and particulates; in instances of visible smoke the causes must be investigated and resolved. Ensure there is no discharge of ozonedepleting substances ODS in accordance with the International Convention for the Prevention of Pollution from Ships MARPOL Annex VI. If well testing must be performed the following measures must be implemented i. During well testing only the minimum volume of hydrocarbons required for the test must be flowed and welltest durations must be reduced to the extent practical. An efficient test flare burner head equipped with an appropriate combustion enhancement system must be selected to minimize incomplete combustion black smoke and hydrocarbon fallout to the sea. fx Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 li. Volumes of hydrocarbons flared must be recorded and reported in the End of Well report as required by Condition 12.9. The estimated quantity of specific pollutants emitted from flaring including but not limited to carbon dioxide CO₂ carbon dioxide equivalent CO₂e nitrogen oxides NO_x sulfur oxides SO_x carbon monoxide CO particulate matter hydrogen sulfide H₂S volatile organic compounds VOCs; methane and ethane; benzene ethyl benzene toluene and xylenes BTEX; glycols and polycyclic aromatic hydrocarbons PAHs must also be reported. The report must include methodology used to determine the concentration of each pollutant. ili. Provide adequate gas sensors that are to be appropriately located during testing operations to ensure all sources of gas can be detected. iv. Ensure all pipes and joints are regularly monitored for leakages and fugitive emissions. Additionally all collected gaseous streams must be

burned in high efficiency flares and leak detection and repair programs must be implemented and maintained. v. Ensure the well test is kept to the minimum practical time in keeping with preapproved schedule between the Agency and Permit Holder. Also notify the Agency immediately in case of any deviationvariation to the well test. 3.15 Approval for flaring shall not be issued for a period exceeding two 2 months; noting where flaring exceeds or is expected to exceed the two month period the Agency may approve continued flaring on a monthly basis after taking into account the study and report set out in Condition 3.16 below or as the Agency may see fit. 3.16 The Permit Holder shall conduct a study of minimum feasible volumes andor durations for flaring associated with Startup production restart emergencies special testing plannedunplanned shutdown flare pilot maintenance and plannedunplanned maintenance. The study will also consider equipment reliability and include an evaluation of spare pieces of equipment related to gas handling. Utilising such study the EPA and Permit Holder will meet and mutually agree to necessary amendment to Condition 3.4 to incorporate such study results. The Permit Holder shall submit to the EPA terms of reference for the study three 3 months before planned startup and commissioning of the gas injection system. 3.17. Inaccordance with the Polluter Pays Principle enshrined in the EP Act Cap 2005 within three 3 months of issuance of the Permit a fine framework shall be 10 fe4.1 4.2 4.3 4.4 4.5 4.6 4.7 4.8

Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 established by the EPA for flaring volumes beyond the permitted period referenced in Condition 3.4 taking into account international standards and norms applied to the Oil and Gas Industry. Applicability and institution of the fines shall be determined by the Agency. WATER QUALITY MANAGEMENT Marine discharges from well drilling hydrostatic testing of flow lines and risers and the overall production operations shall be undertaken in a manner that does not cause or permit the entry of contaminants into the environment in amounts concentrations or levels in excess of that prescribed by the regulations or stipulated by any environmental authorisation. Notify the Agency in writing of any change in the type of drilling fluid

used disposal/recycle/treatment method outlined. Submit upon receipt a copy of the FPSOs International Sewage Pollution Prevention Certificate along with a copy of the Certificate of Type Approval for Sewage Treatment Plants and associated appendices. Discharges of pollutants/contaminants in coastal waters i.e. twelve 12 nautical miles in amounts/concentrations or levels in excess of that prescribed by the regulations or stipulated by any environmental authorisation are prohibited. Visually check and take appropriate measures to mitigate occurrence of free oil resulting from discharge of NADF drill cuttings. Maintain an inventory of all drilling fluid constituents added downhole for each well. Produced water from the reservoir shall be treated onboard the FPSO to an acceptable specification prior to discharging. The oil specification of produced water to be discharged shall not exceed 42 mg/L on a daily basis or 29 mg/L on a monthly average. If the oil of produced water is observed to exceed these limits the produced water shall be routed to an appropriate storage tank on the FPSO until further treatment system is restored and the discharge meets the specification above. Monthly reports shall be submitted to the EPA to demonstrate compliance with the limits set out in condition 4.7. 4f4.9 4.10 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 The Agency reserves the continuous and irrevocable right to order the sampling and analysis of any discharges/effluent or waste emanating from the Project to be analysed by an independent certified laboratory or institution approved by the Agency at the expense of the Permit Holder. The Permit Holder shall complete a study to investigate and determine the feasibility/benefits/implications and cost of reinjecting one hundred 100 percent of produced water and shall be guided by the principles set forth in conditions 4.10.1 4.10.6. 4.10.1 4.10.2 4.10.3 4.10.4 4.10.5 4.10.6 Within thirty 30 days of the date of Permit the Permit Holder shall submit to the EPA for approval terms of reference for the conduct of a study detailing the feasibility of reinjecting produced water in lieu of routine discharge to the ocean including implementation for future installation of facilities for produced water injection and an evaluation of any potential risks to the reservoir from

injection a full cost benefit analysis and Permit Holders recommendations. Within 180 days of the date of the EPAs approval of the terms of reference the Permit Holder shall complete the study's final reports. The study shall be conducted by an independent consultant/contractor approved by the Agency not to be unreasonably withheld. During the conduct of the aforementioned study the Permit Holder shall meet with the EPA upon request to provide any updates on the progress of the study discuss the issues raised by the study and come to an agreement on resolution of issues and/or concerns regarding the study. Thirty 30 days before completion of the study the Permit Holder will issue a draft report to enable the EPA to provide inputs into the final report. The final report shall not be deemed final until approved by the EPA. Upon issuance of the Permit the Permit Holder shall update its base design for the Project to include i tie in points and ii space for potential produced water injection equipment. Condition 4.7 may be amended by the Agency in consideration the aforementioned approved study and the conclusions of the EPA the fd Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 20:05 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 Permit Holder and the Minister of Natural Resources the Minister Responsible for Petroleum.

4.11 The use of fluids that contain diesel as the principal component of the drilling mud liquid phase is prohibited. 4.12 For well sections requiring nonaqueous drill fluid NADF use only lowtoxicity International Oil and Gas Producers IOGP Group 3 base fluid. 4.13 Use solids control and cuttings dryer systems to treat cuttings so that the end of well maximum weighted mass ratio averaged over well sections drilled using IOGP Group 3 nonaqueous fluids polycyclic aromatic hydrocarbons 0.001 by weight and total aromatic 0.5 by weight not exceeding 6.9 grams of non aqueous based fluids per 100 grams of wet drill cuttings. The end of well maximum weighted mass ratio averaged over all well sections drilled using nonaqueous fluids shall be determined using an internationally recognised and EPA approved method and the results must be submitted in the End of Well Report. 4.14 Antifouling chemical dosing to prevent marine fouling of offshore facility cooling water systems shall be carefully considered. Available alternatives should be evaluated and where

practical the seawater intake depth should be optimised to reduce the need for use of chemicals. Appropriate screens should be fitted to the seawater intake if safe and practical to avoid entrainment and impingement of marine flora and fauna. 4.15 The cooling water discharge should be designed to ensure that the temperature is within 3C of ambient seawater temperature at 100 meters. 4.16 Monitor temperature of FPSO cooling water discharges to ensure a temperature rise of no more than 3C above ambient water temperatures at 100 m. 4.17 Abide with the International Maritime Organization IMO Guidelines including the International Convention for the Control and Management of Ships Ballast Water and Sediments 2004 with the exception of Regulation D2 Ballast Water Performance Standard while the FPSO is on station and abide with the International Convention for the Prevention of Pollution from Ships MARPOL. 4.18 Adhere to operational controls regarding material storage washdowns and drainage systems. 13 fk DE Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 4.19 4.20 4.21 4.22 4.23 4.24 4.25 4.26 4.27 4.28 Treat bilge water in accordance with MARPOL to ensure compliance with an oil in water of 15 ppm as applicable. Ensure there is no visible oil sheen from commissioningrelated discharges i.e. flowlinesrisers commissioning fluids including hydrotesting waters or FPSO cooling water discharge. . Prohibit the discharge of drilling fluids which contain usedwaste engine oil cooling oil gear oil or lubricant and which has previously been used for purposes other than borehole lubrication. Prohibit the discharge of cuttings generated using drilling fluids which contain conventional mineral oil IOGP Group 1 except when the mineral oil is used as a carrier fluid transporter fluid lubricity additive or pill. Discharge of diesel oil halogenated phenol compounds or chrome lignosulfonate is prohibited. Wastewater that is released from the onboard Sewage Treatment Plant when sampled three times or more over 24 hours shall comply with the aquatic discharge standards in accordance with MARPOL 7378 regulations. Macerate food waste in accordance with MARPOL prior to discharge. Measure residual chlorine concentration of treated sewage discharges on FPSO monthly to ensure that it is below 0.5mg/L in accordance with

MARPOL 7378 regulations; keep log of results and submit in the quarterly compliance report. Safety management system on board shall include steps for regular checks and maintenance of the sewage plant check pipes storage tanks and other equipment as per manufacturers instructions; checks and maintenance of the sewage plant and other equipment should be logged and documented for the annual compliance report. Inform the Agency in the event that wastewater from the sewage treatment plant is diverted to the oilybilge water separator providing the reasons for this occurrence its duration the quantity diverted and actions taken to resolve the issue should be provided. Further any discharge from the oilybilge separator in this occurrence should be in accordance with Annex IV of MARPOL. . fk Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 4.29 4.30 4.31 4.32 5.0 5.1 5.2 53 5.4 55 5.6 Perform daily visual inspections on the FPSO of discharge points to ensure that there are no floating solids or discolouration of the surrounding waters and document observations provide same in the quarterly compliance report. Ensure that leak detection mechanisms are in place for those equipment treatment and storage facilities fuel chemical etc. on the drillship in accordance with international offshore petroleum industry standards. Utilize leak detection controls during FPSO offloading e.g. for breach of floating hose instrumentation procedures to perform volumetric checks. Utilize leak detection controls during installation and operation of SURF equipment e.g. pigging and pressure testing of lines periodic ROV surveys of subsea trees manifolds flowlines and risers. HAZARDOUS AND NONHAZARDOUS WASTE MATERIALS MANAGEMENT Adhere to the provisions of the Environmental Protection Hazardous Waste Management Regulations 2000. Ensure effective management of waste and recoverable materials generated by the project in accordance with internationally acceptable standards and the Environmental Protection Act Cap. 2005 Laws of Guyana. Dispose of all wastes in accordance with the Waste Management Plan and individual vessel Garbage Management Plans. Waste management companies contracted by the Permit Holder to manage waste which includes collection

transportation storage treatment and disposal shall be authorized by the Agency. Maintain a high level of housekeeping sanitary and hygienic practices and environmental standards of all facilities vessels and associated structures at all times. Operate incinerators in accordance with the Manufacturers Operating Manuals and Waste Management Plan. Ensure that the incinerators are operated only by trained personnel. fi57 5.8 59 5.10 5.11 5.12 513 514 515 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 Perform periodic inspections of the FPSOs waste storage areas and containers and maintain an inspection log. Maintain an inventory of wastes stored aboard the FPSO and Drill Ship. Maintain a record of hazardous materials used in operation and submit in the Annual Report a summary table with the following information a Name and description; b Classification e.g. code or class; c Quantity used per month; d Characteristics that makes the material s hazardous e.g. flammability toxicity. Maintain copies of waste manifests and chain of custody forms. Transport of hazardous waste offsite for treatment and/or disposal MUST be accompanied by a manifest signed by the hazardous waste generator and transporter; the manifest must be provided within the Annual Report as well as submitted to the Agency electronically and should include the name and address of waste generator; name and description of the waste and hazard class; number and type of containers; quantity transported and name and address of receiving facility. Periodically audit waste contractors to verify appropriate waste management practices are being utilized. Utilise low toxicity chemicals/materials where practical. Each chemical/material should be managed in accordance with the associated Safety Data Sheet. Implement best practices outlined in the IFC Environmental Health and Safety EHS General Introduction Guidelines and Offshore Oil and Gas Development Guidelines with respect to the prevention of spills of hazardous materials from offshore facilities during chemical transfers and loading activities. Radioactive sources will be returned to their supplier and radioactive wastes will be sent according to the Waste Management Plan to a facility permitted to manage such wastes. 16

few De5.16 517 5.18 519 5.20 5.21 5.22 523 Environmental Permit Ref. No. 20181204PPOIX
Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental
Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000
The Agency considers all materials listed in Schedules I and II of the Environmental Protection
Hazardous Waste Management Regulations 2000 to be hazardous. Please see attached list of
Hazardous Wastes to be controlled. Fuel oils and chemicals shall be appropriately secured and
contained in accordance with their Material Safety Data Sheet. Submit the types and quantities of
chemicals stored in offshore facilities as part of reporting requirements stipulated in Condition 12.5
of this Permit. Spent oils lubes and chemicals that cannot practically and safely be recycled through
the FPSO process will be sent to shore for disposal in a manner approved by the EPA. Disposal of
usedwaste oils and chemicals in the marine environment or in any waterways is prohibited as well
as disposal onshore if untreated. During the lifetime of the Project the Permit Holder shall be
responsible for stewarding and auditing the activities of all downstream subcontractors handling
Project waste streams and shall contractually require them to conduct all treatment and disposal of
such waste streams in keeping with the EPA approved Waste Management Plan included within the
Project EIA. Within thirty 30 days of issuance of the Permit the Permit Holder shall submit to the
EPA for approval the Terms of Reference for the conduct of a cradle to grave waste analysis study
which must include factors related to i environment ii management iii auditing iv schedule and v
costbenefits. The cradle to grave waste analysis study must be submitted to the EPA for approval
within sixty 60 days of the EPAs approval of the Terms of Reference. The approved cradle to grave
waste analysis study must form part of the revised Waste Management Plan which shall be
submitted within one 1 month of submission of the cradle to grave waste analysis approved study.
The Revised Waste Management Plan referenced in condition 5.22 shall be implemented during the
lifetime of the project. pep6.0 6.1 6.2 6.3 6.4 6.5 6.6 Environmental Permit Ref. No.

Regulations 2000 SEISMICRELATED ACTIVITIES Notify the Agency in writing of the intent to commence seismicrelated activities e.g. Vertical Seismic Profiling VSP site investigations or monitoring surveys in the Payara Area of Interest at least thirty 30 days in advance of commencing activities. Employ trained Marine Mammal Observers MMOs during the conduct of seismicrelated activities e.g. at least one trained MMO for VSPs or at least two trained MMOs for other seismic surveys requiring more than 12 continuous hours of observation per day. Conduct a continuous observation of a mitigation zone 500 metres around a sound source to verify whether it is clear of marine mammals and marine turtles before commencing sound producing seismic operations. Sound producing seismic operations including soft starts shall not commence if marine mammals or turtles are sighted within the mitigation zone during the 30 minutes prior to commencing sound producing operations in water depths less than 200 metres or 60 minutes prior to commencing sound producing operations in water depths greater than 200 metres. Adhere to the Joint Nature Conservation Committee JNCC Guidelines 2017 during the conduct of seismicrelated activities. Record all marine mammals protected species and marine turtle observations and respective mitigation actions e.g. delay of soft start in a standardized report format and submit a copy of the report to the Agency within fortyfive 45 days of the activity completion. The report should contain at minimum the following i. The location date and start time of the activity; ii. Name qualification and experience of MMOs involved in the survey; iii. The location time and reasons when observations were hampered by poor visibility or high winds; iv. The location and time when any startup delays power downs or stop work procedures were initiated due to marine mammal protected species and marine turtle sightings; v. The location date time and distance of any marine mammal protected species and marine turtle sighting including species where possible and whether the sound source was active at the time of sighting; and i i7.0 7.1 7.2 73 7.4 73 7.6 77 7.8 79 Environmental Permit Ref. The date and time when the activity was completed. FPSO

DRILL SHIP INSTALLATION AND SUPPORT VESSELS Vessels shall travel no faster than idle or no wake speed within 300 metres of observed marine mammals and sea turtles and not approach the animals closer than 100 metres. Lighting on the vessels shall adhere to maritime safety regulationsstandards. Where practicable direct lighting on FPSO and major vessels to required operational areas rather than at the sea surface or skyward. Procedures for loading storage processing and offloading operations either for consumables i.e. fuel drilling fluids and additives or for liquid products should be utilized to minimise spill risks. Pumps hoses and valves should be inspected and maintained on a monthly basis. FPSO may be subject to inspection and certification by an appropriate national or international body in accordance with International Maritime Organization IMO requirements. Double hull vessels are preferred whenever available. Offloading activities shall be supervised by the designated Mooring Master according to the conditions of the sea. The conditions and characteristics of the export tankers should be assessed by the Mooring Master and reported to the Offshore Field Manager prior to commencing offloading operations; only properly registered and wellmaintained doublehull vessels should be utilized. In accordance with MARPOL 7378 requirements maintain an Oil Record Book to document the manner in which sludge oil bilge water waste oil etc. are disposed. In accordance with MARPOL requirements maintain a Garbage Management Plan and Garbage Record Book to record the manner in which waste e.g. sewage macerated food waste etc. are managed and disposed. The Garbage Management Plan shall include all information as per MARPOL specification waste type quantity stored onboard waste delivered ashore amount of waste generated and waste discharged at sea in accordance with MARPOL Requirements. . fap 7.10 8.1 8.2 8.3 8.4 8.5 8.6 8.7 Environmental Permit Ref. into the environment. WELL BLOWOUT PREVENTION BOP Install a well BOP system that can be closed rapidly in the event of an uncontrolled influx of formation fluids and that allows the well to be circulated to safety by venting the gas at surface and routing oil so that it may be contained. The BOP system should be tested at installation and at regular intervals at least every 14 days or as operations allow. The BOP system shall be pressure tested at installation after the disconnection or repair of any pressure containment seal in the BOP system and at least every 14 days or as operations allow. Subsea BOP stack should be tested to the maximum anticipated wellhead pressure for the current well program. Annular preventers should not be tested to greater than 70 of the working pressure of the preventer. Facility personnel shall conduct biweekly wellcontrol drills or as operations allow which should be attended by key personnel. Well control training and drills shall be documented and made available to the Agency upon request. BOP testing shall be conducted by the drill ship contractor. The BOP system design maintenance and repair shall be undertaken in accordance with international standards. It is recommended that at a minimum subsea BOP systems consist of one annular preventer two shear ram preventers one of which must be sealings and two pipe ram preventers and that they be equipped with choke and kill lines and failsafe choke and kill close valves. The BOP must be able to close on the maximum OD drill pipe string used for the drilling operations. BOP systems shall operate failsafe in the event of a loss of control signal and hydraulic supply from the surface. At a minimum subsea BOP systems should allow closure of one set of pipe rams and all blindshearing type rams by Remotely Operated Vehicle ROV intervention should automatic systems fail. Contingency plans shall be prepared for well operations and must include identification of provisions for well capping in the event of uncontrolled blowout

8.9 8.10 8.11 8.12 8.13 Environmental Permit Ref. No. 20181204PPOIX Issued under the
Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment
Act 2005 and Environmental Protection Authorisations Regulations 2000 providing indication of the
tools equipment and intervention time required and identification of spill recovery measures. Prepare
and submit an Emergency Plan for review by the Agency within one 1 year of issuance of this Permit

detailing the measures in place to prevent a blowout and the provisions for wellcontrol in a blowout scenario including capping tools and oil spill recovery means. The Emergency Plan shall be reviewed by the Permit Holder annually and any proposed modifications/amendments must be communicated to the Agency for approval. The Permit Holder shall maintain access to one or more subscription services as necessary to allow mobilization of a Capping Stack to the Payara Project location within five 5 days or less of an uncontrolled well event consistent with the Capping Stack Report until such time as any new system is implemented pursuant to subsection 8.15 below. Within thirty 30 days of the date of the Permit the Permit Holder shall submit to the EPA for approval terms of reference for a study detailing the implementation of a system that allows for deployment of a Capping Stack and Debris Removal Systems within three 3 days and four days 4 of an uncontrolled well event including the cost and benefits of each such system. The Permit Holder shall within three 3 months of the date of Permit supplement its incountry First Response Toolkit to include all elements of the Essential First Response Toolkit as outlined in the Capping Stack Report excluding those elements requiring longer manufacturing times. Such longerlead elements will be identified within thirty 30 days of the date of the Permit and shall be promptly completed and delivered to Guyana but in no event shall delivery be later than nine 9 months from the date of the Permit. Within one hundred and eighty 180 days of the date of approval of the terms of reference the Permit Holder shall complete the studys final report. During the pendency of the study the Permit Holder shall meet with the EPA and/or his representatives no less than every thirty 30 days or more frequently on request to provide an update on the progress of the study discuss the issues raised by the study and come to agreement on resolution of issues and/or concerns regarding the study. n JRA 9.0 9.1 9.2 9.3 9.4 9.5 9.6 9.7 9.8 9.9 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 20:05 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 OIL SPILLS AND OTHER EMERGENCY MANAGEMENT Adhere to the approved Oil Spill Response Plan contained within Volume III of the Environmental Impact Assessment dated July 22 2020. Install an Emergency

Shutdown System on the FPSO to initiate automatic shutdown actions to bring the offshore facility to a safe condition and which should be activated in case of any significant release. Implement a corrosion management system to monitor risks and identify corrective actions in the atmospheric zone splash zone submerged zone and internal zones. Develop and implement appropriate maintenance and monitoring programs to ensure the integrity of well field equipment. Implement personnel training and field exercises such as drills in oil spill prevention containment and response at the frequencies defined in the approved Oil Spill Response Plan submitted in the Environmental Impact Assessment. Inspect maintain and operate incountry spill response and containment equipment in accordance with the defined OSRP which will include monthly inspection of oil spill response equipment quarterly test run of oil spill response equipment annual preventive maintenance program execution and annual exercise and deployment of oil spill response equipment to test readiness and response capability. Excountry spill response equipment shall be inspected according to the oil spill response organizations established programs which are aligned with good industry practice and periodically verified by operator. Spills and near misses shall be documented and made available to the Agency upon request. Notify the Agency in alignment with the approved Oil Spill Response Plan for the utilization of insitu burning and/or use of dispersant e.g. Corexit 9500 Corexit 9527A Finasol OSR 52 and Dasic Slickgone NS.. Build Capacity where applicable and/or ensure continued Oil Spill Response capacity building among key national Agencies Community Based Organizations Regional Democratic Councils Neighbourhood Democratic Councils and other relevant stakeholders in Regions 1 2 3 4 5 and 6. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 10.0 DISPERSANTS 10.1 Within ninety 90 days from the date of the Permit the Licensee shall provide a report calculating the appropriate volume of dispersants sufficient for immediate deployment for any Tier 3 event. The report shall not be deemed final until approved by the EPA. 10.2 Following the EPA's approval of the report the Licensee shall maintain

throughout the Permit term such volume of dispersants and the required deployment equipment so as to sufficiently and effectively deal with any Tier 3 event.

11.0 EMPLOYEES

11.1 Operate in accordance with the Occupational Safety and Health Act 1997.

11.2 Employees must at all times be provided with the necessary personal protective equipment to job specification.

11.3 Implement and document training for all employees and contractors on the conditions of the Environmental Permit and good environmental management practices.

11.4 Employ a Health Safety and Environmental Officer and/or establish a health and Safety Committee who would be responsible for the implementation of the Health Safety Environmental and Social Management Plan and the terms and conditions of this Permit.

12.0 COMPLIANCE MONITORING AND REPORTING

12.1 Prepare and submit to the Agency no later than fortyfive 45 days after the end of the operating year a report relating to the activities for the previous year. The report shall include

- i. The identification information of the facility;
- ii. Types and quantities of waste including hazardous waste generated treatment and disposal both onshore and offshore;
- iii. Notwithstanding the obligation to immediately report any acent's and/or noncompliances with this permit a summary of any acent's Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 and noncompliances that may have occurred and any actions taken should be provided;
- iv. A report on all routine marine species observations on vessels and any mitigation measures implemented to avoid injury or harm;
- v. Provide an inventory of prior years emissions including but not limited to particulate matter sulphur dioxide volatile organic compounds carbon monoxide nitrogen dioxide and other greenhouse gases as applicable;
- vi. Report on generation treatment and disposal of wastewater generated on all vessels associated with the project;
- vii. Any other matter the Agency may require.

12.2 Retain copies of all reports required by this Permit for a period of at least three 3 years.

12.3 Provide any information or copies of records requested within a reasonable timeframe as requested by the Agency.

12.4 Submit to the Agency annually a summary of any nonconformances with the Environmental Permit and corrective actions taken.

12.5 Submit

Environmental Annual Report to the EPA on or before March 31 every year on your compliance with this Permit Please see attached Guidelines for the Preparation of Environmental Annual Reports.

12.6 Submit to the Agency Ballast Water Management Plans prepared specifically for the FPSO Drill Ship installation and support vessels outlining how ballast water is managed in accordance with international standards. 12.7. Submit to the Agency within one 1 week of commencement of drilling a list and estimated quantities of all additives to be used in the drilling fluids. 12.8 Notify the Agency 21 days prior to the proposed date of making any changes in the type of drilling fluid to be used and outline the disposalrecycle treatment methods to be applied. Notification after the 21 days period can be accepted under . fp Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 12.9 12.10 12.11 12.12 12.13 12.14 12.15 12.16 12.17 conditions where the notification period was not feasible or where flow assurance or safety risks are a concern. Submit End of Well Reports ninety 90 days following the completion of drilling operations for each well with estimated quantities of fluids additives and cuttings discharged duration of discharges and estimated maximum concentration of each constituent in the discharged drilling fluid. Inform the Agency in the End of Well Report of tests conducted with the Blow out Preventer BOP equipment detailing occasions where there was an influx of formation fluids the well control methods applied and their effectiveness. Inform the Agency in a timely manner of any variation or intentions to conduct other activities not stipulated in this permit such as but not limited to Side tracking of a well. Notify the Agency in writing two 2 years prior to planned decommissioning of the well save and except where mechanical issues or safety concerns are encountered that will affect the integrity of the well to continue operations and submit revised End of Operations Decommissioning Plan including Well Abandonment Plan for approval. Notify the Agency in writing six 6 months prior to well abandonment save and except where mechanical issues or safety concerns are encountered that will affect the integrity of the well to continue operations. Submit to the EPA reports on the progress of the Project activities and

compliance with the conditions under which this Permit was granted within two 2 months after the closure of activity specific Project stage e.g. drilling installation etc.. Report spills to the Agency and other relevant authorities in accordance with the Oil Spill Response Plan. Notify the Agency in writing within twentyone 21 days in event of death bankruptcy liquidation or receivership of the Permit Holder or if the Company becomes a party to an amalgamation Inform the Agency prior to or within thirty 30 days of any change of name or ownership of the Project. fix jp Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 12.18 12.19 12.20 12.21 13.0 13.1 13.2 Submit a copy of the International Oil Pollution Prevention IOPP Certificate for the FPSO. Within three 3 months of issuance of this Permit the Permit Holder shall submit to the EPA for its approval a Terms of Reference for the development of an enhanced Environmental Monitoring Reporting and Verification Framework. A Draft Environmental Monitoring Reporting and Verification Framework shall be submitted by the Permit Holder to the EPA for its approval within three 3 months of the approved Terms of Reference. Submit monthly reports to the EPA on the progress of the operation and compliance with the conditions under which this Permit was granted on or before the 10 day of the following month. An annual audit of Safety Critical Drilling and Production Operations including waste management to ISO 14001 as amended or such equivalent standards may be conducted by the Government. The Permit Holder will request the Government to submit any audit report must be submitted to the Agency in the Annual Report required under Condition 12.5. All areas of shortcomings identified by the audit must addressed by the Permit Holder before the next years audit. LIABILITY FOR POLLUTION DAMAGE The Permit Holder shall have insurance of such type and in such amount as is customary in the international petroleum industry in accordance with good oil field practices for Petroleum Operations in progress Offshore Guyana in respect of i. Loss or damage to all assets used in Project. ii. Pollution caused in the course of the Project for which EGGPL will be jointly and severally held responsible. iii. Loss or damage to property or bodily injury

suffered by any third party in the course of the Project for which EGGPL is liable to according to the terms of the policy. iv. EEPGLs liability to its employees engaged in the Project. v. Any other requirements made by the EPA under Condition 13.4 below. Condition 13.1 shall not be interpreted to mean the Permit Holder its Parent Company Servants andor Agents will not be liable to any other existing or 26 MK Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 forthcoming applicable laws rules and regulations related to insurance for Petroleum Operations within or out the jurisdiction of Guyana.

13.3. This Permit is issued subject to the fulfillment of the obligations outlined in Condition 13.1 above and in a correspondence dated March 20 2019 indicating the commitment of EEPGL to obtain such insurance for coverage of environmental liabilities in accordance with the requirements of the EPA and the Bank of Guyana. Failure to fulfill such obligations or commitments is in breach of this Permit and will result in its immediate cancellation. 13.4 The EPA shall reserve the right to request and review the environmental liability insurance policy. Such review is subject to the following i. Provision of documentary evidence that the insurer is authorised to provide the insurance in the jurisdiction and to provide evidence of the insurers financial strength. ii. Provision of details of the amount of cover and the cost profile evidence of authorisation of the institution or parent insurers to provide insurance. As well as evidence of any supplementary cover required to cover gaps in the primary cover inclusive of details relevant to the excess level which is the responsibility of the policyholder to cover. iii. Agreement to provide notification to the EPA of modification cancellation expiration intent to renew renewal or nonrenewal and expiry dates of the policy. iv. Provision of reports on whether the insurance policy is maintained or renewed so that the EPA can determine if it is acceptable or if it requires a replacement policy. v. Provision of the final insurance policy or certificate of insurance evidence of financial strength and payment of premium. 13.5 The Permit Holder must as soon as reasonably practicable provide from the Parent Company or Affiliate Companies of Permit Holder and its CoVenturers Affiliates one or more legally binding agreements

to the EPA undertaking to provide adequate financial resources for Permit Holder and its CoVenturers to pay or satisfy their respective environmental obligations regarding the Stabroek13.6

13.7 13.8 13.9 Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 Block if EEPGL or its CoVenturers fail to do so. As a consequence EEPGL will be required to 1 provide evidence of the following e That the Affiliates are authorised to provide that guarantee or agreement in this jurisdiction. e That the Affiliates have sufficient financial strength for the amount of the potential liability. e That the Affiliates have the corporate legal capacity to enter into the agreement. 2 Agree to the following e To provide notification of cancellation expiration renewal or non renewal and expiry dates of the Agreement. e As well as to provide annual audited financial statements and notification if the Affiliates are no longer likely to be able to meet specified financial obligations. The Permit Holder his Servants andor Agents shall be strictly liable for the adverse effect of any discharge or release or cause or permit the entry of pollution contaminant in any amount concentration or level in excess of that prescribed by the regulations or stipulated by any environmental authorisation which are attributed to any Project and more specifically petroleum activities in accordance with section 191 and 2 of the Environmental Protection Act Cap. 2005 Laws of Guyana. The Permit Holder shall compensate any Party who suffers any loss or damage as a result of the attributed project in accordance with section 193e of the Environmental Protection Act Cap. 2005 Laws of Guyana. Do not assign or transfer the Environmental Permit to any person without prior consent of the Agency. The Permit Holder his Servants andor Agents shall be strictly liable to penalties prescribed for any material or environmental harm caused by pollution of the environment intentionally or recklessly in accordance with section 39 1 2 3 and 4 of the Environmental Protection Act Cap. 2005 Laws of Guyana. Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 13.10 The Permit Holder his Servants andor Agents

shall be liable jointly and severally for any gross negligence or willful misconduct to the marine environment biodiversity protected species and natural habitat with respect to any release or discharge spill contaminant fluids oil or lubricants any facilities permitted under this project. 13.11 The Permit Holder his Servants and Agents shall be liable jointly and severally for environmental damage due to pollution from its activities within Guyana its territorial waters contiguous zones continental margins continental shelf and Exclusive Economic Zone inclusive of damage to the marine environment biodiversity protected species and natural habitat with respect to any release or discharge spill or contamination which is attributable to the Permit Holder and his agents or contractors. This is in accordance with Section 49 1 of the Maritime Zones Act 2010 and is subject to any other existing or forthcoming laws regulations and standards governing the protection of the marine environment. 13.12 Where it appears to the EPA that the Permit Holder is engaged in any activity that may pose serious threat to natural resources or serious pollution of the environment or any damage to public health the EPA shall issue to the Permit Holder a Prohibition Notice ordering him to immediately cease the offending activity in accordance with section 27 of the Environmental Protection Act Cap. 20:05 Laws of Guyana. 13.13 Should the Permit Holder contravene or is likely to contravene any condition of this Permit the EPA may serve him an enforcement notice in accordance with section 26 of the Environmental Protection Act Cap. 20:05 Laws of Guyana. 13.14 Section 219 of the Environmental Protection Act Cap. 20:05 shall apply mutatis mutandis to this Environmental Permit for any breaches of terms or conditions herein. 14.0 INSTITUTIONAL AUTHORITY 14.1. The EPA reserves the right to conduct regular inspections of the permitted operations as part of its monitoring and enforcement requirements under the Environmental Protection Act Cap. 20:05 Laws of Guyana the Environmental Protection Amendment Act 2005 and the Environmental Protection Authorisations Regulations 2000 and any forthcoming regulations best practices guidelines and standards made under this Act. fo pe Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 20:05 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations

Regulations 2000 14.2 At all times allow entry to the permitted facility to any Officer designated by the EPA for the purposes of conducting inspections or any other legitimate business of the Agency. Pursuant to Section 38 of the Environmental Protection Act Cap 2005 Laws of Guyana it is an offence to assault obstruct or hinder an authorised officer in the execution of his/her duty under the said Act or its regulations and the Permit Holder shall be liable to penalties prescribed under paragraph c of the Fifth Schedule for doing so. 14.3. This Environmental Permit is not the final development consent. Permission from the other relevant regulatory bodies must be obtained prior to Project implementation as required. 14.4 The Permit shall be governed by interpreted and construed in accordance with the Laws of Guyana including but not limited to the Environmental Protection Act and Regulations and consistent with such rules of international laws as may be applicable or appropriate including the generally accepted customs and usages of the international petroleum industry. 14.5 This Permit is effective for the period stipulated herein September 24 2020 to September 23 2025 noting however this Permit and conditions herein and applicable fees will be reviewed annually in consideration of the previous years annual audit required by Condition 14.8 and the studies required by Condition 1.5. 14.6 The Agency reserves the right to suspend modify or cancel this Permit in accordance with Regulation 14 of the Environmental Protection Authorisations Regulations 2000 in consideration of a. any changes in fee structure as determined by the EPA for projects of this nature b. improvement in environmental best practices and best available techniques which consider economic and technological feasibility as described in 1.8 but not limited to any material change in activities and or operations proposed by the Permit Holder c. Recommendations arising from the updated Environmental Impact Statement and Environmental and Socioeconomic Management Plan and the studies provided for under section 1.5 d. Any other information arising from compliance monitoring including the successful completion of an independent third party audit of the facility. ; Vig be 3 oLe Environmental Permit Ref. No. 20181204PPOIX Issued under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and Environmental Protection Authorisations Regulations 2000 14.7. This Permit must be

renewed by submitting a completed Application Form for Renewal of Environmental Authorisation to the Agency at least six months before this Permit expires that is no later than March 24 2025. 14.8 This Environmental Permit shall remain valid until September 23 2025 unless otherwise revised amended suspended or revoked in accordance with its provisions or the Environmental Protection Act Cap 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and the Environmental Protection Authorisations Regulations 2000. 14.9 Failure to comply with the requirements of this Permit or with applicable laws and regulations whether existing or forthcoming shall render the Permit Holder liable to prosecution and to penalties prescribed under the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Regulation 2000 and other applicable Laws of Guyana. I, A PROTEC, on behalf of Esso Exploration and Production Guyana Limited (EEPGL) hereby accepts the above terms and conditions upon which this Operation Permit is granted and agree to abide by the Environmental Protection Act Cap. 2005 Laws of Guyana the Environmental Protection Amendment Act 2005 and the Environmental Protection Authorisations Regulations 2000 and any existing or forthcoming regulations, best practices, guidelines and standards made under this Act.

Research and Forecasting May 2017 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project List of Acronyms Page Intentionally Left Blank May 2017 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Glossary List of Acronyms

Term	Definition
Anthropogenic	Made by humans or attributable to human activity.
Barrel	Biogenic
Biomagnification	The basic unit for measuring oil. A barrel is equal to 42 U.S. gallons. Made by living organisms or attributable to the activity of living organisms. Increasing concentration of a persistent substance usually a pollutant or toxin in the tissues of organisms at successively higher levels in a food chain
Borehole or wellbore	A deep narrow hole drilled in the earth for the purpose of extracting a core releasing gas oil water etc.
Casing	Steel pipe inserted into an oil or gas well to prevent the wall of the borehole from caving in to prevent movement of fluids from one formation to another and to improve the efficiency of extracting petroleum for producing wells.
Circumtropical	Distributed throughout the worlds tropical latitudes.
Congregatory	Crude oil
Cuttings	cuttings or drill Tending to gather in large groups on a cyclical or otherwise regular andor predictable basis
Liquid petroleum	as it comes out of the ground. The properties of crude oil such as color gravity and viscosity can vary.
Broken bits of solid material	produced as the drill bit advances through the borehole in the rock or soil. Cuttings are usually carried to the surface by the drilling fluid circulating up from the drill bit and can be separated from the drilling fluid using a variety of treatment methods e.g. centrifuge.
Development well	A well drilled in a proven area in a field for the purposes of producing hydrocarbons.
A selfpropelled floating offshore drilling unit	that is a ship constructed to permit a well to be drilled from it. Drill ships are generally the preferred option for drilling wells in deep remote waters.
Speciallyformulated fluids	which are typically a mixture of barite clay water and other chemical additives. Drilling fluids are circulated into the borehole to lubricate and cool the rotary drill bit to lift the cuttings out of the borehole and to the surface and to help maintain well control.
A unit of energy based on the approximate energy released by burning one barrel of crude oil.	Quantities of natural gas and natural gas liquids are often translated into barrels of oil equivalent BOE. The energy of six thousand cubic feet of gas 6 MCF is roughly equivalent to one barrel of oil.
Drill ship	

Drilling fluids Equivalent barrels or barrel of oil equivalent [BOE] May 2017 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Term Definition List of Acronyms Exploration Exploratory well Flare or Flaring The search for oil and gas. Exploration operations include aerial surveys geophysical surveys geological studies core testing and the drilling of test wildcat wells. A well drilled to 1 find oil or gas in an undiscovered or unproven area wildcat or 2 extend the limits or depths of a known area. In the oil industry A system of piping and burners used to dispose by burning of surplus gas or vapors produced with the oil. Floating Storage Offloading vessel Production and FPSO A floating vessel that is used for offshore oil and gas operations and is designed to process hydrocarbons and store oil until the oil can be offloaded onto a tanker ship or transported via pipeline. The processing equipment or topsides is located on the FPSOs deck while the oil storage is below the deck within the hull of the vessel. Flowline The surface pipe through which oil travels from a well to processing equipment or to storage. Hydrostatic test A way in which pressure vessels such as pipelines plumbing gas cylinders boilers and fuel tanks can be tested for strength and leaks. The test involves filling the vessel or pipe system with a liquid usually water which may be dyed to aid in visual leak detection and pressurizing the vessel to the specified test point. Pressure tightness can be tested by shutting off the supply valve and observing whether there is a pressure loss. Ichthyoplankton Fish eggs and larvae that drift with the ocean currents usually near the surface prior to developing directional swimming ability. A well in which fluids such as gas or water are injected to increase pressure in the reservoir and drive the oil remaining in the reservoir to the vicinity of production wells. Type of gridless atmospheric model in which pollutant particles move according to the wind field buoyancy and turbulence effects. Term is often used to differentiate such models from Eulerian models which use a gridded field. An area that has been cleared for the temporary storage of equipment and supplies. Laydown areas are usually covered with rock and/or gravel to ensure accessibility and safe maneuverability for transport and offloading of vehicles. A specific area of water where persons vessels and other activities are prohibited as the area has been designated for exclusive use by an activity; a form of safety control measure utilized

to keep unauthorized persons and vessels away from a higher risk activityevent. A highly compressible highly expansible mixture of hydrocarbons which at atmospheric conditions of temperatures and pressure are in a gaseous phase. Injection well Lagrangian Laydown area Marine exclusion zone safety Natural gas May 2017 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Term Definition List of Acronyms Oil field The surface area covering one or more reservoirs containing oil. The oil field also usually includes the reservoir the wells and the production equipment etc. Overboard water Another name for produced water or brine produced from oil and gas wells. Platform An immobile structure used in offshore drilling on which the drilling rig crew quarters and other related items are located. Plugging of well The sealing off of the fluids in the stratum penetrated by a well so that the fluid from one stratum will not escape into another or to the surface. Produced water Water that comes up a well with the oil and gas. Produced water is usually high in salinity. After leaving the well the produced water is separated from the oil and gas. Can also be referred to as formation water saltwater or oilfield brine. Production well A well that is used to retrieve petroleum or gas from an underground deposit. Refinery Reservoir Risers The facility where the characteristics of petroleum or petroleum products are changed. A porous and permeable sedimentary rock containing commercial quantities of oil and gas. The pipe and special fittings used on floating offshore drilling rigs to establish a seal between the top of the wellbore which is on the ocean floor and the drilling equipment located above the surface of the water. A riser pipe serves as a guide for the drill stem from the drilling vessel to the wellhead and as a conductor of drilling fluid from the well to the vessel. The riser consists of several sections of pipe and includes special devices to compensate for any movement of the drilling rig caused by waves. Risers are also used to connect subsea equipment to a surface facility such as an FPSO. Shorebase The land based facility that provides logistical and material support for offshore activities and facilities. A group of mooring lines distributed from the bow and stern of a vessel FPSO to anchors on the seafloor. The vessel is positioned in a fixed heading which is determined by the sea and weather conditions. The symmetrical arrangement of anchors helps to keep the vessel on its fixed heading

location. The spread mooring system does not allow the vessel to weathervane which means to rotate in the horizontal plane due to wind waves or current. The outer layer of large diameter heavywall pipe installed in wells drilled isolate very shallow sediments from from floating subsequent drilling resist the bending moments imposed by the marine riser and to help support the wellhead installed on the conductor casing. installations to Spread anchor system mooring Structural casing

May 2017 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project List of Acronyms Term Tree Wellhead Definition The assembly of valves pipes and fittings used to control the flow of oil and gas from the casing head. A structure that is installed at the top of a natural oil or gas well. Its main function is to ensure a safe operation and manage the flow of oil or gas from the well into the gatheringsystem. It is a system composed of valves spools and assorted adapters that control the pressure of the production well. It acts as an interface between the surface facilities and the casingstrings in the wellbore. May 2017 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement ENVIRONMENTAL IMPACT STATEMENT EIS Executive Summary Esso Exploration and Production Guyana Limited EEPGL proposes the Liza Phase 1 Development Project Project to develop the Liza field located in the Stabroek Block offshore Guyana. EEPGL obtained an offshore prospecting license for the Stabroek Block from the Government of Guyana. In 2015 oil was discovered in the Liza field within the eastern half of the Stabroek Block approximately 190 km 120 mi offshore from Georgetown in waters approximately 1500 to 1900 meters m deep. Subsequent surveys and exploratory drilling have identified a reservoir of oil in a sandstone formation approximately 3600 m below the seabed approximately 5400 m below sea level. This reservoir is estimated to have a recoverable resource of 0.8 to 1.4 billion oilequivalent barrels. EEPGL 45 together with Hess Guyana Exploration Limited 30 and CNOOC Nexen Petroleum Guyana Limited 25 are parties to a Petroleum Agreement with the Government of Guyana. Under this agreement and in light of the Liza field discovery EEPGL has applied for a Petroleum Production Licence and submitted a Project Development Plan to the Minister Responsible for Petroleum. A key permit required for EEPGL to develop the Liza field is the

Environmental Authorisation from the Guyana Environmental Protection Agency EPA in accordance with the Guyana Environmental Protection Act of 1996 EP Act Cap. 20:05. As part of its regulatory role the EPA considering recommendations from the Environmental Advisory Board EAB and Guyana Geology and Mines Commission GGMC is responsible for deciding whether and under what conditions to grant EEPGLs Application for Environmental Authorisation Application which was filed with the EPA on July 5 2016. Based on an initial assessment of the Project the EPA determined that an Environmental Impact Assessment EIA was required. The purpose of the EIA is to provide the factual and technical basis required by EPA EAB and the GGMC to make an informed decision on EEPGLs Application. EEPGL has conducted a robust public consultation program to both inform the public about the Project and to understand community and stakeholder concerns so this feedback could be incorporated and addressed in the EIA as applicable. EEPGL proposes to drill approximately 17 subsea development wells and use a Floating Production Storage and Offloading FPSO vessel to process store and offload the recovered oil. The FPSO will be connected to the wells via separate production oil gas and produced water gas injection and water injection flowlines and risers and associated subsea equipment. The Project will also involve shorebase facilities and marine aviation services to support development drilling FPSO and subsea equipment installation production operations and ultimately decommissioning. EEPGL will utilize proven and industry accepted standards and has incorporated many embedded controls into the overall Project design to minimize environmental and socioeconomic impacts. It could take up to four years to drill the wells with drilling planned to begin as early as 2018. The initial production is expected to begin by mid 2020 with operations continuing for at least 20 years. The Project is expected to employ up to 600 persons during well drilling approximately 600 persons at the peak of the installation stage and up to about 140 persons during production operations. The planned activities of the Project are predicted to have minor impacts on physical resources i.e. air quality marine sediments and water quality no impacts on coastal biological resources minor

impacts on marine biological resources and largely positive impacts on socioeconomics. These predictions are based on the fact that the bulk of the Project activity will occur approximately 190 km 120 miles offshore and the Project will capture and reinject produced natural gas which is not used as fuel on the FPSO back into the Liza reservoir; treat required wastewater streams prior to discharge to the sea; have a very small physical footprint e.g. infrastructure construction disturbs only about 0.3 km² of benthic habitat; and use Marine Mammal Observers MMO during selected activities to minimize the potential impacts to marine mammals due to auditory injury and ships strikes. Unplanned events such as a large oil spill are considered unlikely to occur because of the extensive preventative measures employed by EEPGL. Nevertheless an oil spill is considered possible and EEPGL has conducted oil spill modeling to evaluate the range of likely spill trajectories and rates of travel. The location of the Project 190 km 120 mi offshore prevailing northwest currents the light nature of the Liza field crude oil and the regions warm waters would all help minimize the severity of a spill. Accounting for these factors the modeling indicates only a 5 to 10 percent probability of any oil reaching the Guyana coast without taking into consideration the effectiveness of any oil spill response and in the unlikely event that a spill were even to occur. Although the probability of an oil spill reaching the Guyana coast is very small a spill at a Liza well would likely impact marine resources found near the well such as sea turtles and certain marine mammals that may transit or inhabit the area impacted by a spill. Air quality water quality seabirds and marine fish could also be impacted although likely to a lesser extent because the duration of acute impacts would not be long and the impacts are reversible. A spill could potentially impact Guyanese fishermen if commercial fish and shrimp were impacted. The magnitude of this impact would depend on the volume and duration of the release as well as the time of year the release were to occur e.g. whether a spill would coincide with the time of year when these species are more common. Effective implementation of the Oil Spill Response Plan OSRP would help mitigate this risk by further reducing the ocean surface area impacted by a spill and thereby reduce oil exposure to these species. As described above although a large oil spill is considered unlikely and the probability of

reaching the Guyana coast is very low nevertheless given the sensitivity of many of the resources that could be potentially impacted by a spill e.g. Shell Beach Protected Area marine mammals critically endangered and endangered sea turtles coastal Guyanese and Amerindian communities reliant on ecosystem services for sustenance and their livelihood preparation for spill response is warranted. Therefore we believe it is critical that EEPGL commit to regular oil spill response training exercises document the availability of appropriate response equipment on board the FPSO and demonstrate that offsite equipment could be mobilized for a timely response. May 2017 ii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement It is recommended that all EEPGL embedded controls recommended mitigation measures and appropriate Environmental and Socioeconomic Management Plans including an OSRP be adopted. With the implementation of such controls mitigation measures and management plans the Liza Phase 1 Development Project is expected to pose only minor risks to the environmental and socioeconomic resources of Guyana while potentially offering significant economic benefits to the residents of Guyana. May 2017 iii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project EIS 1.0 INTRODUCTION Environmental Impact Statement This Environmental Impact Statement EIS has been prepared for the Liza Phase 1 Development Project Project in accordance with the Guyana Environmental Protection Agency EPA Environmental Impact Assessment Guidelines November 2000 and the Project Final Terms of Reference February 2017. This EIS was prepared by Environmental Resources Management ERM which is an international environmental and social consulting firm with extensive experience in the preparation of Environmental Impact Assessments EIA for offshore oil and gas development projects. ERM is also a Guyana EPA registered consultant. EIA Appendix B provides the Curriculum Vitae of the key members of the EIA team. ERM did not encounter any specific difficulties in preparing the EIA. The information provided on the Project and the resources found in the Project Development Area PDA were adequate for ERM to prepare a robust impact assessment. EIS 1.1 Project Sponsor The Project Sponsor is a joint venture among Esso Exploration and Production

Guyana Limited EEPGL Hess Guyana Exploration Limited Hess and CNOOC Nexen Petroleum Guyana Limited Nexen. EEPGL will be the operator of the Project and is used in this EIA to represent the joint venture. EEPGL which is an affiliate of ExxonMobil Corporation was formed on October 16 1998 and subsequently registered in Guyana on June 29 1999. ExxonMobil Corporation either directly or through subsidiaries conducts oil and gas exploration activities worldwide. EIS 1.2 Project Context EEPGL obtained an offshore petroleum prospecting license for the Stabroek Block from the Government of Guyana. In 2015 oil was discovered in the Liza field within the eastern half of the Stabroek Block approximately 190 kilometers 120 miles offshore from Georgetown in waters approximately 1500 to 1900 meters m deep Figure EIS1. Subsequent surveys and exploratory drilling have identified a reservoir of oil in a sandstone formation approximately 3600 m below the seabed approximately 5400 m below sea level. This reservoir is estimated to have a recoverable resource of 0.8 to 1.4 billion oil equivalent barrels. EEPGL together with Hess and Nexen are parties to a Petroleum Agreement with the Government of Guyana. Under this agreement and in light of the Liza field discovery EEPGL has applied for a Petroleum Production Licence and submitted a Project Development Plan to the Minister Responsible for Petroleum. May 2017 iv EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement Figure EIS1 Location of the Liza Project Development Area within the Stabroek Block NOTE Map does not represent a depiction of the maritime boundary lines of Guyana. EIS 1.3 Purpose of the Project The purpose of the Project is to achieve safe and efficient production of hydrocarbons from the Liza field. A confidential Petroleum Agreement between EEPGL Hess Nexen and the Government of Guyana defines how revenues from the Project are to be shared between the parties. The Government of Guyana would begin receiving oil revenues when oil is produced. EIS 1.4 Regulatory Framework and Purpose of this EIA In order to develop the Liza field EEPGL needs to obtain approval of an Application for Environmental Authorisation Application from the Guyana EPA in accordance with the Guyana EP Act Cap. 20:05. Toward that end EEPGL filed its Application with the EPA on July 5 2016. As part of its regulatory role the EPA taking into consideration recommendations from the

Environmental Advisory Board EAB and GGMC is responsible for deciding whether and under what conditions to grant EEPGLs Application. Based on an initial assessment of the Project the EPA determined that an EIA was required. The purpose of this EIA is to provide the factual and technical basis required by EPA EAB and the GGMC to make an informed decision on EEPGLs Application. If approved the EPA would issue an Environmental Permit¹ with the terms and conditions necessary to effectively protect the environment. ¹The Environmental Authorisation granted by the EPA is also commonly referred to as an environmental permit and may be used interchangeably.

May 2017 v

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement EIS 2.0 PROJECT DESCRIPTION

The Project proposes to develop the offshore resource by drilling approximately 17 subsea development wells and using a Floating Production Storage and Offloading FPSO vessel to process store and offload the recovered oil. The FPSO will be connected to the wells via associated equipment collectively referred to as subsea umbilicals risers and flowlines SURF to transmit produced fluids i.e. oil gas produced water from production wells to the FPSO as well as treated gas and water from the FPSO to the injection wells. The Project drilling and production operations activities will collectively occur in what is referred to as the Project Development Area PDA which is an approximately 50 km² area located approximately 190 km 120 mi offshore Figure EIS2. The Project will also involve use of onshore shorebase facilities and marine aviation services to support development drilling SURF and FPSO installation production operations and ultimately decommissioning. Figure EIS2 Preliminary Liza Phase 1 Field Layout

Natural gas will be produced in association with the produced oil. EEPGL will use some of the recovered gas as fuel on the FPSO and proposes to reinject the remaining gas back into the Liza reservoir which will assist in optimizing management of the reservoir. Alternative uses of gas for future phases are being studied and would be addressed in a separate environmental authorization.

Phase 1 will consist of essentially three stages 1 Drilling and Installation 2 Production Operations and 3 Decommissioning. Each of these stages is described briefly below.

May 2017 vi EEPGL

Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact

Statement EIS 2.1 Drilling and SURFFPSO Installation The approximately Figure EIS3 Typical Drill Ship EEPGL will use one or two drill ships Figure EIS3 to drill the development 17 wells. development wells are currently planned to include eight production wells for recovering the oil six water wells to inject water into the Liza reservoir to maintain pressure and three gas wells to reinject recovered gas not used on the FPSO into the reservoir. The wells will be clustered around two drill centers. For safety reasons a 500 m marine safety exclusion zone around the drill ships and major installation vessels will be established to avoid interactions with unauthorized vessels. For each well the initial section i.e. structural casing section will feature a pipe inserted into the borehole and cemented in place. This section will be drilled using water based drilling fluids WBDF and drill cuttings from this section will be discharged to the seafloor near the well. Subsequent lower sections of the wells will be drilled using lowtoxicity nonaqueous drilling fluids NADF with low to negligible aromatic . The used cuttings from the lower sections will be directed to the drill ship where the drilling fluids will be recovered for reuse to the extent practicable and the cuttings will be treated to limit the percentage of fluid retained on the cuttings. After treatment the cuttings are then discharged to the sea. Figure EIS4 FPSO Once each well is drilled a wellhead and tree are installed and the well is connected to a manifold which is connected as appropriate to an umbilical and production gas or water flowline. The flowlines will be laid on the seafloor and risers will connect the seafloor infrastructure to the FPSO. The flowlines and risers will be hydrostatically tested with treated seawater to ensure no leakage. After the testing the hydrostatic water used to test the water and gas injection flowlines will be discharged near the seafloor and the fluid used to test the production flowlines will be recovered and treated prior to discharging overboard. The FPSO Figure EIS4 will be a converted double hull tanker with the capacity to store 1.6 million barrels of stabilized crude oil. The FPSO will be secured to the seafloor by a 16 to 20point spread mooring anchor system. The FPSO and the mooring system are designed to remain in place for at least 20 years and to sustain extreme 100year return period environmental conditions. The FPSO will also provide living quarters

May 2017 vii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

Environmental Impact Statement and associated utilities for approximately 140 personnel. For safety reasons the FPSO will have a two nautical mile exclusion zone to avoid interactions with unauthorized vessels.

EIS 2.2 Production Operations The FPSO will be designed to separate the recovered reservoir fluids into its oil water and gas phases Table EIS1. The oil will be treated to remove impurities e.g. sulfate and other salts and then sent to storage tanks in the hull. The water from the reservoir referred to as produced water will be treated to remove hydrocarbons and will then be discharged to the sea. The FPSO will dehydrate compress and reinject the produced natural gas into the Liza reservoir although some of the gas will be used as fuel on the FPSO and some gas may be occasionally flared on a nonroutine temporary basis. The FPSO will also have the capacity to treat by filtration deaeration and sulfate removal seawater for injection into the reservoir to maintain reservoir pressure and offset the withdrawal of reservoir fluids to enhance oil production.

Table EIS1 FPSO Key Design Rates

Service	Oil Production	Produced Water	Total Liquids	Produced Gas	Gas Injection	Design Rate
Oil Production	100000 bpd	150000 bpd	190000 bpd	180000000 standard cubic feet per day	160000000 standard cubic feet per day	100000 bpd

peaks of 120000 bpd 100000 bpd 150000 bpd 180000000 standard cubic feet per day 160000000 standard cubic feet per day assumes some produced gas will be used as fuel gas for the FPSO 190000 bpd

Water Injection Project facilities will have the potential to safely operate at sustained peaks above the design rate. For purposes of this EIA potential impacts generated by the Project e.g. air emissions were based on a potential peak production volume of 144000 bpd to be conservative in the analysis. The FPSO will offload produced crude oil to conventional oil tankers on a regular basis. The tanker under the guidance of a Mooring Master will maneuver to within approximately 120 m 390 feet of the FPSO and hold position with the aid of up to three tugboats Figure EIS5. Crude oil will be pumped from the FPSO storage tanks to an offloading tanker using a floating hose at a rate of approximately one million barrels of oil in about 28 hours.

May 2017 viii
 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement Figure EIS5 Typical FPSO Offloading to a Conventional Tanker EIS 2.3
 Decommissioning Prior to the end of operations estimated at approximately 20 years EEPGL will

initiate detailed planning for facility decommissioning including filing a Notice of Intent for Decommissioning to the GGMC and EPA. All development wells will be permanently plugged and abandoned. It is expected that the SURF equipment and the FPSO mooring lines will be abandoned in place on the seafloor in accordance with standard industry practice subject to the decommissioning plan. The FPSO will be disconnected from its mooring system and towed to a shipyard for decommissioning.

EIS 2.4 Onshore Marine and Aviation Support Shorebases laydown areas warehouses fuel supply and waste management facilities will support the Project across the Project stages as described above. EEPGL is planning to utilize shorebases in Guyana and Trinidad to support the Project. Marine support will include various supply vessels with an average of 12 trips per week during drilling and installation and about 7 trips per week during production operations. These vessels are planned to originate from shorebases in Guyana and Trinidad. Aviation support is expected to average about 30 to 35 flights per week during drilling and installation and about 20 to 25 flights during production operations.

EIS 2.5 Project Workforce EEPGL estimates it will require a workforce of approximately 600 persons at the peak of the development well drilling approximately 600 persons at the peak of the installation stage approximately 150 shorebase and marine logistical support onshore staff some of whom will be Projectdedicated while others will be shared resources at the peak of installation and drilling activities approximately 100 to 140 persons at peak of production operations and approximately 60 persons at the peak of decommissioning.

May 2017 ix EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

EIS 2.6 Project Schedule Environmental Impact Statement It could take up to four years to drill the approximately 17 wells with drilling planned to begin in 2018 or 2019. Installation of the SURF and FPSO are likely to be initiated in 2019 to be ready for initial production by mid2020 with operations continuing for at least 20 years

Figure EIS6. Figure EIS6 Preliminary Project Schedule

EIS 2.7 Public Consultation EEPGL has conducted a robust public consultation program to both inform the public about the Project and to understand stakeholder concerns so this feedback could be incorporated into the EIA as applicable. EEPGL has held various workshops with the government and others regarding

offshore oil and gas development. EEPGL and ERM have held meetings with over 30 Guyana government agencies, commissions, many elected officials and Regional Administrators, over 15 professional or business associations, various international and domestic nongovernmental organizations, several universities and research institutes, various religious and ethnic organizations and the media. EEPGL and ERM participated in two sector agency scoping meetings with over 150 attendees of which approximately 100 were members of the general public. These were followed by six public scoping meetings in Regions 1 through 6 which had over 300 attendees of which over 200 were public participants.

EIS 2.8 Alternatives

The EIA considered a range of potential Project alternatives as summarized below.

Location Alternatives

The location of the Project and the development wells in particular is driven by the location of the resource to be recovered. There are no meaningful differences in location alternatives for the FPSO, SURF equipment and drill centers within the PDA as the nature of the seafloor and the water surface are not expected to vary appreciably across the area; thus no environmental or social benefits would be achieved by minor location modifications.

May 2017 x EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Development Concept Alternatives Environmental Impact Statement of Facility Type

Given the water depth and distance to shore of the Liza field, the development alternatives are primarily limited to floating production systems e.g. FPSO, semisubmersible, tension leg platforms. With the exception of the FPSO concept, the other deepwater production systems would necessitate the use of a separate Floating Storage and Offloading (FSO) vessel for oil storage and offloading, which would increase environmental impacts. The FPSO was chosen because it is a more efficient standalone solution for deepwater oil processing and storage and is also the environmentally preferred alternative.

Gas Disposition

Three primary alternatives were considered for addressing associated gas produced during Phase 1 operations: gas reinjection, gas export and continuous flaring. Gas reinjection was determined to be feasible for Phase 1 and it also provides benefits in reservoir management. As such, produced gas not used as fuel gas on the FPSO will be reinjected under normal operations. Continuous flaring of gas on a routine basis is not preferred primarily due

to the associated air emissions. Gas export alternatives continue to be evaluated particularly given challenges related to commercialization of associated gas. The FPSO has been designed to allow for future gas export should an export alternative be identified. Technology Alternatives EEPGL is using the most appropriate industryproven technology in developing the Project in terms of well drilling drilling fluids equipment selection development concepts and environmental management. EEPGLs parent company ExxonMobil and its contractors have extensive experience in delivering offshore deepwater development projects around the world particularly with FPSO and SURF components and are applying that knowledge experience and technology in the development of the Project in Guyana. Nogo Alternative Under this alternative the Project would not be executed and the existing conditions in the PDA would remain unaffected by the Project and the potential positive and negative impacts assessed would not be realized. Therefore evaluating the nogo alternative means evaluating the tradeoff between positive and negative impacts. Overall the proposed Project reflects optimized locational siting appropriate development concept use of industryproven technology and also selection of the environmentally preferred action alternative. May 2017 xi EEPGL Environmental Impact Assessment Liza Phase 1 Development Project EIS 3.0 PROJECT IMPACTS Environmental Impact Statement This section summarizes the predicted environmental and socioeconomic impacts of the Project resulting from planned activities and potential unplanned events specifically an oil spill as well the Projects contributions to cumulative impacts on important resources and receptors. The resourcesreceptors considered in this analysis are listed in Table EIS2. The impacts of the Project were evaluated against the conditions of the existing environment as described in the Section 6 of the EIA. Table EIS2 Resources and Receptors Considered in this EIA Physical Resources Air Quality and Climate Sound Marine Geology and Sediments Coastal Wildlife and Shorebirds Community Health Wellbeing Employment and Livelihoods Biological Resources Protected Areas and Special Status Species Coastal Habitats Socioeconomic Resources Economic Conditions Marine Water Quality Seabirds Marine Mammals Marine Turtles Marine Fish Marine Benthos Ecological Balance and Ecosystems Marine Use and Transportation Social

EIS 3.1 Planned Activities The Project is an offshore oil development and all drilling installation production operation and decommissioning activities will occur over 190 km 120 miles off the coast of Guyana. The Project should not disturb any natural onshore habitats. There may be a minor increase in traffic congestion near the onshore shorebases and a Road Safety Management Procedure should mitigate those impacts. The Project will generate benefits for the citizens of Guyana through revenue sharing with the Government of Guyana a minor increase in employment and select Project purchasing from Guyanese businesses. The only resources with the potential to incur any meaningful adverse impacts from planned Project activities would be air quality and marineoriented resources i.e. marine sediments water quality and biological resources which are discussed briefly below.

EIS 3.1.1 Air Quality Emissions generated by the Project generally emanate from three source categories a specific point sources such as the power generating units and diesel engines on drill ships and on the FPSO b nonroutine flaring used to combust produced gas when not consumed as fuel gas on FPSO or reinjected and c general area sources such as support vessels construction vessels tug boats and helicopters. Such emissions contribute to increases in the ambient air concentrations of certain pollutants.

May 2017 xii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement

The CALPUFF model was used to assess the dispersion of air pollutants and the potential impact for onshore human receptors. For all modeled constituents the maximum onshore concentrations predicted to result from Project activities are negligible relative to World Health Organization WHO guidelines the highest being less than or equal to 1 percent of the WHO guideline. The Project will also emit greenhouse gases GHGs throughout its predicted lifecycle with peak emissions during steadystate production operations stage estimated to be approximately 980 kilotonnes of CO₂equivalents per year. There are no applicable regulatory criteria against which these GHG emissions can be compared but these emissions are disclosed in accordance with good international practice to aid in managing GHG emissions at a national and international level. EEPGL proposes to reinject

recovered natural gas which is not used as fuel on the FPSO back into the Liza reservoir which represents a significant reduction in potential GHG emissions versus that which would result from routine gas flaring.

EIS 3.1.2 Marine Water Quality

The Project will impact marine water quality in a localized manner via planned discharges during well drilling hydrostatic testing of the flowlines and risers following installation and production operations stages. During well drilling as each well is started the Project will release a small volume of WBDF and cuttings at the seafloor. Low toxicity NADF will be used for the remainder of the well drilling but will be captured recovered to the extent practicable and reused. EEPGL would treat the drill cuttings to reduce the drilling fluids retained on the cuttings prior to discharging overboard. Modeling indicates that the residual NADF on the cuttings may have a localized minor impact on water quality. During installation the subsea flowlines and risers must be hydrostatically tested to confirm there are no leaks. Treated seawater is used for this purpose to prevent biofouling. A hydrate inhibiting substance such as methanol or ethylene glycol will also be used to prevent formation of hydrates during commissioning of the production and gas injection lines. After the completion of the testing the hydrostatic test water and hydrate inhibitor from the gas injection line will be released at the seafloor. The hydrostatic test water and hydrate inhibitor from the production lines will be returned to the FPSO treated and discharged from the overboard water line. These discharges would be a onetime short term impact and the treated seawater and hydrate inhibitor would be quickly diluted within the water column. During production operations the FPSO will discharge five primary effluent streams to the ocean Table EIS3. The FPSO systems associated with these discharges will be designed to ensure applicable discharge criteria are met which may require treatment in some cases. Modeling indicates that concentrations of chemical constituents would be reduced to insignificant levels within approximately 100 meters of the discharge point.

May 2017 xiii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement Table EIS3 Summary of Production Operations Discharges

Discharges Source	Cooling Water	Process water to dissipate heat from FPSO systems	no hydrocarbon contact	Potential Contaminants	Temperature	Chlorine	Produced
-------------------	---------------	---	------------------------	------------------------	-------------	----------	----------

Water separated from reservoir fluids Sulfate Removal and Potable Water Processing Brines Removal of sulfates from seawater prior to injection; potable water processing Domestic Sanitary Wastewater Personnel black and gray water food wastes Oil grease Temperature Residual production and water treatment chemicals Bioe Chlorine Oxygen scavenger Scale inhibitor Nutrients chlorine bacteria Discharge Rate Comments 700000 bpd Discharge will meet internationally recognized standards limiting increases in ambient water temperature. 100000 bpd Will be treated to meet internationally recognized limits on oil grease . 100000 bpd Discharge 9000 bpd meets applicable standards without treatment. Will be treated in accordance with internationally recognized standards prior to discharge. Discharge will be conducted in accordance with internationally recognized standards. Offloading Tanker Ballast Water Offloading tanker will discharge ballast water as it loads oil from the FPSO None anticipated 1100000 barrels during each loading EIS 3.1.3 Marine Sediments and Marine Benthos The drilling of wells and the placement of flowlines and other subsea equipment will physically disturb approximately 0.3 km² of the sea bottom. After the initial structural casing section is installed the remaining NADF drill cuttings will be returned to the drill ship for treatment to remove associated drilling fluids prior to discharge to the sea in order to meet acceptable discharge thresholds. The planned discharge of NADF drill cuttings will result in the localized accumulation of cuttings on the seafloor primarily around the well locations with the distribution of deposition determined by oceanographic conditions. Modeling has indicated that the discharge of these cuttings will not significantly impact sediment quality because of the May 2017 xiv EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement relatively low toxicity and expected dispersion. Overall the Project impact on marine sediments will be negligible. Marine benthos organisms living on the seafloor could also be impacted by Projectrelated seafloor disturbance by potential smothering from the drill cuttings. Based on surveys of the seafloor however benthic organisms primarily consisting of polychaete worms occur at low densities. Modeling indicates that smothering effects from drill cuttings would be limited to a very small area around the well approximately 43 m diameter area. EIS 3.1.4 Marine

Biological Resources Marine resources i.e. seabirds fish mammals and turtles have the potential to be impacted by the Project but it was determined that the significance of these impacts range from minor to negligible for the reasons explained below. The Project could impact seabirds by interfering with their migration i.e. lights serving as attraction and potential exposure to the radiant heat from the flare. The Project lighting will be downcast to minimize its attraction potential and flaring will be nonroutine and temporary i.e. during select maintenance activities so the overall Project impact on seabirds was determined to be negligible. The Project could impact marine fish by deterioration of water quality from the discharges described above and the potential to entrain suck in fish at the cooling water intake. Modeling indicates that water quality will return to near background conditions within 100 m of the FPSO so the area impacted will be very small and fish are mobile and are known to avoid areas with degraded water quality. Water intakes will be designed to minimize the entrainment of fish. Marine mammals may be impacted by two types of sound continuous sound from vessels and machinery operating in the PDA and by comparatively louder shorter duration impulse sound from Vertical Seismic Profiling VSP and driven piles. Both the continuous sound and impulse sound sources would be loud enough to cause injury in the immediate vicinity of the source but would attenuate to noninjurious levels approximately 10 m horizontal distance from the vessels approximately 100 m from the VSP and approximately 1300 m from the driven piles at depths 1000m. Many of the larger baleen whales and dolphins would naturally avoid the area of potential effect especially around Drill Center 2 because it would be deeper than their typical maximum dive depths. Others such as sperm whales dive deep enough that they could potentially be exposed to injurious sound levels throughout the PDA however it would not be expected that they would be exposed for continuous time periods predicted to be necessary to result in injury. Vessel strikes would likely pose more of an immediate threat than auditory injury. Marine observers will be used to monitor for mammals present prior to or approaching during the VSP and soft start procedures will be used to allow any mammals in the immediate vicinity of the VSP and pile driving to vacate the area before sound levels reach potentially injurious levels in accordance with JNCC guidelines.

Vessel crews will also lookout for marine mammals to minimize the potential for vessel strikes. May 2017 xv EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement

Marine turtles are generally considered to be less sensitive to marine sound than marine mammals so underwater sound from Project activities would not have the same potential to impact marine turtles as marine mammals. The most significant potential Project-related impacts on marine turtles would be from marine vessel strikes and the same measures employed to manage risks of strikes on mammals would help manage risks of strikes on turtles. Numbers of vessel trips are modest in relation to existing vessel activity in Guyana waters; thus impacts to marine turtles are not anticipated to result in a significant impact.

EIS 3.2 Unplanned Events

An unplanned event is defined as an event that is not planned to occur as part of the Project e.g. accidents but that could potentially occur. Since these events are not planned they are evaluated using methods different from those used for planned events specifically taking into consideration the likelihood that an unplanned event will occur. For purposes of the Project three types of unplanned events were identified and considered hydrocarbon spill vessel collision and onshore vehicular accident. While a vessel collision and a vehicular accident could result in injuries significant injuries or fatalities would be expected to be rare occurrences considering likely vessel and vehicle speeds in areas where risk of collisions is highest. Thus vessel collisions and vehicular accidents are considered to have small temporary and localized impacts. The remainder of this section focuses on the potential impacts from an oil spill. The Project will be producing processing storing and offloading oil as its core activity so the risk of an oil spill would be present. EEPGL has identified nine spill scenarios including spills of different types of hydrocarbons e.g. crude oil marine diesel fuel oil lubricating oil NADF with several being applicable for spills at the shorebases and on vessels in the Demerara River estuary e.g. from supply vessel or in the Atlantic Ocean e.g. from a well drill ship supply vessel tanker FPSO. The largest of these scenarios considers a loss of well control in situ at the seafloor releasing 20000 barrels of oil per day for 30 days. EEPGL's well control philosophy is focused on blowout prevention using safety and risk management systems management of change

procedures global standards and trained experienced personnel. EEPGL has a mature program that emphasizes attention to safety well control and environmental protection. This includes proper preparation for wells e.g. well design well control equipment inspection and testing detecting changes in pressure quickly and efficiency in the process for temporary closing of a well personnel training and proficiency drills. In addition to these prevention measures EEPGL also has developed a detailed Oil Spill Response Plan OSRP to ensure an effective response to an oil spill if one were to occur. The OSRP identifies the organizations that would respond to a release event depending on the magnitude and complexity of the spill. The OSRP clearly delineates the responsibilities of each entity that would take part in a response and describes how EEPGL would mobilize both its own resources and those of its oil spill response contractors as well as notifying the government of Guyana with respect to mobilizing its resources. May 2017 xvi EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement Due to the precautionary measures proposed by EEPGL to prevent and control an oil spill as described above the likelihood of an oil spill occurring is expected to be unlikely. Nevertheless EEPGL has conducted oil spill modeling and coastal sensitivity mapping to identify and characterize the resources/receptors with the potential to be exposed to oil in the event of a spill. An overview of this modeling and mapping is provided below. The spill modeling evaluated the range of possible trajectories and rate of travel of an oil slick from an extended loss of well control 20000 barrels of oil per day for 30 days. Several factors would inherently reduce the severity of an oil spill occurring in the Liza offshore development area and would increase subsequent ecosystem recovery rates including the following

Location of Spill a Liza well control event would occur approximately 190 km 120 mi offshore. It would take some time for oil to reach the Guyana shoreline which allows time to implement the Projects OSRP and also allows more time for evaporative and dispersive forces to act on the spilled material. Prevailing Currents the Guiana Current is a strong nearly year round westerly flowing current along the coast of Guyana. Modeling indicates that this current significantly reduces the probability of spilled oil reaching the sensitive coastal resources of Guyana. Properties of Spilled Oil

the Project will be producing a light crude oil which has low smothering potential and tends to spread readily on the ocean surface both of which can reduce severity of impacts to shoreline resources. Climate the relatively warm yearround waters of the Project area would keep any spilled oil less viscous which helps cleanup operations such as skimming and pumping. The modeling predicted that surface oil would generally travel towards the northwest in all scenarios during both the summer and winter seasons. The oil spill model indicates that even in the unlikely event of an oil spill there is only a 5 to 10 percent chance of shoreline oiling in Guyana. It is important to note that this modeling does not account for any oil spill response e.g. aerial vessel or subsea dispersant application offshore containment and recovery source control operations so any preventative measures taken to keep oil from reaching the coast during a response would further reduce the potential of shoreline oiling in Guyana below the estimated 5 to 10 percent. It is highly unlikely oil spilled in the Liza field would reach the Guyana shoreline in the case of an actual spill. In addition to the low probability of oil reaching the Guyana shoreline in the absence of any spill response it would take 5 to 15 days for oil to reach shore. This would allow ample time for mobilization of spill response resources to further reduce the risk of oil actually reaching the shoreline. Despite this if oil were to reach the Guyana shoreline those resources most at risk would include protected areas i.e. Shell Beach coastal habitats especially mangroves and marshes and coastal wildlife especially birds and furbearers as well as coastal communities and indigenous peoples dependent on fishing in the ocean and other ecosystem services Table EIS4. However the combination of the low probability of an oil spill actually reaching the shoreline and the time available to allow for spill response results in the residual risk to these resources being considered minor. May 2017 xvii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement Table EIS4 Coastal Resources Potentially Impacted by an Oil Spill Resource Potential Impact Protected Areas Coastal Habitats and Wildlife Ecosystem Services Coastal Communities and Indigenous Peoples Per oil spill model Shell Beach Protected Area and its vicinity could be impacted if oil were to reach the Guyana shoreline. Mangroves and wetlands are common habitats along the Guyana coastline

and support many species and are considered sensitive to oil contamination. Many rural coastal communities and especially Indigenous communities rely on many ecosystem services e.g. for food housing materials medicinal plants income producing products flood protection for sustenance and livelihoods. Residual Risk Rating Minor Minor Minor Even though the probability of a spill impacting the coastal resources of Guyana is very low such an oil spill would likely have adverse impacts on marine resources in the area impacted by the spill. Those resources most at risk would be water quality seabirds marine mammals and marine turtles as described in Table EIS5. Effective implementation of the OSRP would help mitigate this risk by further reducing the ocean surface area impacted by a spill and oil exposure to these species. Table EIS5 Marine Resources Potentially Impacted by an Oil Spill Resource Potential Impact Marine Water Quality Seabirds Marine Mammals Marine Turtles Dissolution of some spilled oil into the water column but light oil expected to degrade quickly and the impacts are reversible. Seabirds are typically among the species most impacted by an oil spill because they spend significant time on the water surface and so may come in contact with the spilled oil but seabirds are primarily transient in the PDA. Ingestion and respiratory irritation from inhalation of vapors at the water surface and the potential for fouling of baleen whale plates which are used to feed. Dermal irritation from contact with oil ingestion and respiratory irritation from inhalation of vapors at the water surface. Residual Risk Rating Moderate Minor Moderate Moderate Cumulative Impacts EIS 3.3 The Project is located approximately 190 km 120 mi offshore so there are few opportunities for the Project to cumulatively impact resources that would be impacted by other activities. There is the potential for other future offshore Guyana oil and gas exploration and possibly development. If such nonProject activities were to occur the Project and nonProject activities together could cumulatively impact some resources such as Marine Mammals via vessel strikes or sound Marine Turtles vessel strikes Marine Fish degraded water quality and seawater entrainment Community Health and Wellbeing increased demand on limited medical treatment capacity Marine Use and Transportation marine congestion especially near May 2017 xviii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact

Statement Georgetown harbor and Social Infrastructure and Services increased demand for limited housing utilities and services. Many of the above potential impacts that require offshore interaction between the Project and others have a limited chance of cooccurring given the size of the Stabroek Block. Thus potential cumulative impacts were considered to be of Minor significance.

EIS 3.4 Degree of Irreversible Damage

The planned Project would not cause irreversible damage to any onshore areas of Guyana. There would be a very minor approximately 0.3 km² permanent loss of benthic habitat as a result of the installation of wells flowlines and other subsea equipment which may be proposed to be left in place upon decommissioning. However this equipment can ultimately provide the substrate for recolonization of the impacted areas. Even in the unlikely event of an oil spill little irreversible damage would be expected although it could take a decade or more for all resources to fully recover depending on the on the volume and duration of the release as well as the time of year the release were to occur.

EIS 3.5 Environmental and Socioeconomic Management Plan

An Environmental and Socioeconomic Management Plan ESMP has been developed to manage and mitigate the impacts identified in the EIA. The ESMP includes the following

Environmental and Socioeconomic Management Plan Framework

Environmental Management Plan including

- o Air Quality Management
- o Water Quality Management
- o Waste Management Plan

Preliminary End of Operations Decommissioning Plan

May 2017 xix EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement

EIS 4.0 CONCLUSIONS AND RECOMMENDATIONS

EIS 4.1 Conclusions

The planned Project is predicted to have minor impacts on physical resources i.e. air quality marine sediments and water quality no impacts on coastal biological resources minor impacts on marine biological resources and largely positive impacts on

socioeconomics. These predictions are based on the fact that the bulk of the Project will occur approximately 190 km 120 miles offshore and the Project will capture and reinject produced natural gas; treat all significant wastewater streams prior to discharge to the sea; have a very small footprint e.g. only physically disturb about 0.3 km² of benthic habitat; and use MMOs during VSP operations to minimize the potential for auditory damage and injury from ship strikes to marine mammals. The Project will generate benefits for the citizens of Guyana through revenue sharing with the Government of Guyana a minor increase in employment and select Project purchasing from Guyanese businesses. Unplanned events such as a potential oil spill are considered unlikely to occur because of the extensive preventative measures employed by EEPGL. Nevertheless an oil spill is considered possible and oil spill modeling has been conducted to evaluate the range of likely spill trajectories and rates of travel. The location of the Project 190 km 120 miles offshore prevailing northwest currents the light nature of the Liza field crude oil and the regions warm waters would all help minimize the severity of a spill. Accounting for these factors the modeling indicates only a 5 to 10 percent probability of oil reaching the Guyana coast without taking into consideration the effectiveness of any oil spill response. Although the probability of an oil spill reaching the Guyana coast is very small a well control spill at a Liza well would likely impact marine resources found near the well such as sea turtles and certain marine mammals especially baleen whales that may transit or inhabit the area impacted by a spill. Air quality water quality seabirds and marine fish could also be impacted although likely to a lesser extent because the duration of acute impacts would not be long and the impacts are reversible. A spill could potentially impact Guyanese fishermen if commercial fish and shrimp were impacted. The magnitude of this impact would depend on the volume and duration of the release as well as the time of year the release were to occur e.g. whether a spill would coincide with the time of year [May to September] when these species are more common in the PDA. Effective implementation of the OSRP would reduce this risk by further reducing the ocean surface area impacted by a spill and oil exposure to these species. Table EIS6 provides a summary of the predicted residual taking into consideration proposed mitigation

measures impact significance ratings for impacts to each of the resources/receptors that may result from each of the Project stages i.e. well drilling SURFFPSO installation production operations and decommissioning unplanned event i.e. oil spill and cumulative impacts. Minor 2 Soundrelated impacts on Marine Mammals are factored into the Marine Mammal impact assessment. May 2017 xxi EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental Impact Statement The Project will also generate benefits for the citizens of Guyana in several ways Through revenue sharing with the Government of Guyana although the details of this revenue sharing is confidential. The type and extent of benefits associated with revenue sharing will depend on how decision makers in government dee to prioritize and allocate funding for future programs which is unknown and outside the scope of the EIA; By procuring select Project goods and services from Guyanese businesses to the extent reasonably practicable; and By hiring Guyanese nationals where reasonably practicable although the potential magnitude of hiring will be limited. In addition to direct revenue sharing expenditures and employment the Project would also likely generate induced economic benefits as other nonProject related businesses benefiting from direct Project purchases or worker spending will reinvest locally or expand spending in the area thereby also generating more local valueadded tax. These beneficial multiplier impacts will occur throughout the Project life. EIS 4.2 Recommendations ERM recommends the following measures be considered by EPA GGMC and the EAB as conditions of any approval of the Project Embedded Controls incorporate all of the proposed embedded controls see EIA Chapter 11. Mitigation Measures adopt the recommended mitigation measures see EIA Chapter 11. Management Plans Management Plan. implement the proposed Environmental and Socioeconomic Oil Spill Response EEPGL has proactively embedded many controls into the Project design to prevent a spill from occurring and we agree that a spill is unlikely. But given the sensitivity of many of the resources that could be impacted by a spill e.g. Shell Beach Protected Area marine mammals critically endangered and endangered sea turtles Amerindian communities reliant on ecosystem services for sustenance and their livelihood we believe it is critical that EEPGL commit to regular oil spill response drills simulations and exercises document the availability of appropriate response equipment on board the FPSO and demonstrate that offsite equipment could be mobilized for a timely response. With the adoption of such embedded controls mitigation measures and management plans and requirements

for emergency response preparedness the Liza Phase 1 Development Project is expected to pose only minor risks to the environmental and socioeconomic resources of Guyana while potentially offering significant economic benefits to the residents of Guyana. May 2017 xxii EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 1 Introduction ENVIRONMENTAL IMPACT ASSESSMENT 1.0 INTRODUCTION Esso Exploration and Production Guyana Limited EEPGL³ together with its joint venture partners Hess Guyana Exploration Limited and CNOOC Nexen Petroleum Guyana Limited is seeking an environmental authorization for the first phase of oil field development of the Liza prospect in the eastern half of the Stabroek Block hereafter referred to as the Liza Phase 1 Development Project or the Project which is located approximately 190 km 120 mi offshore from Georgetown Figure 11. Based on exploration and assessment activities in the Stabroek Block including three exploration wells Liza1 Liza2 and Liza3 respectively EEPGL believes these reservoirs potentially contain a recoverable resource of between 0.8 and 1.4 billion oil equivalent barrels. Figure 11 Location of the Liza Project Development Area within the Stabroek Block NOTE Map does not represent a depiction of the maritime boundary lines of Guyana. ³ EEPGL will be the operator of the Project and is used in this EIA to represent the joint venture. May 2017 1 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 1.1 Purpose of this EIA Chapter 1 Introduction Guyanese law requires EEPGL to obtain an environmental authorization from the Guyana Environmental Protection Agency EPA to undertake the Project. The EPA oversees the effective management conservation protection and improvement of the environment in Guyana. In this role the EPA is responsible for managing the environmental authorization process. EEPGL filed an Application for Environmental Authorisation Application with the EPA on July 5 2016. Based on an initial assessment of the Application the EPA determined that an Environmental Impact Assessment EIA was required in support of the Application. The purpose of this EIA is to provide the factual and technical basis required by EPA to make an informed decision on EEPGLs Application for Environmental Authorisation⁴ to permit the Project. After submission and review of this EIA the EPA takes into account recommendations from the

Environmental Advisory Board EAB and the Guyana Geology and Mines Commission GGMC the public's comments and EPA's own review including support from technical experts within other ministries in deciding whether and under what conditions to grant EEPGLs Application. The GGMC has several functions including promoting and regulating the exploration and development of the country's mineral and petroleum resources. The Petroleum Division of the GGMC is responsible for promoting Guyana's petroleum potential and monitoring exploration and production activities. GGMC oversees EEPGLs Prospecting Licence under which offshore exploration and drilling activities e.g. Liza 1 2 and 3 wells were conducted and has received EEPGLs application for a Petroleum Production Licence and associated Development Plan for the first phase of the Liza field development. GGMC will also provide technical input into the review of the EIA as discussed above and will consider the findings of the EIA as part of its evaluation of EEPGLs application for Petroleum Production Licence for the Liza Phase 1 Project. The EAB is an independent body that contributes to the development and review of the EIA and makes recommendations to the EPA on whether the EIA should be accepted amended or rejected and whether the environmental authorization should be granted and if so under what terms and conditions. This EIA was prepared by Environmental Resources Management ERM which is an international environmental and social consulting firm with extensive experience in the preparation of EIAs for offshore oil and gas development projects. In the Project's Final Terms of Reference ToR EPA approved ERM as the independent consultant to undertake the EIA. This EIA has been prepared in compliance with the Guyana Environmental Protection Act EP Act Cap.20:05 the Environmental Protection Authorisation Regulations 2000 the Environmental Impact Assessment Guidelines Volume 1 Version 5 2004 the Environmental Impact Assessment Guidelines Volume 2 Version 4 2000 other applicable Guyana 4 The Environmental Authorisation granted by the EPA is also commonly referred to as an environmental permit and may be used interchangeably. May 2017 2 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 1 Introduction regulations international good practice EEPGLs corporate standards and in accordance with ERM's standard practice. 1.2

EEPGL Exploration Well Drilling History EEPGL has drilled five exploration wells within the Stabroek Block offshore Guyana with a sixth well planned in 2017 as indicated in Table 11 below. After completion of the exploration testing each of these wells was closed consistent with good industry practice. EEPGL has plans to explore in other blocks but no drilling has yet occurred outside of Stabroek Block.

Well Name	Liza1	Liza2	Liza3	Skipjack	Payara	Snoek	Year Drilled	2015	2016	2016	2016	2016	Planned for 2017	Result
	Successful	oil found	Successful	Successful	Dry well	no oil found	Successful	Not available	1.3	Goals				

and Objectives of the EIA The goals of the EIA are to Provide the factual and analytical basis required by EPA and the GGMC to make an informed decision on EEPGLs Application for Environmental Authorisation to permit the Project; and Provide a basis for EEPGL to understand and appropriately avoid or manage the risks imposed by the Project via design or other management measures. In support of those goals and in accordance with the EIA Final ToR which were approved by the EPA on February 17 2017 the underlying objectives of the EIA are to Describe the Project including its various components and activities and full life cycle through to decommissioning; Describe the existing conditions within the Projects Area of Influence AOI; Identify and assess the potential direct and indirect environmental and socioeconomic impacts that could credibly result from the Project using a riskbased assessment process; Evaluate the potential for cumulative impacts; Describe a strategy to manage the identified significant adverse impacts of the Project; Characterize potential positive benefits of the Project; and Recommend monitoring to assess the effectiveness of the management strategy.

May 2017 3 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 1.4 Components of the EIA Chapter 1 Introduction As required by the Guyana EP Act Cap. 2005 and further described in the Guyana Environmental Impact Assessment Guidelines this EIA includes the required components of an EIA Project Description see Chapter 2 of the EIA; Environmental Baseline Studies see Chapter 6 of the EIA; Environmental Assessment see Chapters 7 8 and 10 of the EIA; Environmental Impact Statement provided at the beginning of the EIA; and Environmental and Socioeconomic Management Plan the

Environmental and Social Management Plan ESMP Framework is provided as Chapter 9 of the EIA. EEPGL has elected to submit these components as one document. The Environmental Impact Assessment Guidelines Volume 1 Rules and Procedures for Conducting and Reviewing EIAs November 2004 includes as Appendix 2 an EIA Review Checklist. Provided below in Table 12 is an EIA roadmap that shows where all of the Checklist Items Evaluated can be found in this EIA.

Table 12 EIA Review Checklist Roadmap	EIA Review Checklist Items
1. Adherence to the ToR	Corresponding EIA Reference Adherence to the ToR confirmed Adherence to the ToR must be verified simply by checking that all items and information requested in the ToR have been presented regardless of the or quality of such information.
2. Multidisciplinary Team	The accuracy of the EIA depends on the qualifications of the multidisciplinary team not only regarding the EIA process and methods but also regarding their knowledge of the several stages of the specific type of project. Therefore individual CVs should be submitted as part of the EIA Annexes. Signatures of each member of the team must be affixed.
3. Interdisciplinary Achievement	An EIA must present information regarding the interactions and integration between the physical biological and socioeconomic aspects of the environment in that particular area of the study.
4. Chapter 12 lists all team members and references Appendix A provides signatures and Appendix B includes all CVs. Chapter 7 includes assessment of all three categories of resources	EEPGL Environmental Impact Assessment Liza Phase 1 Development Project EIA Review Checklist Items
4. Executive Summary Chapter 1 Introduction	Corresponding EIA Reference Executive Summary included in EIS
5.01 see Chapter 2 5.02 see Section 2.3 Drilling 2.6 Installation Hookup and Commissioning 2.7 Production Operations and 2.9 Decommissioning	5.03 see Section 2.1 all stages occur within this same area 5.04 see Section 2.8 only onshore supply and support has any land requirements 5.05 see Section 2.10 5.06 see Section 2.10 5.07 see Section 2.10 5.08 Noise impacts are quantified in Section 7.2.5; thermal and liquid discharges are quantified in Section 7.1.4; and air gaseous emissions are quantified in Section 7.1.1 5.09 see Section 2.12 The Executive Summary also referred to as the nontechnical summary should provide a brief description of the project and

information regarding the potential impacts of the project arranged in order of significance along with the proposed mitigation/compensatory measures for each impact. The summary should end with the consultants' recommendations.

5. Project Description

The process of environmental impact assessment depends on the full understanding of the project proposal and accurate identification of the project actions. If actions are unclear, sufficiently detailed impacts are not likely to be identified with the accuracy and specificity needed to enable the development of appropriate mitigation measures.

5.01 Is the project proposal fully understood
5.02 Are all phases identified e.g. planning construction operation and decommissioning
5.03 Is the geographical area for each phase identified
5.04 Are the land use requirements for each phase identified
5.05 Is there an inventory of the nature and quantity of materials used in the production process
5.06 Are there inventories of the type and quantity of products byproducts and effluents expected to be produced by the project
5.07 Is there an inventory of the type and quantity of residues
5.08 Are the levels of emissions expected detailed with respect to Noise Vibration Light Heat Radiation Gases Liquids
Are the types and levels of any other emissions included
5.09 Is information on employment provided

May 2017

5 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 1 Introduction EIA Review Checklist Items Corresponding EIA Reference

6. Identification and Description of Alternatives

The assessment of sound alternatives is necessary to validate the EIA process. Therefore reasonable alternatives have to be fully and comprehensively considered. As a minimum one of the following alternatives must be considered location project layout technology scheduling project scale.

6.01 Did the developer consider alternatives
6.02 Was the no-project scenario considered
6.03 Were the environmental factors adequately presented for each alternative
6.04 Is the final choice adequate

6.01 see Section 2.16
6.02 see Section 2.16
6.03 see Section 2.16
6.04 see Sections 2.16 and 10

7. Definition and Justification of Physical Boundaries Direct and Indirect Area of Influence

See Section 5.1 Inconsistency in identifying the correct areas of influence will inevitably lead to inconsistency in the baseline data and the impact analysis. The indirect area of influence is the area likely to be affected by indirect secondary and/or long term impacts.

8. Analysis

of the Legal Aspects Involved The analysis of the legal framework involves more than a list of legal Acts. It involves assessing the consequences for the project of enforcing all the environmental legislation and regulations regarding the proposed site and sectoral requirements related to the proposed activity.

9. Identification of Other Existing Planned Activities or Projects in the Area of Influence This information is of utmost importance to ensure that landuse and other types of conflicts do not arise later during the project implementation.

9.01 Has the compatibility between the proposal and the identified existing activities been analysed

9.02 Are the activities compatible

9.03 Does the inventory of existing activities match what is observed See Sections 3.1 through 3.3 See Chapter 8 which discusses other activities in the AOI as part of the Cumulative Impact Assessment

9.01 see Section 8.1.2 9.02 see Section 8.1.2 9.03 see Section 8.1.2 May 2017 6 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 1 Introduction EIA Review Checklist Items Corresponding EIA Reference

10. Adequacy and Completeness of Relevant Baseline Data Baseline data must be specific and relevant to the area of influence. General and superficial information does not allow for the use of adequate impact prediction techniques.

10.01 Is the information presented specific and relevant

10.02 Were difficulties in attaining information if any documented

10.03 Have the impact indicators identified been adequately covered see Section 13

11. Appropriateness of EA Methods The use of appropriate EA methods is necessary to ensure reliability of the results of the EIA study. Each type of EA method has different strengths and vulnerabilities regarding its appropriateness to perform each step of the EIA study. Some EA methods are unable to provide the means of identification of causeeffect relationships; others do not enable the identification of indirect secondary and/or longterm impacts. Scientific and technical accuracy of the EIA methods used must therefore be evaluated to ensure the reliability of the conclusions drawn from the impact assessment.

12.1. Physical Impacts Have all the identified impacts on air water soil noise landscape and natural resources been checked against the relevant impacts defined in the ToR Are impacts characterized positiveneegative directindirect primarysecondary shortmediumlong term reversibleirreversible temporarypermanent

12.5. Economic Impacts

Have all the identified impacts on the economy local/regional/national been checked against the relevant impacts defined in the ToR? Are impacts identified with respect to economic assets and activities? Are impacts characterized positive/negative direct/indirect primary/secondary short/medium/long term reversible/irreversible temporary/permanent local/regional/national/strategic avoidable/unavoidable? Have the magnitudes been estimated? Have the impacts been assigned a significance? Have the social implications of the impacts been assessed? Have cause/effect relations been properly identified? Are impacts identified with respect to income generation for the community and at the National Level? Are impacts characterized positive/negative direct/indirect primary/secondary short/medium/long term reversible/irreversible temporary/permanent local/regional/national/strategic avoidable/unavoidable? Have the magnitudes been estimated? Have the impacts been assigned a significance? Have the social implications of the impacts been assessed? Have cause/effect relations been properly identified?

12.6. Other impacts

Have all other impacts been checked against the relevant impacts defined in the ToR? Are impacts identified with respect to? Are impacts characterized positive/negative direct/indirect primary/secondary short/medium/long term reversible/irreversible temporary/permanent local/regional/national/strategic avoidable/unavoidable? Have the magnitudes been estimated? Have the impacts been assigned a significance? May 2017 9

See Section 7.3 which addresses economic resources combined with other socioeconomic resources. Other potentially impacted resources not specifically listed above have been included such as marine sediments, marine use and transportation and indigenous peoples. EEPGL

Environmental Impact Assessment Liza Phase 1 Development Project Chapter 1 Introduction EIA Review Checklist Items Corresponding EIA Reference

Has the social distribution of the impacts been identified

Have causeeffect relations been properly identified 13. Cumulative Impacts There may be cases where an activityproject will contribute to a cumulative impact on the environment although individually it may not have a significant environmental impact. This may be as a result of the presence of similar activities within the vicinity of the project. 13.01 see Chapter 8 13.02 see Section 8.2 13.03 see Section 8.2 13.04 see Section 8.2 13.05 see Section 8.2 13.01 Have cumulative impacts been adequately identified and characterized 13.02 Have the magnitudes been estimated 13.03 Have the impacts been assigned a significance 13.04 Has the social distribution of the impacts been identified 13.05 Have causeeffect relations been properly identified 14. Impact Indicators Impact indicators are the parameters used to estimate the magnitude of the impacts. 14.01 Were the impact indicators used adequate for all the impacts identified 15. Prediction Techniques Impact prediction techniques are necessary to enable the estimation of the magnitude of the impacts. Without the use of adequate impact prediction techniques accurate impact analysis is not possible. 15.01 Have the impact prediction techniques used been described 15.02 Are they adequate 16. Magnitude of Impacts Magnitude is the estimate of the absolute measurevaluedimension of the difference between the environmental situation of a given parameter before and after the project is implemented. In the majority of cases physical biological and economic impacts it must be expressed in quantitative values. The estimation of the magnitude of each relevant impact is one of the most important steps in impact analysis. It ensures the accuracy of the EIA and allows for the May 2017 10 See Chapter 4 which outlines approach for characterizing magnitude of impacts See Chapter 7 which assesses magnitude for impacts 15.01 see Chapter 4 which describes the impact assessment methodology used; Chapter 7 describes methodology and results of analytical approaches for each resourcereceptor 15.02 see Chapter 4 See Chapter 4 which describes the approach for characterizing magnitude of impacts Chapter 7 assesses magnitude for impacts for each resourcereceptor

EEPGL Environmental Impact Assessment Liza

Phase 1 Development Project Chapter 1 Introduction EIA Review Checklist Items identification of appropriate and costeffective mitigation measures. Have the magnitude of all the relevant impacts been adequately estimated refer to impact indicators Section 14 Corresponding EIA Reference 17.0 ImportanceSignificance of Impacts Usual methods involve objective criteria regarding the ecological and social relevance of the project 17.01 Is the relative importancesignificance of each impact with regard to the environmental factor affected and with regard to the other impacts given 17.02 Is the significance based on objective criteria in order to minimize subjectivity of judgments 17.01 see Chapter 4 which describes the approach for characterizing the importance and significance of impacts 17.02 see Chapter 7 which describes the methodology and results of analytical approaches for each resourcereceptor 18 Social Distribution of Impacts Identifies which social groups will be affected by the positive and the negative impacts. These groups are often not the same. The balance between positive and negative impacts cannot be done without the correct identification of the social distribution of the impacts because it would not have scientific and technical relevance. 19 Stakeholder Participation 19.01 Are the results of stakeholder participation such as the results of interviews hearings etc. clearly documented 19.02 Have questionnaires used been included 19.03 Are the extent and method of stakeholder participation adequate 19.04 Are the conclusions drawn valid based on available data See Chapter 7.3 which addresses impacts to socioeconomic resources specifies affected groups 19.01 see Section 4.5 19.02 No specific questionnaires were used but numerous Key Informant Interviews informal meetings capacity building workshops as well as two AgencySector scoping meetings and six public scoping meetings from Regions 16 were held. 19.03 see Section 4.5 19.04 see Section 4.5 20 Analysis and Selection of Best Alternative See Section 2.16 and Chapter 10 Selection must be based on criteria derived from the impact assessment and appropriate analysis and decisionmaking methods must be used. 21 Environmental Management Plan EMP May 2017 11 See Chapter 9 and the ESMP EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 1 Introduction EIA Review Checklist Items Corresponding EIA Reference An EMP is sometimes called an Impact Management Plan. It is a

necessary step to ensure that the developer is effectively committed to the implementation of the mitigation measures. It is also a useful corporate management tool. Does the EMP as a minimum present The set of mitigation remedial or compensatory measures A detailed description of each one with indication and criteria for their effectiveness Detailed budgets for each one Timetables for implementation Assignment of responsibilities including an Environmental Manager The Environmental Policy 22 Monitoring See Section 9.6 and the ESMP Monitoring is a necessary step to ensure costeffectiveness of the EMP. It is usually addressed under the EMP see Section 20 Does the monitoring plan as a minimum address What is going to be monitored impact indicators Where will samples be taken How the samples will be analysed methodtechnique Criteria used to evaluate the results Financial and human resources required 23 Implementation Plan for the Mitigation Measures and the Environmental Management Plan See Chapter 9 and the ESMP Implementation mechanisms must be in place to ensure effective implementation of the mitigation measures and all other recommendations that might arise from the EIA study. It usually involves the assignment of a person responsible for environmental management and an approved timetable for implementation of measures. May 2017 12 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description 2.0 PROJECT DESCRIPTION Previous seismic testing and exploratory drilling have determined the presence of a high porosity sandstone reservoir of crude oil with an estimated recoverable resource of 0.8 to 1.4 billion oilequivalent barrels in an area referred to as the Liza field located within the eastern half of the Stabroek Block. The purpose of this Project is to develop the Liza field and produce the oil in what is referred to as the Liza Project Development Area PDA. Phase 1 of the Project will consist of the drilling of approximately 17 development wells the installation and operation of Subsea Umbilicals Risers and Flowlines SURF equipment the installation and operation of a Floating Production Storage and Offloading FPSO facility and ultimately Project decommissioning. The Project will also involve onshore facilities and marineaviation services to support development drilling installation production operations and decommissioning. This section discusses the following information related to the Project Installation

hookup and commissioning activities; Project location; Overview of development concept; Drilling and well design; SURF; FPSO vessel including topsides facilities and the vessel mooring system; Production operations including offloading by conventional tankers; Onshore marine and aviation support; End of operations decommissioning; Materials emissions discharges and wastes; Embedded controls; Project workforce; Worker health and safety; Project schedule; and Project alternatives.

2.1 Project Location The Stabroek Block which covers an area of approximately 26800 km² is oriented roughly parallel to the Guyana coastline extending across the entire width northwest to southeast of Guyana territorial waters. Figure 11 illustrates the location of the Liza PDA which is located approximately 190 km 120 mi from the coastline northeast of Georgetown within the Stabroek Block. Figures 21 and 22 illustrate the preliminary conceptual layout of the FPSO SURF equipment and drill centers within the Stabroek Block; their proximity to the Liza1 Liza2 and Liza3 exploration wells; and the subsea and surface extents of the PDA respectively.

May 2017 13 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 21 Subsea Project Development Area for FPSO Installation SURF and Drill Centers within Stabroek Block Note Locations on figure subject to change.

May 2017 14 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 22 Surface Project Development Area for FPSO and Drill Centers within Stabroek Block Note Locations on figure subject to change.

May 2017 15 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description The locations of the future development wells will be finalized before Project implementation; however the decision has been made that the wells will be drilled from two main drill centers⁵. During the development drilling installation of the FPSOSURF facilities and production operations stages work may be performed in the area denoted on Figure 21 as the Subsea PDA covering an estimated 45005000 hectares ha. Most of this subsea area will not be physically disturbed; the estimated subsea area to be disturbed during installation of SURF equipment and the FPSO mooring system see Figure 21 is approximately 400000 m² 30 ha incorporating a 50 percent contingency factor. During the development drilling and FPSO production

operations stages work may be performed on the surface of the ocean within the area denoted on Figure 22 as the Surface PDA also covering an estimated 45005000 ha. As further described in subsequent sections and represented on Figure 22 some of the ocean surface would have operational constraints that would restrict unauthorized vessels from entering a defined safety exclusion zone during drilling installation and production operations. Note however that while Figure 23 shows four potential exclusion zones around the drilling locations a maximum of only two drill ships will be operating at any one time. The safety exclusion zones for the large installation vessels are not specifically denoted on Figure 22; however exclusion zones similar to those for the drill ships will be maintained for these vessels while working in the PDA.

2.2 Overview of the Development Concept

2.2.1 Development Concept

The Liza field will be developed during Phase 1 with approximately 17 development wells drilled from two drill centers each with separate production gas and water injection manifolds. Figure 23 illustrates the preliminary field layout of the proposed Liza field development which includes the development wells SURF and a spreadmoored FPSO vessel. The facility layout will continue to evolve during the design development process. The various components shown on Figure 23 are further described in the relevant Drilling SURF and FPSO sections in this chapter.

5 A drill center is defined as a group of wells including production water injection and/or gas injection wells clustered around one or more manifolds. Each drill center incorporates separate manifolds that are separated by several kilometers and are designed for production or injection. For example Drill Center 1 will be separated into 1P production and 1I injection components.

May 2017 16 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 23 Preliminary Liza Phase 1 Field Layout Chapter 2 Project Description February 2017 17 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

The development wells consist of production wells water injection wells and gas injection wells. A portion of the associated gas i.e. gas entrained in the wellstream produced from the reservoir will be used onboard the FPSO as fuel gas and the remaining balance will be reinjected back into the reservoir via the gas injection wells. Alternative uses of gas for future

phases are being studied and would be addressed in a separate or amended EIA. Water injection will be used as needed to maintain reservoir pressure for optimal production over the life cycle of the Project. The Liza field will be developed using a spreadmoored FPSO see Section 2.5. The FPSO will be a converted double hull Very Large Crude Carrier VLCC that will support the topsides facilities process the produced wellstream from the production wells and store the processed crude oil. Offloading of the processed crude oil for export will occur directly to conventional tankers in a tandem configuration. Subsea production gas and water injection wells and manifolds will be tied back to the FPSO via flowlines and risers see Section 2.4.

2.2.2 Applicable Codes Standards and Management Systems

The various aspects of engineering design and operations will be carried out according to applicable Guyana statutory requirements applicable international design codes and standards as well as the EEPGL Operations Integrity Management System OIMS⁶ and the EEPGL Safety Security Health and Environment SSHE policies⁷. EEPGL and its contractors will have structured management systems to verify the ongoing application of all necessary codes standards procedures and SSHE management systems. An overview of the EEPGL OIMS Framework is included in Section 3.

2.3 Drilling and Well Design

2.3.1 Drilling Program

The Project proponent is considering the use of up to two drill ships similar to the drill ship shown on Figure 24 to drill the development wells during Phase 1. Both drill ships may be operated simultaneously. Drilling operations may occur prior to during and after the installation of the FPSO and SURF components.

6

<http://corporate.exxonmobil.com/company/about-us/safety-and-health/operations-integrity-management-system>

7 The SSHE policies are part of the overall Standards of Business Conduct policy <http://corporate.exxonmobil.com/en/company/about-us/guiding-principles/standards-of-business-conduct>

May 2017 18 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 24 Typical Drill Ship

Chapter 2 Project Description During the drilling process drill ships will require various tubulars instruments and devices collectively referred to as the drill string to conduct the well construction process which will be as follows drilling the borehole running and cementing casings

and installing the completion and production tubing. The drilling program will employ highangle and extended reach drilling technologies. These technologies allow wells to reach targets up to approximately 4 km 2.5 mi from the drilling seabed location. The wells will be clustered around two drill centers rather than distributed over the producing reservoir. This approach reduces the number of drilling locations thereby reducing the area potentially impacted by drilling operations including discharged drill cuttings⁸. The planned development drilling program and its cuttings management approach is consistent with industry practices considered protective of the environment and has been the basis for the Liza1 Liza2 and Liza3 exploration wells.

2.3.2 Typical Well Design

Once the borehole is started for a well pipe also known as casing must be inserted into the borehole and cemented in place to keep the well from collapsing and to seal the casing to the formation. As shown on Figure 25 various sized casings will be progressively set as the wells are drilled deeper. The size and strength of the casings to be used in the design of the well takes into account the peak reservoir temperature and pressure conditions that may be encountered during drilling and during production operations when the wells are flowing reservoir fluids. After each casing string cement job is completed pressure testing will be performed to confirm

⁸ Drill cuttings are the broken bits of solid material produced as the drill bit advances through the borehole in the rock or soil. The cuttings are usually carried to the surface by drilling fluid circulating up from the drill bit.

May 2017 19 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

integrity according to standard industry practices. A provisional well program and design including casing types and sizes setting depths drilling fluid types and discharge locations for the development drilling program is shown on Figure 25.

Figure 25 Provisional Casing Program for Development Drilling Program

The first i.e. most shallow section of each well also known as the structural casing section will be jetted or drilled with seawater. Drill fluids and cuttings from this section will be discharged to the sea at the mudline without treatment per standard industry practice. For each subsequent section of the well to be drilled the drill string will be removed and the casing will be lowered into the hole to prevent its collapse. Wet cement will then be pumped down the

May

Project Description casing and forced into the annular space between the hole and the outside of the casing as well as into the annular space between the present and previously set casing. The conductor casing which is designed to hold back seabed surface soils and support the weight of the entire well is then set and cemented back to the seabed. Drilling fluids and cuttings from this section will be discharged to the sea at the mudline per standard industry practice. A drilling riser will be deployed to connect the conductor casing and the drill ship and the blowout preventer⁹ BOP will be installed. Marine drilling risers with buoyant joints and tension will be used to connect the wells via the BOP to the drill ship. BOPs will be periodically tested during the well construction process. After this point all returns of drilling fluids and cuttings will be directed to the drill ship for treatment i.e. solids control and centrifugal cuttings dryer system to reduce solids in the fluids as well as the fluids retained on cuttings. After treatment the cuttings will be discharged to the sea from the drill ship. Based on prior analysis from the Liza¹ exploration program cuttings disperse in the ocean current as they descend through the water column which typically prevents significant accumulations of cuttings in any particular location on the seafloor. The surface casing will then be set and cemented in competent rock at a depth below the mudline to allow drilling to the top of reservoir. The production casing will be set and cemented at the top of reservoir and it is the casing string in which the production tubing is run. The production tubing carries the reservoir fluids from the production zone to the wellhead when the wells are flowing. The production tubing includes the subsurface safety valve SSSV which is designed to mitigate the uncontrolled release of fluids from the reservoir during the production process. The production tubing also protects the production casing from corrosion and deposition of byproducts such as sand paraffins and asphaltenes. After the production tubing is run the well will be suspended i.e. flow prevented by installing barriers to flow; the riser and BOPs will be removed; and the subsea tree will be installed and tested. At that point the well is ready for future connection to the SURF components. Figure 26 shows the various components of a typical subsea drilling system. ⁹ Blowout preventers are secondary safety devices that are installed

at the top of a well which may be closed in order to prevent the uncontrolled flow of liquids and gases in the event of a loss of well control during drilling operations.

May 2017 21 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

Figure 26 Typical Subsea Drilling System

2.3.3 Drilling Fluids

Two categories of drilling fluids will be used waterbased drilling fluids WBDF and low toxicity nonaqueous drilling fluids NADF in which the continuous phase is an International Oil and Gas Producers Association IOGP Group III nonaqueous base fluid NABF with low to negligible aromatic . WBDF will be used when drilling the upper sections of the well. To avoid formation of hydrates icelike crystals due to the cold water temperature and high pressure salt or organic inhibitors may be added to the WBDF. Based on wellbore stability analysis and experience gained from Liza1 and Liza2 drilling NADF will be required to maintain borehole stability while drilling all well sections below the conductor casing. Cuttings treatment equipment will be installed on the drill ships to allow recovery of NADF and reduce the percentage of NABF retained on cuttings BFROC. The cuttings will be discharged to the sea after treatment in accordance with standard industry practice. The use of cuttings dryers on other similar projects has significantly reduced the BFROC. During completion activities a solidsfree weighted brine composed of a fresh water base with watersoluble salts will be utilized. Viscosified brinebased fluid will be utilized during displacement and gravel packing operations. The brine will be filtered through diatomaceous earth and cartridge filters. Brine gravel pack fluids proppant diatomaceous earth fossilized skeletal remains of marine diatoms and filtered solids will be discharged to the sea in accordance with standard industry practice.

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Any unused or used and recovered drilling fluids and products will be reused recycled or disposed of in accordance with applicable regulations and best practices. A preliminary list of the types of drilling completion and treatment fluids that may be utilized can be found in Section 2.10.

2.3.4 Well Cleanup and Ancillary Processes To facilitate well cleanup development wells will be drilled completed and tiedback to the FPSO. Completion and treatment fluids and solids left in the wellbore will be flowed back to the FPSO where they will either be treated and discharged or collected for onshore disposal. The wells will not be cleaned up to the drill ship using temporary well test equipment; but rather all wells will be cleaned up through the subsea treeflowlinesproduction equipment on the FPSO. Such small quantities of fluids will be incorporated with the crude product from other wells. Resulting gas and water will be processed along with fluids from other wells. No well tests of the Phase 1 development wells are planned. Vertical Seismic Profile VSP data may be collected to improve velocity modeling and reduce uncertainty in reservoir mapping. VSP surveys can be used to correlate the surface seismic data to the information on the physical properties and characteristics of the hydrocarbons gained from drilling the well. VSP data provides further time depth information to improve knowledge and understanding of the structure and

stratigraphy of the reservoir. A VSP survey which can be conducted from a drill ship or other support vessel requires a sound source commonly compressed air and a receiver. Data is acquired by the receiver which is installed within the wellbore. The source may be located with zero offset from the well directly above the wellbore at a fixed offset a defined lateral distance from the well walk away at a range of offsets or walk above at zero offset to the down hole well location. The final scope of the VSP survey and specific geophysical tools to be used is still under review.

2.4 Subsea Umbilicals Risers and Flowlines

The SURF facilities concept for the Project is comprised of subsea production trees and gaswater injection trees clustered around subsea manifolds in two subsea drill centers. The risers flowlines and umbilicals¹⁰ will connect the subsea facilities on the seafloor to the FPSO. The production manifolds will consolidate the production fluid from the individual production wells to the flowlines and the injection manifolds will distribute injection gaswater to the individual gaswater injection wells. The subsea production control system on the FPSO will monitor and control the subsea facilities through an umbilical and subsea control distribution system that supplies power communication hydraulic fluid and chemicals. The hydraulic fluid for operating the subsea hydraulic valves will be a lowtoxicity water soluble hydraulic fluid. The SURF system will be designed to withstand the full shut in pressure from the production wells and the gaswater injection components will be designed to withstand the

¹⁰ An umbilical is a cable and/or hose that provides the electrical hydraulic chemical and communications connections needed to provide power and control between the FPSO and subsea equipment.

May 2017 23 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

highest required injection pressures. Overpressure protection will be provided on the FPSO in accordance with industry standards to protect the subsea systems. Figure 27 shows an illustration of a representative SURF system similar to what is currently being designed for the Project. Figure 27 Representative SURF System Note Schematic is not necessarily representative of number of drill centers or wells. The production drill centers will be connected to the FPSO with roundtrip piggable production flowlines. A pig is a specially designed device that is placed in the riser/flowline at a launcher at one end and pushed by

pressure until it reaches the receiving trap or catcher at the other end. Pigging is performed to aid and assist in the maintenance operations cleaning and inspection of flowlines. Figure 28 shows an example of a pig. Figure 28 Example of Wire Brush Cleaning Pig May 2017 24 EEPGL

Environmental Impact Assessment Liza Phase 1 Development Project 2.4.1 Well Flow Connections Chapter 2 Project Description Well flow connections between the subsea wells and the FPSO include several components. Each subsea development well is capped by a subsea tree which include several isolation valves and a choke valve to control production and water and gas injection. For a given set of wells tied to the same manifold the subsea trees are connected by well jumpers to the subsea manifold which is then connected by flowline jumpers to flowline end terminations FLETs located towards the drill center end of the flowline. A typical configuration of the subsea trees FLETs flowlines and manifolds expected at a drill center for the Project is indicated on Figure 29. Figure 29 Representative Subsea Trees FLETs Jumpers and Manifold From the drill center the rigid flowlines travel on the seabed to the vicinity of the FPSO and transition to vertical risers where they connect to the FPSO at the surface. The risers carry fluids up to the FPSO at the surface as shown on Figure 210. In the case of injection streams i.e. for gas and water injection the same configuration is used but flow is from the FPSO downward through the risers to the water or gas injection manifolds.

May 2017 25 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 210 Representation of Riser Connected to FPSO 2.4.2 FPSO Topside Subsea Control System The FPSO will provide power utilities cabling and tubing ties to subsea control equipment installed on its topsides to control the subsea equipment. The FPSO will be configured with backup power in the event primary power is lost. The subsea trees and manifolds will be monitored and controlled through the subsea control system on the FPSO via a dynamic and static steel tube umbilical. Subsea control system will accommodate typical monitoring requirements such as pressure and temperature measurement. 2.4.3 Risers Flowlines Umbilicals and Manifolds 2.4.3.1 Risers and Flowlines The Project will incorporate production water and gas injection flowlines and risers as shown on Figure 23. Flowline and umbilical lengths will range from

approximately 3.2 to 6.4 km 2 mi to 4 mi excluding risers in water depths of approximately 1500 to 1900 m. The current May 2017 26 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description design lengths are based on preliminary shallow hazard surveys and current field layout which may be adjusted during detailed design. 2.4.3.2 Umbilical The umbilical Figure 211 will be designed as an integrated bundle of tubes and cables to transport hydraulic fluid injection chemicals and electrical powercommunication. A single dynamic umbilical which will be connected to the FPSO at the surface and end at production Drill Center 1 DC1P will service the Liza field during Phase 1. Infield umbilicals will be used to further distribute these services to the other subsea equipment. Figure 211 Representative Integrated Dynamic Umbilical Cross Section 2.4.3.3 Manifolds Manifolds are gathering points or central connections made up of valves hubs piping sensors and control modules. Manifolds include a protective structural framework that rests on a seabed foundation where multiple trees jumpers and flowlines gather to consolidate flows before they are either transported to the FPSO on the surface as part of production or back down for injection of water and gas into the reservoir Figure 212. May 2017 27 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 212 Representative Subsea Manifold 2.4.3.4 Gas Lift System The FPSO riser support system will be designed for gas lift capability. The gas lift system is not required for initial startup and it will be installed at some time during the Project production operations stage based on the production characteristics of the Liza reservoirs. This system will include a riser and flowline to DC1P with connections to the production flowlines. 2.5 Floating Production Storage and Offloading Vessel 2.5.1 General Description The FPSO vessel to be utilized for the Project will be a VLCC tanker which utilizes a spread moored configuration to maintain station continuously for at least 20 years. The FPSO will be designed to receive the full production wellstream from the development wells and will process crude oil at a design rate of 100000 barrels of oil per day BOPD with potential to safely operate at sustained peaks of up to approximately 120000 BOPD. For the purposes of this EIA potential impacts generated by the Project will be based on the highest potential oil production

volume which is conservatively based on 144000 BOPD¹¹. The FPSO hull will be capable of storing a minimum of 1.6 million barrels of stabilized crude oil. The FPSO will be able to offload approximately 1 million barrels to a tanker in a period of approximately 28 hours. ¹¹ 144000 BOPD is 20 over the sustained peak volume of 120000 BOPD. May 2017 28 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description The FPSO will also have the capability to process dehydrate compress and reinject the gas produced from the reservoir. The FPSO will be configured to treat seawater used for facility cooling purposes for injection into the reservoir and to treat produced water for disposal overboard into the sea. Living quarters and associated utilities will be provided in order to support the operations on the FPSO. Table 21 provides an estimate of the design rates for the FPSO facility. Although the Project nameplate oil production capacity is 100000 barrels per day bpd the Project facilities will have the potential to safely operate at sustained peaks above the design rate. For purposes of this EIA potential impacts generated by the Project e.g. air emissions were based on a potential peak production volume of 144000 bpd to be conservative in the analysis. Table 21 FPSO Key Design Rates

	Oil Production bpd	Produced Water bpd	Total Liquids bpd	Produced Gas Mscfd	Gas Injection Mscfd
Design Rate ¹	100000	100000	150000	180	160

assumes 20 Mscfd of produced gas will be used as fuel gas for the FPSO 190000 Water Injection bpd Notes bpd barrels per day Mscfd million standard cubic feet per day ¹ All design rates are presented as the peak annual average. ² The facilities will have the potential to safely operate at sustained peaks of oil production up to approximately 120000 bpd. For the purposes of the EIA 144000 bpd has been used as the basis to analyze potential impacts from the Project. Key FPSO design features include the following The FPSO will be designed to remain moored for at least 20 years without drydocking and will include facilities to support inwater hullstructural surveys and repair and maintenance. The FPSO will be designed to operate in extreme 100year return period environmental conditions associated wind waves and current. The FPSO will be designed to reinject the produced gas back into the reservoir except during times of injection system unavailability which will require temporary nonroutine flaring.

A computer simulated picture of the planned FPSO and a general schematic of a converted FPSO topsides and hull are provided on Figures 213 and 214 respectively. May 2017 29 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

Figure 213 Computer Simulated Picture of Planned Liza Phase 1 FPSO May 2017 30 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

Figure 214 General Schematic of a Converted FPSO Topsides and Hull May 2017 31 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

2.5.2 FPSO Topsides

The FPSOs topsides design employs an interconnected module concept where process equipment is packaged in modules. The design concept maximizes precommissioning and functional testing of the modules prior to arrival offshore Guyana. The FPSO will arrive for installation hookup and commissioning in the Stabroek Block fully fabricated preassembled and most facilities modules components and systems pretested. The principal functions of the topsides process facilities will be To receive separate and process the produced reservoir fluids to provide o a crude oil product for offloading onto conventional tankers o produced water from the reservoir to be of sufficient quality for environmentally acceptable discharge to the sea and o produced gas to meet requirements for FPSO turbine generator fuel gas and for reinjection into the reservoir; To treat seawater to provide a suitable supply of injection water to support the reservoir depletion plans; and To provide support systems for the safe accommodation of approximately 80120 personnel involved in the operation of the production facilities and on occasion personnel involved with the drilling program. Temporary accommodations may also be utilized during key activities including hookup commissioning and maintenance operations to increase accommodations capacity up to approximately 140 personnel.

2.5.3 FPSO Process Systems

The process facilities on the FPSO topsides are shown schematically on Figure 215 and are described in the subsequent sections. May 2017 32 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 215 Process Flow Diagram Chapter 2 Project Description

Notes GI Gas reinjection WI Water injection HP High pressure IP Intermediate pressure LP Low

pressure SRU Sulfate Removal Unit 2.5.3.1 Oil Water Gas Separation and Oil Desalting An inlet manifold will receive full wellstream fluids consisting of oil gas and water from the production flowlines and will route the fluids to the FPSO processing facilities. The wellstream fluids will be separated into oil water and gas phases in a single train of separation. The separation train consists of three stages high intermediate and low pressure of flash separation to produce a stabilized crude product. Fresh water will then be added to the stabilized crude product to remove dissolved salts as part of oil desalting. The final crude oil product from the flash separation stabilization process will be treated to meet the specifications for sale prior to being sent to the crude product storage tanks in the FPSO hull. Further processing of the water and gas streams from the separation process and the process for treating seawater for injection are described below. May 2017 33 LP Flare HP Flare

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 2.5.3.2 Gas Processing Chapter 2 Project Description For Phase 1 the Project will reinject produced gas that will not be consumed as fuel gas on the FPSO back into the reservoir. The purpose of the FPSO gas processing system is to condition the associated produced gas which is not consumed as FPSO fuel gas to the appropriate specification prior to reinjection into the reservoir. It comprises systems to compress gas dehydrate gas and direct gas to be reinjected. During equipment maintenance and process upsets including startup and shutdown scenarios part or all of the offgas from the separationstabilization process will be sent to the High Pressure HP or Low Pressure LP Flare Systems. Flaring will be temporary and nonroutine. Flaring is discussed in more detail in Section 2.5.4.3 below. 2.5.3.3 Produced Water Treatment The produced water treating system will be designed to collect produced water from the FPSO processing facilities and treat the water for discharge overboard per standard industry practice. The system will consist of primary and secondary treatment. Primary treatment will consist of either a skim vessel or hydrocyclones for removal of large oil droplets from the produced water. Secondary treatment will consist of a gas flotation for removal of small oil droplets in order to meet the discharge specification. Produced water that does not meet the overboard discharge specification will be routed to an appropriate tank

in the hull for further treatment. 2.5.3.4 Seawater Treatment and Water Injection System Water injection will be used for reservoir pressure maintenance to enhance oil production. Seawater used for injection water will be treated prior to injection into the producing reservoirs per standard industry practice. The seawater treatment system will include sea lift pumping filtration deaeration and sulfate removal. Seawater lift pumps on the FPSO will be used to pump seawater from depths up to 100 meters below the surface in order to access colder seawater than what is available from the ocean surface. The filtration system will consist of both coarse filtration strainers and fine filtration multimedia filtration for removal of particulate from the incoming seawater. Following filtration seawater will be vacuum deaerated for removal of oxygen. The deaerated seawater will then be pumped through a membrane system for removal of sulfate ions from the seawater as the final treatment step. The treated seawater will then be pumped to the necessary pressure for injection into the producing reservoir. A portion of the treated seawater will be further treated through a reverse osmosis system to make fresh water. Fresh water is required for removal of salt from the crude product as part of oil desalting as described in Section 2.5.3.1. May 2017 34 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 2.5.4 FPSO Utility Systems Chapter 2 Project Description This section discusses the utility system requirements for the FPSO. For the most part the utility systems designed to support the process facilities will be located above deck. Marine utility systems may be used to support topside systems where appropriate. 2.5.4.1 Process Cooling Cooling of process streams via a closed loop waterbased cooling medium system is required to dissipate heat generated by the oil and water treating systems the compression systems and miscellaneous utility systems. The seawater lifting system described in Section 2.5.3.4 will also supply the required seawater for cooling. Process hydrocarbon fluids do not come into contact with this seawater. Treated seawater will be disposed of overboard at a suitable temperature so as not to significantly impact marine life. 2.5.4.2 Process Heating A process heating system is required as part of the crude oil treatment process to achieve the required crude oil product specifications. A closed loop waterbased heating medium system will be used to add heat to the

incoming production. Waste heat from the power generation system will be used as the source of heat.

2.5.4.3 Flaring System EEPGL intends to reinject all operationally produced gas under routine conditions except that which will be utilized for FPSO operations e.g. fuel gas. A flare system will be provided for the collection and safe disposition of produced hydrocarbon gases resulting from unplanned nonroutine relief and blowdown events. Relief events occur to prevent overpressure scenarios in the process equipment. Blowdown events occur to depressure the facilities in a controlled manner as a result of emergency shutdown events. In addition temporary nonroutine flaring will occur during equipment maintenance process upsets and startup. The flare system will include both an HP and LP flare sharing a common flare tower as shown on Figure 215. The flare tower has elevated flare tips for both high and low pressure flares which provides for the safe ignition of hydrocarbon gases. Both flares will support highefficiency combustion and will utilize pilots that have minimal emissions.

2.5.4.4 Topsides and Subsea Chemical Injection The FPSO will have storage and injection facilities to inject the required amounts of chemicals and methanol into the production fluids to support production operations both for subsea chemical injection requirements and for topsides chemical injection requirements. These chemicals are further described in Section 2.10. Table 26 provides a summary of the key effluent characteristics for planned discharges to water.

May 2017 35 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

2.5.4.5 Air Chapter 2 Project Description An air compression system will be provided to supply FPSO hull and topsides equipment. Compressed air is primarily required for the operation of control valves and other process instrumentation requirements.

2.5.4.6 Nitrogen Instrument air will feed the nitrogen generation system. Nitrogen will be provided as required for purging i.e. removing residual amounts of products inerting i.e. introducing nonflammable gas to prevent ignition blanketing i.e. filling vapor space in tanks with nonflammable gas to prevent ignition and as required for miscellaneous utilities.

2.5.4.7 Drains The FPSO topsides shall be equipped with the following drain systems

Nonhydrocarbon open drain. Used to collect drain fluids e.g. rainwater from nonhydrocarbon areas and to route them to the slop tank in the FPSO hull or direct overboard.

Hydrocarbon open drain. Used to collect drain fluids e.g. oil contaminated water from hydrocarbon areas and to route them to the slop tank in the FPSO hull.

2.5.4.8 Other Two deck cranes will be provided for supply boat offloading and materials handling and to support general maintenance activities. Workshops a laboratory capable of checking the properties of the produced and injection fluids as well as select discharges for compliance medical facility and storage facility for supplies and spare parts will also be provided. Heating Ventilation and Air Conditioning HVAC systems will be provided for buildings and enclosures.

2.5.5 Power Generation System The required power for the FPSO will be generated by three systems as follows The main power generation system will be gas turbine driven generator sets with spares available in the case of unplanned downtime. All generator sets will be dual fuel diesel produced gas capable to allow for restoring power to the facility i.e. black start. The essential services power generation system will be a diesel driven generator set. Essential services include systems required for facility restart and for flow assurance hydrate mitigation activities after an unplanned shutdown. The vessel emergency power generator set will be diesel driven and will provide power to both the hull and topsides emergency systems e.g. safety systems including emergency lighting telecommunication.

May 2017 36 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

Additionally for backup power during emergency situations the uninterruptible power supply UPS system will be provided to power equipment such as the Integrated Control and Safety System ICSS and subsea controls among others.

2.5.6 Integrated Control and Safety System ICSS Monitoring and control of the FPSO production operations will be performed by an ICSS. Located in the main control room of the FPSO the ICSS will include process shutdown emergency shutdown and fire and gas systems to protect the facilities and personnel. These systems will interface to a public address and general alarm system PAGA to provide distinct audible and visual alarm notification. The ICSS includes the Process Control System PCS Safety Instrumented System SIS the Fire and Gas FG system the Alarm Management System AMS the Operator graphics consoles; and the thirdparty interfaces to packaged systems such as compressors subsea and marine among others.

2.5.7

Communication Systems Telecommunications equipment will be installed on the FPSO to enable safe operation of the facilities in normal and emergency conditions. This equipment will allow communication with the shorebase support vessels helicopters and tankers as well as communication on the FPSO.

2.5.8 Additional Vessel Systems

2.5.8.1 FPSO Cargo Systems

The main purpose of the FPSO cargo system will be To receive distribute and store onspecification crude oil from the process facilities into the FPSO cargo tanks; To receive and store offspecification crude oil from the process facilities into a designated FPSO cargo tank; and To offload the crude oil stored in the FPSO cargo tanks into a conventional tanker at regular intervals. In addition to the FPSO cargo tanks there will be a slop tank to receive stripping water from the cargo tanks and discharge from the topsides nonhazardous and hazardous drain system. The oil and water will be gravityseparated by a minimum residence and retention time. Once separated the oil will be skimmed off the top and sent to the cargo tanks and the water will be discharged overboard to specification. The FPSO cargo tanks will be blanketed with inert gas. As depicted on Figure 215 a tank vent system will be provided to release vapor and inert gas from the cargo tanks to a safe location toward the bow of the FPSO to prevent an overpressure event in the tanks.

May 2017 37

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

The marine cargo system supports the following routine activities Flushing of the crude oil offloading export hose; Emergency and temporary ballasting of FPSO cargo tanks with seawater; and Inspection and maintenance of FPSO cargo tanks and piping systems between offloading operations.

2.5.8.2 Custody Transfer Meter

For offloading crude will be pumped from the FPSO hull storage tanks through a custody transfer metering package on the topsides and into the offloading system at a rate sufficient to achieve transfer of approximately 1 million barrels of oil in up to 28 hours up to a VLCC class tanker size.

2.5.8.3 Crude Oil Offloading Export

of the crude oil from the FPSO will be via a floating hose to the midship manifold of a conventional tanker. The FPSO will be configured for tandem offloading to a conventional tanker which will be ownedoperated by others. The separation distance between the stern of the FPSO and the conventional tanker will be

approximately 120 m 390 ft. The maximum conventional tanker size envisioned is a VLCC class. During offloading operations the conventional tanker will maneuver and hold station relative to the FPSO with the aid of up to three assistance tugs as shown on Figure 216. Crude will be transported to buyers final location by the conventional tankers after each offloading operation. Figure 216 General Offloading Configuration May 2017 38 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 2.5.8.4 Ballast System Chapter 2 Project Description Ballast water will be required during the transit from the shipyard to the site. Once on site the unneeded ballast water from the FPSO may be discharged overboard. 2.5.8.5 Spread Mooring System The FPSO will be permanently moored by fixed spread mooring with up to a 20 point mooring line system each connected to their respective anchor pile embedded into the seafloor. The anchor piles will be either suction piles or driven piles. The mooring system will be designed to maintain the FPSO on station for a 100year environmental condition. 2.5.9 Safety and Personnel Protection Systems FPSO safety systems will include Firewater System The firewater system will have one pump each located at the fore and aft ends of the FPSO with one pump serving as a redundant backup. Fire and Gas Detection Systems Fire and smoke detectors will be located throughout the topsides and living quarters and will be wired centrally with alarms sounding in the central control room CCR which will activate the general alarm system on the FPSO. Gas detectors will be placed in areas where gas might be released or could accumulate. Blanket Gas Generation To prevent fires the cargo tanks will be operated with an inert gas blanket at all times except during tank entry. The inert gas for cargo tanks will be supplied by an inert gas system utilizing flue gas from the marine boilers. To provide gas blanketing for other spaces including the methanol and xylene tanks inert gas will be provided by routing compressed air through the nitrogen membrane package. Lifeboats and Life Rafts The FPSO will be provided with lifeboats on either side of the accommodation having a capacity on each side for 100 percent of the personnel on board POB. A fast rescue boat will also be provided complete with a davit launching and retrieving system. 2.6 Installation Hookup and Commissioning The sequence and duration of each FPSO and SURF installation hookup and commissioning activity

will be further defined as part of ongoing Project planning and development. The final sequence and durations of activities will depend on a number of factors including but not limited to final Project design marine vessel and equipment availability mobilization times and weather among other factors. Key installation hookup and commissioning activities will include FPSO Mooring Installation Installation of the FPSOs anchor piles and mooring lines. Following installation the mooring lines will be staged on the seafloor until arrival of the FPSO. May 2017 39 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description FlowlineRiser Installation Installation of the production water injection and gas injection flowlines and risers. These components will be cleaned and tested to verify and ensure integrity after installation and then staged on the seafloor until arrival of the FPSO. FPSO Positioning and Mooring Connection Positioning of the FPSO using support tugs followed by retrieval of the FPSO mooring lines from the seafloor and hookup of the FPSO to its mooring system. ManifoldDrill Center Installation Installation of the manifolds manifold foundation piles jumpers Subsea Distribution Units and flying leads at the drill centers followed by integrity testing and verification. Umbilical Installation Installation of the umbilical and umbilical termination unit. Riser Connection Retrieval from the seafloor pullin and connection of the risers to the FPSO. Testing and Commissioning Testing and commissioning of the connected integrated FPSO and SURF production systems including testing and dewatering displacing flowlines and umbilicals with commissioning fluids which are further discussed in Section 2.10 and testing SURF control and shutdown systems. Some of these commissioning fluids may be discharged to the sea per standard industry practice as shown in Section 2.10.2 Table 26. Any unused or used and recovered commissioning fluids and products will be reused recycled or disposed of in accordance with applicable regulations and best practices. The above activities will be executed in an optimal sequence with activities completed in parallel where possible. During the FPSOSURF installation stage a remotely operated vehicle ROV may be periodically utilized to support the above mentioned activities e.g. underwater observations connections and sampling among others. 2.7 Production Operations The Project will include a leased FPSO owned and

operated by the FPSO contractor and a subsea development owned by EEPGL and operated by the FPSO contractor under the direction of EEPGL. Throughout production operations EEPGLs personnel will perform oversight and monitoring of the FPSO contractor to ensure that management systems pertinent to safety the environment and operations integrity are properly implemented. To accomplish this EEPGL plans to utilize an onboard representative OBR supported by operational and technical specialists to monitor and direct as necessary operation of the FPSO and SURF facilities. Operating processes will include flowing the hydrocarbon well stream from the reservoir to the FPSO where further fluid separation stabilization storage and management will occur prior to offloading the crude oil to the conventional tankers. General maintenance of the FPSO and SURF components will also be performed offshore during production operations. Some industry standard chemicals will be required as part of the processing and handling of the oil and associated gas on the FPSO as well as treating produced water prior to discharge. Both the FPSO and SURF facilities will also require the use of industry standard additives to provide

May 2017 40 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description

flow assurance and prevent corrosion scale hydrate and asphaltene formation as previously noted in Section 2.5.4.4 and described in Section 2.7.1. These subsea and topsides chemicals will separate into the oil water or gas phases of the process stream depending on their solubilities and applications. Therefore residual quantities of these chemicals may be contained in the processed crude oil discharged with produced water or emitted to the atmosphere with vented and fugitive gases. The final chemical requirements and quantities will be determined as part of the ongoing FPSO and SURF facilities design work and a preliminary list is provided in Table 22. Any unused or used and recaptured production chemicals will be reused recycled or disposed of in accordance with applicable regulations and best practices. The objective of the following sections is to provide a general overview of the flow assurance challenges and strategies.

2.7.1 Common Flow Assurance Additives

2.7.1.1 Hydrates

Ambient seafloor temperatures in the Liza area are sufficiently cold that hydrates could form in the FPSO and SURF equipment. To prevent the formation of hydrates a

combination of inhibitor methanol thermal insulation and operating practices will be utilized. 2.7.1.2 Paraffin and Asphaltenes The insulation needed for hydrate mitigation is sufficient to prevent Paraffin wax deposition in the subsea production system. Paraffin inhibitor can be injected along with downhole asphaltene inhibitor downhole if needed. Asphaltene precipitation and/or deposition are expected at near wellbore and in production wells. Asphaltene deposition will be mitigated with continuous asphaltene inhibitor downhole. In case asphaltene deposition cannot be mitigated by asphaltene inhibitors production wells will be soaked with xylene as remediation. Pigging operations with or without xylene may also be used for remediating any asphaltene deposition in the production flowline and riser. 2.7.1.3 Scale Control Scale formation will be managed using scale inhibitor downhole and by sulfate reduction with Sulfate Removal Unit SRU at topsides. 2.7.1.4 Corrosion Control Internal corrosion of the subsea facilities shall be managed by a combination of material selection and injection of inhibitor. Components in the production path upstream of the flowlines will be fabricated from corrosion-resistant alloys suitable for the intended service. The carbon steel flowlines and risers will be protected by the injection of corrosion inhibitor at the subsea production manifold headers. May 2017 41 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description 2.7.2 Hydrogen Sulfide H₂S Management The concentration of H₂S will be extremely low for the initial stage i.e. 510 years of FPSO SURF production operations. There may be potential for the reservoir to sour over time which influences material selection and corrosion inhibition for certain FPSO SURF and drilling systems. In the unlikely event that concentrations of H₂S increase to a level that could represent potential health or safety concerns for the Projects offshore workforce additional management measures will be implemented as appropriate e.g. training programs personal protective equipment response planning and equipment for leak detection and alarms. 2.7.3 Marine Safety The Maritime Administration MARAD of the Ministry of Public Infrastructure is responsible for issuing notices to mariners concerning safety at sea. MARAD will be advised of the location of drill ships during the drilling of the development wells and the performance of well workovers in the PDA and of the

location of installation vessels during major installation activities so that mariners are aware of these activities. Safety exclusion zones with a 500 m 1640 ft radius will be established around drill ships during drilling operations and around drill centers during well workovers as well as around major installation vessels in accordance with industry standards and practices as represented on Figure 217. Authorizations for inwater activities will be obtained from MARAD and notices to mariners will be issued for all marine vessels including the FPSO supply and support vessels tugs and those vessels employed during the FPSOSURF installation hookup and commissioning stage. The Project will also communicate major vessel movements to commercial cargo commercial fishing and subsistence fishing vessel operators who might not ordinarily receive Notices to Mariners and where possible communicate Project activities to those individuals to aid them in avoiding Project vessels through the stakeholder engagement process. As also shown on Figure 217 during the production operations stage the FPSO will have a 2 nautical mile nm radius encircling the vessel where marine support and tanker offloading will occur. No unauthorized vessels will be allowed to enter this approximately 4000 ha operational marine safety exclusion zone. EEPGL will use radar and visual surveillance of the marine safety exclusion zones to monitor vessel traffic. Any vessels that may inadvertently enter the marine safety exclusion zone without authorization will be contacted via radio and instructed to leave the area. If EEPGL is unable to contact the vessel by radio a Project supply vessel will approach the encroaching vessel and notify them that they have entered a marine safety exclusion zone. If the encroaching vessel ignores these instructions EEPGL will contact the Guyana Coast Guard for support.

May 2017 42 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 217 Preliminary Safety Exclusion Zones during Drilling Installation and Offloading Operations

2.7.4 Offloading Tankers

Conventional tankers supporting offloading operations typically arrive anywhere from one day to several hours ahead of the scheduled loading time as a function of weather and ocean conditions. When the conventional tanker is ready to approach a Mooring Master will board the vessel approximately 2 km 1 mi from the FPSO in order to guide it to the FPSO for offloading. The conventional tankers will export the

crude oil to the buyers final location after offloading operations have been completed. May 2017 43

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description 2.8 Onshore Marine and Aviation Support 2.8.1 Onshore Supply and Support Activities

Shorebases laydown areas pipe yards warehouses fuel supply heliport and waste management facilities in Guyana will be utilized to support development drilling FPSOSURF installation production operations and ultimately decommissioning. These onshore facilities will be ownedoperated by others and will not be dedicated to the Project. The specific shorebases and onshore support facilities e.g. warehouses laydown yards to be utilized in Guyana have not yet been identified by EEPGL. A preliminary footprint estimate for onshore staging and storage in Guyana is approximately 3000050000 m2. However the final area required will be determined as the Project development plan progresses. Accordingly ERM has performed the impact assessment on the basis that the Project will utilize existing shorebases located in Georgetown that meet this minimum requirement. Should any new or expanded shorebases or onshore support facilities be utilized the constructionexpansion and any required dredging as well as the associated permitting of such facilities would be the responsibility of the owneroperator and such work scope would not be included in the scope of the EIA. A typical shorebase quay is shown in Figure 218 and a typical laydown yard is shown in Figure 219. Where existing Guyana shorebases do not have the technical andor capacity requirements to support Project activities EEPGL will potentially consider the use of other onshore support facilities and services in Guyana as identified and deemed necessary. Additional logistical support may be provided by other regional suppliers outside of Guyana as informed by inputs from EEPGL contractors after contract award to address Project needs e.g. deepwater port access in Trinidad. Onshore support facilities will include pierportquayside space with sufficient draft for receipt of cargo vessels bringing materials to and from the shorebases. Marine support vessels will service the offshore activities and operations. A marine berth and secure warehousing space for indoor and outdoor storage of materials and goods trucking stevedoring freight forwarding customs logistics receiving inspection and associated container handling and

storage operations will also be utilized. Daily activities and operations to be performed at the shorebases will generally include Storage of pipe equipment and spares; Loading and unloading cargo from trucks and marine vessels; Use of cranes and other lifting equipment; Bulk storage of chemicals fuels and industrial consumables; Potential operation of a cement and drilling and completion fluids plant to support offshore drilling operations; and Secure handling and storage of wastes pending final recycling treatment or disposal. May 2017 44 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Most of the major SURF equipment will be shipped preassembled and pretested directly to the offshore Project site from their points of origin. Other minor equipment supplies and materials may be temporarily staged at the shorebases and associated laydown yards and warehouses until transferred offshore for installation or use. The owners/operators of these contracted facilities will be required to seek environmental authorization for any changes to current operations e.g. bulk storage of chemicals and fuels or facility expansions. Figure 218 Typical Shorebase Quay May 2017 45 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 219 Typical Laydown Yard Chapter 2 Project Description Support and supply vessels will require sufficient water depths to transit between the Liza field and the shorebases. There is potential for some initial and periodic maintenance dredging to be performed by the shorebase owner/operators with any required permitting being the responsibility of the shorebase owner/operators. 2.8.2 Logistical Support An average of 10 roundtrip helicopter flights is currently being made per week to support ongoing exploration drilling activities. It is estimated that during development drilling and FPSO/SURF installation an incremental 20 to 25 helicopter flights per week will be added for a total of 30 to 35 roundtrip flights per week. During FPSO/SURF production operations an estimated 20 to 25 roundtrip helicopter flights per week will be necessary to support FPSO/SURF production operations and development drilling activities. There will be a variety of marine and aviation support equipment supporting the FPSO installation vessels and drill ships as shown on Figure 220. The support vessels will consist of Platform Supply Vessels PSVs conducting resupply trips to the FPSO and drill

ships Tug Vessels TVs supporting tanker offloading activities and MultiPurpose Vessels MPVs supporting subsea installation and maintenance activities. Based on current drilling activities and past experience with similar developments it is estimated that during development drilling and FPSOSURF installation an average of 12 vessel trips per week may be made to the PDA. During FPSOSURF production operations it is estimated that this number will be reduced to approximately 7 vessel trips per week. The vessels are planned to be loaded and offloaded at shorebase facilities in Guyana and/or Trinidad. Figure 221 depicts a conceptual diagram and May 2017 46 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description estimated number and types of logistical support equipment that will be utilized to support the Project. Figure 220 Typical Logistics Support Vessels May 2017 47 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 221 Potential Drilling and Operations Stage Peak Fleet Profile May 2017 48 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description 2.9 End of Operations Decommissioning In advance of the completion of the Phase 1 production operations stage EEPGL will prepare a decommissioning plan for the facility in compliance with the laws and regulations in effect at that time while also considering the most appropriate technology available at that time. The decommissioning plan and strategy will be based on a notice of the intent for decommissioning the production facilities and plugging and abandonment of the development wells which will be provided to the GGMC and EPA to obtain approval in accordance with the requirements of the Guyana Petroleum Exploration and Production Act 1998 and EP Act Cap. 20:05. EEPGL will perform inspections surveys and testing to assess and report to the EPA the conditions that will provide the basis and required information to prepare a plan for decommissioning. All risers pipelines umbilicals subsea equipment and topside equipment will be safely and properly isolated deenergized and cleaned to remove hydrocarbons and other hazardous materials to a suitable level prior to being taken out of service. Near the time of decommissioning EEPGL will work with the EPA and the GGMC to select the final decommissioning strategy based on a comparative assessment which is

designed to evaluate the potential safety environmental technical and economic impacts and associated mitigation measures in order to finalize the decommissioning plan. Wells will be permanently plugged and abandoned PA by restoring suitable cap rock to prevent escape of hydrocarbons to the environment. PA barriers will be installed in the wellbore of adequate length to contain reservoir fluids and deep enough to resist being bypassed by fracturing. The number of barriers required will depend on the distribution of hydrocarbonbearing permeable zones within the wellbore. It is expected that the risers pipelines umbilicals subsea equipment FPSO mooring lines and anchor piles will be disconnected and abandoned in place on the seafloor unless an alternative strategy is selected based on the results of the comparative assessments. The FPSO will be disconnected from its mooring system removed from the production location and towed to a new location for reuse or decommissioning. Selected waste streams associated with decommissioning activities including hazardous and nonhazardous wastes will be managed and disposed of in accordance with standard industry practice and applicable regulations. Methods may include injection downhole into the reservoir separation and incineration offshore or transport to onshore waste management facilities for management and disposal.

2.10 Materials Emissions Discharges and Wastes

This section describes the materials i.e. primarily chemicals used across the various stages of the Project as well as the Projects planned emissions discharges and wastes. The Project may potentially produce small amounts of Naturally Occurring Radioactive Material NORM from the reservoir over the life of the production operations stage. The Project may also utilize radiography periodically to support installation and maintenance activities

May 2017 49 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description e.g. nondestructive examination of materials for quality control purposes. The Project will follow standard industry practices to manage any workforce exposure to NORM or radiography. Any equipment containing such sources will be registered strictly tracked controlled and returned to the vendor at the end of their use or if they must be replaced at any time. The Project will not generate any meaningful vibration which impact resourcesreceptors. EEPGL will manage airborne sound through

engineering controls through administrative controls and by providing appropriate Personal Protection Equipment PPE to its Project workforce as described in Section 7.1.2. Underwater sound is discussed as part of the Marine Mammal impact evaluation see Section 7.2.5. The Project generates heat primarily in the form of a cooling water discharge to the sea which is discussed as part of the Marine Water Quality impact evaluation see Section 7.1.4. The Project generates light which is discussed as part of the Seabird and Marine Turtle impact evaluations see Sections 7.2.4 and 7.2.6 respectively.

2.10.1 Materials Inventory Offshore oil development is primarily an extractive process e.g. producing oil from the Liza field. This extractive process will however require the use of various equipment described in this chapter e.g. drill ships pipes flowlines FPSO as well as some chemicals used to facilitate well drilling oil recovery wastewater treatment pipeline maintenance and other purposes which have been described in prior sections of this chapter. The required volumes of these chemicals are yet to be determined. Table 22 below provides preliminary inventories of the primary chemicals that would be used as part of the Projects drilling installation commissioning and production operation stages respectively. Residual quantities of drilling and production chemicals may be discharged to the sea as components of drilling fluid or produced water injected into the reservoir or emitted to the atmosphere as described in prior sections of this chapter. Unused or used and recovered chemicals will be reused recycled or disposed of in accordance with applicable regulations and best practices. All chemicals will be stored either at the shorebases or on the drill ship or FPSO in appropriate storage containers with either secondary containment or appropriate drainage control.

The principal sources of atmospheric emissions from the Project operations can be divided into four main categories Combustion Emissions generated from combustion of liquid fuel or natural gas during aviation and marine support and installation activities operation of the FPSO and drill ships waste incineration and nonroutine flaring of gas that is not reinjected into the reservoir; Venting Emissions consisting of emissions related to tank storage operations flashing emissions standingworkingbreathing losses dominated by FPSO product storage tanks but also including other tank storage; Vessel loading emissions dominated by emissions released during the transfer of crude oil from FPSO to tankers but also including fuel transfer operations; and Fugitive Emissions leakage through process equipment components e.g. valves flanges and potential unplanned CFC releases from the HVAC and refrigeration systems. Table 23 provides estimated maximum annual Project atmospheric emissions in three distinct periods selected to account for differing activity levels over the Project life. Primary activities in each of these periods to which the corresponding emissions can be attributed are as follows 2018 2019 Drilling SURF installation and commissioning and operation of related support vessels 2020 2021 Drilling FPSO startup and associated temporary nonroutine flaring beginning of production operations tanker loading 2022 2040 Production operations following cessation of drilling including temporary nonroutine flaring operation of related support vessels and

tanker loading. May 2017 53 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 2.10.3 Discharges Chapter 2 Project Description The Project will have several planned discharges to water related to the operations and maintenance of the drill ships FPSO installation and commissioning activities. These planned discharges based on the preliminary design information are listed in Table 24. Potential discharges include drill cuttings and fluids well completion and treatment fluids produced water cooling water sulfate removal and potable water processing brines topsides drainage hydrostatic test water ballast water BOP testing fluids and sanitary and domestic wastewater as described below. All Project vessels will be equipped to comply with the water pollution control standards required by the International Maritime Organization IMO International Convention for the Prevention of Pollution by Ships 1973 as modified by the Protocol of 1978 MARPOL 7378. Drill Cuttings and

Fluids WBDF as listed in Table 22 and associated cuttings will be discharged to the sea without treatment per standard industry practice. The process for treating and discharging cuttings with residual NABF as listed in Table 22 is described in Section 2.3.3. Cement Cement slurry returns are only expected during the cementing of the first casing string for each development well. The excess spacer and lead slurry will be discharged directly to the seafloor immediately around the well. Excess unused cement will be discharged to the sea. Well Completion and Treatment Fluids Well completion and treatment fluids will be treated and discharged to the sea or shipped to shore for appropriate treatment/disposal per standard industry practice. Produced Water The produced water treating system will collect produced water from process facilities and treat the water prior to discharge overboard as described in Section 2.5.3.3. Cooling Water Seawater is used to dissipate heat generated by the oil and water treating systems the compression systems and miscellaneous utility systems. Process hydrocarbon fluids do not come into contact with this seawater. Cooling water will be disposed of overboard at a suitable temperature so as not to significantly impact marine life. Sulfate Removal Potable Water Processing Brines These brine disposal streams are byproducts of the membrane processes used offshore to generate sulfate-free water for injection and to generate fresh water for crude desalting and for living quarters requirements. No treatment of these streams essentially seawater is required prior to discharge. Topsides Drainage The topsides will have a nonhydrocarbon and hydrocarbon drain system. The hydrocarbon drain system will direct drainage to a slop tank where oil and water will be gravity separated. Once separated the oil will be skimmed off the top and sent to the cargo tanks and the water will be discharged overboard in accordance with treatment specifications. The nonhydrocarbon drain system e.g. rainwater will route the drain fluids to the slop tank in the FPSO hull or directly overboard. Hydrostatic Test Water Seawater treated with chemicals e.g. biocides will be injected in the flowlines and risers to ensure the lines are sealed properly during installation prior to the flow

May 2017 54 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description of hydrocarbons. The treated seawater used for hydrostatic testing of the water and gas injection lines

will be discharged near the seafloor per standard industry practice. The treated seawater used for hydrostatic testing of the production lines will be roundtrip pigged to the FPSO and will be treated and discharged overboard with produced water. Commissioning Fluids A hydrate inhibiting substance e.g. methanol or ethylene glycol will be used to prevent formation of hydrates during commissioning of the production and gas injection lines. The fluid used for the gas injection line will be discharged at the seafloor and the fluid used for the production lines will be returned to the FPSO treated and discharged from the overboard water line. Ballast Water Discharges of ballast water will be required for initial FPSO installation and recurring tanker offloading. BOP Testing Fluids During periodic testing approximately every two weeks of the BOP system approximately 30 barrels of lowtoxicity power fluid i.e. fluid used to hydraulically move the preventers will be discharged near the seafloor. The typical composition of this fluid is 97 percent water with 3 percent bioelubricationcorrosion protection chemicals. Gray WaterBlack WaterFood Preparation Wastes The Project will provide wastewater treatment for sanitary wastes black watersewage and food preparation wastes in accordance with MARPOL requirements. Gray water will be discharged overboard. Table 24 summarizes drillingrelated discharges and Table 25 summarizes commissioning and productionrelated discharges.  including both hazardous and nonhazardous wastes which vary over time by Project stage. As Table
 26 indicates waste will begin to be generated when drilling commences as early as 2018 per the
 current project schedule. Waste volumes generated will increase as drilling activity increases in
 2019 and 2020. Additional waste will be generated from SURF installation and FPSO

commissioning and hookup activities in the 2019/2020 timeframe. Waste volumes will then begin to decrease as drilling activity declines in 2021 and significantly decrease during the production operations stage once drilling activity is complete 2022 to 2039. When production operations cease some waste will be generated from decommissioning activities.

The annual totals reflect the current preliminary Project schedule see Section 2.14 which could change. 2 Nonhazardous volumes include estimated quantities of residue from treatment of hazardous waste Solid waste generated offshore will be reduced recycled treated and disposed offshore i.e. incinerated and accounted for in Table 24 under FPSO source where practicable with the remainder directed for onshore treatment recycling reuse or disposal. For the exploration drilling program EEPGL is currently utilizing a regional supplier who is operating an existing onshore waste treatment/incineration facility at a local shorebase in Georgetown Guyana see Figures 222 and 223. The Project is planning to utilize similar facilities in Guyana or the region during the development drilling FPSO/SURF production operations and decommissioning stages. To the extent that solid wastes are being disposed of by a Guyanese licensed onshore disposal facility i.e. landfill incinerator in accordance with their permit then impacts from the proper disposal of these

wastes are not further discussed in this EIA. All Project waste streams will be managed in accordance with the Waste Management Plan that will be part of the Project Environmental and Socioeconomic Management Plan ESMP. May 2017 59 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 222 Typical Waste Management Facilities at a Local Shorebase Figure 223 Vertical Infrared Unit with Wet Scrubber and Oxidizer at Typical Waste Management Facilities May 2017 60 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 2.11 Embedded Controls Chapter 2 Project Description EEPGL has incorporated the embedded controls¹³ provided in Table 27 into the Project ResourcesReceptors Benefitted Marine sediments water quality mammals turtles fish and benthos Marine sediments water quality mammals turtles fish and benthos Marine mammals marine turtles Air quality marine sediments marine water quality protected areas sensitive species coastal habitats coastal wildlife and shorebirds marine mammals turtles fish benthos ecology and ecosystems Table 27 List of Embedded Controls Embedded Control Measures Drilling and SURFFPSO Installation and Commissioning Utilize WBDF to the extent reasonably practicable and in other cases use lowtoxicity IOGP Group III NABF. When NADF is used utilize a solids control and cuttings dryer system to treat drill cuttings prior to discharge such that end of well maximum weighted mass ratio averaged over all well sections drilled using nonaqueous fluids shall not exceed 6.9 percent wet weight base fluid retained on cuttings. For VSP activities commence such operations during daylight hours after a suitable prewatch by Marine Mammal Observers MMOs is performed and begin with soft start procedures which incrementally increase source sound levels in order to allow marine mammals and turtles time to move away from the activity before full sound source energy is utilized in accordance with JNCC guidelines. With respect to prevention of spills of hydrocarbons and chemicals during the drilling stage o Change liquid hydrocarbon transfer hoses periodically o Utilize drybreak connections on liquid hydrocarbon bulk transfer hoses o Utilize a liquid hydrocarbon checklist before every bulk transfer o Perform required inspections and testing of all equipment prior to deploymentinstallation; o Utilize certified Blowout Prevention BOP equipment; o Regularly test

certified BOP equipment and other spill prevention equipment; o Utilize overbalanced drilling fluids to control wells while drilling; o Perform operational training certification including well control training for drill ship supervisors and engineers; o Regularly audit field operations on the drill ships FPSO and shorebases to ensure application of designed safeguards; and o Controls for mitigating a failure of the dynamic positioning system on the drill ships and maintain station keeping which include 13 Embedded controls are engineering specifications components and/or operational procedures that are planned as part of the Project.

May 2017 61 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Embedded Control Measures Chapter 2 Project Description Resources/Receptors Benefitted Use of a Class 3 Dynamic Positioning DP system which includes numerous redundancies; Sea trials and acceptance criteria; Rigorous personnel qualifications and training; Continuous DP proving trials; Continuous DP failure consequence analysis; and Establishment of well-specific operations guidelines. System Failure Mode and Effects Analysis; During pile driving activities gradually increase the intensity of hammer energy to allow sensitive species to vacate the area before injury occurs i.e. soft starts. Maintain marine safety exclusion zones with a 500 m 1640 ft radius around drill ships and major installation vessels to prevent unauthorized vessels from entering potentially hazardous areas. Production Operations Reinject produced gas which is not utilized as fuel gas on the FPSO to avoid routine flaring. With respect to non-routine flaring the following measures will be implemented o Monitor flare performance to maximize efficiency of flaring operation; o Ensure flare equipment is appropriately inspected and function tested prior to production operations; and o Ensure flare equipment is appropriately maintained and monitored during production operations. Treat produced water on the FPSO to limit oil and grease (OG) to 29 mg/L monthly average and 42 mg/L daily maximum. Design produced water and cooling water processes to avoid increases in ambient water temperature of more than 3°C at 100m 328 ft from the FPSO when discharging. Perform onboard waste incineration for certain categories of waste. Utilize a Mooring Master from the FPSO located onboard the offloading tanker to support safe tanker approach/departure and offloading operations. Utilize

support tugs to aid tankers in maintaining station during approach/departure from FPSO and during offloading operations. Utilize a hawser with a quick release mechanism to moor the FPSO to the tanker at a safe separation distance during offloading operations. FPSO offloading to tankers will occur within an environmental operating limit that is established to ensure safe operations. In the event that adverse weather occurs during offloading operations that is beyond May 2017 62 Marine mammals Marine use and transportation safety Air quality Marine water quality mammals turtles fish and benthos seabirds ecology and ecosystems Marine water quality mammals turtles fish and benthos seabirds ecology and ecosystems Land use Marine use and transportation safety Marine use and transportation safety Marine sediments water quality mammals turtles fish benthos and EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Embedded Control Measures the environmental operating limit the tanker will cease the offloading operations and may disconnect and safely maneuver away from the FPSO as appropriate. Utilize a marine bonded doublecarcass floating hose system certified by Class or other certifying agency that complies with the recommendations of OCIMF Guide to Manufacturing and Purchasing Hoses for Offshore Moorings GMPHOM 2009 Edition or later. Utilize breakaway couplers on offloading hose that would stop the flow of oil from FPSO during an emergency disconnect scenario. Utilize a load monitoring system in the FPSO control room to support FPSO offloading. Utilize leak detection controls during FPSO offloading which include o Leak detection for breach of the floating hose that complies with the recommendations of OCIMF GMPHOM 2009 Edition or later; o Utilization of instrumentation/procedures to perform volumetric checks during offloading. Chapter 2 Project Description Resources/Receptors Benefitted seabirds Marine sediments water quality mammals turtles fish benthos and seabirds Marine sediments water quality mammals turtles fish benthos and seabirds Marine sediments water quality mammals turtles fish benthos and seabirds Marine sediments water quality mammals turtles fish benthos and seabirds Provide trained medical personnel on board the FPSO and major installation vessels to minimize reliance on medical infrastructure and facilities in Guyana. Utilize marine safety exclusion zone of 2

nautical miles around the FPSO to prevent unauthorized vessels from entering potentially hazardous areas. Project vessels will conduct ballasting operations in accordance with IMO regulations.

General Measures

Maintain equipment marine vessels and helicopters in good working order and operate in accordance with manufacturers specifications in order to reduce atmospheric emissions and sound levels to the extent reasonably practicable.

Community health and wellbeing

Marine use and transportation safety

Ecological Balance and Ecosystems

Air quality water quality marine mammals marine turtles Regularly inspect and service shorebase cranes and construction Air quality equipment in order to mitigate the potential for spills and to maintain air emissions at optimal levels. Shut down or throttle down sources of combustion equipment in intermittent use where reasonably practicable in order to reduce air emissions.

Air quality Utilize secondary containment for bulk fuel storage drilling fluids and Water quality hazardous materials where practical. Regularly check pipes storage tanks and other equipment associated Water quality with storage or transfer of hydrocarbons chemicals for leaks. Perform regular audits of field operations on the drill ship FPSO and shorebase to ensure application of designed safeguards.

Air quality water quality May 2017 63

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Embedded Control Measures

Treat sewage to applicable standards under MARPOL 7378. For those wastes that cannot be reused treated or discharged disposed on the drill ship or FPSO they will be manifested and safely transferred to appropriate onshore facilities for management. Waste management contractors will be vetted prior to utilization. If deficiencies in contractors operations are noted an action plan to address the identified deficiencies will be established. Utilize oilwater separators to limit oil in water in bilge water to 15 parts per million ppm; per MARPOL. Provide standing instruction to Project dedicated vessel masters to avoid marine mammals and turtles while underway and reduce speed or deviate from course as needed to reduce probability of collisions.

Chapter 2 Project Description

Resources

Receptors

Benefitted Marine sediments water quality mammals turtles fish benthos and seabirds Land use Marine sediments water quality mammals turtles fish benthos and seabirds Marine mammals marine turtles Provide standing instruction to Project dedicated vessel

masters to avoid Seabirds any identified rafting seabirds when transiting to and from PDA. Observe standard international and local navigation procedures in and around the Georgetown Harbour and Demerara River as well as best shipkeeping and navigation practices while at sea. Project workers will be subject to health screening procedures to minimize risks of communicable diseases. Utilize an established SSHE program to which all Project workers and contractors will be required to mitigate against risk of injury/illness to workers. All workers and contractors will receive training on implementation and will be required to adhere to its principles. Marine use and transportation safety Community health and wellbeing Occupational and community health safety and wellbeing Maintain an OSRP to ensure an effective response to an oil spill including maintaining the equipment and other resources specified in the OSRP and conducting periodic training and drills. Where practicable direct lighting on FPSO and major vessels to required operational areas rather than at the sea surface or skyward. Provide screening on FPSO and drill ships for seawater intakes to minimize the entrainment of aquatic life where practical. All resources and receptors Seabirds and marine turtles Marine fish

2.12 Project Workforce Preliminary workforce estimates are provided in Table 28. These estimates have been slightly revised since submittal of the Application for Environmental Authorisation. May 2017 64 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Table 28 Workforce Estimates Project Stage Development Drilling Installation including FPSO and SURF Mobilization and Hookup Commissioning Production Operations including FPSO and conventional tanker Decommissioning Chapter 2 Project Description Estimated Workforce Approximately 600 persons offshore at peak when utilizing up to two drill ships concurrently Dependent upon final drill ships and support vessels selected Approximately 600 persons offshore at peak Dependent upon final installation and support vessels selected Approximately 100 to 140 persons offshore at peak an additional 25 to 30 persons would be onboard the tanker Dependent upon conventional tanker schedule Approximately 60 persons offshore at peak In addition to the offshore components there will also be personnel providing shorebase and marine logistical support onshore approximately 100/150 persons some of whom will be Project dedicated while others will be

shared resources. The onshore logistical support staff will ramp up gradually through the installation stage until reaching a peak during the development drilling campaign and FPSOSURF installation activities and then will diminish during FPSOSURF production operations. The logistical support onshore staff level is expected to increase again briefly during decommissioning.

2.13 Worker Health and Safety EEPGL and its parent company ExxonMobil are committed to protecting the safety security and health of its employees contractors and the public with a goal of Nobody Gets Hurt. It has a robust and effective management system to protect its Project workforce. EEPGL will implement its Operations Integrity Management System OIMS see Section 2.2 during each Project stage. This program is designed to manage occupational risks to Project workers and therefore occupational health and safety are not discussed further in this EIA.

2.14 Project Schedule At this time the proposed Project schedule is still being refined. The Project life cycle will include development drilling installation production operations and decommissioning as well as associated logistics and onshore support. The engineering stage will precede FPSO and SURF installation and development drilling operations and will include frontend engineering and design FEED and detailed engineering. The execution stage will include procurement fabrication and construction drilling installation hookup commissioning and startup. Operations and maintenance will follow startup and will be the longest stage of the Project.

May 2017 65 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Figure 224 provides a preliminary schedule for the major Project components and activities. As depicted on Figure 224 oil production and export from the Project is planned for approximately mid2020. To support this goal development well drilling from up to two drill ships is planned to start in early 2019 with the potential for mobilization in 2018. The installation of the SURF components and the FPSO are planned to commence in 2019. Production will continue for at least 20 years. The milestones are still being refined and are subject to change. This schedule provides for simultaneous development drilling and FPSOSURF production operations which will involve bringing the initial production wells online as subsequent development wells are being drilled.

Figure 224 Preliminary Project Schedule

2.15

Project Benefits The Project will generate benefits for the citizens of Guyana in several ways Through revenue sharing with the Government of Guyana although the details of this revenue sharing is confidential. The type and extent of benefits associated with revenue sharing will depend on how decision makers in government decide to prioritize and allocate funding for future programs which is unknown and outside the scope of the EIA; By procuring select Project goods and services from Guyanese businesses to the extent reasonably practicable; and By hiring Guyanese nationals where reasonably practicable although the potential magnitude of hiring will be limited. In addition to direct revenue sharing expenditures and employment the Project would also likely generate induced economic benefits as other nonProject related businesses benefiting from direct Project purchases or worker spending will reinvest locally or expand spending in the area thereby also generating more local valueadded tax. These beneficial multiplier impacts will occur throughout the Project life.

EEPG Environmental Impact Assessment Liza Phase 1 Development Project 2.16 Alternatives Chapter 2 Project Description This section describes the alternatives to the proposed Project that were considered Location alternatives; Development concept alternatives; Technology and process alternatives; and Nogo alternative.

2.16.1 Location Alternatives The location of the Project and the development wells in particular is driven by the location of resource to be recovered. There are no meaningful location alternatives for the FPSO SURF equipment and drill centers within the PDA.

2.16.2 Development Concept Alternatives Given the water depth and distance to shore of the Liza field the development alternatives for Phase 1 are primarily limited to floating production systems e.g. FPSO semisubmersible tension leg platforms. With the exception of the FPSO concept the other deepwater production systems would necessitate the use of a separate Floating Storage and Offloading FSO vessel for oil storage and offloading in order to enable export of the oil to

buyers. The use of an FSO would significantly increase the Project offshore infrastructure which would increase Project impacts on air quality e.g. increased air emissions marine water quality e.g. additional wastewater discharges marine benthos e.g. increased disturbance of the seafloor FSO for mooring system marine use and transportation e.g. expanded exclusion zones for other marine vessels. Therefore the FPSO was chosen as the preferred concept for Phase 1 because it is a more efficient standalone solution for deepwater oil processing and storage and it also provides for fewer environmental impacts. Three primary alternatives were considered for addressing associated gas produced during Phase 1 operations gas reinjection gas export and continuous flaring. Gas reinjection was determined to be feasible for Phase 1 and it also provides benefits in reservoir management and reduced air emissions. As such produced gas not used as fuel gas on the FPSO will be reinjected under normal operations. Continuous flaring of gas on a routine basis is not preferred primarily due to the associated air emissions. Gas export alternatives for future development continue to be evaluated particularly given challenges related to commercialization of associated gas. The FPSO has been designed to allow for future gas export should an export alternative be identified.

2.16.3 Technology Alternatives EEPGL is using the most appropriate industryproven technology in developing the Project in terms of well drilling drilling fluids equipment selection development concepts and environmental management. EEPGLs parent company ExxonMobil and its contractors have extensive experience in delivering offshore deepwater development projects around the world May 2017 67 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description particularly with FPSO and SURF components and are applying that knowledge experience and technology in the development of the Project in Guyana.

2.16.4 Nogo Alternative The nogo alternative means that the proposed Project would not be executed. If this alternative is applied the existing conditions described in Chapter 6 would remain unaffected by the Project and the potential positive and negative impacts assessed in Chapter 7 would not be realized. Therefore evaluating the nogo alternative means evaluating the tradeoff between positive and negative impacts.

2.16.5 Summary of Alternatives EEPGL considered

a reasonable range of alternatives to the Project and their environmental impacts and has selected the best action alternative which is also the environmentally preferred alternative for use during Phase 1. The FPSO and SURF production system is a proven development concept for deepwater oil developments and would leverage both operator and industry proven technologies and experiences.

May 2017 68 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 2 Project Description Page Intentionally Left Blank May 2017 69 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework

3.0 ADMINISTRATIVE FRAMEWORK

The Project must comply with applicable policies guidelines and legislation in Guyana see Section 1.1 Purpose of the EIA. This chapter reviews the relevant legislations and policies in Guyana that are applicable to the Project and is divided into three sections Section 3.1 describes Guyanas national legal framework focusing on laws that apply to environmental issues in a general context such as the Constitution of Guyana as well as specific national laws and regulations that focus on environmental issues such as the EP Act Cap. 20:05 and the Environmental Protection Authorisation Regulations of 2000 and petroleum development issues. It also identifies several resourcespecific environmental laws that are more narrowly focused and are directly or indirectly relevant to the Project. Section 3.2 describes the elements of the national policy framework that apply to the Project. These strategies and policies articulate the governments goals with respect to various environmental issues. Section 3.3 describes the various international and regional conventions and protocols to which Guyana is a signatory that are applicable to the Project. In addition to these Guyana regulations Section 3.4 discusses EEPGLs Operations Integrity Management System OIMS which establishes common expectations to address risks inherent in its business.

3.1 National Legal Framework

This section provides an overview of the key legislation currently in force in Guyana that pertains to resources that could be affected by the Project.

3.1.1 National Constitution of Guyana

Guyana is governed according to the Constitution of the Cooperative Republic of Guyana as amended. The constitution took effect in 1980 and expressly provides for protection of the environment. Article 25 establishes improvement of the environment as

a general duty of the citizenry. 3.1.2 The Environmental Protection Act In 1996 the EP Act Cap. 2005 was ratified to implement the environmental provisions of the Constitution. The EP Act Cap. 2005 is Guyanas single most significant piece of environmental legislation because it articulates national policy on important environmental topics such as pollution control the requirements for environmental review of projects that could potentially impact the environment and the penalties for environmental infractions. It also provides for the establishment of an environmental trust fund. Most importantly the EP Act Cap. 2005 authorized the formation of the EPA and establishes the EPA as the lead agency on environmental matters in Guyana FAO 2013. The EPA is one of the agencies included within the Ministry of Natural Resources. The EP Act Cap. 2005 further mandates May 2017 70 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework the EPA to oversee the effective management conservation protection and improvement of the environment EPA 2012. It also requires the EPA to take the necessary measures to ensure the prevention and control of pollution assessment of the impact of economic development on the environment and the sustainable use of natural resources. The EPA has issued an official guidance document entitled Environmental Impact Assessment Guidelines which describes the general components and of a typical EIA. This EIA has been prepared consistent with the recommendations in this document see Table 12. 3.1.3 The Guyana Geology and Mines Commission Act The Guyana Geology and Mines Commission Act was enacted in 1979 and authorized the government to establish the GGMC which is within the Ministry of Natural Resources. The GGMC promotes and regulates the exploration and development of the countrys mineral resources. The GGMC has a dedicated Petroleum Unit charged specifically with regulatory supervision of the oil and gas sector; however petroleumrelated activities also occur in other divisions such as the Geological Services Division and the Environment Division. 3.1.4 The Petroleum Act The Petroleum Exploration and Production Act was enacted in 1986 to regulate the prospecting for and production of petroleum in Guyana including the territorial sea continental shelf and exclusive economic zone. This act identifies persons allowed to hold prospecting licenses

establishes the process for obtaining prospecting licenses and specifies requirements for further resource development in the event petroleum resources are discovered. The GGMC has a dedicated Petroleum Unit charged specifically with regulatory supervision of the oil and gas sector; however petroleum-related activities also occur in other divisions such as the Geological Services Division and the Environment Division. In 2012 the Commonwealth Secretariat was commissioned by the Government's then Ministry of Natural Resources and Environment now the Ministry of Natural Resources to prepare recommendations to reform Guyana's regulatory regime that governs the upstream petroleum sector. In September 2015 the Minister of Governance via the GGMC's Petroleum Unit announced plans to upgrade the country's upstream oil and gas policy which was originally crafted in 2012 and finalized in 2014. In June 2016 the Ministry of Natural Resources completed a new national oil and gas policy and announced pending revisions to the Petroleum Act. These revisions were due for consideration by Guyana's National Assembly before the end of 2016 (Kaieteur News 2016) but had not been presented for approval as of February 2017. In late January 2017 Guyana's Government Information Agency GINA announced the Ministry of Natural Resources plan to conduct a national outreach program to provide information to the public and answer questions on the emerging oil and gas sector (GINA 2017).

May 2017 71 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework 3.1.5 Other Resource-Specific National Environmental and Social Laws

Several additional Guyanese environmental laws with more narrowly defined scopes pertain to specific biological or physical natural resources. Other laws which primarily have a public health related focus are also indirectly related to the environment. Several of Guyana's environmental statutes were enacted prior to the 1980 Constitution and were subsequently incorporated into the newly formed national legal framework but most were enacted after 1980. Table 31 identifies these laws and summarizes their relevance to the Project.

Table 31 Resource-Specific Environmental and Social Laws

Objective	Relevance to the Project	Title
Biological Resources	Fisheries Act 2002 Regulates fishing and related activities in Guyana territorial waters. The Fisheries Act authorizes the prohibition and/or	

regulation of deposition or discharge of substances harmful to fish. Would primarily affect the of routine discharges from Project vessels and the FPSO. Sections 3 and 6 prohibit knowingly wounding or killing wild birds listed in the First and Second Schedule of the Act and establishes penalties. Provides for wildlife protection conservation and management. Provides a supportive mechanism cognizant of the national goals for wildlife protection conservation management and sustainable use. Wild Birds Protection Act 1987 Protects listed wild birds in Guyana. Species Protection Regulations 1999 Wildlife Management and Conservation Regulations 2013 recently supplemented by passing of Wildlife Conservation and Management Bill 2016 Provides for the establishment of a Management Authority and a Scientific Authority in compliance with the Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES. Provides for the establishment of a Management Authority and the management of the countrys flora and fauna. May 2017 72 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework Physical Resources Environmental Protection Water Quality Regulations 2000 Focused on setting effluent standards reporting requirements penalties for violations of standards and permitting requirements for discharges. Environmental Protection Air Quality Regulations 2000 Environmental Protection Hazardous Waste Regulations 2000 Toxic Chemicals Control Act No. 13 of 2000 as amended in 2007 Environmental Protection Noise Management Regulations 2000 Sets ambient air quality standards reporting requirements penalties for violations of standards and permitting requirements for stationary and mobile sources. Establishes requirements for generating handling and disposing of hazardous waste as well as penalties for violations of these requirements. Provides for the formation of a Pesties and Toxic Chemicals Control Board. Establishes requirements for registration licensure and trade in pesties and toxic chemicals. Amended in 2007 to provide rules for the exportation of pesties and toxic chemicals. Establishes general provisions for noise avoidance and restrictions from multiple commercial and industrial sources including sound making devices night clubs equipment tools and construction activities. Regulates discharges of listed substances which could include substances

used during the Project. Would affect the concentrations of certain constituents primarily metals but including others such as nitrogenous compounds fluoride and sulfate that could be discharged in the routine discharges from the Project. Regulates discharges that could be emitted during the Project including smoke particulates and carbon monoxide CO. Identifies wastes subject to regulation including several types of waste that could be produced by the Project. Establishes regulations pertaining to the use of toxic chemicals and pesticides. Pesticides will not be required for this Project but small amounts of chemicals may be used. The Act would regulate the importation registration and use of these chemicals. Tools and equipment includes pile drivers steam shovels pneumatic hammers pumps vent or valve devices and any other similar equipment. A regulated facility includes any offshore installation and any other installation whether floating or resting on the seabed. May 2017 73 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework Draft Guyana Standard Requirements for Industrial Effluent Discharge into the Environment 2015 Compulsory standard used for monitoring of effluents into freshwater estuarine and marine water resources. Public Health Occupational Safety and Health Act 1997 Food Drug Regulations Food and Drug Act Social Cultural Resources National Trust Act Legally defines the responsibilities of workers and management with respect to keeping workplaces safe. Regulates the sale advertisement preparation and handling of food products. Regulates the manufacture advertisement trade and administration of pharmaceuticals. Provides the Ministry of Health authority to inspect facilities to establish compliance with sanitation standards. Stewardship of historic resources and places of cultural significance. Sets limits for key parameters in discharges of industrial effluent. Would affect the concentrations of many of the same constituents in routine discharges that would be regulated under the Environmental Protection Water Quality Regulations 2000. Would also dictate the general water chemistry parameters e.g. temperature biological oxygen demand pH of these discharges. Would generally apply to workers and Project-related activities on the Project sites. Governs the preparation of food and provision of medications at Project facilities. Governs the management of any building structure object or other manmade or natural feature that

is of historic or national cultural significance that could be impacted by the Project. Includes shipwrecks and other marine features. Would only apply to the Project in the event of a chance find in which case the Act would require EEPGL to work cooperatively with the National Trust to manage any resources discovered. Most recently the Minister of Natural Resources who functions as the sponsoring Minister for the Oil and Gas industry announced plans in September 2015 to upgrade the countrys upstream oil and gas policy which was originally crafted in 2012 and finalized in 2014 indicating an evolving policy and regulatory framework surrounding the oil and gas industry in Guyana. May 2017 74 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework To date there are 16 laws concerning oil and gas in Guyana. The majority of these laws are housed with the EPA National Advisory Council on Occupational Safety and Health Guyana Revenue Authority GRA GGMC or Guyana National Bureau of Standards. 3.2 National Policy Framework Guyanas government has articulated national policies on several environmental and social topics that are relevant to the Project. This section provides an overview of the key government policies applicable to the Project. 3.2.1 National Development Strategy The National Development Strategy NDS recommends priorities for Guyanas economic and social development policies for the next decade. The draft document contains technical analysis of problems and future prospects in all sectors of the economy and in areas of social concern. The NDS contains six volumes. Volumes 3 and 5 are the most relevant to the Project. Volume 3 of the NDS sets government policy with regard to the environment as well as social equality issues. It identifies 12 distinct features of Guyanas natural resources and environment and sets policies governing the management of each feature. Relevant features to this Project covered under Volume 3 include the coastal zone fisheries waste management pollution control and environmental impacts of privatesector activities NDS 1997. Volume 5 of the NDS relates in part to the energy sector. It describes the condition of the energy sector in Guyana reviews past government policies related to the energy sector identifies challenges facing the energy sector in Guyana and describes the governments vision for development and regulation of the

sector into the future NDS 1997. 3.2.2 National Environmental Action Plan Guyanas National Environmental Action Plan NEAP articulates the national governments approach to managing the environment from the perspective of economic development. The NEAP considers the issues of environmental management economic development social justice and public health to be inextricably linked. It identifies deforestation pollution and unregulated gold mining as historically minor but with growing environmental problems and identifies private sector investment as one of the primary opportunities to generate the necessary capacity within Guyana to 1 provide an appropriate level of public services to its citizens; 2 reduce andor eliminate the avoidable environmental degradation that occurs when resource development occurs in a regulatory vacuum; and 3 reduce unsustainable uses of natural resources due to the socioeconomic pressures of widespread poverty. The NEAP is directly relevant to the Project in several ways. It identifies the coastal zone which will support Project activities as an area in need of focused management due to the concentrated human population along the coast and the susceptibility of the coastal environment to both natural and humaninduced degradation. It identifies private sectorled development projects as a mechanism to build capacity and ultimately support more May 2017 75 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework responsible environmental management. Finally it identifies petroleum resources as a potential target for development. 3.2.3 Integrated Coastal Zone Management Action Plan Guyanas Integrated Coastal Zone Management ICZM process is an ongoing initiative to promote the wise use development and protection of coastal and marine resources; enhance collaboration among sectorial agencies; and promote economic development. In 2000 after two years of study the ICZM Committee produced an ICZM Action Plan which was approved by the Cabinet in 2001. The ICZM Action Plan addresses policy development analysis and planning coordination public awareness building and education control and compliance monitoring and measurement and information management GLSC 2006. Other coastalzone related tasks currently being undertaken by the Government include strengthening the institutional setup for ICZM; conducting a public awareness

campaign to increase public understanding of the vulnerability of the coastal zone to sea level rise and climate change; and creating a database of coastal resources to facilitate improved ICZM. Currently the EPA is mandated to coordinate the ICZM program and coordinate the development of the ICZM Action Plan through the ICZM Committee. Under the Caribbean Planning for Adaptation to Climate Change project Guyana has also conducted a socioeconomic assessment of sealevel rise as part of a wider vulnerability assessment and developed a Climate Change Adaptation Policy and Implementation Strategy for coastal and lowlying areas.

3.2.4 Protected Areas Act

The Protected Areas Act was enacted in 2011. It provides for protection and conservation of Guyanas natural heritage and natural capital through a national network of protected areas and established a Protected Areas Commission to oversee the management of this network. It also highlights the importance of maintaining ecosystem services of national and global importance and public participation in protected areas and conservation and it establishes a protected areas trust fund to ensure adequate financial support for maintenance of the network. Other functions of this Act include promoting national pride in and encouraging stewardship of Guyanas natural heritage recognizing the conservation efforts and achievements of Amerindian Villages and Amerindian Communities and promoting the recovery and rehabilitation of vulnerable threatened and endangered species.

3.2.5 Guyanas National Biodiversity Strategy and Action Plan NBSAP

Guyanas current National Biodiversity Strategy and Action Plan was formally adopted in 2015 and is the third iteration of the NBSAP. It establishes the national vision for biodiversity which is to sustainably utilize manage and mainstream biodiversity by 2030 thereby contributing to the advancement of Guyanas biosecurity and socioeconomic and low carbon development. It is intended to guide national policy with respect to biodiversity through 2020. It recognizes the May 2017 76

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework importance of biodiversity to the growing ecotourism industry and other economic sectors. It also simultaneously recognized the importance of the mining industry to the national economy and the potential for conflicts between the mining industry and ecotourism if land

degradation is associated with mining activity is not appropriately managed. The NBSAP set forth nine strategic objectives intended to promote conservation and sustainability on a national scale improve biodiversity monitoring harmonize legal and policybased mechanisms across all levels of government to support biodiversity conservation and prioritize funding to meet these objectives.

3.2.6 Low Carbon Development Strategy and the Green Economy In June 2009 the Government of Guyana announced the Low Carbon Development Strategy LCDS. The LCDS aims to protect and maintain the forests in an effort to reduce global carbon emissions and at the same time attract payments from developed countries for the climate services that the forests provide. In 2013 the LCDS was updated to focus on two main goals 1 transforming the national economy to deliver greater economic and social development by following a low carbon development path while simultaneously combating climate change 2 providing a model for the world of how climate change can be addressed through low carbon development in developing countries. The LCDS identifies Reducing Deforestation and Forest Degradation Plus as a primary mechanism for achieving the goals of the strategy. Although there is no formal government plan for achieving a green economy the Government of Guyana has expressed interest in the concept. President David Granger has defined the green economy as consisting of the four pillars of energy environmental security ecological services and enterprise and employment Kaieteur News 2016. The LCDS provides the conceptual framework for implementing the green economy.

3.2.7 Guyana Energy Agency's Strategic Plan The Guyana Energy Agency GEA was established by the Guyana Energy Agency Act of 1997 with a mandate to advise the Prime Minister on energy related issues develop a national energy policy improve energy efficiency monitor the energy sector and educate the public on energy efficiency and renewable energy GEA undated. The GEAs Strategic Plan for 2014-2018 specifically charges the Agency with monitoring the production importation distribution and utilization of petroleum and petroleum products.

3.3 International Conventions and Protocols Guyana is signatory to a number of international agreements and conventions relating to environmental management and community rights although not all of these agreements have been translated into national

legislation. The key agreements relevant to the Project to which Guyana has acceded or is a signatory are listed in Table 32. Guyana is a member state of two organizations that administer multiple international treaties and conventions the International Labour Organization ILO and the International Maritime Organization IMO. The ILO has established eight fundamental conventions which provide May 2017 77 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework certain general protections to workers in signatory states such as the right to organize standards for remuneration restrictions on child labor including minimum ages to work and protection from forced labor. In addition to these fundamental agreements Guyana is signatory to several specific agreements that would govern certain specific aspects of the Project as they relate to labor. The IMO is a similar organization whose member states have agreed to one or more conventions related to maritime activities. These include three key conventions the International Convention for the Safety of Life at Sea the International Convention for the Prevention of Pollution from Ships and the International Convention on Standards of Training Certification and Watchkeeping for Seafarers as well as several other agreements concerning more specific aspects of maritime activity such as safety and security at sea maritime pollution and liability for maritime casualties. Guyanas Maritime Administration manages compliance with the requirements of the agreements Guyana is signatory to under the IMO with technical assistance from the IMOs Regional Maritime Advisory Office in Port of Spain Trinidad. The agreements to which Guyana is party through its membership in the ILO and IMO are identified in bold in Table 3.2. Table 32 International Agreements Relevant to Environmental and Socioeconomic Issues in Guyana Agreement Convention Objective Status Relevance to Project Climate Change Air Quality United Nations Framework Convention on Climate Change Promote international cooperation to limit average temperature increases and resulting changes in climate. Promote international cooperation to adapt to these impacts. Kyoto Protocol Vienna Convention on the Protection of the Ozone Layer Montreal Protocol on Substances that Deplete the Ozone Layer Extends the UNFCCC and commits countries to reduce greenhouse gas emissions. Provides a

framework for the protection of the ozone layer. Is a protocol to the Vienna Convention and is designed to protect the ozone layer by phasing out the production of numerous substances that are responsible for ozone depletion. Acceded and Ratified in 1994 Acceded in 2003 Acceded in 1993 Acceded in 1993 Provides for controls on greenhouse gas emissions within Guyanas territory maritime and land and establishes national policy regarding adaptation to climate change. Establishes national emission reduction targets. Establishes measures for protecting the ozone layer. Prohibits the use of several groups of halogenated hydrocarbons that may deplete the ozone layer. May 2017 78 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework Acceded in 1997 Would protect Guyanas rights to respond to an oil spill if such an event were to occur. Pollution Prevention International Convention for the Prevention of Pollution from Ships International Convention for Safe Containers International Convention Relating to Intervention on the High Seas in Cases of Oil Pollution Casualties International Convention on Civil Liability for Oil Pollution Damage Basel Convention on the Transboundary Movement of Hazardous Wastes and Their Disposal Regulates various forms of marine pollution including oil and fuel noxious liquid hazardous substances sewage garbage air emissions and ballast water. Acceded in 1997 Acceded in 1997 Promote the safe transport and handling of containers through generally acceptable test procedures and related strength requirements and facilitate the international transport of containers by providing uniform international safety regulations equally applicable to all modes of surface transport. Confirms the right of coastal member states to take specific actions when necessary to prevent pollution from oil following a maritime casualty Establishes vessel owners liability for damages caused by pollution from oil spills and provides for compensation would be available where oil pollution damage was caused by maritime casualties involving oil tankers Reduce and control the movements of hazardous waste between nations and discourage transfer of hazardous waste from developed to less developed countries. Acceded in 1997 Acceded in 2001 Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade Provides a

mechanism for formally obtaining and disseminating decisions of party nations as to whether they wish to receive future shipments of listed chemicals and for ensuring compliance with these decisions by exporting party nations. Acceded in 2007 May 2017 79 Impacts the handling and disposition of controlled substances from the drill ships FPSO and support vessels. Regulates the manufacture use and integrity of containers used on board the drill ships FPSO and support vessels. Would not apply directly to EEPGLs activities but would apply to potential spills from tankers that had received oil from the FPSO. Would apply to the Project only if hazardous waste generated in Guyana were disposed outside Guyana or if hazardous waste was brought into Guyana from a foreign state for disposal during execution of the Project. Would apply to the Project only if chemicals and/or pesticides listed under the convention were shipped into or out of Guyana.

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Stockholm Convention on Persistent Organic Pollutants POPs as amended Requires party nations to take measures to eliminate or reduce the release of persistent organic pollutants. Acceded in 2007 Establishes measures for dealing with marine oil pollution incidents Ratified in 1997 International Convention on Oil Pollution Preparedness Response and Cooperation Chapter 3 Administrative Framework Would apply to the Project only if POPs were released to the environment during the course of Project-related activities in Guyana. Requires ships to have a shipboard oil pollution emergency plan. Provide framework for international protection and development of the marine environment across the Caribbean region. Ecological/Environmental Quality/Cultural Heritage The Cartagena Convention for the Protection and Development of the Marine Environment in the Wider Caribbean Region Protocol on Specially Protected Areas and Wildlife Protocol supplementing and supporting the Cartagena Convention. Requires signatories to adopt an ecosystem approach to conservation. Provides mechanism for compliance with the Convention on Biological Diversity. Promotes biological conservation within the framework of sustainable development and use of biological resources and the fair and equitable sharing of benefits of genetic resources. Convention on Biological Diversity Acceded and Ratified in 2010 Sets general goals for protection for the marine

environment especially from pollution. Acceded and Ratified in 2010 Elaborates on the wildlife goals established in the Cartagena Convention and Convention on Biological Diversity. Signed in 1992 Ratified in 1994 Discourages activities that would negatively impact biodiversity. May 2017 80

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3

Administrative Framework United Nations Convention on the Law of the Seas Defines nations rights and responsibilities in terms of their use of oceans and provides guidance on environmental and natural resource management. Concluded in 1982 and ratified in 1994 Defines legal status of subsea mineral resources as the common heritage of humankind encourages resource development to be done in a way that supports healthy global economic growth and trade balance and mandates that states take measures to prevent control and reduce pollution of the oceans. Restricts collection and trade of endangered species. Convention on International Trade in Endangered Species of Wild Flora and Fauna UNESCO Convention on the Protection of the Underwater Cultural Heritage LaborHealthSafety International Convention for the Safety of Life at Sea Convention for the Suppression of Unlawful Acts against the Safety of Maritime Navigation Dock Work Convention Protects endangered plants and animals from international trade. Acceded in 1977 Protects all traces of human existence having a cultural historical or archaeological character that have been under water for over 100 years. Specifies minimum standards for the construction equipment and operation of vessels compatible with their safety. Allows governments of participating states to inspect vessels flagged in other participating states to ensure compliance. Promotes safety at sea by criminalizing actions that would endanger a vessel or its cargo or contributing to activities that would do so. Ratified in 2014 Applies to shipwrecks. Acceded in 1997 Affects construction operation and equipment on board the drill ships FPSO installation vessels and support vessels. Acceded in 2003 Would apply to any activity intended to endanger vessels while at sea conducting permitted activities related the Project. Would apply to loading and offloading activities at the shorebase. Regulates activities associated with the loading and unloading of cargo ontofrom oceangoing vessels when at port. Acceded 1983 May 2017 81 EEPGL Environmental Impact Assessment Liza

Phase 1 Development Project Repatriation of Seafarers Convention Revised Seafarers Identify Documents Convention Convention on the International Regulations for Preventing Collisions at Sea International Convention on Standards of Training Certification and Watchkeeping Convention on Facilitation of International Maritime Traffic Requires vessel owners/operators to repatriate at the operators expense seafarers that have successfully concluded a minimum period of service onboard a vessel minimum time to qualify for this benefit to be determined by the member state but not to exceed 12 months Requires signatory states to issue identity cards to seafarers and for other signatory states to allow holders of these cards entry to their territories for the purposes of shore leave joining a crew or repatriation after completing a voyage. Officially recognizes the importance of traffic separation in the marine environment and codifies basic measures to accommodate traffic separation including safe speed signaling conventions and general vessel conduct. Obligates crews operating vessels flagged in signatory states to adhere to minimum standards relating to training certification and watch keeping. Requires signatory states to submit detailed information to the International Maritime Organization concerning administrative measures taken to ensure compliance with the convention. Prevent unnecessary delays in maritime traffic arising from burdensome documentation requirements and establish uniform formalities and other procedures to permit transboundary maritime commerce and travel. Acceded 1996 Acceded 1966 Acceded in 1997 Acceded in 1997 Chapter 3 Administrative Framework Would apply to workers onboard both EEPGL owned/operated vessels their contractors and tankers receiving oil from the FPSO. Would apply to seafarers entering or egressing Guyana prior to or following employment on vessels operated by EEPGL or its contractors and to seafarers on shore leave while employed by EEPGL or its contractors. Governs operation of drill ships FPSO installation vessels and support vessels. Impacts required capabilities of crew on board the drill ships FPSO installation vessels and support vessels and provides for inspection by authorities to ensure compliance. Acceded in 1998 Facilitates entry of drill ships FPSO installation vessels and support vessels into Guyana. Guyana also belongs to other international organizations such as the Organization of American States the International Monetary

Fund and the Caribbean Community. To highlight Guyanas adherence to international standards and guidelines relevant to the oil and gas sector in May 2010 the country announced its commitment to the implementation of May 2017 82 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 3 Administrative Framework the Extractive Industries Transparency Initiative and in September 2015 the country recommitted its support to the ILO. 3.4 EEPGLs Operations Integrity Management System The Company and its affiliates including EEPGL are committed to conducting business in a manner that is compatible with the environmental and economic needs of the communities in which it operates and that protects the safety security and health of its employees those involved with its operations its customers and the public. These commitments are documented in its Safety Security Health Environmental and Product Safety policies. These policies are put into practice through a disciplined management framework called OIMS. EEPGLs OIMS Framework¹⁴ establishes common expectations used by Company affiliates worldwide for addressing risks inherent in its business. The term Operations Integrity OI is used to address all aspects of its business that can impact personnel and process safety security health and environmental performance. Application of the OIMS Framework is required across all Company affiliates with particular emphasis on design construction and operations. Management is responsible for ensuring that management systems that satisfy the OIMS Framework are in place. Implementation will be consistent with the risks associated with the business activities being planned and performed. Figure 31 provides a high level description of the OIMS Framework and its 11 essential

Elements.

Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology

Preparing for the Environmental Impact Assessment 4.0 METHODOLOGY FOR PREPARING THE ENVIRONMENTAL IMPACT ASSESSMENT

The purpose of this EIA is to assess the potential physical biological and socioeconomic including social economic community health and cultural impacts of the Project. This chapter provides a summary of the approach and methodology used to assess the potential impacts associated with the Project. The EIA has been undertaken in a manner consistent with the Guyana Environmental Impact Assessment Guidelines Volumes 1 and 2 2000 and 2004 respectively. This chapter also describes the process used to conduct the EIA. The EIA was prepared to provide an independent sciencebased evaluation of the potential impacts associated with the development drilling installation production operations and decommissioning stages of the Project. The EIA is also intended to share those findings with stakeholders and decisionmakers so they can make informed decisions regarding the potential benefits and impacts of the Project as well as the measures proposed to enhance these benefits and mitigate these impacts. that This EIA has been undertaken following a systematic process that evaluates the potential impacts the Project could have on physical biological and socioeconomic resourcesreceptors and that identifies measures that EEPGL will take to avoid reduce and remedy adverse impacts. For the purposes of the EIA an impact is defined as any alteration of existing conditions adverse or beneficial caused directly or indirectly by the Project. The EP Act Cap. 2005 defines an adverse impact as meaning one or more of the following Harm or material discomfort to any person; An adverse effect on the health of any person; Rendering any property or plant or animal life unfit for use by human or unfit for its role in Impairment of the quality of the natural environment or any use that can be made of it; Injury or damage to property or to plant or animal life; Impairment of the safety of any person; the ecosystem; Loss of enjoyment of normal use of property; and Interference with the normal conduct of business. Information on potential impacts including potential cumulative impacts related to the Project was obtained by ERM from various primary and secondary sources including consultation and key informant interviews with the EPA

GGMC and other stakeholders; environmental impact assessments for other similar projects worldwide; and scientific research and literature. The key stages for this EIA approach are Screening; Scoping and Terms of Reference; Assessing Existing Conditions; Project Description and Interaction with Design and DecisionMaking Process; May 2017 85 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Stakeholder Engagement; Assessment of Impacts and Identification of Mitigation; Mitigation Management and Monitoring; and Disclosure and Reporting. The methodologies for the key stages are described in the subsequent sections.

4.1 Screening The first stage of the EIA process involved the EPA screening the Project to determine the appropriate level of analysis to support the Application for Environmental Authorisation Application submitted by EEPGL. The EPA screens projects based on the information provided in the Application and determines the depth of environmental assessment type of document required to support the Application. Based on the results of its screening assessment the EPA may determine that the information included in the application is sufficient to support a permitting decision or it may require a Strategic Environmental Assessment Environmental Management Plan and/or an Environmental Impact Assessment. The EPA determined that the Project could result in potentially significant impacts and in accordance with the EP Act Cap. 2005 indicated on July 29 2016 that the Project requires an Environmental Impact Assessment to inform a decision to approve or reject the Project.

4.2 Scoping and Terms of Reference The key objectives of scoping are to Identify key sensitivities and those actions having the potential to cause or contribute to significant impacts on physical biological and socioeconomic resources receptors; Identify potential siting layout and technology alternatives for the Project; Obtain stakeholder views through consultation; and Help inform the Terms of Reference ToR for the EIA through consultation to ensure that the process and output are focused on the key issues. The ToR describes the scope technical approach and issues of importance to be considered in the EIA. EPA issued a draft ToR for the Project on September 8 2016 and its availability was advertised in the newspaper on September 9 2016. Sector Agency

Scoping Meetings were held on October 5 and 6 2016 to receive government agency comments on the draft ToR. Public Scoping Meetings were held in each of the six coastal regions as follows to receive public comments on the draft ToR Region 1 November 14 2016 Region 2 October 26 2016 Region 3 October 24 2016 Region 4 December 3 2016 Region 5 December 2 2016 Region 6 November 8 2016.

May 2017 86 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment

Following the public scoping meetings the EPA required the submittal of an updated Project Summary which EEPGL submitted on January 13 2017. The EPA issued a public notice for the updated Project Summary with an additional 28day public comment period. EPA approved the Final ToR on February 17 2017. The Final ToR was developed to guide the preparation of the EIA and outline the requirements of the same. The Final ToR incorporated the concerns issues and suggestions garnered during the 28day Public Notification Period and the public and sector agency meetings described above.

4.3 Assessing Existing Conditions The description of existing physical environmental and socioeconomic conditions provides information on resourcesreceptors identified during scoping that have the potential to be significantly impacted by the Project. The description of existing conditions is aimed at providing sufficient detail to meet the following objectives Identify the key conditions and sensitivities in areas potentially impacted by the Project; Provide a basis for extrapolation of the current situation taking into consideration natural variability and development of future scenarios without the Project; Provide data to aid the prediction and evaluation of potential impacts of the Project; Understand stakeholder concerns perceptions and expectations regarding the Project; Provide a benchmark to inform assessments of future changes and of the effectiveness of Inform development of appropriate mitigation measures; and mitigation measures. Field studies conducted to document existing conditions for the EIA are described in Chapter 6.

4.4 Interaction with Design and DecisionMaking Process The interaction between the EIA team and the design and decisionmaking process was one of the key areas in which the EIA influenced how the Project would be developed. It included involvement in defining the Project and identifying those activities with the

potential to cause physical biological or socioeconomic impacts. Project planning decision making and refinement of the Project description continued throughout the assessment process in view of identified impacts and proposed mitigation measures. During the EIA process there was extensive communication between the impact assessment team and the Project design team with regard to identifying alternatives potential impacts and mitigation measures.

4.5 Stakeholder Engagement

Stakeholder engagement has been conducted to support the development of the EIA and associated ESMP. The objectives of the Projects stakeholder engagement activities are to Promote the development of respectful and open relationships between stakeholders and EEPGL during the Project life cycle; Identify Project stakeholders and understand their interests and concerns in relation to Project activities and incorporate such interests and concerns into the EIA and ESMP development processes and if appropriate the Project design; May 2017 87 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Provide stakeholders with timely information about the Project in ways that are appropriate to their interests and needs and also appropriate to the level of expected risks and potential adverse impacts; Satisfy regulatory and EEPGL expectations for stakeholder engagement; and Record feedback and resolve any grievances that may arise from Projectrelated activities through a formal feedback mechanism.

4.5.1 Stakeholder Engagement Plan

Project stakeholder engagement activities are guided by a Stakeholder Engagement Plan SEP which describes Stakeholders identified for engagement; A program of engagement and communications activities and their frequency throughout the Project life cycle; A dedicated phone line and email address through which stakeholders can contact EEPGL to voice concerns provide information or ask questions about the Project and its activities; and Mechanisms through which EEPGL will monitor and report on external engagement and communications. The SEP is a document that is updated periodically as the Project progresses to reflect new information changing conditions and additional stakeholders.

4.5.2 Stakeholder Identification and Engagement Strategy

Project stakeholders have been identified through a combination of desktop research and incountry

assessment and engagement. Stakeholder categories include but are not limited to government officials; communities including indigenous peoples; interest groups; nongovernmental organizations NGOs; the private sector; media; academic and research institutions; and professional business and worker associations. Building on the stakeholder identification and mapping analysis EEPGLs stakeholder engagement strategy identifies mechanisms and tools to facilitate stakeholder communications and public information sharing. These tools are divided into two tiers that interact to facilitate informed engagement. The first tier is information sharing in which EEPGL provides information about the Project to stakeholders to support their understanding of what is proposed to occur. The second tier is consultation in which EEPGL seeks to support open dialogue and to receive stakeholder feedback opinions concerns and knowledge regarding the way the Project may interact with the natural and social environment. The objective of the consultation is to ensure that EEPGL has identified key stakeholder issues and concerns. EEPGL may disseminate information through print and online publications media releases as well as presentations and open houses. The intent of these types of activities is to provide information to a broad audience or group of stakeholders as efficiently as possible. Consultation or dialogue activities involving a twoway flow or exchange of information May 2017 88 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment between stakeholders and the Project may include oneonone and small group meetings public meetings including a question and answer session and feedback mechanisms such as a dedicated email address guyanastaff@exxonmobil.com and phone line 592 231 2866 extension 12400. The intention of these activities is to allow for not only a twoway exchange of information but also a means for EEPGL to gather information concerning topics that are important to its stakeholders. These activities also help ensure stakeholders comments and opinions are heard and legitimate concerns can be addressed.

4.5.3 Stakeholder Engagement Process

Stakeholder engagement activities are an integral part of the Project lifecycle from the initial notification when the Project is proposed to the scoping of potential impacts to the EIA and throughout the life of the Project.

EEPGL has conducted a robust public consultation program to both inform the public about the Project and understand community and stakeholder concerns so they could be incorporated into the EIA. The different stages of the Project each require stakeholder engagement that is tailored in terms of its objectives and intensity as well as the forms of engagement used. The various engagements completed and/or planned specific to the EIA stage are summarized below. EEPGL has held many meetings and various workshops with the government and others on offshore oil and gas exploration and development. The submission of the Application was posted in the local newspaper on August 9 2016 by EPA Figure 41 and was subject to a 28-day public comment period. There were no comments received from the public in regards to the Application. EEPGL and/or ERM have held meetings or key informant interviews with over 30 Guyana government agencies/commissions many elected officials and Regional Administrators over 15 professional or business associations international and domestic nongovernmental organizations several universities and research institutes various religious and ethnic organizations and the media to inform stakeholders about the Project and to collect information needed for the EIA. Although questionnaires were not used these meetings are documented in the SEP and inputs from these engagements were incorporated into the existing conditions and impact assessment components of the EIA Chapters 6 and 7 respectively. The Draft ToR was developed and published by the EPA on their website on September 8 2016. Sector Agency Scoping Meetings were held with EEPGL the EPA and other government agencies on October 5 and 6 2016 with over 150 attendees of which approximately 100 were members of the general public to discuss the Draft ToR scope potential impacts and capture agency-level stakeholder feedback on the Draft ToR. Public Scoping Meetings for the purpose of scoping potential impacts and capturing stakeholder opinions from the general public on the Draft ToR were held in Regions 1 through 6 during October November and December 2016 with over 300 attendees of which over 200 were public participants Figure 42. May 2017 89

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Following the public scoping

meetings the EPA required the submittal of an updated Project Summary which EEPGL submitted on January 13 2017 that was followed by an additional 28day public comment period. The EPA approved the TOR for the Project on February 17 2017. Several select stakeholders were consulted following acceptance of the TOR including 50 business community stakeholders at the Marriott hotel in Georgetown on February 20 2017; the Guyana Oil and Gas Association on February 21 2017; and Once the EIA was submitted to the EPA on February 27 2017 the EPA administered a 60day public comment period during which the public was invited to submit comments to the EPA on the EIA. During the 60day public comment period EEPGL held a number of small group and individual meetings government agencies commissions and NGOs Regional Administrators and academic and ethnic religious institutions. The purpose of these meetings was to provide an overview of the EIA results and answer questions relating to the EIA process and results. stakeholders including various with During the 60day public comment period EEPGL also held public meetings in Regions 1 and 6. The meetings included an overview presentation of the EIA results and provided the public the opportunity to pose questions about the EIA and the Project. May 2017 90 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Figure 41 Environmental Application Invitation for Public Comment May 2017 91 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Figure 42 Sample Draft Terms of Reference Invitation for Public Comment Regions 2 and 3 May 2017 92 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Once the EIA process is complete and assuming EEPGL obtains environmental authorization and other approvals from EPA GGMC and EAB the Project will subject to a final investment decision transition into execution. Plans for stakeholder engagement during Project execution are described in the SEP and engagement activities will be adjusted to reflect evolving Project status and activity level as well as stakeholder concerns over the life of the Project. During Project execution the emphasis of

engagement shifts from input gathering to disclosure about planned activities as well as consultation including receipt of feedback on ongoing and planned activities. EEPGL will keep the public informed about the general progress of the Project e.g. completion of Project stages such as well drilling and will respond to any grievances e.g. specific concerns filed under the Projects Grievance Procedure which is described in the SEP. The Grievance Procedure will be in place throughout the life of the Project.

4.5.4 Stakeholder Comments and Considerations

This section summarizes the key comments and suggestions received from stakeholders during the EIA consultation processes to date and how these comments have been considered and addressed in the EIA Table 41. During the Projects EIA scoping phase the EPA led a series of eight scoping meetings two meetings attended by agency representatives and one public meeting each in Regions 16. These meetings served to inform stakeholders about and receive feedback on the EIA Terms of Reference ToR which were also made available on the EPA website throughout the scoping phase. The public was also made aware that comments could be submitted directly to the EPA during the 28day public comment period of the scoping phase. A total of 163 comments were received from public stakeholders over the course of the scoping phase. Some were raised in person at the scoping meetings while others were submitted via comment boxes at the meetings or by letter to the EPA. The largest number of comments 58 pertained to the EIA approach process and/or methodology including questions about the EIA timeline the company conducting the EIA delineation of the Area of Influence AOI data collected for the EIA stakeholder engagement efforts over the course of the EIA process and of the ESMP. There were also numerous questions and comments 37 about potential impacts of the Project including impacts to marine life and other biological resources fishing livelihoods air quality indigenous lands and potential for accidents. A total of 40 comments pertained to the Project Description including the project location life of the project processes for waste management use of produced gas and measures to prevent and address oil spills. A total of 19 comments were received about possible socioeconomic benefits of the Project including employment government revenues and local . Seven comments were received regarding the EPAs

role and capacity in the EIA process and three questions were received about the administrative framework regulating oil and gas development in Guyana. Table 41 below summarizes key themes raised by stakeholders during the EIA scoping phase and indicates how these have been considered in the EIA.

May 2017 93 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment

Table 41 Themes in Scoping Comments Received and Consideration in EIA Key Theme Differences between Phase 1 and Phase 2 types of SURF and FPSO equipment and methods gas reinjection EIA methodology hierarchy data collection techniques types of surveys and studies limitations predictive analysis and considerations for mitigation Oil spill response OSR capabilities protection measures vessel information response capacity e.g. trained responders equipment notifications liability Area of Influence AOI determinations Timing for public comment period cutoff dates and how comments are incorporated into the EIA Credentials and experience of the company developing the EIA. Subcontractor management and monitoring logistical support requirements and onshore shorebases Decommissioning Alternatives analysis particularly as it pertains to Air Quality Strategic Environmental Assessment SEA details current and previous stakeholder engagement information Role of Marine Mammal Observers Potential socioeconomic benefits of the Project including employment and government revenue. Potential adverse impacts on livelihoods and economy including fishing livelihoods. Consideration in EIA Phase 2 has not been defined. Any future phases would be addressed through a separate permitting process. A Project Description is provided in Chapter 2. The methodology for the EIA including existing condition data collection assessment and mitigation analysis is discussed in Chapter 4. OSR planning is discussed in Chapter 7. Potential impacts as a result of an unplanned event such as an oil spill are assessed in Section 7.4. A separate Oil Spill Response Plan for the Project is being developed. The AOI for the Project is described in Chapter 5. Details related to the EIA process and the administrative frameworks are discussed in Chapter 3. Details related to the public comment period and how stakeholder feedback is incorporated into the EIA are discussed here in Section 4.5. A brief description of ERM and its

experience conducting EIAs for offshore oil and gas projects is presented in Section 1.0 of the EIA. Curriculum vitae for the key EIA team members are provided in Appendix B of the EIA. Details related to subcontractors and logistical support are described in Chapter 2. Decommissioning information is presented in Chapter 2. An alternatives analysis is included in Section 2. Further details pertaining to Air Quality Climate Change and the impact on receptors is discussed in Chapter 7. The SEA that was submitted to EPA in March 2014 and includes previous stakeholder information can be found on the EPA website. Information pertaining to marine mammal data collection can be found in Chapter 6. Socioeconomic benefits of the Project are discussed generally in Section 7.3.2 and Section 7.3.3 of the EIA. Opportunities for local employment and procurement are currently under study; details will be elaborated in a Projects specific local plan. Potential adverse impacts to employment livelihoods and economy are discussed in Section 7.3.2 Section 7.3.3. and Section 7.4.4. May 2017 94 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Key Theme Consideration in EIA Management and use of produced gas Use and disposal of hazardous substances Emissions and their impacts A description of the gas production rate and its management and use by the Project are described in Section 2.5 of the EIA. A list of chemicals that the Project intends to use is provided in Section 2.10.1 of the EIA. Management of wastes including hazardous waste is provided in Section 2.10.4. An estimated annual emissions summary is provided in Section 2.10.2 of the EIA while assessments of Project emissions on ambient air quality and climate are provided in Section 7.1.1. Waste streams and their management and discharge Descriptions of the Project vessels discharges and management disposal systems and practices are provided in Sections 2.10.3 and 2.10.4. Possible effects on coastal resources including mangroves and artisanal fisheries Assessment of impacts to coastal resources is provided in Section 7.2.1 Section 7.2.2 Section 7.2.3 Section 7.4.3 and Section 7.4.4 of the EIA. Possible effects on marine life An assessment of impacts to biological receptors including marine wildlife can be found in Section 7.2 and Section 7.4.3 of the EIA. Possible effects on fishing livelihoods Assessment of

impacts to fishing livelihoods can be found in Section 7.3.3 and Section 7.4.4. Impacts to indigenous people lands and resources A discussion of indigenous people and resources and their potential to be affected by the Project is provided in Section 7.3.10 and Section 7.4.4.8. Oil spill potential impacts and impacted locations Oil spill modeling results and assessment of potential impacts of an oil spill are discussed in Section 7.4 of the EIA. Potential for social changes such as trafficking prostitution drug trade etc. Potential impacts to community safety are assessed in Section 7.3.4 of the EIA. Principles and of the Environmental and Social Management Plan ESMP The guiding principles and an overview of general structure and of the ESMP are discussed in Chapter 9 of the EIA. Type of anchor mooring on offshore vessels The type of anchor mooring or other positioning mechanism to be utilized by Project vessels is discussed in Section 2.

May 2017 95 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Some questions were raised during the scoping meetings that were outside the scope of an EIA e.g. the potential for an oil refinery in Guyana and/or are confidential such as the details of EEPGLs agreement with the Government of Guyana and are therefore not discussed in Table 41. During the Projects 60day public comment period EEPGL conducted a series of individual and small group meetings as well as two public consultations one in Region 1 and one in Region 6. The stakeholders that were engaged during this period include Environmental Protection Agency Ministry of Indigenous Peoples Affairs Ministry of Natural Resources National Trust of Guyana Maritime Administration Department Conservation International Guyana Civil Defense Commission World Wildlife Fund Guyana Ministry of Agriculture Department of Guyana Marine Conservation Society Fisheries Guyana Geology and Mines Commission University of Guyana Ministry of Health Guyana Hindu Dharmic Sabha Region 2 Administration Region 1 public consultation Ministry of Communities Region 6 public consultation Stakeholder comments were documented over the course of these engagement events. Comments and questions related to a range of topics including potential impacts on fishing livelihoods potential impacts to marine biodiversity potential impacts on air emissions and how these were assessed

financial responsibility in the event of an oil spill application of the mitigation hierarchy Project employment opportunities and other socioeconomic benefits and the Projects stakeholder engagement process. EEPGL compiled comments received over the course of the 60day public comment period that could necessitate changes to the EIA and ESMP. In addition the EPA received written comments from stakeholders during the public comment period which were forwarded to EEPGL. Upon conclusion of the public comment period EEPGL thoroughly considered all comments received and updated the EIA and ESMP as relevant and appropriate.

4.6 Assessment of Impacts and Identification of Mitigation

The primary purpose of an EIA is to predict the potential impacts resulting from a proposed Project and to identify and evaluate the efficacy of measures to avoid reduce or remedy these impacts. ERM uses a standard impact assessment methodology for evaluating the impacts and May 2017 96 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment significance of projects around the world the ERM Impact Assessment Standard. This methodology the sensitivityvulnerabilityimportance of the resourcereceptor to determine the significance of the impact see Table 42 which is described in more detail below. into consideration both the magnitude of an impact and takes Table 42 Evaluation of Impact Significance Impacts can be direct indirect or induced as defined below Direct Impacts that result from a direct interaction between the Project and a resourcereceptor e.g. disturbance of a benthic community habitat on the seafloor; Indirect Impacts that follow indirectly from the direct interactions between the Project and its environment as a result of subsequent interactions within the environment e.g. impacts to marine fish who feed off a directly impacted benthic community; and Induced Impacts that result from other activities that are not part of the Project that happen as a consequence of the Project e.g. influx of job seekers. May 2017 97 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment The assessment of impacts proceeded through an iterative fourstep process as illustrated in Figure 43. Figure 43 Impact Prediction and Evaluation Process Step 1 Predict Impacts The EIA evaluates potential Project

impacts by predicting and quantifying to the extent possible the sensitivity/vulnerability/importance of the impacted resources/receptors. resources/receptors magnitude impacts those and on of

Magnitude is a function of the following impact characteristics

Type of impact i.e. direct/indirect/induced; avoidable or unavoidable

Nature of the change what is impacted and how; positive or negative; Size scale or intensity; Geographical extent and distribution e.g. local/regional/national/international; Duration and/or frequency e.g. temporary/short term/long term/permanent; and Reversibility reversible or irreversible.

Magnitude therefore describes the change that is predicted to occur in the resource/receptor e.g. the area and duration over which air or groundwater may become polluted the level of increase in concentration the degree and probability of impact on the health or livelihood of a local community.

The magnitude of impacts are predicted and evaluated using a variety of different methods appropriate to the resources/receptors potentially impacted by the Project. For example models are used to evaluate potential impacts on physical resources e.g. water quality/oil spill/air dispersion and underwater sound models.

Table 51 provides additional information on the analytical methods used in assessing impacts for resources/receptors.

The magnitude of an impact takes into account all the various dimensions of a particular impact in order to make a determination as to where the impact falls on the spectrum in the case of adverse impacts including Negligible/Small/Medium and Large.

Some impacts can result in changes to the environment that may be immeasurable/undetectable or within the range of normal natural variation. Such changes can be regarded as essentially having little or no impact and are thus characterized as having a Negligible magnitude.

Other impacts may result in changes that are substantial and/or extremely widespread and these are characterized as May 2017/98 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment having a Large magnitude.

In the case of positive impacts this EIA does not attempt to characterize magnitude.

In determining the magnitude of impacts on resources/receptors embedded controls are taken into consideration. For example the assessed magnitude of impacts on seawater quality from proposed produced water discharge considers the

efficacy of produced water treatment measures that are part of the Project design. The sensitivityvulnerabilityimportance of the impacted resourcereceptor is characterized by considering the nature of the resourcereceptor as well as other factors including legal protection government policy stakeholder views and economic value. The definitions for Low Medium and High sensitivityvulnerabilityimportance designations will vary on a resourcereceptor basis.

Step 2 Evaluate Impacts For routine aspects of the Project the significance for each impact was assigned based on the evaluations of the magnitude of the impact and the sensitivityvulnerabilityimportance of the resourcereceptor using the matrix shown in Table 42 above. This matrix applies to all resourcesreceptors. The assignment of a significance rating enables decisionmakers and stakeholders to understand key potential Project impacts. The following considerations are provided to clarify what the various significance designations represent.

An impact of Negligible significance is one where a resourcereceptor will not be impacted by a particular activity or the predicted impact is deemed to be imperceptible or is indistinguishable from natural background variations or small magnitude impacts are predicted only to low sensitivity receptors. impact but An impact of Minor significance is one where a resourcereceptor will experience a the noticeable resourcereceptor is respectively of Medium or Low sensitivityvulnerability importance. An impact of Moderate significance has an impact magnitude that falls somewhere in the range from a threshold above which the impact is Minor up to a level that might be just short of being considered Major. is Small or Medium andor impact magnitude the An impact of Major significance is one where the impact magnitude is Medium or Large for a resourcereceptor of High sensitivityvulnerabilityimportance or Large magnitude for a Medium sensitivityvulnerabilityimportance resourcereceptor. An impact of Positive significance is one that has been identified as having a positive impact on the receptorresource. This EIA does not attempt to characterize magnitude for positive impacts. The specific criteria used to evaluate significance of impacts for each resourcereceptor are presented in Chapter 7. Nonroutineunplanned events related to the Project e.g. oil spills traffic acents or other events with a low probability of occurrence do not lend themselves readily to the analysis described

above. For these types of events understanding the significance of the risk requires understanding of the May 2017 99 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Consequence potential of the event if it were to occur; and Likelihood of the event occurring. As such for these unplanned events a Risk Table Table 43 based on event consequence and likelihood is used to assess the significance of impacts associated with the events. Table 43 Evaluation of Risk Consequencesseverity takes into consideration the magnitude as defined for Step 1 of the potential impact if the unplanned event were to occur. Likelihood reflects the probability of occurrence and is defined as follows Unlikelyconsidered a rare event and there is a small likelihood that an event could occur; Possiblethe event has a reasonable chance to occur at some time during normal operating conditions; and Likelythe event is expected to occur during the life of the facility. Likelihood is estimated on the basis of experience and/or evidence that such an outcome has previously occurred. It is important to note that likelihood is a measure of the degree to which the unplanned event is expected to occur not the degree to which an impact is expected to occur as a result of the unplanned event. The latter concept is referred to as uncertainty and this is typically dealt with in a contextual discussion in the impact assessment rather than in the impact significance assignment process. Step 3 Mitigation and Enhancement The next step in the process for this EIA is the identification of measures that can be taken to mitigate as far as reasonably practicable the identified potential impacts of the Project. A mitigation hierarchy is used where preference is always given to avoid the impact before considering other types of mitigation. The preferred hierarchy of measures followed in this EIA is Avoidremove the source of the impact by employing alternative designs or operations to avoid risks related to environmental and socioeconomic impacts; Reducelessen the probability and/or consequence of impacts that cannot be avoided e.g. reduce the size of the project footprint; and Remedyif significant impacts cannot be avoided or reduced then repair the consequences of the impact after it has occurred through rehabilitation reclamation restoration compensation and/or offsets. May 2017 100 EEPGL Environmental Impact Assessment

Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Management measures are generally not developed for potential adverse impacts that are assessed as Negligible. Practicable measures as available are adopted for higher levels of impact significance.

Step 4 Determine and Manage Residual Impacts The final step in the iterative impact evaluation process for this EIA is the determination of residual impacts i.e. impacts that are predicted to remain after both embedded controls and committed mitigation measures have been taken into consideration. This typically involves pursuing elements of Step 1 and Step 2 to reevaluate the magnitude and then the significance of the potential impact now considering the implementation of proposed mitigation measures. If significant residual impacts remain efforts aligned with Step 3 are made to identify additional or alternative cost-effective and practicable mitigation measures. The management emphasis for Moderate and Major impacts is on reducing the impact to a level that is as low as reasonably practicable. This does not necessarily mean for example that impacts of Moderate significance have to be reduced to Minor but rather that impacts are being managed effectively and efficiently. Although a goal of an impact assessment is to eliminate Major residual impacts through impact avoidance or other measures for some resources/receptors there may be Major residual impacts after all practicable mitigation options have been exhausted. Decisionmakers must weigh such negative factors against the positive ones such as employment in reaching a decision on the Project.

4.7 Mitigation Management and Monitoring In support of the EIA process ERM and EEPGL developed a Project ESMP as summarized in Chapter 9 that includes Management measures identified in the impact assessment; Summary of how the measures will be implemented; and Monitoring strategy to evaluate the effectiveness of the management measures. The management strategy uses an adaptive approach during the Project life cycle to ensure that recommended management measures are implemented as planned and produce the desired outcomes. This adaptive approach provides the Project in consultation with the EPA and other stakeholders the opportunity to Address unanticipated adverse impacts that are encountered through the addition of new management measures following the avoid-reduce-remedy

hierarchy; Adjust or replace existing management measures when appropriate during the Project life cycle to address evolving impacts; and Retire existing management measures when no longer demonstrating value. EEPGL recognizes that demonstrating capacity to manage nonroutine unplanned events such as oil spills is an important and integral component of the impact management process. As such the ESMP includes an Oil Spill Response Plan OSRP to address the possibility of nonroutine unplanned events.

May 2017 101 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 4 Methodology Preparing for the Environmental Impact Assessment Page Intentionally Left Blank May 2017 102 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the EIA

5.0 SCOPE OF THE ENVIRONMENTAL IMPACT ASSESSMENT

The scope of the EIA includes all Phase 1 Project stages i.e. development drilling installation hookupcommissioning production operations and decommissioning as described in Chapter 2 and planned activities listed in Section 5.2. The EIA also addresses nonroutine unplanned events e.g. spills and releases. This EIA builds on the previous Strategic Environmental Assessment prepared for EEPGLs original Exploration Drilling in the Stabroek Petroleum Prospecting License Area March 2014 and the Environmental Management Plan prepared for EEPGLs Liza Field Multiwell Exploration Program February 2016. The collection of additional data and completion of further analyses however were required to evaluate the potential environmental and socioeconomic impacts of all stages of the Project which are addressed in this EIA.

5.1 The Area of Influence

The area potentially impacted by a project is referred to as its Area of Influence AOI. For purposes of this impact assessment the Project AOI was divided into a direct and an indirect AOI as described below

Direct AOI within which the Project is expected to have direct impacts Figure 51. This area includes

- 1 the PDA i.e. the Liza Phase 1 area including the subsea wells SURF equipment and the FPSO;
- 2 the marine transit corridors between the PDA and shorebased activity centers in Guyana and Trinidad; and
- 3 the city of Georgetown; and

Indirect AOI within which the Project is expected to have indirect impacts Figure 52. This area includes

- 1 coastal areas and marine waters within the territorial boundary of Guyana that could

potentially be impacted by an unplanned event i.e. an oil spill; see Section 7.4 for more details on oil spill modeling and 2 coastal Regions 1 to 6 who could be impacted to a greater extent by the Project than the other regions because of their subsistence and commercial marine fisheries e.g. potential impacts on fish and marine transport and increased exposure to Project socioeconomic impacts. Although all 10 regions of Guyana would potentially benefit from the shared government revenue stream from the Project the Indirect AOI does not include the entire country because the extent to which any specific region could benefit from the revenues is dependent on the governments policies rather than on EEPGLs activities as assessed in this EIA. As described in Section 8 cumulative impacts on environmental and socioeconomic resources could potentially result from incremental impacts of the Project when combined with other past present and reasonably foreseeable future projectsdevelopments within the AOI. The geographic area of concern for the cumulative impacts analysis is generally consistent with the Project AOI.

May 2017 103 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 51 Direct Area of Influence Chapter 5 Scope of the EIA NOTE Map does not represent a depiction of the maritime boundary lines of Guyana.

May 2017 104 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 52 Indirect Area of Influence Chapter 5 Scope of the EIA NOTE Map does not represent a depiction of the maritime boundary lines of Guyana.

May 2017 105 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the EIA 5.2 Project Interactions with Environmental and Socioeconomic Receptors In order to define the scope of the environmental and socioeconomic impact analysis it is necessary to identify the potential interactions between the Project and the resourcesreceptors within the AOI. These interactions are the mechanisms that could trigger Projectrelated impacts on resourcesreceptors. Each of the Project activities and potential unplanned events listed below has the potential to interact with existing resourcesreceptors in the AOI which could potentially create environmental or socioeconomic impacts.

Development
Drilling Stage o Drill ship and drilling operations
Power generation
Drill cuttings discharges
Drilling fluids discharges

incineration o VSP o ROV operations o Onshore waste management recycling treatment and disposal Installation of FPSOSURF Components Stage o Marine installation vessels and FPSO Power generation Install mooring system e.g. driven or suction piles for FPSO and select SURF equipment Discharge of hydrostatic test water hydrate inhibitor ballast water Wastewater discharges Limited waste incineration o ROV operations and installation of SURF equipment o Hookup and commissioning of FPSO and SURF equipment o Onshore waste management recycling treatment and disposal Production Operations Stage o FPSO Vessel Operations Power and heat generation Nonroutine temporary flaring Produced water discharges Brine discharges from sulfate removal and potable water processing Sanitary wastewater discharges Ballast water discharge one time at mobilization Nonhydrocarbon contact cooling water discharges Gas reinjection into reservoir Seawater intake May 2017 106 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the EIA Seawater injection into reservoir Chemical use topsides subsea downhole o Oil Offloading to Conventional Tankers Tanker power generation Venting of cargo tanks during oil loading Seawater intake for ballast operations Tanker ballast water discharge on arrival Tanker domestic wastewater discharge o Offshore waste treatment and disposal including waste incineration o Onshore waste management recycling treatment and disposal Decommissioning Stage o Marine decommissioning vessels and FPSO Power generation Disconnection of mooring system and SURF equipment Wastewater discharges Limited waste incineration o Onshore waste management recycling treatment and disposal Logistical Support across all Project stages o Supply and support vesselaircraft operations o Onshore fuel transfers from suppliers o Utilization of shorebases including pipe yards and warehouses o Onshore waste management recycling treatment and disposal Nonroutine Unplanned Events o Oil spill or release FPSOSURF production operations o Oil spill or release Well control event o Other oil spills or releases o Other unplanned events 5.3 ResourcesReceptors Assessed in the EIA One of the purposes of the scoping process is to identify which resourcesreceptors could potentially be significantly impacted by the Project and which resourcesreceptors would not have the potential to

be significantly impacted by the Project. Based on the Project Description and understanding of existing conditions at the time of scoping Table 51 lists those resources/receptors that were identified as having the potential to be impacted by the Project subject to further assessment. These resources/receptors were retained for further consideration in the EIA. May 2017 107 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the EIA Table 52 lists those resources/receptors that have been identified as unlikely to have the potential to be impacted by the Project and the rationale for this determination. These resources/receptors are excluded from further consideration in the EIA. May 2017 108 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the Environmental Impact Assessment Table 51 Summary of Resources/Receptors Retained for Further Consideration in EIA and Corresponding Potential Impacts Primary Sources of Potential Impacts and Analytical Approach

Resource or Receptor	Potential Impacts	Primary Sources of Potential Impacts	Analytical Approach
Physical Resources	Air Quality and Climate	Air emissions resulting from the Project have the potential to change ambient air quality in the Project AOI on a localized basis. Air quality is important for health of humans and wildlife. Potential impact of greenhouse gas emissions from the Project on climate change.	Power generation Other combustion sources Nonroutine temporary flaring Fugitive emissions from storage and loading Waste incineration Helicopter and aviation emissions To describe actual air quality conditions in the vicinity of the Project ambient air quality data were collected at the proposed Project site approximately 190 km 120 mi offshore of Guyana including measurements of particulate matter PM ₁₀ carbon monoxide CO sulfur dioxide SO ₂ hydrogen sulfide H ₂ S nitrogen dioxide NO ₂ and volatile organic compounds VOC. Measurements were taken onboard a research vessel. Air emission inventories were prepared for these pollutants and a screening level analysis was conducted to identify potential air quality impacts associated with Project activities. Dispersion modeling was conducted to assess potential impacts to ambient air quality. Potential impacts were described. Estimated greenhouse gas GHG emissions for the Project were calculated. Sound Auditory impacts on Project workers. Equipment/machinery operating

onboard the FPSO or drill Managing occupationalrelated risks through appropriate PPE. Marine Geology and Sediments Marine Water Quality The Project will disturb marine geology and sediments on a localized basis in the PDA and could impact sediment quality from nonaqueous base fluid NABF on drill cuttings discharges. The Project could have localized impacts to marine water quality in the PDA from discharge of drill cuttings and from routine operational and hydrotesting discharges. The Project could potentially impact marine water quality in the Project AOI as a result of nonroutine unplanned events. ships Drilling of development wells Installation of FPSO and SURF components Drilling of development wells cuttings and fluid discharge Cooling water discharges Installation of FPSO and SURF components Wastewater discharges Produced water discharges Hydrotesting discharges Nonroutine unplanned event e.g. spill or release Biological Resources Protected Areas and Special Status Species The Project is not expected to impact Protected Areas during routine planned operations and activities in the Project AOI. The Project could potentially impact Protected Areas in the Project AOI as a result of nonroutine unplanned events. The Project could potentially impact some special status species e.g. endangered or listed species in a localized manner in the PDA as a result of underwater sound light seawater withdrawal and changes in marine water quality. The Project could potentially impact special status species in the Project AOI as a result of nonroutine unplanned events. Nonroutine unplanned event e.g. spill or release Underwater sound generated by marine component operations and activities Lighting on offshore facilities e.g. FPSO drill ships Seawater intake by FPSO Wastewater discharges Drilling of development wells cuttings and fluid discharge Cooling water discharges Produced water discharges Hydrotesting discharges Vessel movements A fate and transport model GIFT was used to evaluate cuttings and drilling fluid deposition surrounding the development wells. The physical differences between the native seafloor and the accumulated drill cuttings as well as the distribution of residual NABF on drill cuttings were described based on the results of the modeling analysis. A fate and transport model GIFT was used to evaluate total suspended solids TSS concentrations resulting from discharge of drilling fluid and cuttings based on global ocean currents data. USEPAs

CORMIX model was used to simulate the mixing zone around the drill ships and FPSO and to support an analysis of impacts on marine water quality from routine production operations discharges and onetime hydrotesting discharges. Oil spill modeling was used to estimate concentrations of dissolved hydrocarbons that might result from different unplanned event scenarios. Oil spill modeling was used to simulate the trajectory of an oil spill and assess the risk of oiling impacting any designated Protected Areas. Consistent with the approach taken for marine mammals turtles and fish without special status designation the scientific literature was reviewed for information on the impacts of planned offshore activities on special status species including marine turtles fish and marine mammals. Oil spill modeling was used to assess potential spill-related impacts. Underwater sound was modeled to assess potential auditory impacts associated with marine activities. USEPA's CORMIX model was used to simulate the mixing zone around the drill ships and FPSO and to support an analysis of impacts on marine water quality from routine operational discharges and onetime hydrotesting discharges. The GIFT model was used to evaluate TSS concentrations resulting from discharge of drilling fluid and cuttings based on global ocean currents.

May 2017 109 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the Environmental Impact Assessment Resource or Receptor Coastal Habitats Coastal Wildlife and Shorebirds Seabirds Marine Mammals Marine Turtles Marine Fish Marine Benthos Potential Impacts

The Project is not expected to impact beaches mangroves or wetlands in the Project AOI during routine planned operations and activities. The Project could potentially impact beaches mangroves and wetland habitats in the Project AOI as a result of nonroutine unplanned events. The Project is not expected to impact coastal wildlife or shorebirds during routine planned operations and activities in the Project AOI. The Project could potentially impact coastal wildlife and shorebirds in the Project AOI as a result of nonroutine unplanned events. The Project could potentially impact seabirds in a localized manner in the PDA as a result of light i.e. disorientation. The Project could potentially impact seabirds in the Project AOI as a result of nonroutine unplanned events. The Project could potentially impact some marine mammals in a

localized manner in the Project AOI as a result of underwater sound and ship strikes. The Project could potentially impact marine mammals in the Project AOI as a result of nonroutine unplanned events. The Project could potentially impact some marine turtles in a localized manner in the Project AOI as a result of underwater sound ship strikes and light. The Project could potentially impact marine turtles in the Project AOI as a result of nonroutine unplanned events. The Project could potentially impact some marine fish as a result of underwater sound light seawater withdrawal and changes in marine water quality in the PDA. The Project could potentially impact marine fish in the Project AOI as a result of nonroutine unplanned events. The Project could potentially disturb some benthic habitat and organisms in a localized manner in the PDA.

Primary Sources of Potential Impacts

Nonroutine unplanned event e.g. spill or release Analytical Approach Oil spill modeling was used to simulate the trajectory of an oil spill and assess the risk of oiling beaches mangroves or wetlands. Nonroutine unplanned event e.g. spill or release Oil spill modeling was used to simulate the trajectory of an oil spill and assess the risk of impacting coastal wildlife and shorebirds. Drill ship FPSO and support vessel operations Lighting on offshore facilities e.g. FPSO drill ships Nonroutine temporary flaring Waste incineration Nonroutine unplanned event e.g. spill or release Underwater sound generated by marine component operations and activities Ship strikes Changes in forage availability Lighting on offshore facilities e.g. FPSO drill ships Seawater intake by FPSO Wastewater discharges Drilling of development wells cuttings and fluid discharge Cooling water discharges Produced water discharges Hydrotesting discharges Nonroutine unplanned event e.g. spill or release

The scientific literature was reviewed for information on the impacts of lighting from planned offshore activities on seabirds. Oil spill modeling was used to assess potential spillrelated impacts on seabirds. The scientific literature was reviewed for information on the impacts of planned offshore activities on marine mammals turtles and fish. Analyses were performed based on expected marine mammal and turtle presence and Project vessel transits to assess likelihood of vessel strikes. Oil spill modeling was used to assess potential spillrelated impacts. Underwater sound was modeled to assess potential auditory impacts associated with marine activities. USEPA's CORMIX model was

used to simulate the mixing zone around the drill ships and FPSO and to support an analysis of impacts on marine water quality from routine operational discharges and onetime hydrotesting discharges. A fate and transport model GIFT was used to evaluate total suspended solids TSS concentrations resulting from discharge of drilling fluid and cuttings based on global ocean currents. Oil spill modeling will be used to assess potential spillrelated impacts on marine mammals turtles and fish. Drilling of development wells cuttings discharge and deposition Installation of FPSO mooring structures and SURF components Nonroutine unplanned event e.g. spill or release Fate and transport model GIFT was used to predict the extent and thickness of cuttings discharged on the seafloor surrounding the development wells. The physical differences between the native seafloor and the accumulated drill cuttings as well as the distribution of NABF containing cuttings and potential for toxicity impacts were described based on the results of the modeling analysis. Impacts from planned activities were evaluated in terms of the percentage of benthic habitat impacted by disturbance. May 2017 110 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Resource or Receptor Ecological Balance and Ecosystems Potential Impacts The Project could have indirect impacts on ecological functions in the Project AOI particularly if special status species or trophic relationships are disturbed. Chapter 5 Scope of the Environmental Impact Assessment Analytical Approach The scientific literature was reviewed to determine the ecological relationships between major marine taxonomic groups. Oil spill modeling was used to assess potential spillrelated impacts on marine organisms. Primary Sources of Potential Impacts Underwater sound generated by marine component operations and activities Lighting on offshore facilities e.g. FPSO drill ships Seawater intake by FPSO Installation of FPSO and SURF components Installationrelated disturbances to seafloor Wastewater discharges Ballast water discharges Waste incineration Nonroutine unplanned event e.g. spill or release Socioeconomic Resources Economic Conditions Employment and Livelihoods The Project is generally anticipated to have a positive impact on the economy of Guyana as a result of government revenue sharing from the Project as well as employment and local procurement opportunities. Potential adverse

impacts may include potential shorter term increases in the cost of living as a result of increased demand for specific goods and services. Potential adverse impacts to income from agriculture and fisheries could also occur as a result of nonroutine unplanned events. The Project is expected to build capacity in the local labor force increase demand for skilled labor and increase demand for service industries beneficial impact. There is also the potential for limited adverse impacts to fishing activities as a result of marine safety exclusion zones or marine traffic and nonroutine unplanned events. Community Health and Wellbeing Marine Use and Transportation Most Project activities will be located offshore in the PDA and would have no direct impacts on communities in Guyana. Introduction of limited levels of foreign labor could potentially have health and socioeconomic impacts. The Project could potentially impact community health and wellbeing in the Project AOI due to onshore traffic social interaction or as a result of nonroutine unplanned events. The Project may result in increased marine shipping and general marinerelated traffic which could potentially contribute to marine vessel congestion in port areas. Government revenue sharing from Project Local Project purchases of select materials goods and services Limited local Project employment direct and indirect Increased spending on select materials goods and services indirect multiplier impacts for localregional population Government reports were reviewed and key informant interviews were conducted to identify key economic drivers in the national regional and local economies and determine the likely Projectrelated impacts on these economic factors. A particular emphasis was placed on industrial sectors that are important to coastal communities. Local employment for Installation vessels o Drill ships o o FPSO topside equipment and operations o Marine support and supply vessels o Tankers o Tugs and support vessels o Aviation operations Marine safety exclusion zones Projectrelated marine traffic Drilling; FPSOSURF installation hookup and commissioning; and FPSO and support vessel operations aspects relating to occupational health and safety for Project workforce Nonroutine unplanned event e.g. spill or release Increased traffic as a result of Project activities at the Guyana shorebase locations Social interaction between Project workers and residents Pressure on wages from introduction of foreign workers and

increased competition for skilled labor Noise and light near shore by Project marine and aviation operations Nonroutine unplanned event e.g. spill or release Marine vessel operations Project workforce projections and types of labor requirements were assessed against data obtained through key informant interviews on the existing service industry within Guyana. The potential for adverse impacts to fishing activities was assessed by taking into consideration the distance from shore at which different fishery types typically operate in comparison to the locations and durations of Projectrelated marine activity and marine safety exclusion zones. Potential occupational hazards to Project workforce working onshore and offshore were assessed. Potential risks to safety and health of local communities posed by shorebase operations were assessed. Key informant interviews were conducted to characterize existing road marine and air traffic safety conditions as well as coastal agriculture aquaculture and offshorecoastal fishing activities. Oil spill modeling was used to simulate the trajectory of an oil spill and to assess potential spillrelated impacts on community health and wellbeing. Key informant interviews were conducted to characterize communities dependent on marine transportation for livelihoods e.g. speedboat operators and fisherpersons and to characterize existing marine vessel and safety conditions in the Projects AOI.

May 2017 111 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the Environmental Impact Assessment Resource or Receptor Social Infrastructure and Services Cultural Heritage Land Use Ecosystem Services Indigenous Peoples Potential Impacts The Project will use public infrastructure and services and thus could potentially compete with other existing businesses and consumers across a range of services e.g. roads medical and emergency response accommodation and utilities. The Project may result in increased vehicular traffic in Georgetown which could potentially contribute to vehicular congestion in certain areas. The Project has the potential to adversely impact cultural heritage through localized disturbance of archaeological or historical sites related to Project development. These resources have conservation cultural and other values to stakeholders. The Project could potentially impact cultural heritage in the Project AOI as a result of nonroutine unplanned events. No new Projectdedicated land disturbance is planned.

There is the potential that thirdparty onshore facilities may elect to expand or impact adjacent land as a result of supporting Projectrelated needs; however these impacts are outside the scope of this EIA. Projectrelated impacts on natural resources could lead to shorter term direct or indirect impacts on the services and/or values derived from natural resources and ecosystems in the AOI. The Project is not expected to directly cause any changes to population and demographics in indigenous communities. The Project could potentially impact indigenous peoples in the Project AOI as a result of nonroutine unplanned events.

Primary Sources of Potential Impacts

Project demand requirements for selected infrastructure and services which could overburden existing capacity and supply

Shorebase operations

Ground transportation operations

Analytical Approach

Key informant interviews and review of government reports were conducted to assess existing demand on public infrastructure transportation networks vehicular traffic and public services and to determine the impact access and safety that any additional demand on these resources would have on impacted communities.

Drilling of development wells

Installation of FPSO and SURF components

Nonroutine unplanned event e.g. spill or release

AUV and other geophysical surveys were conducted to map seabed objects in the PDA. Oil spill modeling was used to simulate the trajectory of an oil spill and to assess the potential for a release from an unplanned event to contact terrestrial archaeological sites.

Shorebase operations

Pipe yards Warehouses Bulk fuel storage and transfer facilities

Onshore waste recycling treatment and disposal facilities

Direct or indirect impacts derived from one or more of the impacts on physical biological or socioeconomic resources described above

Nonroutine unplanned event e.g. spill or release

Land use in the area surrounding onshore facilities planned for Project use was reviewed and assessed with respect to the potential for significance of land use changes as a result of the Project. The use of natural resources by local communities including indigenous communities was examined to identify specific dependencies on resources that could be impacted by the Project. Where dependencies on natural resources that would be impacted were identified the direct and indirect impacts of Project activities on local communities access to and use of impacted resources was assessed. Coastal communities including indigenous

communities in the Project AOI were mapped. Key informant interviews were conducted to characterize socioeconomic conditions in communities and their reliance on natural resources. Oil spill modeling was used to simulate the trajectory of an oil spill and to assess the potential for oil to contact lands and natural resources of coastal communities.

May 2017 112 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the Environmental Impact Assessment Table 52 Resources and Receptors Excluded from Further Consideration in the EIA

Resource/Receptor	Coastal	Onshore
Resources	Onshore geology/soils	Topography/Landscape
Groundwater quality	Terrestrial vegetation	Freshwater habitats
Marine Resources	Aquatic plants	Physical Resources
Natural hazards	Vibration and radiation	Rationale for Excluding

The Project will not result in any onshore disturbance to geology and soils. The Project will not require any excavation fill or other landbased activities that could change topography or landscapes. The Project will not require any changes in land use that could impact ground water quantity or quality. The Project will not require any clearing or disturbance of terrestrial vegetation. Even in the case of an unplanned event such as a spill only estuarine vegetation e.g. mangroves would be expected to be potentially impacted. Terrestrial vegetation should be unaffected by a spill event. The Project is offshore with no new onshore disturbance so will not have any impact on freshwater habitats. The marine aspects of the Project will occur in an area that is too deep to support vascular marine plants. The Project is not located within an area that is known to have a high level of seismic activity or susceptibility to other natural hazard with the potential to affect Project facilities. The Project will not generate any vibration or radiation that would be expected to impact resources/receptors. See Section 2.10

May 2017 113 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 5 Scope of the Environmental Impact Assessment Page Intentionally Left Blank

May 2017 114 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment 6.0 DESCRIPTION OF THE EXISTING ENVIRONMENT 6.1 Physical Resources 6.1.1 Air Quality and Climate

This section describes the existing air quality conditions and climate in the Project AOI. Air quality in a geographic area is determined by the

presence of background concentrations due to natural and distant sources the type and amount of pollutants emitted locally into the atmosphere the topography of the area and the weather and climate conditions. The levels of pollutants and pollutant concentrations in the atmosphere are typically expressed in units of ppm parts per billion ppb or micrograms per cubic meter $\mu\text{g}/\text{m}^3$ averaged over various periods of time.

6.1.1.1 Methodology

Climate Information on meteorological conditions in coastal Guyana was obtained from publicly available sources and technical literature. Parameters discussed include rainfall offshore wind direction air temperature and relative humidity. To develop more specific information regarding the conditions in the PDA EEPGL and ERM have deployed oceanographic moorings in the PDA to collect information on existing oceanographic and meteorological conditions in the area to support design development. The meteorological moorings are equipped with a Datawell Direction Wavescan Buoy which measures wave and atmospheric conditions. With respect to atmospheric conditions the instrument measures and logs wind direction speed two anemometers record 10 minute average wind speeds and gusts air temperature atmospheric pressure solar radiation precipitation and relative humidity.

Air Quality

Since the PDA is located approximately 190 km 120 miles offshore in the Atlantic Ocean and far removed from any anthropogenic sources of emissions other than intermittent marine traffic ambient air quality is determined primarily by regional influences rather than by local emission sources or topographic influences. ERM has conducted offshore air monitoring including the collection of air samples to analyze existing ambient concentrations of relevant air quality pollutants in the PDA; the samples were collected from onboard a research vessel within the Stabroek Block and PDA. The pollutants collected include inhalable particulate matter i.e. that fraction with aerodynamic diameter of less than 10 micrometers PM_{10} carbon monoxide CO sulfur dioxide SO_2 hydrogen sulfide H_2S nitrogen dioxide NO_2 and volatile organic compounds VOC.

May 2017 115 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment 6.1.1.1 Regional or National Setting

Context Climate

Guyana has a wet tropical climate characterized by two pronounced wet seasons and yearround warm temperatures. The bimodal wet/dry regime is caused

by the annual migration of the InterTropical Convergence Zone ITCZ which changes latitude based on the Earth's position and angle in relation to the sun. Northward movement of the ITCZ occurs as energy from the sun is strongest in the Northern Hemisphere during the Northern Hemisphere's summer thereby increasing solar heating in that hemisphere. The relative changes in solar heating slightly shift the atmosphere's primary circulation cells which cause the area of trade wind convergence closest to the Equator to migrate seasonally. In the areas closest to the ITCZ one can expect increased thunderstorm activity and heavy rainfall between mid-April and the end of July with peak rainfall in June. This period is known in Guyana as the primary wet season. The secondary wet season occurs during the southward migration of the ITCZ from mid-November to the end of January with peak rainfall in December. The intervening periods January to April and mid-August to mid-November are relatively dry but rain can occur at any time of the year. Average annual rainfall totals range between 70 inches and 110 inches 180 cm to 280 cm Hydromet 2014. During El Niño years Guyana's long dry season is often drier and warmer than normal and La Niña years bring wetter and cooler conditions than normal during the long wet season McSweeney et al. 2010. Although the ITCZ moves seasonally it is generally located between 5 degrees North and 5 South latitude. North and south of the ITCZ atmospheric circulation and the Coriolis effect create global wind patterns including the Northern Hemisphere's trade winds and westerlies NOAA 2008. Guyana's coastal zone is located approximately between 6 and 8 latitude and the Stabroek Block is located between 7 and 8 latitude both within the southern portion of the area impacted by the trade winds. The influence of the trade winds produces a strongly dominant northeast wind offshore of Guyana which gives rise to the afternoon sea breeze that usually blows inland across coastal Guyana from the ocean. Annual average temperatures in coastal Guyana are relatively constant with an annual average daytime maximum temperature of 29.6 degrees Celsius C 85.3 degrees Fahrenheit [F] and an annual average night time minimum temperature of 24.0 C 75.2F. The average daily temperature is approximately 27 C 81F. Relative humidity is high at 80 percent or more year round in the coastal zone. Air Quality For purposes of this EIA relevant literature was used to identify appropriate ranges

of concentrations to represent existing conditions. Based on the estimated Project emissions profile the principal relevant air pollutants of interest are PM_{2.5} and NO₂. Yale University 2016 published a report that ranked Guyana 6th from the best out of 180 countries in air quality. As part of this study Yale University 2015 published an online mapping tool which estimates that the average concentration of PM_{2.5} in onshore Guyana is 2.5 gm³. No values were found in the literature for onshore air quality existing conditions for NO₂. May 2017 116 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment 6.1.1.2 Existing Conditions in Area of Influence Climate In general climate conditions within the Project AOI should be similar to those described above for Guyana. The results of the ERMs offshore monitoring effort to further characterize climate conditions within the PDA have been incorporated into Appendix L of the EIA. Air Quality The PDA is well offshore and far removed from any existing stationary anthropogenic sources of airborne pollution. In addition the prevalent wind direction is from the northeast open ocean; therefore ambient air quality within the PDA is expected to be good. This assumption was confirmed by the results of a 20day ambient air quality measurement program conducted aboard the Research Vessel Proteus. Those measurements found that air pollutant levels were generally below detection levels with the exception of PM₁₀. Chemical analysis of particulate matter samples found that the most of the collected mass was composed of sodium chloridethe most likely source of which is sea salt. 6.1.2 Sound This section includes a summary of the desktop review of existing underwater sound conditions in the Project AOI. It also describes the different metrics commonly used to represent underwater acoustic fields. A description of the modeling study used to predict underwater sound levels associated with Project activities in the PDA is discussed in Section 7.2.5 Marine Mammals. This analysis is limited to underwater sound because the Project is located approximately 190 km 120 mi offshore from Georgetown so airborne sound and groundborne vibration from offshore Project activities will not impact onshore community or public receptors in Guyana. Offshore the principal airborne sound receptors of potential concern will be the Project workforce on the Project vessels who will be provided with appropriate Personal

Protective Equipment PPE including ear protection when engineered controls must be augmented to manage sound exposure. The Project will not measurably impact any airborne sound or groundborne vibration at the onshore shorebase pipe yards and warehouse locations. Therefore airborne sound and groundborne vibration are not discussed further in this section.

6.1.2.1 Underwater Acoustic Metrics

Underwater sound amplitude is measured in decibels dB relative to a fixed reference pressure p_0 1 micro Pascal Pa or reference energy level 1 Pa²s. Three common descriptors are the peak Sound Pressure Level peak SPL measured in dB re 1 Pa Root Mean Square SPL RMS SPL measured in dB re 1 Pa and Sound Exposure Level SEL measured in dB re 1 Pa²s. The peak SPL metric is the maximum instantaneous SPL in a stated frequency band attained by an acoustic event. The peak metric is commonly quoted for impulsive sounds but does not May 2017 117 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment account for the duration or bandwidth of the sound. At higher intensities the peak SPL can be a valid criterion for assessing whether a sound is potentially injurious or may cause behavioral implications to a marine receptor. The RMS SPL is a measure of the average pressure or the effective pressure over the duration of an acoustic event such as the emission of one acoustic pulse from a seismic source e.g. vertical seismic profiler. This level is the root mean square pressure level of the pulse. The SEL is a measure of the total acoustic energy contained in one or more acoustic events and is often used as an indication of the energy dose over a specific event or time. The SEL metric measures the sound energy to which an organism at that location would be exposed. Sound loudness is a subjective term describing the strength of the ears perception of a sound. It is a complex interaction between the sound pressure level and the hearing ability of an individual receptor for that sound how well the sound can be detected. Because the loudness of impulsive sound is not generally proportional to the instantaneous acoustic pressure the peak SPL is a poor indicator of perceived loudness. As such several other sound level metrics such as RMS SPL and SEL are commonly used to evaluate the loudness of impulsive sound and its impacts on marine life. More information on the underwater acoustic metrics described above

including the analytical formulation of these metrics is provided in the document Underwater Sound Associated with Liza Phase 1 Project Activities prepared by JASCO Applied Sciences in December 2016 JASCO 2016.

6.1.2.2 Methodology Ambient underwater sound levels were based on literature values for coastal Guyana. Research has indicated that with the exception of localized or short term events that may cause acute exposure e.g. passage of a single ship intense rain events or whale vocalizations underwater sound levels do not vary much in the open ocean. Human activities are minimal in the PDA principally related to commercial fishing and other ocean going vessels. Therefore the use of literature values from coastal Guyana should be a reasonable representation of underwater sound conditions in the PDA.

6.1.2.3 Regional or National SettingContext Ambient underwater sound levels can serve as existing conditions from which to measure potential disturbance impacts associated with Project activities. Sound in the ocean is the result of both natural and anthropogenic sources. Examples of notable sound levels produced by natural sources include snapping shrimp peak SPL of individual snaps vary from 183 to 189 dB re 1 Pa at 1 m with a typical peak spectrum between 2 and 5 kHz and energy extending to 200 kHz waves breaking at 50 Hz due to sea surface agitation 61 to 76 dB re 1 Pa depending on the sea state and waves breaking at 25 kHz due to sea surface agitation 32 to 47 dB re 1 Pa depending on the sea state Hildebrand 2009. Examples of notable sound levels produced by human or mechanical sources include cargo vessels at 16 knots 173 m length; 192 dB RMS re 1 Pa at 1 m with typical spectrum between 40 and 100 Hz small boat May 2017 118 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment outboard engine at 20 knots 160 dB RMS re 1 Pa at 1 m with typical spectrum between 1000 and 5000 Hz seismic array 260 dB RMS re 1 Pa at 1 m with typical spectrum between 5 and 300 Hz and subbottom profiler 230 dB RMS re 1 Pa at 1 m with typical spectrum between 3000 and 7000 Hz Hildebrand 2009.

6.1.2.4 Existing Conditions in Project Development Area Guyanas entire continental shelf and slope including the Stabroek Block are influenced by the Guiana Current which transports warm turbid water north from the mouth of the Amazon River across the coast of northern South America. There are currently no notable

sources of mechanical or human-generated background sound in the PDA other than sporadic instances of commercial vessels and other ocean-going vessels. Considering the natural sources such as the Guiana Current and other features of the PDA e.g. depth distance from shoreline existing underwater sounds in the PDA are not expected to exceed 120 dBrms.

6.1.3 Marine Geology and Sediments

6.1.3.1 Coastal Geology

Guyana's continental shelf occupies an area of 18790 mi². The average width of the continental shelf is approximately 113 km (70 mi) (NDS 1997). The shelf is widest near the borders of Suriname and Venezuela and slightly narrower near the center. Guyana's coastline is approximately 431 km (268 mi) long (NDS 1997). The Guyana Coast is a sedimentary plain that has formed from successive deposits of sediment with a series of coastal ridges crossing the coast from east to west. These ridges are connected with submarine features that move across the shallow continental shelf in a northward direction driven by the nearshore current.

6.1.3.2 Marine Stratigraphy

The Guyana basin has been described as a passive margin basin associated with the rifting and opening of the Equatorial Atlantic Ocean. Part of the Guyana Basin is onshore but most of it occurs offshore. Table 61 summarizes the age and composition of the major geologic formations listed in descending order from ground surface that comprise the Guyana Basin (Workman 2000; CGX 2009).

Formation	Age	Composition
Corentyne	Pleistocene	Sandstone and shale
Pomeroon	Pliocene	Sandstone and shale
Georgetown	Miocene	Sandstone and shale
New Amsterdam	Eocene	Sandstone and shale
Canje	Maastrichtian	Sandstone and shale
Potoco	Lower Tertiary	Sandstone and shale
Stabroek	Santonian to Turonian	Sandstone and shale
	Aptian	Sandstone and shale
	Cretaceous	Sandstone and shale
	Barremian	Sandstone and shale

Organic shale, nonorganic shale and sandstone, Carbonates, Basal shales and sandstones of continental origin.

6.1.3.3 Marine Sedimentology

Fine clay and mud sediment are transported from the mouth of the Amazon River and are deposited approximately 21 to 60 km (13 to 37 mi) offshore to an average thickness of approximately 20 m (65 ft).

along Guyanas continental shelf CGX Resources 2009. Moving further out to sea i.e. toward the edge of the continental shelf sand gradually becomes the dominant sediment layer. The bathymetric profile of the continental shelf forms a generally smooth gradual slope from nearshore to shelf edge but a series of low mud ridges or mudbanks are located approximately 21 to 60 km 13 to 37 mi offshore Figure 61. Figure 61 Typical Distribution of Mudbanks and Mangroves on Guyanas Coast Source Institutional Capacity Building Activities on Guyana Sea Defenses 2005. Although the Essequibo and several other smaller rivers e.g. the Demerara Corentyne and Berbice Rivers discharge large quantities of fine sediment which are subsequently transported seaward and westward across the continental shelf analysis of the humic nutrient composition and ratio of surface area to mass of Guyanese marine sediments indicates that they are nearly identical to Amazonian sediments and unlike continental Guyanese sediments Eisma and van der Marel 1971. This evidence strongly indicates that from a sedimentary perspective the Guyanese continental shelf functions as a marine extension of the Amazonian delta system. At greater depths calcarenite coral fragment substrates become more prevalent Strmme and Stersdal 1989. The Stabroek Block occupies the transition area between the Amazonianinfluenced zone and the older deeper calcarenite zones. In the PDA the foundation zone of the seabed sediments comprises a hemipelagic drape of very soft to soft clay irregularly interbedded with interpreted coarsegrainprone turbidites. The mud of the sediments averaged 60.8 percent and the sand averaged 39.1 percent across the 2016 survey area. The surficial layer is underlain by a regional Mass Transport May 2017 120 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Complex MTC consisting of a heterogeneous clayprone matrix material with intact blocks. The thickness of the surficial soft clay varies across the PDA from approximately 4.5 m 15 ft to 41 m 135 ft. These features could influence the design or siting of certain subsea components that will rest on the seafloor although they do not present structural or operational hazards to the Project Fugro 2016. 6.1.3.4 Sediment Quality Sediment samples were collected from the Stabroek Block offshore Guyana as part of two environmental baseline surveys EBS. The

surveys were conducted prior to EEPGL exploration drilling activities in April and May of 2014. Maxon Consulting Inc. and TDI Brooks International Inc. 2014 and during later EEPGL exploration drilling activities in March of 2016. FUGRO EMU Limited 2016. Sediment samples were collected from 10 sampling stations as part of the 2014 survey and from 25 sampling stations as part of the 2016 survey; these locations are collectively referred to as the Study Area in this section; the stations include locations within the PDA as well as locations outside the PDA but within the southeastern portion of the Stabroek Block. A discussion of the results from both surveys is provided below. Summaries of the results for metals and hydrocarbon concentrations in the sampled sediments are presented in Table 62 and Table 63 respectively.

During the 2014 EBS sediment samples were analyzed for the following parameters Total organic carbon TOC Metals Hydrocarbons Total Organic Carbon Concentrations of TOC were less than 1 percent at all survey stations. Higher concentrations of TOC were found in the southwest portion of the survey area which is closer to shore. Metals Twelve metals were measured to assess general patterns of distribution across the Study Area which was defined as the Liza Area of Interest for the purpose of the study and what is now considered the PDA. Of the 12 metals analyzed 10 metals i.e. arsenic barium cadmium chromium copper lead mercury nickel vanadium and zinc were used as indicators of anthropogenic sources; 2 metals i.e. aluminum and iron were used to provide geological source information. All of the ten anthropogenic indicator metals had concentrations similar to those reported for the upper continental crust Wedepohl 1995 with the exception of arsenic which was slightly elevated average of 4.51 g g⁻¹ compared to an upper continental crust mean background concentration of 2 g g⁻¹. However all average concentrations were at or below the NOAA Effect Range Low ERL values. Hydrocarbons Hydrocarbons are divided into two classes of compounds aliphatic compounds and aromatic compounds. The hydrocarbon analysis consisted of the analysis of saturated and other aliphatic hydrocarbons SHC including selected isoprenoids and polycyclic aromatic hydrocarbons PAHs. Aliphatic Compounds Aliphatic compounds can be saturated alkanes with carbon atoms joined by single bonds or unsaturated alkenes with carbons joined by double bonds. The study measured concentrations of saturated hydrocarbons that encompass light and heavy fractions of petroleum i.e. alkanes nC₉nC₄₀ and selected isoprenoids branched chain unsaturated hydrocarbons including pristane and phytane. Concentrations of total SHC ranged from 8 g g⁻¹ to 14 g g⁻¹. The unresolved portion of the SHC analysis i.e. SHCs that cannot be identified through the use of standard analytical methods ranged from 3 g g⁻¹ to 12 g g⁻¹ with an average of 7.0 g g⁻¹ which makes up approximately 66 percent of the average SHC concentration. Several SHC-based parameters and ratios were used to distinguish between biogenic and petroleum-derived sources. These parameters and ratios are listed below along with a general discussion of their relevance in determining the source of the hydrocarbons. May 2017 124 EEPGL

Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Carbon Preference Index CPI The total oddchain hydrocarbons divided by the total evenchain hydrocarbons. A value of 2 to 4 indicates input from plants. As petroleum is added the value decreases approaching 1. PristanePhytane Ratio The source of phytane is mainly petroleum whereas pristane is derived from both biological matter and petroleum. In environmental samples with no petroleum contribution this ratio is greater than 1 and it decreases as petroleum is added. Hexadecane nC16Pentadecane [nC15] Heptadecane [nC17] ratio At background levels hydrocarbons nC15 and nC17 can be used as indicators of plankton hydrocarbon inputs. As plankton productivity increases this ratio decreases. If the ratio were to increase over time or within the data set the rationale would be that it is related to anthropogenic sources. Hexadecane nC16 is rarely found in biolipids Thompson and Eglinton 1978; paraffins of nC15 nC17 or nC19 have been found to be predominant in benthic algae Clark and Blumer 1967 Youngblood et al. 1971. The results of the sediment samples exhibited a predominance of oddcarbonnumber over evencarbonnumber nalkanes with an average CPI value of approximately 2 indicating primarily biogenic sources of hydrocarbons. This could be expected given the volume of land runoff from the Essequibo and Demerara rivers. The average pristanephytane ratio of 1.34 reflects a predominance of pristane over phytane in the sediments indicating a predominantly biogenic source of hydrocarbons. The low ratio less than 1 of nC16 over the sum of nC15 nC17 for all samples indicates relatively higher concentrations of planktonrelated hydrocarbons as compared to hydrocarbons from anthropogenic sources. PAHs PAHs are composed of aromatic rings. PAHs analyzed included 20 parent i.e. unalkylated compounds and 23 alkylated homologues consisting of two to sixring PAH compounds. Concentrations of total PAHs all 43 analytes ranged from 0.02458 g g⁻¹ to 0.05336 g g⁻¹. The sample distribution of individual PAHs provided information for a range of hydrocarbon sources. The PetrogenicPyrogenic distribution ratio listed below is useful to distinguish between petroleumderived hydrocarbons and those derived from combustion of fossil fuels. The ratio increases as inputs from petroleum increase. PetrogenicPyrogenic Ratio The ratio of the sum

of petrogenic PAHs divided by the sum of pyrogenic i.e. combustion-related PAHs where o petrogenic PAHs include naphthalene acenaphthene acenaphthalene fluorene phenanthrenes and dibenzothiophenes as well as the daughter compounds of the chrysenes and fluoranthenes pyrenes and o pyrogenic PAHs include the parent compounds of fluoranthene pyrene and chrysene benzokfluoranthene as well benzoapyrene dibenzoahanthracene and benzoghiperylene. benzobfluoranthene benzoanthracene as May 2017 125 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment In general sample distributions of PAHs were dominated by the low molecular weight PAHs naphthalenes and anthracenephenanthrenes. The petrogenic/pyrogenic ratios of greater than 1 indicate hydrocarbons are from biogenic or natural material potentially including petroleum-derived rather than combustion-related compounds. High concentrations of perylene relative to other PAHs were also observed. Perylene is a biogenic compound linked to plant pigments from terrestrial runoff and is not indicative of either petrogenic or pyrogenic sources Fugro 2016. Both total PAHs and total SHC exhibited strong positive correlations with TOC further supporting biogenic origins of the trace hydrocarbons. Overall the 2014 sediment hydrocarbon results indicate that biogenic or natural materials are the primary source of the low-level hydrocarbons measured in the survey area. Biogenic hydrocarbon sources most likely consist of terrestrial plant and humic material transported to the survey area via river inputs.

6.1.3.6 2016 EBS Results

Fugro 2016 During the 2016 EBS sediment samples were analyzed for the following parameters TOC Metals Hydrocarbons TOC Similar to the 2014 results concentrations of TOC ranged from below the reporting limit to 1.1 percent. TOC concentrations were found to be higher at sampling locations with a greater proportion of fine sediments indicating a negative correlation between grain size and organic logical given that smaller grain sizes have a greater surface area and thus more ability to adsorb organic matter.

Metals

Twelve metals were measured to determine general patterns of distribution across the survey area i.e. Stabroek Block. Of the 12 metals analyzed 10 metals i.e. arsenic barium cadmium chromium copper lead mercury nickel vanadium and zinc were used as indicators of anthropogenic

sources and 2 metals i.e. aluminum and iron were used to provide geological source information. The maximum concentrations of the individual metals measured during the 2016 survey were consistently higher than those from the 2014 survey; this is possibly a result of the different as used by the 2014 and 2016 laboratories for extraction or of greater variability in the data set due to the significantly larger sample area covered by the 2016 investigation compared to the 2014 investigation. Average concentrations of anthropogenic indicator metals arsenic and nickel exceeded the NOAA ERL values. While this may reflect the composition of source material there may be some contribution from terrestrial runoff contaminated from mining or other industries as carried to the Guyana basin via riverine inputs from Brazil and the Guiana Shield.

May 2017 126 EEPGL
Environmental Impact Assessment Liza Phase 1 Development Project Hydrocarbons Chapter 6
Existing Environment

The hydrocarbon analyses include measurements of total hydrocarbons THC and PAHs. THC concentrations ranged from 1.5 g g⁻¹ to 4.8 g g⁻¹. THC showed positive correlations with metals concentrations with the exception of copper and arsenic as well as with TOC concentrations. The unresolved complex mixture UCM i.e. fraction of THC that cannot be resolved identified concentrations ranged from 0.9 g g⁻¹ to 2.8 g g⁻¹ and the average was 1.8 g g⁻¹ which makes up 64 percent of the average THC concentration. Concentrations of alkanes nC₁₂₋₃₆ ranged from 0.12 g g⁻¹ to 0.50 g g⁻¹. Levels of short chain alkanes nC₁₂₋₂₀ were consistently lower than those of the long chain alkanes nC₂₁₋₃₆. Several THC based parameters and ratios were used to distinguish between biogenic and petroleum derived sources. The values of CPI for the total range of alkanes nC₁₂₋₃₆ ranged from 1.83 g g⁻¹ to 2.27 g g⁻¹. These results display a predominance of odd carbon number over even carbon number nalkanes with an average CPI value greater than 2 indicating primarily biogenic sources of hydrocarbons. The average pristane/phytane ratio was 1.28 meaning a predominance of pristane over phytane exists in the sediments indicating the primary source of the hydrocarbons is likely biological. PAHs a subset of total hydrocarbons were analyzed. Concentrations of total PAHs ranged from 0.016 g g⁻¹ to 0.239 g g⁻¹. The sample distribution of individual PAHs provided information for a range of hydrocarbon sources. A distribution ratio is listed

below as well as a general discussion of its relevance in determining the source of the hydrocarbons. Naphthalene Phenanthrene Anthracene and Dibenzothiophene NPD4 to 6 Ring Ratio

The ratio of the sum of naphthalene phenanthrene anthracene and dibenzothiophene petrogenic indicators divided by the sum of 4 to 6ring PAHs pyrogenic indicators. This ratio is useful to determine the relative contributions of pyrogenic and petrogenic hydrocarbons in differentiating sources. The ratio increases as inputs from petroleum increase. In general samples showed a predominance of 4 to 6 ring PAHs i.e. NPD4 to 6 ring ratios of less than 1 indicating predominantly pyrogenic sources of hydrocarbons as opposed to petrogenic sources. However high concentrations of perylene a biogenic compound linked to plant pigments from terrestrial runoff and not indicative of either petrogenic or pyrogenic sources relative to other PAHs were also observed. Overall the 2016 sediment hydrocarbon results indicate that the low levels of hydrocarbons measured in the Study Area could have derived from biogenic or natural materials as well as combustionrelated compounds. Biogenic hydrocarbon sources most likely consist of terrestrial plant and humic material transported to the survey area via river inputs while combustionrelated emissions could arise from multiple natural or anthropogenic sources.

May 2017 127 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment 6.1.4 Oceanographic ConditionsMarine Water Quality 6.1.4.1 Oceanographic Conditions

Guyanas marine environment is bounded and heavily influenced by the Orinoco and Amazon rivers in Venezuela and Brazil respectively. During the rainy season Guyanas coastal marine waters receive large volumes of freshwater discharges from these major rivers as well as from Guyanas own Essequibo Demerara and Berbice rivers FAO 2005. Guyanas surficial marine waters are crossed by the Guiana Current which is part of the northern limb of the North Atlantic Meridional Overturning Circulation MOC. The North Atlantic MOC circulates water between the subtropics and polar region. The Guiana Current derives from the North Brazil Current NBC flowing north along the northeastern coast of South America from northern Brazil toward the southeastern Caribbean Sea. As it reaches French Guiana part of the NBC separates from the coast to join the North Equatorial Counter Current NECC while

the rest continues flowing northwest to form the Guiana Current. Figure 62 illustrates the proximity of the Guiana Current NBC and North Equatorial Counter Current to the Stabroek Block. Several times a year the NBC turns back on itself to create closed circulation and form regions of strong eddies circular currents. These eddies can separate the NBC and NECC. These eddies can travel northwest along the South American coast. The current magnitude within these eddies can vary with depths significantly. These eddies may range from approximately 145 km to 400 km 90 to 250 mi in diameter. During springtime the Guiana Current can extend as far as 300 nautical miles offshore to cover Guyanas entire continental shelf. Its highest velocities tend to occur along the edge of the continental shelf i.e. in Guyana just shoreward of the Stabroek Block. Fluctuations in the ITCZ and the trade winds lead to significant variation in the strength of the Guiana Current and the extent of its influence offshore but maximum speeds generally occur in April to May while minimum speeds commonly occur in September Gyory et al. 2013. The Guiana Current primarily travels near the water surface while the deeper portion of the water column in the Stabroek Block is strongly influenced by the North Atlantic Deep Western Boundary Current which is the southward limb of the North Atlantic MOC which returns colder denser water from polar regions to the subtropics at intermediate and deep levels. In May 2014 EEPGL commissioned a Lowered Acoustic Doppler Current Profiler LADCP survey of four stations along a transect located in the central portion of the Stabroek Block to support design development. The profilers were placed at depths ranging from approximately 970 m to 1100 m. The survey indicated the presence of both the Guiana Current and the Deep Western Boundary Current. Figure 63 shows vector stick plots from the four stations along the LADCP transect. Figure 64 shows the locations of these LADCPs relative to the planned FPSO location and the southern boundary of the Stabroek Block. The three deepest stations 1 2 and 3 showed similar vertical current structure i.e. a northwestward surface flow influenced by the Guiana Current and a southeastward deep flow due to the Deep Western Boundary May 2017 128 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Current. The shallowest station Station 4 showed a similar layered structure but the

speed of the northwestward surface current however was significantly greater at this station than at the others TDI Brooks International Inc. 2014. May 2017 129 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 62 Marine Currents in the Vicinity of the Project Development Area Chapter 6 Existing Environment February 2017 130 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 63 Vector Stick Plot for Stations on the Stabroek LADCP Transect Each stick also called a vector describes the direction speed and depth of a discrete measurement. The length of the vector is directly proportional to its speed a scale is provided at the bottom of the plot. The depth of each measurement is provided on the yaxis. The direction of the vector points in the compass direction of the current flow north corresponding to up on the plot. The horizontal distance between stations on the xaxis is to scale. Source TDI Brooks 2014 May 2017 131 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 64 LADCP Locations Chapter 6 Existing Environment May 2017 132 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 6.1.4.2 Marine Water Quality Chapter 6 Existing Environment The hydrographic and isohaline conditions in Guyanas coastal marine waters are greatly impacted by the outflow of the coastal rivers in the region as described in Section 6.1.4.1. The large amount of freshwater discharge impacts ocean salinity and temperature. Oceanic water is relatively heavy cold and saline compared to the lighter warm and fresher water of the Amazon and Orinoco plumes which converge offshore of Guyana. These convergences form oceanic fronts offshore of Guyana. Freshwater lenses generated by the Amazon and Orinoco rivers are transported across Guyanas continental shelf to points north and west. These lenses persist for months and have been detected as far away as Barbados and Trinidad Sherman and Hempel 2009. Of the several coastal rivers that impact the marine environment offshore Guyana the Amazon River with its average discharge of 180000 m³sec Nittrouer and De Master 1987 is the most prominent factor in marine water quality in the region. Analysis of the Amazonian plume has shown there is little seasonal variation in the plumes nutrient e.g. silicates of 144 mol.kg⁻¹ phosphates of 0.7 mol.kg⁻¹ and nitrates of 16 mol.kg⁻¹

De Master and Pope 1996. It has been estimated that 40 to 50 percent of the annual Amazon runoff transits along the coast of the Guyanas. The entire region offshore of Guyana is considered part of the North Brazil Shelf Large Marine Ecosystem LME. The ocean temperature in the North Brazil Shelf LME has alternately warmed and cooled over the last few decades. A period of cooling lasted from the mid1970s through the mid1990s but since the mid1990s the LME has consistently warmed Sherman and Hempel 2009. Although the ocean temperature has alternately warmed and cooled in recent decades the net change in LME water temperature since 1957 equates to an average increase of 0.22 C over 50 years Sherman and Hempel 2009. Water quality samples were collected from the Stabroek Block offshore Guyana as part of two environmental survey efforts in 2014 and 2016. The 2014 samples were collected in April and May of 2014 prior to exploration drilling activities Maxon Consulting Inc. and TDI Brooks International Inc. 2014. The 2016 survey provided an additional detailed integrated site investigation covering 247 mi 64000 ha of the offshore PDA FUGRO EMU 2016. This study enables ERM to have a multiyear database of water quality in the Stabroek Block as well as the ability to analyze a greater number of locations to further characterize the block. Sampling locations were chosen based on current and future exploration and potential development activities. In the 2016 study water quality samples were collected at top middle and bottom depths and analyses of the collected samples covered a range of physicochemical parameters. In addition conductivity temperature and depth CTD profiles including dissolved oxygen pH and turbidity measurements were acquired and assessed through in situ monitoring of water column profiles at 15 locations. May 2017 133 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Results from the 2016 vertical profiles show a stratified water column in terms of temperature salinity and dissolved oxygen. The depths of the thermocline halocline and oxygen boundary layer were observed to increase with the total depth of water. Dissolved oxygen concentrations reach near saturation levels near the surface but decrease with depth. The mean sea surface temperature was 27.8 C while bottom temperatures ranged between 2.7 C deepest station and 11.2 C shallowest station. Salinity ranged between 37.05

parts per thousand ppt to 36.60 ppt near the surface. In depths below the halocline the salinity ranged between 33.63 ppt and 35.50 ppt. Mean pH values ranged between 8.18 and 8.47 increasing slightly with depth. Low turbidity was measured throughout the water column with values less than or equal to 2.9 formazine turbidity units FTU. The presence of organic carbon in the water column was analyzed by measuring TOC in discrete water samples. TOC decreased slightly with depth. TOC ranged between 0.9 mg/l and 3.9 mg/l at the surface and between 0.9 mg/l and 2.4 mg/l in the bottom depths. Total suspended solids TSS concentrations were generally higher near the surface than at depth. In the 2016 survey values ranged from 2.4 mg/l to 18.3 mg/l near the surface and from below the detection limit to 7.7 mg/l at the bottom depths. In the 2014 survey measured hydrocarbon concentrations were mostly below detection limits total SHC less than 13 g/l to less than 13.5 g/l. In the 2016 survey whose protocols allowed for lower detection limits THC were detected at concentrations ranging from 8.3 g/l to 35.9 g/l in the bottom depths and 10.0 g/l to 33.1 g/l near the surface. Individual n-alkanes were also measured from 12 carbons n-dodecane to 36 carbons n-hexatriacontane. The sum of all measured alkanes in the 2016 survey ranged from 0.55 g/l to 4.22 g/l at the surface and from 0.37 g/l to 16.3 g/l in the bottom depths. In the 2014 survey PAHs were reported to be below detection limits with the exception of naphthalene as well as the C1 and C2 alkylated homologues of naphthalene fluorene and phenanthrene all of which are ubiquitous trace-level laboratory contaminants. In the 2016 survey the sum of the PAHs with two to six benzene rings ranged from 0.051 g/l to 0.109 g/l at the surface and 0.059 g/l to 0.133 g/l at the bottom depths. The sum of the 16 PAHs from U.S. Environmental Protection Agency's USEPA's priority pollutant list ranged from 0.006 g/l to 0.021 g/l. Pristane to phytane ratios indicative of the possible origin of hydrocarbons present were close to 1.0 suggesting an oxidizing depositional environment with the compounds likely derived from chlorophyll (Moustafa and Morsi 2012). Ratios below 1.0 would suggest the presence of petroleum-based hydrocarbons. In both the 2014 and 2016 surveys measured metal concentrations in the collected water samples were below USEPA Saltwater Quality Standards (USEPA 2015). Table 64 provides the minimum mean and maximum values for

metals measured in 2014 and 2016 along with USEPAs criterion maximum concentrations CMCs and criterion continuous concentrations CCCs for comparison. The CMCs and CCCs are the USEPAs recommended highest concentrations in saltwater that are not expected to pose a significant risk for acute and chronic May 2017 134 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment impacts respectively to the majority of species in a given environment USEPA 2016. All samples had concentrations within the natural range of the ocean water Morel et al. 2006 well below the CMCs and CCCs. 6.2 Biological Resources

6.2.1 Protected Areas and Special Status Species

Formerly the EPA was Guyanas focal point for the Convention of Biological Diversity and the agency coordinated the National Protected Areas System EPA Undated which included five protected areas. In 2011 Guyana enacted Protected Areas legislation that established a Protected Areas Commission to oversee and manage protected areas. This legislation established a list of prohibited activities including unlawfully entering or remaining within a protected area; disturbing or destroying the vegetation common or endangered; removing or exterminating wildlife species common or endangered; damaging archeological finds or sites; and mining. If any prohibited activities occur fines range from 50000 to 500000 Guyanese dollars [GYD] Protected Areas Act 2011. Guyanas National Biodiversity Strategy and Action Plan 2015 states the overall importance of biodiversitys role within the country Guyanas biodiversity provides an important basis for climate regulation poverty reduction provisioning of fresh water and hydropower economic growth and development in areas such as agriculture forestry and fisheries payment for forest climate services community based economies particularly in hinterland

communities and biodiversity-related education, scientific research and recreation. Loss of biodiversity and any disruption in the provision of ecosystem services would impact negatively on the economy and more particularly on the quality of life in the hinterland and indigenous communities. GNBSAAP 2015 May 2017 135 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment

The 2011 legislation also established Shell Beach and the Kanuku Mountains as Guyana's newest nationally Protected Areas. This increased the total number of Protected Areas in Guyana to seven and increased the total land area protected to approximately 1.8 million hectares or about nine percent of Guyana's land area as summarized in Table 65. Figure 65 illustrates the locations of Guyana's Protected Areas. There are currently no designated marine Protected Areas in Guyana.

Protected Area	Km ²
Kaieteur National Park	630
Iwokrama Forest	3710
Kanashen Community Owned Conservation Area	6250
Kanuku Mountains	6110
Shell Beach Nature Reserve	2000
Moraballi Forest Reserve	110
Mabura Hill Forest Reserve	20

Source: IUCN and UNEP WCMC 2016

Of the seven Protected Areas, Shell Beach Protected Area (SBPA) is the only one located on Guyana's coast and so it is most pertinent to the impacts analysis of the Project. The SBPA includes Guyana's coastline but does not extend into the Atlantic Ocean; however, the ecology of the coastal zone and Shell Beach are inextricably connected to the coastal marine ecosystem. Figure 66 provides a detailed map of SBPA, the beaches it incorporates and the surrounding area. It is located in northwestern Guyana and extends for almost 140 km (87 mi) between the Waini, Baramani and Moruka rivers and the Atlantic Ocean. The PDA is located approximately 300 km (187 mi) northeast of the southernmost closest point of Shell Beach. Shell Beach, which derived its name from the fact that its entire stretch of coastline is comprised mainly of pulverized shells from crustaceans (RBAPS/BPA 2004), is a dynamic area. Its landscape constantly changes due to the competing impacts of erosion and accretion along the shoreline. The area is 70 percent forested; the rest is made up of mostly swamp (30 percent) and sandy beaches (1 percent) (Kandaswamy 2014). Shell Beach supports numerous plant species including coconut, papaya and palm trees (GMTCS 2011; Bovell 2011). The vegetative

community has changed little in recent history apart from limited clearing to accommodate a few dispersed encampments and farmsteads. The rivers bordering the Protected Area discharge nutrients through the Protected Areas mudflats and mangroves. These high nutrient levels contribute to the productivity of the marine ecosystem. Fish prawns and crabs from the nearshore marine area use the mangrove covered coastlines as nursery habitat. May 2017 136 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 65 Protected Areas of Guyana May 2017 137 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 66 Shell Beach Protected Area May 2017 138 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Shell Beach is best known as a sea turtle nesting site. The composition of the substrate at Shell Beach its geographical location and the low anthropogenic activity makes it an ideal nesting site for sea turtles. Most nesting beaches in Guyana are used by only one or two species of sea turtles but four species of sea turtles Leatherback Hawksbill Olive Ridley and Green Turtle nest at Shell Beach Pritchard 2001. In addition to sea turtles there are also at least four other species of turtles present within the Protected Area including yellowfoot tortoise *Geochelone denticulate* scorpion mud turtle *Kinosternon scorpioides* giant river turtle *Podocnemis expansa* and mata mata *Chelus fimbriata*. The SPBA also supports rich bird herpetofauna reptiles and amphibians and mammal communities. The 2004 Rapid Biodiversity Assessment documented 170 species of birds 20 species of mammals and 31 species of herpetofauna. The 170 species of birds represent one of the richest populations in Guyana and include well known species such as scarlet ibis *Eudocimus ruber* roseate spoonbill *Platalea ajaja* and Caribbean Flamingo *Phoenicopterus ruber* orangewinged Amazon parrots *Amazona amazonica* and several species of macaws. Sixteen herpetofauna species other than turtles are known to inhabit the Shell Beach area. These include the Ameiva lizard *Ameiva ameiva* whiptail lizard *Cnemidophorus lemniscatus* water labaria *Helicops angulatus* cane toad *Bufo Marinus paradoxical* frog *Pseudis paradoxa* and numerous tree frogs *Hyla* spp. RBAPSBPA 2004. Twenty species of

mammals including howler monkeys *Alouatta* spp. jaguars *Panthera* spp. and manatees *Trichechus* sp. are known to inhabit the Shell Beach area and surrounding coastal region Prince et al. 2004; Kalamandeen et al. 2005. Appendix G Flora and Fauna Diversity of Shell Beach provides an extensive list of species within the area. Resources within Protected Areas are a key factor in supporting local communities see Chapter 7 for additional information. Areas within and near Shell Beach have been inhabited for 10000 years by Amerindian groups from the Warao Carib and Arawak tribes Charles et al. 2004. Most of the current indigenous residents of the Shell Beach area are concentrated in a community known as Almond Beach near the northern end of the Protected Area. Other communities included within the boundary of the Protected Area as delineated in 2011 include Fathers Beach and Assakata. The remainder of the Protected Area is sparsely populated if at all. Indigenous communities have historically used the Shell Beach area for subsistence fishing crabbing trapping farming logging and palm harvesting. The important crab species that are utilized by the locals include blue hermit *Callinectes bocourti* hermit *Portunas spinimanus bunderi* *Cardiosoma guanhumi* and buckcrab *Ues cordatus* RBAPSBPA 2004. They have also historically engaged in sea turtle trapping and harvesting of sea turtle eggs. While these activities have declined in recent years as emphasis on conservation and sustainability has increased illegal catching of turtles may still occur Charles et al. 2004. Increasing human activity in proximity to Shell Beach has led to increasing exploitation of natural resources and has the potential to lead to additional ecological harm. In 1997 a fire caused by human activity extensively damaged an area of mangroves Pritchard 2001. May 2017 139 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Throughout the past few decades there have also been various industrial proposals for Shell Beach. These include proposals to extract shell material from the beaches as feedstock for fertilizer production and to develop a luxury tourist outpost Charles et al. 2004. Amerindian communities in the area have also expressed interest in developing ecotourism in the area Charles et al. 2004. 6.2.1.1 Special Status Species The International Union for Conservation of Nature IUCN maintains a Red List which provides taxonomic

conservation status and distribution information on plants and animals that have been globally evaluated to determine their relative risk of extinction IUCN 2014. The IUCN categorizes species according to their risk at six status levels ranging from Extinct to Least Concern as defined in Table 67. Table 67 Definitions of IUCN Red List Threatened Categories IUCN Red List Status Extinct EX Critically Endangered CR Endangered EN Vulnerable VU Near Threatened NT Least Concern LC Data Deficient Source IUCN 2001 Definition A taxon is Extinct when there is no reasonable doubt that the last individual has died. A taxon is presumed Extinct when exhaustive surveys in known and/or expected habitat at appropriate times diurnal seasonal annual and throughout its historical range have failed to record an individual. A taxon is Critically Endangered when the best available evidence severe population decline very small population very small geographic area occupied or a probability of extinction in the next 10 years of 50 indicates that it is facing an extremely high risk of extinction in the wild. A taxon is Endangered when the best available evidence large population decline small population small geographic area occupied or a probability of extinction in the next 20 years of 20 indicates that it is facing a very high risk of extinction in the wild. A taxon is Vulnerable when the best available evidence substantial population decline small population fairly small geographic area occupied or a probability of extinction in the next 100 years is 10 indicates that it is considered to be facing a high risk of extinction in the wild. A taxon is Near Threatened when it has been evaluated against the criteria but does not qualify for Critically Endangered Endangered or Vulnerable now but is close to qualifying for or is likely to qualify for a threatened category in the near future. A taxon is Least Concern when it has been evaluated against the criteria and does not qualify for Critically Endangered Endangered Vulnerable or Near Threatened. Taxa that are widespread and abundant are included in this category. A taxon is Data Deficient when there is inadequate information to make a direct or indirect assessment of its risk of extinction based on its distribution and/or population status. May 2017 140 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Species categorized as CR EN and VU are collectively considered to be internationally threatened while NT species are close to

qualifying as threatened and LC species are considered internationally widespread and abundant. There are 296 species known to occur in the coastal and marine habitats in Guyana on the IUCN Red List. Sixtytwo of these marine and coastal species have been ranked NT or higher. These species are listed in Appendix H. According to the IUCNs classification scheme these species currently face a credible threat of extinction. Most of the threatened CR EN or VU or NT species that could be impacted by the Project are fish. They include highly migratory species such as species of tunas and sharks benthopelagic species including certain groupers and demersal species including species of skates and rays. As noted in Section 6.3.3.2 many of these fish species are also targeted by the Guyanese commercial fishing industry. The remaining threatened or NT marine and coastal species in Appendix H include sea turtles marine mammals and crustaceans.

6.2.2 Coastal Habitats

There are four ecoregions in Guyana Figure 67 coastal plain interior savannas hilly sand and clay and forested highlands GNBSAAP 2015. The Project will have no impact on the interior savannas hilly sand and clay and forested highlands so this section focuses on habitats of the coastal plain note that the only potential impacts on the coastal plain are those associated with unplanned events [i.e. oil spill]. Guyanas coastal plain occupies approximately 7 percent of the countrys total area and extends along the entire approximately 400 km 250 mi of the Atlantic coast varying in width from approximately 16 km to 64 km 10 mi to 40 mi Kalamandeen and Da Silva 2002 and in elevation from sea level to approximately 3 m 10 ft GNBSAAP 2015. The coastal plain is a narrow belt of sediments with riverine and marine clays and silts stretching along Guyanas coastline. The coastal zone is a highly productive and sensitive environment that is subjected to marine and terrestrial influences. Guyanas coastal ecoregion is a network of plains and low hills including mangroves salt to brackish lagoons brackish herbaceous swamps swamp woods and swamp forests. The coastal zone contains some of the worlds most productive ecosystems with rich biological diversity Kalamandeen and Da Silva 2002. The swamps are an important source of freshwater to mangroves and other flora and fauna WWF 2016. Along the Guyana shoreline the portion of the coastal plain with the most potential to be impacted by an unplanned event associated with the Project the

principal habitats are mangroves beaches and mudbanks which are described below. May 2017 141

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 67 Guyanas
Ecoregions Chapter 6 Existing Environment May 2017 142 EEPGL Environmental Impact
Assessment Liza Phase 1 Development Project 6.2.2.1 Mangroves Chapter 6 Existing Environment

Mangroves are regarded as one of the most important ecosystems for the security of the biodiversity
of the entire Guyana coast as they protect coastlines from wave action and shoreline erosion see
Section 6.1.3. Figure 68 shows the general distribution of mangrove resources along coastal
Guyana; Figure 69 provides photographs of mangroves in Guyana. It is difficult to ascertain the
exact location and extent of mangrove forests in the country because the mangroves are subject to
erosion and other factors that can lead to rapid and dramatic changes in distribution. A 2008
Smithsonian report stated that mangroves occupied over 81000 hectares of Guyanas coast in six of
Guyanas 10 geopolitical regions Smithsonian 2008. The Guyana Mangrove Restoration Project
estimates 75 percent of the countrys mangroves are concentrated in Regions 1 and 2 GMRP Fact
Sheet 2010 which are located along the northwestern coast and include SBPA. Coastal mangroves
have been identified by numerous national and international stakeholders as vital to Guyanas
biodiversity physical security and economy WWF 2016; GMRP 2010; Ilieva undated. In 2014 ERM
conducted a coastal zone sensitivity analysis as part of the Oil Spill Response OSR planning for the
Liza1 drilling program. The analysis included detailed mapping of mangroves along Guyanas coast
from Georgetown west to the Venezuelan border. Figure 68 is a composite of 10 individual map tiles
showing the identified distribution of mangroves redshading across this portion of Guyanas coastline
as of 2013. There are currently three species of mangrove in Guyana red mangrove *Rhizophora*
mangle black mangrove *Avicennia germinans* and white mangrove *Laguncularia racemosa*.
Mangroves in Guyana have a unique distribution pattern that is different from the norm in most other
countries. RGME 2014 noted that in Guyana black mangroves typically colonize the coastal
shorelines and red mangroves establish themselves further inland along the rivers. There is some
overlap in the typical distribution of these species elsewhere but in general the pattern in other

countries is for red mangroves to establish along the shoreline black mangroves to establish farther inland and white mangroves to establish the farthest inland. Mangrove ecosystems are known to be among the most productive ecosystems in the world Mann 1982 serving major habitats while providing shelter and feeding sites for many faunal species Mestre Krul and Moraes 2007. Many invertebrate inhabitants of mangrove ecosystems in Guyana live either on or in close proximity to mangrove roots and substrates and include snails barnacles tunicates mollusks polychaete worms oligochaete worms shrimp crabs sponges jellyfish amphipods and isopods. These small organisms provide forage for birds mammals reptiles amphibians and fish. Herons egrets and ibises are the most conspicuous group of bird species found in mangroves due to the abundant food sources in a relatively safe habitat Da Silva 2014. May 2017 143 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 68 Guyanas Mangrove Distribution Georgetown west to Venezuelan Border Figure 69 Mangrove Photographs Coastal Mangroves Red Mangrove Forest Source ERM 2016; Rapid Biodiversity Assessment of Shell Beach 2004 May 2017 144 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 6.2.2.2 Beaches Chapter 6 Existing Environment Guyana has relatively few beaches but the beaches that do occur are critically important nesting habitats for sea turtles and providing habitat used by a variety of avian herpetofauna and mammalian species see Figure 66 for the locations of beaches in the SBPA. 6.2.2.3 Mudbanks See Section 6.1.3 for the description of the physical attributes and location of Guyanas mudbanks which generally refer to the submerged mud features below the low tide line as distinct from the intertidal mud flats. There has been no targeted biological surveys of Guyana mud banks conducted to date but coastal mud habitats typically support burrowing invertebrates such as marine worms mollusks crustaceans amphipods and copepods. This invertebrate community provides important forage for bottomfeeding fishes such as grunts catfishes and snappers particularly during their early life stages. 6.2.3 Coastal Wildlife and Shorebirds Guyana occupies the westcentral portion of the Guianan mangrove ecoregion which extends from southeastern Venezuela southeast to French Guiana between the Orinoco River

Deltas and the Oyapok River Delta in French Guiana. The ecoregion is a biogeographical rather than geopolitical region and was designated as a distinct ecoregion by the World Wildlife Fund as part of their Terrestrial Ecosystems of the World project Olsen et al. 2001. Despite supporting over 90% of the countrys human population Guyanas coastal region supports a diverse fauna. This section briefly describes bird mammal reptile and amphibian species that are representative of Guyanas coastal region.

6.2.3.1 Coastal Wildlife Numerous mammal reptile and amphibian species occur in Guyanas mangroves agricultural areas and coastal forests. There are over 50 species of mammals present including opossums; bats; primates such as capuchin monkeys *Cebus apella* squirrel monkeys *Saimira sciureus* howler monkey *Alouatta seniculus* and Guianan saki *Pithecia pithecia*; giant anteater *Myrmecophaga triactyla*; several species of cats including pumas *Panthera onca* puma *Puma concolor* and ocelot *Leopardus pardalis*; ungulates and rodents including the capybara *Hydrochaeris hydrochaeris* paca *Agouti paca* red rumped agouti *Dasyprocta leporina*; red and grey brocket deer *Mazama* sp.; and the giant river otter *Pteronura brasiliensis* which is a freshwater species and the neotropical otter *Lontra longicaudis* which is found in both freshwater and estuarine habitats WWF undated. Other reptiles that frequent this ecoregion are the green iguana *Iguana iguana* spectacled caiman *Caiman crocodilus* and anaconda *Eunectes murinus*. Amphibians are generally less common along the coast than in the interior especially due to saline influence in the mangroves but two species that are found along the coast are the paradoxal frog *Pseudis paradoxa* and the pipa frog *Pipa pipa*.

May 2017 145 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

6.2.3.2 Shorebirds Chapter 6 Existing Environment Guyana has a high species richness and diversity of flora and fauna. The coastal bird community is rich in Guyana with over 200 species of coastal birds recorded including a variety of parrots and macaws numerous waterbirds and shorebirds and raptors including the rare Harpy Eagle *Harpia harpyja* GNBSAAP 2015. A coastal bird survey conducted along the coast in the Georgetown region by Bayney and Da Silva 2005 documented 32 coastal bird species 20 of which are migrants. The most abundant species documented in the survey were shorebirds including Least Sandpiper *Calidris minutilla* Spotted

Sandpiper *Actitis macularia* Ruddy Turnstone *Arenaria interpres* and Semipalmated Plover *Charadrius semipalmatus*. Waterbird species including Snowy Egret *Egretta thula* and Cattle Egret *Bulbulcus ibis* were also abundant. In 2007 Braun et al. developed a comprehensive checklist of the 814 bird species within 11 habitats documented in Guyana Braun et al. 2007. The coastal habitats surveyed include mangrove forests and mudflats and the checklist includes 47 species within 18 families for the mangroves and 38 species within 8 families for the mudflat habitats Braun et al. 2007 Appendix I. A more recent bird survey within coastal mangrove habitats in southeast Guyana identified 37 species within 14 families Da Silva 2014. In this 2014 survey the most abundant species recorded were the Rufous Crabhawk *Buteogallus aequinoctialis* Great Egret *Ardea alba* Greater Kiskadee *Pitangus sulphuratus* Scarlet Ibis *Eudocimus ruber* and the Pied Water Tyrant *Fluvicola pica* Appendix I. As discussed in Section 6.2.2 Shell Beach is the only coastal Protected Area in Guyana. Two biodiversity surveys have been undertaken within and around Shell Beach over roughly the past decade Mendonca et al. 2006; GEPA et al.; 2004. Each of these surveys documented over 200 bird species in the Shell Beach area including many forest interior species that occur in the inland habitats of Shell Beach. Many of the over 200 species documented are migrants traveling from United States and Canada to spend the winter season in Guyana primarily following the Atlantic and Central Flyways to South America. The most abundant coastal species recorded at and around Shell Beach during the two surveys included Laughing Gull *Larus atricilla* Scarlet Ibis *Eudocimus ruber* Yellowbilled Tern *Sterna supercilialis* Least Tern *Sterna antillarum* Spotted Sandpiper *Actitis macularia* Lesser Yellowlegs *Tringa flavipes* and Blackbellied Whistlingduck *Dendrocyna autumnalis* Mendonca et al. 2006; GEPA et al. 2004. BirdLife International 2016a has designated several Important Bird Areas IBAs in the neighboring countries of Suriname Trinidad and Tobago and Venezuela. These IBAs provide foraging breeding and nesting habitats similar to those found along Guyanas coastline. However no IBAs have been designated in Guyana.

6.2.4 Seabirds

Seabirds are birds that spend their time in nearshore and/or offshore marine environments away from land except when they are nesting. Types or groups of

seabirds more prevalent in this region include albatrosses petrels shearwaters stormpetrels skuas jaegers tropicbirds and terns. Twentytwo species of seabirds breed in the Caribbean and dozens more occur as migrants through the region. Seabird data that is specific to Guyana is almost nonexistent and May 2017 146 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment no comprehensive survey of seabirds has ever been conducted in Guyana BirdLife International 2016. Birdlife International lists 21 species of seabirds for Guyana BirdLife International 2016. Other current data sources such as eBird and seabird observations recorded in the Stabroek Block during the EEPGL seismic surveys conducted in 2015 and 2016 increase the total number of documented seabird species in Guyana to 30 eBird 2016; RPS 2016. This number is consistent with that of other countries in the region. For example 32 and 29 species of seabirds are documented in Trinidad and Tobago and Venezuela respectively BirdLife International 2016. Table 68 lists the seabird species documented in Guyana based on the BirdLife data eBird records and EEPGL observations. Any of these species could occur in the PDA at some time during the year specific timing of occurrence is dependent on the species and environmental conditions. All of the 30 species of seabirds known to occur in Guyana are currently listed on the IUCN Red List as LC which means that the population status of the species does not meet the IUCN criteria for a threatened or NT designation IUCN 2016. Of the species observed in the Stabroek Block during the EEPGL seismic surveys the most commonly observed species in descending order of number of sightings i.e.; frequency of occurrence were the Masked Booby *Sula dactylatra* Magnificent Frigatebird *Fregata magnificens* and Brown Booby *Sula leucogaster* RPS 2016. Seabirds feed on fish and other marine organisms that concentrate on or near the surface of the water either by surface feeding from flight or swimming or by diving. As such the presence and availability of seabird prey in a given area which is strongly influenced by the oceans currents are a major determinant in the occurrence of seabirds. Further water clarity can impact a seabirds foraging success and some studies have suggested that seabirds in the Caribbean prefer areas with clear water where they can more easily see their prey Schreiber 2001. Seabirds in the PDA area are

likely to be transients moving opportunistically with schools of fish and other prey. The marine environment within the PDA is heavily influenced by the Guiana Current which is a strong surface current that directs surface flows northwestward. No slower moving or circular currents or areas of upwelling that could concentrate marine biota are known to occur in the PDA. Further no islands or nearsurface submarine ridges that would be an attractant to foraging seabirds occur in the PDA. While a variety of fish occur in the PDA including schooling fish such as tuna and mahimahi no evidence suggests that large concentrations of fish consistently occur in the PDA to the extent that they would promote regular use by foraging seabirds. The turbid conditions in the Stabroek Block further reduce the likelihood that the area has significant importance for foraging seabirds. Since 2010 BirdLife International has focused its efforts on identifying Marine IBAs with specific significance to seabirds. The types of sites that qualify as Marine IBAs include seabird breeding colonies foraging areas around breeding colonies nonbreeding usually coastal concentrations migratory bottlenecks and feeding areas for pelagic species Birdlife International 2016b. No Marine IBAs have been identified in Guyana but three Marine IBAs of May 2017 147 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment global or regional importance to seabirds have been designated in neighboring countries St. Giles Islands and Little Tobago both located off the northeastern tip of Tobago and Isla de Aves in Venezuela Lentino and Esclasans 2009; Birdlife International 2016b; Devenish et al. 2009. Figure 610 depicts the location of these IBAs relative to the Stabroek Block. Table 68 Seabird Species Known to Occur in Guyana

Marine Mammals Chapter 6 Existing Environment Although there have been no comprehensive studies in the PDA a basic understanding of the existing composition and distribution of the marine mammal community in the vicinity of the PDA is provided by regional compilations Ward 2001; Ward and Moscrop 1999 marine mammal observation MMO data collected during EEPGL exploration activities from 2014 to 2016 RPS PSO database studies on cetaceans in offshore waters of neighboring countries such as Suriname and Venezuela de Boer 2015; IWCSC 2006 and incidental reports associated with strandings and bycatch Project GLOBAL 2007. Information from these reports and other studies provides the foundation for this discussion of existing conditions which is focused on cetaceans. One sirenian the West Indian manatee and two pinniped groups seals and sea lions have been documented in the region but are either now considered to be locally extinct or extremely rare and would not be expected to be encountered in coastal waters adjacent to the PDA Ward 2001. However the manatee may be encountered in nearshore and riverine settings. 6.2.5.1

Regional Setting The equatorial waters of Guyana are located within subregion VI of the Wider Caribbean Region WCR. This subregion includes the countries of Guyana Suriname and French Guiana Ward and Moscrop 1999. Many cetacean species are known to occur either seasonally or yearround in the waters of the WCR but there are minimal data concerning the life history and behavior of the majority of these species. The cetacean community is also underrecorded in waters off of French Guiana and Guyana de Boer 2015; Mannocci et al. 2013. In contrast more detailed records exist for Venezuela in the southern Caribbean region. The scarcity of cetacean records for subregion VI can be attributed to a lack of survey effort rather than an absence of marine mammals de Boer 2015. 6.2.5.2 Marine Mammal Data from the Project Development Area The 2007 Global

Bycatch Assessment of Longlived Species Project GloBAL Country Profile of Guyana provides a list of marine mammals whose distributions overlap with Guyanas Exclusive Economic Zone EEZ. The cetacean species documented in this report are listed in Table 69. Table 69 Marine Mammals with Ranges that include Waters Offshore Guyana Common Name Scientific Name Sei whale *Balaenoptera borealis* IUCN Status Notes EN Brydes whale *Balaenoptera brydei* Data Deficient The

sei whale is a baleen whale and is the third largest after the blue whale and the fin whale. It inhabits most oceans and adjoining seas and prefers deep offshore waters. Bryde's whales are moderately sized and closely resemble their relative the sei whale.

Dwarf sperm whale	<i>Kogia simus</i>	Data Deficient	

Blue whales are the largest mammals on earth. Their diet consists almost entirely of krill. Blue whales were hunted nearly to extinction. Fin whales are the second largest mammal after blue whales; they are found worldwide and their food consists of small fish, squid, copepods and krill. These dolphins occur throughout warm temperate and tropical oceans. Shortbeaked common dolphins can occur in aggregations of hundreds or even thousands of dolphins. They sometimes associate with other dolphin species such as pilot whales. The range of this dolphin is more restricted than that of the short beaked common dolphin. It has a varied diet. One of the main threats to this dolphin is fisheries. Minke whales are the second smallest baleen whale. This is a baleen whale that was once a preferred target for whalers. They feed mostly on copepods and krill. This is a poorly known and rarely seen dolphin that avoids human contact. They are often caught in drift gill nets. Shortfinned pilot whales are very sociable and are rarely seen alone. They are found in groups of 10 to 30 though some pods are as large as 50. The species primarily feeds on squid but will also feed on certain species of fish and octopus. They feed nearly 300 m deep or more and spend great lengths of time at depth. A pod may spread out up to 800 m (2640 ft) to cover more area to find food. These are found worldwide in temperate and tropical waters just off the continental shelf on steep banks. Risso's dolphins feed almost exclusively on neritic and oceanic squid mostly

nocturnally. The pygmy sperm whale is not much larger than many dolphins. Pygmy sperm whales are normally either solitary or found in pairs. They feed mainly on cephalopods. The dwarf sperm whale is the smallest species commonly known as a whale. Dwarf sperm whales feed mainly on squid and crab. Its preferred habitat appears to be just off the continental shelf.

Sperm whale	<i>Physeter macrocephalus</i>	VU	False killer whale
<i>Pseudorca crassidens</i>		Data Deficient	

This dolphin is normally sighted in deep tropical waters. Frasers dolphins swim quickly in large tightly packed groups of about 100 to 1000 in number. Found in oceans and seas around the world humpback whales typically migrate up to 25000 km each year. Humpbacks feed only in summer in polar waters and migrate to tropical or subtropical waters to breed and give birth in the winter. Once hunted to the brink of extinction its population fell by an estimated 90 before a 1966 moratorium. Since this time stocks have partially recovered. This species of beaked whale is found in tropical and warm waters in all oceans and has been known to range into very high latitudes. The whales are seen in groups of three to seven individuals. Dives have been measured as long as 22 minutes. These whales occur in small groups. They most likely feed on squid. Although this species frequently strands until 1998 no one had made a confirmed sighting of the species at sea. These have been seen in small groups and are believed to be squid eaters. Little else is known. Closely related to the pygmy killer whale and pilot whale collectively this dolphin species is known by the common name blackfish. It is also related to the false killer whale. The melonheaded whale is widespread throughout the worlds tropical waters although not often seen by humans because it prefers deep water. The largest of the toothed whales that can be found anywhere in the open ocean females and young males live together in groups while mature males live solitary lives outside

of the mating season. Females give birth every four to twenty years and care for the calves for more than a decade. A mature sperm whale has few natural predators. They feed on squid and fish and usually dive between 300 to 800 m 984 to 2625 ft to forage. This species lives in temperate and tropical waters throughout the world. As its name implies the false killer whale shares characteristics such as appearance with the more widely known killer whale. Like the killer whale the false killer whale attacks and kills other cetaceans. May 2017 153 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Common Name Scientific Name Pantropical spotted dolphin *Stenella attenuata* LC IUCN Status Notes Clymene dolphin *Stenella clymene* Data Deficient Striped dolphin *Stenella coeruleoalba* LC Spinner dolphin *Stenella longirostris* Data Deficient Roughtoothed dolphin *Steno bredanensis* LC Found in all the worlds temperate and tropical oceans this species was threatened due to the killing of millions of individuals in tuna purse seines. In the 1980s the rise of dolphinfriendly tuna capture methods benefitted the species and it is now one of the most abundant dolphin species in the world. Clymene dolphins spend most of their lives in waters over 100 m 330 ft in depth but occasionally move into shallower coastal regions. They feed on squid and small schooling fish hunting either at night or in mesopelagic waters where there is only limited light. The striped dolphin inhabits temperate or tropical offshore waters. It moves in large groups usually up to thousands of individuals in number. The adult striped dolphin eats fish squid octopus krill and other crustaceans. The spinner dolphin is a small dolphin found in offshore tropical waters around the world. The species primarily inhabits coastal waters islands or banks. These dolphins can be found in deep warm and tropical waters around the world and are typically social animals. An average group has between 10 and 20 members. They have also been reported to school together with other species of dolphin and with pilot whales false killer whales and humpback whales. Source Global 2007; De Boer 2015; IUCN 3.1; Minasian et al. 1984 A recent peerreviewed study was conducted in Suriname and adjacent waters in 2012 De Boer 2015. The data from this study were collected at similar depths and distances offshore as the PDA. De Boer 2015 documented the presence of 10 identifiable species in

dedicated effort-related surveys. These are shown in bold in Table 5A of de Boer 2015. In addition during transit to the survey area Trinidad to Suriname De Boer also documented incidental sightings of common bottlenose dolphins *Tursiops truncatus* off of Trinidad other dolphins *Stenella* sp. off of Guyana and Guiana dolphin *Sotalia guianensis* at the entrance of the Suriname River. These species may be encountered closer to shore where Project-related marine support vessel transits will be occurring. The survey data from De Boer 2015 show that the cetacean community in the Suriname area is primarily composed of odontocetes toothed whales including sperm whales beaked whales killer whales and dolphins. These are more common offshore of Suriname than the baleen whales including Brydes and sei whales. The occurrence of baleen whales is likely seasonal with Brydes and sei whales recorded only during June and July. Additional opportunistic records May 2017 154 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment cited in De Boer 2015 show that large baleen whales have been observed in early October. Both shelf waters and offshore waters are important for the dolphin community. De Boer 2015 notes that the most abundant species documented offshore Suriname were the sperm whale and melonheaded whale. Spinner and pantropical spotted dolphins were also frequently encountered in large groups. The relative abundance index for all cetaceans was relatively low as expected for the offshore survey location approximately 1190 m to 3350 m [3900 ft to 11000 ft] water depths. Based on these data when viewed together with other systematic surveys in tropical regions in the eastern Atlantic and western Africa estimated densities were found to be much higher in areas that spanned both deep and shallow waters versus the deep water only area surveyed offshore Suriname. De Boer 2010. For example tropical shallow shelf waters off of the Maldives in the Indian Ocean generally hold a much more diverse and abundant cetacean community Clark et al. 2012. Other older reports provide additional information for context. For example the International Whaling Commission IWC Scientific Committees SCs Draft Report on Small Cetaceans of the Wider Caribbean IWCSC 2006 cites information from French Guiana and Venezuela and provides secondary information on Guyanas marine mammals. Bottlenose dolphins are incidentally captured in

both gillnet and trawl fisheries in these countries. Tucuxi or grey dolphin *Sotalia fluviatilis* are known to suffer incidental capture in gillnets and seines throughout their range which includes the Guianas French Guiana Suriname and Guyana. Marine mammal observations during recent seismic surveys conducted between December 2015 and March 2016 RPS 2016 noted that dolphins were detected either visually or acoustically on 20 occasions and included four species pantropical and bottlenose dolphins shortfinned pilot whales and melon headed whales. Two sperm whale detections and two Brydes whale detections were also recorded along with one unidentified baleen whale. Visual monitoring was conducted over a period of about 85 days for a total of 1007.5 hours. Data from this winter study were combined with other observations in the Stabroek and Canje Blocks to develop the list of confirmed species sighted depicted in Table 610. Table 610 Marine Mammal Species Visually Observed during EEPGL Activities Since 2014

Beaked Whale	0	0	0	0	0	0	0	0	0	0	0	0

Source RPS PSOMAP database search from June 1 2014 to Sept 1 2016. Includes visual and acoustic detections. Data indicates number of detections rather than abundance. These observations off of Guyana correspond with those documented by De Boer 2015 off of Suriname. Based on these recent sightings and data compilations toothed whales including dolphins are

detected most frequently in the PDA but baleen whales may also be encountered. A survey of nearshore waters conducted by Charles et al. 2004 of 125 Guyanese captains of trawl drift seine and red snapper fishing vessels found that these vessels usually encountered boto *Inia geoffrensis* spotted dolphin *Stenella* spp. longmouth or common dolphin *Delphinus delphi* *tucuxi* *Sotalia fluviatilis* spinner dolphin *Stenella longirostris* and bottlenose dolphin *Tursiops truncatus*. Individuals of these species may be encountered by marine support vessel operations and tankers in these waters. Nearshore Project activities in or near the Demerara River could encounter West Indian manatees. A subspecies of the West Indian manatee is sometimes referred to as the Antillean manatee *Trichechus manatus manatus*. Antillean manatees are sparsely distributed throughout the Caribbean and the Northwestern Atlantic Ocean from Mexico east to the Greater Antilles and south to Brazil. They are found in French Guiana Suriname Guyana Trinidad though there has been a lack of recent sightings there and Venezuela. Historically Antillean manatees were hunted by local natives and sold to European explorers for food. Today they are threatened by loss of habitat poaching entanglement with fishing gear and increased boating activity.

May 2017 156 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 611 Locations of Marine Mammal Sightings Relative to the Stabroek Block

May 2017 157 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 6.2.6 Marine Turtles Chapter 6 Existing Environment According to the Regional Sea Turtle Conservation Program and Action Plan for the Guianas 2003 sea turtles are an important natural resource shared by the countries of the Guiana Shield region which encompasses the nations of Venezuela Guyana Suriname French Guiana and Brazil. Data from this action plan along with more recent compilations from Project Global 2007 The Center for Rural Empowerment and the Environment [CREE] 2014 and observations collected during exploration activities from 2014 to 2016 represent the main sources of data for turtles in the Project Area. In addition information on the interaction between sea turtles and trawl fisheries on the Guianas shelf since the 1970s was reviewed Pritchard 1973 1991.

6.2.6.1 Regional Setting and Species Descriptions Five sea turtle species are found in the region all

of which occur in Guyanese waters. Four of these species green turtle *Chelonia mydas* leatherback turtle *Dermochelys coriacea* hawksbill turtle *Eretmochelys imbricata* and Olive Ridley turtle *Lepidochelys olivacea* nest on Guyanas beaches. Loggerhead turtles *Caretta caretta* also occur offshore Guyana but rarely come ashore. In addition to sandy beaches for egg laying as a group sea turtles require healthy coral reef seagrass and hardbottom habitats for food and refuge although the relative importance of these habitats varies by species. Based on each species known habitat requirements some green sea turtles likely remain in Guyana waters as juveniles to feed in the sargassum mats while the other species largely move to clearer waters and coral reefs to the north after hatching Piniak and Eckert 2011. Green turtles are generally found in tropical and subtropical waters along coastlines and continental islands between the latitudes of 30 North and 30 South. They are distributed worldwide nesting in more than 80 countries and inhabiting the coastal waters of more than 140 countries National Marine Fisheries Service U.S. Fish and Wildlife Service 2007. Green turtles are listed as endangered by the IUCN and are protected from exploitation in most countries. Adult green turtles are benthic herbivores Bjorndal et al. 1997; they play an important role in seagrass ecosystems by pruning them increasing the nutrient cycle and preventing the creation of sediment Bjorndal and Jackson 2003; Jackson et al. 2001. Their migrations have two phases they travel rapidly to the open ocean in a straight line and then move more slowly toward the migration coasts Trong et al. 2005b. Leatherback turtles are the largest of all sea turtle species and do not have a hard shell like other sea turtles; instead their shell is made of leathery tissue. Leatherbacks are found in pelagic tropical and temperate marine waters where they spend most of the time feeding on jellyfish salps and siphonophores DOE 2014; however they are also known to forage along coastlines. Leatherbacks make extensive seasonal migrations between different feeding areas and nest at the same location every year NWF 2014b. Leatherback turtles nest from March to midJuly along the Caribbean coast Trong et al. 2004. Young leatherback turtles can remain in tropical latitudes until the length of their shell reaches approximately 40 inches Eckert 1999. The largest nesting colony in the Caribbean region is located in Yalimapo French Guiana Eckert May

Existing Environment and Grobois 2001. A moderate number of nests can also be found in Guyana Venezuela Trinidad and Colombia. This species is listed by the IUCN as Vulnerable. The hawksbill turtle is a small to medium sized sea turtle that has an elongated head that tapers to a point with a beaklike mouth giving its name NOAA 2014e. These turtles are circumtropical and can be found in waters from latitudes of 30 North to 30 South in the Atlantic Pacific and Indian oceans and use a wide range of broadly separated localities and habitats during their lifetimes Mortimer and Donnelly 2008. However individuals located within the Atlantic Ocean primarily feed on sponges and are found within lagoons ledges and caves associated with coral reef environments NOAA 2014e. These types of habitats are generally found northwest of the PDA in the Caribbean Sea. This species is listed as Critically Endangered by the IUCN. The loggerhead turtle is an oceanic turtle distributed throughout the world. The loggerhead turtle is found in the Atlantic Pacific and Indian oceans as well as the Mediterranean Sea. It spends most of its life in saltwater and estuarine habitats with females briefly coming ashore to lay eggs. The loggerhead sea turtle has a low reproductive rate; females lay an average of four egg clutches and then become quiescent producing no eggs for two to three years. The loggerhead turtle is omnivorous feeding mainly on bottom dwelling invertebrates. Its large and powerful jaws serve as an effective tool for dismantling its prey. Young loggerheads are exploited by numerous predators; the eggs are especially vulnerable to terrestrial organisms. This species is classified by the IUCN as Endangered with high risk of extinction. The olive ridley turtle is a small circumtropical sea turtle that is classified as vulnerable by the IUCN. While olive ridley turtle populations have declined in prior decades their populations have remained stable in more recent years. Olive ridley turtles are best known for their behavior of synchronized nesting in mass numbers termed arribadas. Females return to the same beach at which they first hatched to lay their eggs. The olive ridley is predominantly carnivorous especially in immature stages of the life cycle. Animal prey consists of protochordates or invertebrates which can be caught in shallow marine waters or estuarine habitats. Common prey

items include jellyfish tunicates sea urchins bryozoans bivalves snails shrimp crabs rock lobsters and sipunculid worms. Large nesting aggregations of green and leatherback turtles are located in the Guianas Suriname and French Guiana while smaller nesting areas are located from northwestern Guyana Shell Beach to Venezuela and some Caribbean islands which includes the Leeward Lesser and Greater Antilles; the Gulf of Mexico Central America; and Atlantic Ocean the Bahamas; and the southern coast of the United States Piniak 2011. The hawksbill turtles range is primarily in the Caribbean Sea with small nesting areas in the Guianas and in eastern Brazil. The olive ridley turtle primarily nests along the French Guiana coast with small nesting areas along the northeastern coast of Venezuela to Suriname and in eastern Brazil Piniak 2011. The primary nesting site for all these species in Guyana is Shell Beach located on the northwestern coast of Guyana. The exact locations of secondary nesting sites change due to coastal erosion which creates and destroys nesting areas continuously but they are generally distributed along the northwest coast between the Pomeroon River and the Waini River May 2017 159 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment estuaries. Leatherback turtles are the most common species on Guyanas nesting beaches while nesting green and hawksbill turtles are less common. According to CREE the primary nesting season for the leatherback green hawksbill and olive ridley turtles in Guyana Shell Beach occurs at night from March to August CREE 2014. The primary threats to sea turtles are poaching of eggs and adults intentional and acental fishing and habitat disturbance and degradation due to marine pollution coastal zone development shore erosion lighting and debris. Population monitoring and conservation activities are limited primarily due to the logistical challenges associated with the remoteness of primary nesting sites. Although leatherback and olive ridley turtles occur at higher densities and thus show a corresponding higher frequency in shrimp trawls juvenile greens and loggerheads are also taken as bycatch see Project Global 2007. Tambiah 1994 estimated that trawl nets in the Guianas caught 1300 turtles annually with mortality rates of 60 percent. Tambiah 1994 also reported that gillnet fisheries in Guyana and Suriname are an even bigger threat than trawl

fisheries inentially capturing 21600 sea turtles per year. However the report documents the highest inences of olive ridley bycatch occurring during the period prior to the nesting arribadas in Suriname January to March coining with the peak period for shrimp fisheries February to May. 6.2.6.2 Marine Turtle Data for the Project Development Area MMO observations conducting during seismic surveys between July 2015 and August 2016 detected six sea turtles one green turtle two loggerhead turtles and three unidentified turtles. The locations of the sightings are indicated on Figure 611. Based on these recent sightings and data compilations it is possible that any of the five abovereferenced sea turtle species could be encountered in the PDA. The Sea Turtle Conservation Society actively maps sea turtle movements by placing satellite transmitter tags on individual turtles after they finish nesting see www.conserveturtles.org. Starting on May 21 2012 the Society mapped movements of three leatherback turtles from their nesting place at Shell Beach Figure 6.12. Each remained offshore of Shell Beach and in Guyanas equatorial waters for several weeks. By the second to third week of June two had moved farther offshore in transit to waters off the coast of Nova Scotia while one remained in Guyanese waters until the third week of July and eventually transited to Honduran waters. One passed through the Stabroek Block before moving northward. These movements are consistent with Piniak and Eckerts 2011 assertion that most species of marine turtles likely move out of Guyanese waters as juveniles. May 2017 160 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 612 Location of Sea Turtle Sightings and Satellite Tracks Relative to the Stabroek Block May 2017 161 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 6.2.7 Marine Fish Chapter 6 Existing Environment Scientific data on marine fish in the PDA are sparse. Much of what is known about marine fishes offshore Guyana is known from study of commercial landings. The inshore fish community is dominated by drums croakers and marine catfishes and includes other species such as snooks and tarpon. Further offshore near the interface of the turbid North Brazil Current with oceanic water the fish community is more complex consisting of pelagic highly migratory species such as tunas jacks and mackerels in the upper water column and snappers and groupers in the

demersal zone lowest section of the water column near the seafloor MOA 2013. Sharks are found inshore and offshore. Guyanas marine fish community exemplifies the ecological connectivity among the mangroves estuaries and offshore zones because many fish species are dependent on different habitats at specific life stages or occur in more than one habitat type. Several species that occur in the inshore and offshore zones as adults are dependent on coastal mangroves as juveniles particularly drums croakers and snappers. Catfishes occur in the mangroves estuaries and oceanic waters as adults. Some other species including snooks and tarpon may occur occasionally in the ocean but are specifically adapted to completing their entire life cycles in mangrovelined estuaries

MOA 2013. 6.2.7.1 Historical Data on Demersal Coastal Species The most complete data on marine fish in Guyanas territorial waters come from a twoyear trawl survey conducted in 1958 and 1959. The survey consisted of 35 cruises lasting 4 to 11 days each and included data from 1070 stations comprising 2246 fishing hours McConnell 1962. Although the study report does not contain a map of the individual stations the map of the study area indicates that they extended seaward to the edge of the continental shelf. Although the study did capture some pelagic species it was designed as a trawl survey and was therefore more oriented toward demersal species. The study documented the presence of 213 species of fish comprised primarily of drums croakers catfishes jacks grunts and snappers. McConnell noted a spatial pattern in the distribution of fishes across the shelf and separated the shelf into four biogeographic zones Zone 1 described as the brown fish zone water depths from 0 to 10 fathoms 018 m. The fish community in this zone was dominated by drums catfishes rays and various toadfishes Batrachoididae. Zone 2 described as the golden fish zone water depths from 10 up to 30 fathoms 1855 m. The fish community in this zone was dominated by catfishes jacks and grunts. Zone 3 described as the silver fish zone. This zone was associated with less turbid oceanic waters and the location of this zone was more dependent on water quality than depth but the fish typical of this zone were particularly abundant in water 20 to 40 fathoms 3775 m. Zone 4 described as the red fish zone ranging from water depths of about 20 fathoms near Suriname and 30 to 40 fathoms 5575m closer to Georgetown seaward to the edge of the continental

shelf. Snappers and various demersal species comprised the bulk of the catch in this zone. May 2017 162 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Approximately 80 species of fish occurred in Zone 4 in the McConnell study. These species are listed in Appendix K. Although the PDA is located slightly north of the seaward limit of McConnells study area and in deeper water the catches from Zone 4 contain species that are also found at much deeper depths and are therefore considered indicative of the types of fish that are likely to occur in the PDA especially near the seafloor. The data from Zone 4 in the McConnell study include several species that are commonly associated with coral reefs including butterflyfishes angelfishes wrasses and parrotfishes McConnell 1962. McConnell notes that coral fragments appeared in the trawl but that the coral retrieved in the net was dead. It seems likely that the coral-associated fishes in the McConnell study were likely present on scattered fragments of dead coral or possibly small dead patches of coral rather than on living reefs. Based on comparisons with species lists from nearby countries McConnell determined that about 50 percent of Guyanas marine fish species were widely distributed coastal species about 10 percent were clearwater associated species more typical of the Caribbean Islands about 5 percent were more southerly species typical of the Brazilian coast and the balance were habitat generalists with no defined regional habitat associations. McConnell also noted that the North Atlantic Continental Shelf is continuous from the Gulf of Mexico to Brazil and that there were no major barriers to migration through this area so Guyanas marine fish community would be expected to have many species in common with other countries in the region. This likely explains the presence of so many widespread species in the dataset. The Guyana Fisheries Department a division of the Guyana Ministry of Agriculture does not monitor noncommercial marine fisheries but bycatch data from the nearshore shrimp trawl fishery provided by the Guyana Fisheries Department summarized in Table 612 are consistent with the McConnell study with respect to marketable species in McConnells brown fish zones. Recent bycatch data collected since 2012 from shrimp trawlers identify seven species of fish. Four of these species Bangamary Bashaw Croaker Sea Trout are in the family Scianidae which McConnell

identified as characteristic of Zone 1 McConnell et al. 1962; Bangamary Bashaw and Sea Trout represent 6575 percent of the total bycatch by weight each year from 2012 to 2015. May 2017 163

2015 1151 485 168 0 303 0.1 42 2148 Projects specific information on fish species from the PDA is available from observations made during EEPGLs various activities in the southeastern half of the Stabroek Block since 2014 Figure 613. Fish observed in this area Figure 613 include 17 species as listed in Table 613. None of these species were documented in the McConnell study but the data from EEPGLs activities were acquired from surface observations and are comprised of species that are characteristic of the upper water column so would not be expected in McConnells trawl survey.

Mola mola	Stephanolepis hispidus	Istiophrous albicans	Katsuwonus pelamis	Thunnus atlanticus	Thunnus albacares	Cypselurus comatus	Makaira nigricans	Caranx ruber	Caranx hippos	Elagatis bipinnulata

May 2017 164 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 613 Approximate Locations of Biological Observations Made Since 2014 February 2017 165 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment In the summer of 2011 several islands in the eastern Caribbean e.g. Anguilla Antigua Barbuda Barbados British Virgin Islands Guadeloupe Martinique St. Lucia St. Maarten St. Martin experienced large amounts of sargassum washing

ashore. In 2012 and 2014 Barbados Guadeloupe Dominica Antigua Barbuda St. Croix and Puerto Rico reported moderate episodes of the phenomenon. The sargassum consisted of two species Common Gulfweed *Sargassum natans* and Broadtoothed Gulfweed *Sargassum fluitans* CRFM undated. A large amount of sargassum was also documented in the Stabroek Block in 2015. Quantities were sufficiently large in the block to clog intake hoses for vessel propulsion systems and foul acquisition equipment being used to collect seismic data in the block at the time. Subsequent analysis of satellite imagery revealed that although sargassum densities were unusually high offshore Guyana in 2015 sargassum concentrations fluctuate annually and have a seasonal peak between April and September Palandro 2016. The presence of such large amounts of sargassum is significant from a fish biodiversity perspective because sargassum has several important ecological roles related to marine fishes including concentrating forage fish that are preyed upon by large pelagic fishes including juvenile swordfish dolphinfish filefishes jacks flying fishes triggerfishes and various tunas; spawning habitat for flying fish *Exocoetidae*; and habitat for unique fishes and other organisms that spend most or all of their lives in floating mats of sargassum including the sargassum fish *Histrio histrio*.

6.2.7.3 Special Status Fish Species

Thirty marine and coastal fishes in Guyana have been ranked by the IUCN as threatened CR EN or VU with another 21 ranked as NT. According to the IUCNs classification scheme these species currently face a credible threat of extinction and are expected to face such risks soon. An additional 17 are considered Data Deficient and cannot be objectively assessed with the currently available data. Most of the threatened or NT species that could be impacted by the Project are fish. These species are listed in Appendix H. They include highly migratory species e.g. some tunas and sharks benthopelagic species e.g. some groupers and demersal species e.g. some skates and rays. As noted in Section 6.3.3.2 many of these fish species are also targeted by the Guyanese commercial fishing industry. All of the CR species are coastal species and would not be expected to occur in the vicinity of the PDA. Several of the EN species including Atlantic bluefin tuna whale shark squatheaded hammerhead shark and scalloped hammerhead shark are open water pelagic species and could occur in the PDA

intermittently but would not be expected to be residents in the area. The two remaining EN species golden tilefish and Nassau grouper are bottomdwelling species and do not move large distances as adults but they are most often associated with uneven bottoms containing rocky outcrops shipwrecks or other structural habitats. The continental slope in the vicinity of the PDA lacks any known structure that would be expected to attract or aggregate these species.

May 2017 166

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment

The VU NT and Data Deficient categories all contain a mix of pelagic species e.g. sharks and tunas and demersal marine species such as grouper skate and ray species and in some cases species that are important targets of fishery activities e.g. gillbacker.

6.2.8 Marine Benthos

The benthic communities inhabiting the Guyana Basin are influenced by the dominant environmental conditions that characterize the area including sediment composition water turbidity and nutrient loads. This section describes the marine benthic habitat within the Project AOI.

6.2.8.1 Methodology

This section draws on information provided in the scientific literature maps Automated Underwater Vehicle AUV photographs as well as field data collected by box coring and sediment profile imaging during the 2014 and 2016 environmental surveys.

6.2.8.2 Regional Setting

Marine benthic biological resources offshore of Guyana are poorly studied but do not include the matrix of shallow coral reefs and seagrass meadows that are characteristic of coastal tropical Atlantic environments elsewhere. This is due to the highly turbid conditions offshore of Guyana which do not permit the growth of warm water corals since they rely on symbiotic photosynthetic algae for nourishment. Two coldwater coral species *Madrepora oculata* and *Solenosmilia variabilis* are known to occur offshore of Guyana. Both species occur in a wide range of depths *M. oculata* from 55 to 1950 m and *S. variabilis* from approximately 219 m to 2165 m. The locations and the extent of deepwater corals offshore of Guyana have not been published Freiwald et al. 2004. Many cold water corals construct reefs that support highly diverse invertebrate and fish fauna NOAA 2014. Both *M. oculata* and *S. variabilis* are technically considered reefbuilding corals but *M. oculata* is particularly fragile and does not often form deepwater reefs. It more frequently occurs as a

commensal species living within or on reefs that were originally constructed by more robust species such as *S. variabilis*. Several species of benthopelagic shrimp occur in Guyanese waters including shallow water species such as the Atlantic Seabob *Xiphopenaeus kroyeri* the Southern Brown Shrimp *Penaeus subtilis* and the Southern White Shrimp *Penaeus schmitti*. The Redspotted Shrimp *Penaeus brasiliensis* and the Southern Pink Shrimp *P. notialis* are found in deeper waters USEPA 2010. While these species are free swimming they are often found at or near the bottom. In addition to shrimp there are other species of crustaceans found in the deepwater areas of the Caribbean Sea. These include several species of isopods such as *Leptanthura guianae* and *Malacanthura truncata* Poore and Schotte 2009 and 2015 and amphipods including *Ampelisca mississippiana* and *Thaumastasoma* species. There are also numerous species of annelids May 2017 167 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment including the polychaetes *Tharyx marioni* *Ariea suecia* *Levinsenia uncinata* and *Paraonella monilaris* as well as bivalves such as *Vesicomya vesical* and *Heterodonta* sp. Wei et al. 2010.

6.2.8.3 Existing Conditions in the Project Development Area Results of the 2014 environmental survey revealed that the total abundance of benthic infauna in the PDA was low averaging 116 organisms per m². This organism density is below the range of typical abundances reported from other continental slopes Rowe et al. 1982; Flach et al. 1999. The most abundant major taxonomic groups were polychaete worms crustaceans and mollusks. The overall prevalence of these three groups is typical for marine sediments. Polychaetes were the numerically dominant group identified avg. density 47 per m² representing 41 percent of the total groups. Polychaetes typically comprise about half of all species and a third of macrofaunal species from deepwater marine habitats worldwide. Aside from polychaetes no other individual major taxa were abundant with each of the other taxa groups individually representing less than 14 percent of total abundance. The observed paucity of macrofauna is likely ascribed to limited organic food sources indicated by the low organic carbon in the sediment. No deepwater coral growth was detected in either the 2014 or 2016 environmental surveys or the AUV surveys of the seafloor in the vicinity of the Liza1 well

Maxon Consulting Inc. and TDI Brooks International Inc. 2014; FUGRO EMU Limited 2016. A total of 50 distinct families were identified during the 2014 environmental survey with approximately half represented by either one or two individuals. This is a relatively high level of diversity considering the low abundance of macrofauna. Dominant families were typical cosmopolitan inhabitants of shelf and slope sediments worldwide. These included spionid cirratulid paraonid polychaetes phoxocephalid amphipods and thyasirid and nuculanid bivalve mollusks. Similar to the 2014 data the 2016 environmental study showed an overall prevalence of annelids including polychaetes crustaceans and mollusks typical for marine sediments as well as low macrofaunal densities. The 2016 samples averaged 20 organisms per 0.1 m² which can be extrapolated to 200 organisms per 1 m² for the purposes of comparison to the 2014 data. While the 2014 survey did not categorize the macrofauna organisms beyond the family level the 2016 survey further classified the macrofauna to the order and species level and covered a larger sampling area. Results from the 2016 sampling showed macrofaunal communities within the survey area to be diverse. In 2016 a total of 165 taxa were identified in 7 phyla and 27 families with 36 identified to species level including 15 species of polychaetes 10 crustaceans 8 mollusks and 3 sipunculid worms. Annelida were the numerically dominant group phylum in terms of species composition 40 percent and abundance 42.7 percent. Crustaceans accounted for the second highest species composition 38.2 percent and abundance 39.1 percent followed by mollusks 12.7 percent and 8.7 percent respectively and other taxa collectively 9.1 percent and 9.5 percent respectively Figure 614. May 2017 168 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 614 Abundance of Major Taxonomic Groups Identified in 2016 EBS Source FUGRO EMU Limited 2016 Table 614 identifies the common macrofauna families identified in the 2014 and 2016 studies. As the 2014 survey did not categorize the macrofauna organisms beyond the family level the commonalities between the 2014 and 2016 surveys were identified based on equivalent families. Both surveys characterized the surveyed area to have a diverse macrofauna community with polychaete worms as the most abundant major taxonomic group. The 2014 survey

additionally recognized that overall macrofaunal abundance within the surveyed area is at the lower end of the macrofaunal densities reported for continental slope sediments around the world Rowe et al. 1982; Flach et al. 1999. The 2016 survey similarly reported that numbers identified in all taxonomic groups were low.

references that the scientific community has not specifically classified the organism to a given categorization. The term unidentified refers to the surveyors inability to further identity the categorization of an organism. Figure 615 depicts some of the benthic fauna detected during the 2014 environmental survey. Figure 615 Benthos Photographed in the Vicinity of the Liza1 Well

Source Maxon Consulting Inc. and TDI Brooks International Inc. 2014 May 2017 170 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Both surveys reported that there was not a strong correlation between macrofaunal communities or number of species and any single parameter such as sediment characteristics or water depth. The results of the seabed photography sediment and faunal data review showed the

survey area primarily consists of one broad benthic habitat type sublittoral sediment EUNIS15 code A5. This marine benthic habitat can encompass a wide range of sediments from boulders and cobbles through pebbles and shingles coarse sands fine sands muds and mixed sediments Davies et al. 2004. Each sediment type hosts characteristic biological communities which together define biotopes. Within the sublittoral sediment habitat one biotope was identified circalittoral sandy mud A5.35 with aspects of deep sea mud. Benthic epifauna were scarcely observed in the photographs taken. Figure 616 provides representative photographs of the circalittoral sandy mud biotope taken from five of the 2016 sample stations. Epifauna were sparse in the photographs taken but evidence of habitation by tube building polychaetes possibly Sabellidae and Terebellidae burrowing shrimp and foraminifera can be observed in all of the images of the seafloor. Mud shrimp burrows were evident in most photographs and some photographs showed other taxa including tusk shells gastropods and hydroids. 15 The European Nature Information System EUNIS is a habitat classification system developed by the European Environment Agency EEA in collaboration with international experts. The EUNIS includes all types of natural and artificial habitats both aquatic and terrestrial. Project AOI. It was developed based on secondary information contained in Projectrelated materials; socioeconomic reports and data obtained through government entities and other stakeholders; and other relevant data received from public sources. It is also based on information obtained directly from key informant interviews with members of national regional and local governments; civil societies and nongovernmental organizations NGOs; local community members; and other Project stakeholders. Specific stakeholder engagement information can be found in Section 4.5.

6.3.1 Administrative Divisions in Guyana Guyana is divided administratively into 10 regions pictured on Figure 617. These regions are further subdivided into Neighborhood Democratic Councils NDCs of which there are 65 in total. Within the NDCs are villages the smallest administrative unit. In addition there is one city that serves as the capital Georgetown and nine townships. Four of these townships were designated as new townships by the Ministry of Communities in 2015 as part of an administrative decentralization effort. Each of the nine townships has its own mayor and council and is intended to serve as an administrative hub for government services such as passports and drivers licenses as well as providing utilities and public services such as water and sanitation as well as other services such as banking.

May 2017 173 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 617 Guyanas Administrative Regions and Townships May 2017 174 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

6.3.2 Population Distribution Chapter 6 Existing Environment Most of Guyanas population is located in the six coastal regions and according to the 2012 national census nearly half of the countrys population lives in Region 4 DemeraraMahaica which includes the capital city of Georgetown. Table 615 summarizes the distribution of population within the 10 regions in 2012 the last year for which complete census data are available. Table 615 Regional Population Distribution in Guyana

Note Each regions change in population should be weighted based on that regions percent of the total population so the sum of population changes in each region do not add up to the total national population change.

6.3.2.1 Ethnic Composition Data from the 2012 census indicate that the majority of the countrys population are representatives of two ethnic groups those of East Indian descent 39.8 percent and those of African descent 29.3 percent. These are followed by populations of mixed ethnicity 19.9 percent and indigenous peoples who in Guyana are referred to as Amerindians 10.5 percent. Other ethnicities including Chinese White and Portuguese collectively make up less than one percent of the population. Figure 618 shows the ethnic composition of each region and indicates notable differences between interior and coastal regions and between regions that are highly rural versus more urban. The more populated and urban Regions 3 4 5 and 6 are dominated by populations of East Indian and African descent followed by populations of mixed ethnicity. Amerindian population numbers in these regions are low. However the majority of population residing in the more remote and rural Regions 1 8 and 9 is of Amerindian ethnicity.

6.3.2.2 Indigenous Peoples Amerindians in Guyana numbered 78492 as of the 2012 census and their population is on the rise with growth of 12.8 percent seen in the period 2002-2012. According to Minority Rights Group International 2008 there are nine main Amerindian groups in Guyana of which three are coastal the Carib Warao and Arawak tribes. Other groups tend to inhabit the countrys hinterland regions. Many of the Amerindians in Guyana particularly in the coastal area have undergone cultural integration

with the general population and share much of the same culture as the Afro and IndoGuyanese population. However as a whole the standard of living for the Amerindian population in Guyana is lower than for the general population particularly for those in remote areas where provision of infrastructure and services is a challenge. The distribution of Amerindian population among the regions is shown on Figure 619.

May 2017 176 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment Figure 619 Amerindian Population by Region 2012

Region	Population
Region 1	17846
Region 2	8834
Region 9	20808
Region 8	8009
Region 7	6833

Region 5	1270
Region 3	2820
Region 4	7066

Source Bureau of Statistics Guyana 2012

The coastal plain of Region 1 and part of Region 2 are not accessible by road and therefore Amerindian communities in these areas are remote and are generally underserved by public infrastructure and services. These populations make use of a range of coastal resources for subsistence and livelihoods. Communities that are directly adjacent to the coast are the titled community of Three Brothers along the Waini River directly inland from Shell Beach and the nontitled communities within the SBPA Almond Beach Fathers Beach and Unity Grant. Titled indigenous communities located 510 km inland from the coast in Regions 1 and 2 are Santa Rosa Waramuri Manawurin Assakata and Wakapau. In the SBPA fishing and crabbing activity is particularly active at the westernmost end of Shell Beach at the mouth of the Waini River. At the eastern end of Shell Beach in the community of Fathers Beach there are coconut plantations used for manufacturing oil and just northwest of this is a forested area where hunting trapping fishing crabbing crabwood seed harvesting and lumbering occurs Protected Areas Commission 2015. In Regions 3 and 4 titled indigenous communities are located inland and not within the coastal plain.

6.3.3 Education

The education system in Guyana is similar to that of other Caribbean countries with school being compulsory from ages of 5 to 16 through preprimary primary and secondary schools. The federal Ministry of Education controls education budgets policies and standards and administers these by region. In 2012 the government spent 3.2 percent of GDP on the education sector CIA World Factbook 2016. Between the years of 2008 and 2012 the youth 15-24 years literacy rate was 93.7 percent and 92.4 percent for females

and males respectively. Preprimary and primary school gross enrollment averaged from 83.7 percent to 88.7 percent depending May 2017 177 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Existing Environment upon grade and gender with male youth averaging a few percentage points lower than female youth. Secondary school net enrollment was 80.6 percent and 71.2 percent for female and male youth respectively UNICEF 2016. At the time of writing the 2012 census compendium on social indicators had yet to be released. Therefore the only reliable data on educational attainment at the regional level are from the 2002 census compendium which shows that Region 1 had the highest percentages of male youth 10.9 percent and female youth 15.3 percent with either no schooling or Kindergarten level only with Regions 8 and 9 only a few percentage points higher. In Regions 2 and 3 the percentage of all youth with either no schooling or Kindergarten level only ranged between 2 percent and 4 percent. Region 4 and Region 10 had the highest level of enrollment across all levels Guyana Bureau of Statistics 2002. The levels of primary education for the indigenous population are typically lower than nonindigenous groups of the population. In the Amerindian communities the attendance rate at primary schools has been reported to be 50 percent lower than average. This is partly attributable to a shortage of teachers and standardized teaching methods and curriculum which limits appreciation for indigenous culture and values. While access to education in Amerindian communities continues to be limited the stated government policy is to provide indigenous children with the same educational opportunities available to the rest of the population Minority Rights International 2008.

6.3.4 Land Use Guyana is divided into the following three main geographic zones The lowlying coastal plain occupying about 5 percent of the countrys land area which ranges from approximately 5 km to 6.5 km 3 to 4 mi wide along the coast; The white sand belt a largely vegetated zone dominated by white sandy soils lying inland from the coastal zone ranging from approximately 150 km to 250 km 93 mi to 155 mi wide and containing most of the countrys mineral deposits; and The interior highlands that extend from the white sand belt to the countrys southern borders and makes up the largest land area in the country. As described above Guyana is a sparsely populated country

with the majority of the population concentrated in the coastal plain region. In 2012 the cultivated area in Guyana was estimated at 1107000 acres. Cultivated land is also concentrated in the coastal plain where the majority of the population resides FAO 2015. Figure 620 shows land cover in the coastal and white sand belt areas. In the coastal plain areas cultivated areas are evident in Regions 2 3 and 4 southeast of SBPA and occur to a lesser extent in Region 1 including SBPA. The landscape in these areas is dominated by sugar rice and coconut plantations interspersed with smaller scale establishments of nontraditional crops and livestock. May 2017 178 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Figure 620 Land Cover in Coastal Guyana Chapter 6 Existing Environment Source ERM 2014 and CCI 2012 May 2017 179 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment The SBPA is a notable feature in the coastal area. It was designated a Protected Area with the passage of the Protected Areas Act of 2011 and is the only Protected Area on Guyanas coast. More information on the SBPA is provided in Section 6.2.2.

6.3.4.1 Land Ownership The pattern of land ownership in Guyana today is approximately 85 governmentowned approximately 14 percent Amerindianowned and one to two percent privately owned. There are two land markets one consisting of freehold properties and one consisting of the lease of stateowned land. Amerindian lands are owned collectively and are not subject to transfer or sale. Approximately half of the farms in the coastal area are freehold properties and these tend to be small properties of 515 acres each Government of Guyana 1997. Leases of governmentowned lands are issued by the Guyana Lands and Surveys Commission GLSC. According to a study of the land registration system in Guyana conducted by the InterAmerican Development Bank IDB the countrys dual property registration system title registration and deed registration has regulations that overlap and conflict and is considered complex and bureaucratic. The systems are also considered ineffective in managing and enforcing rights. As a result a large number of land owners do not register their properties or do not keep their ownership rights up to date IDB 2010.

6.3.5 Economy Guyanas nominal GDP in 2015 was 653.8 billion GYD or approximately 3.2 billion U.S. dollars USD.

The per capita GDP in 2015 was 761000 GYD or approximately 3700 USD BSG 2016 and it was reclassified by the World Bank from a lower middle income to an upper middle income country in 2016 World Bank 2016. Guyanas main sectors by contribution to GDP are summarized in Table 616. Table 616 Economic Sectors and Contribution to GDP 2015 Sector Agriculture Fishing and Forestry Wholesale and Retail Trade Transportation and Storage Mining and Quarrying Construction Manufacturing Public Administration Information and Communication Financial and Insurance Activities Education Other Services Health and Social Services Real Estate Source PSC 2015 Note Percentages add to more than 100 due to rounding. May 2017 180 Percent of GDP 19.2 12.3 11.2 10.9 9.8 7.4 7.2 7.0 5.0 4.5 3.9 2.0 1.2 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Guyana relies heavily on trade with exports totaling 238.3 billion GYD 1.15 billion USD in 2015 up from 183.3 billion GYD 884.9 million USD in 2010 Guyana Bureau of Statistics 2015. The main export products for the country are sugar rice bauxite gold forest products and fish FAO 2015. Sectors that are uniquely tied to the coastal environment in Guyana as well as the mining sector are described in further detail below. 6.3.5.1 Agriculture According to the Private Sector Commission Guyana has a relatively strong agricultural sector and is the only net exporter of food in the Caribbean. In 2015 agriculture fishing and forestry accounted for 19.2 percent of the countrys GDP or 73.9 billion GYD approximately 356.7 million USD. Rice Rice farming is the predominant agricultural activity in the coastal areas of Regions 2 and 3 accounting for an estimated 85 percent of the overall economy in Region 2 and 55 to 60 percent of the economy in Region 3 ERM Personal Communication 1. Rice fields dominate the landscape in many coastal areas in these regions Figure 621. Figure 621 Rice Field in Region 2 PomeroonSupenaam The rice sector yield grew by 8.3 percent in 2015 see Figure 622. However the first half of 2016 has seen a decline in yields attributed to El Niorelated dry weather as well as an early arrival of the rainy season Ministry of Finance 2016. May 2017 181 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 622 Annual Rice Production 20112015

sennoT800000700000600000500000400000300000200000100000020112012201320142015Source Private Sector Commission 2015 According to the president of the Guyana Rice Producers Association industrial rice production requires the ability to precisely control water levels in the rice fields. The rice growers in coastal Guyana achieve this by operating two separate systems of canals one dedicated to irrigation and another dedicated to drainage. The irrigation canals convey fresh water from water conservancies via gravity to the rice fields. The rice fields are contained within a dike system that has separate gates for irrigation and drainage systems. The fields drain to a separate network of canals that were constructed to provide general drainage to the surrounding coastal landscape ERM Personal Communication 1. These canals drain to the Atlantic Ocean via manuallyoperated mechanical sluice gates locally called kokers; see Figure 623. The drainage canals are generally constructed at or very near sea level to achieve the gradient necessary for drainage of the surrounding landscape and can therefore be tidally influenced but the kokers control inflow from the sea. This system ensures that the rice fields remain upgradient of tidally influenced water in the drainage canals and prevents salt water from intruding into the fields ERM Personal Communication 1. May 2017 182 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 623 Sluice Gate Koker in Charity Region 2 at High Tide Note Seawater seeping into drainage canal from ocean through closed gate. Sugar Figure 624 shows an aerial view of sugar plantations in Region 2. Sugar production increased in 2014 and 2015 after being in decline in previous years Figure 625. According to Guyana Sugar Corporation GuySuCo the national sugar company sugar production employs 18000 people in Guyana and accounts for 40 percent of the countrys agricultural production. GuySuCos Demerara sugar is exported to markets in the European Union the U.S. and CARICOM countries. May 2017 183 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 624 Aerial View of Sugar Plantations in Region 2 Figure 625 Annual Sugar Production 20112015 sennoT25000020000015000010000050000020112012201320142015Source Private Sector

Commission 2015 May 2017 184 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Coconut The coconut industry in Guyana has grown in recent years Figure 626 and shows potential for continued growth due to high international demand for products such as coconut oil and coconut water. It ranks third after rice and sugar in terms of acreage cultivated and is grown primarily in the coastal regions including along the Pomeroon River and the Essequibo Coast in Region 2. According to recent news media articles the amount of land in the Pomeroon area being converted to coconut cultivation is increasing Guyana Chronicle 2016; Stabroek News 2016. Figure 626 Annual Coconut Production 2011-2015

sennotcirteM100000900008000070000600005000040000300002000010000020112012201320142015

Source Ministry of Agriculture 2016a Other Cash Crops Nontraditional crops crops other than sugar cane and rice grown in Guyana include tubers such as cassava sweet potato and eddo; vegetables such as eggplant pumpkin and okra; spices such as hot peppers sweet peppers and ginger; and fruits including banana papaya mango and pineapple. Data from the Ministry of Agriculture 2016a show that production for most tuber and vegetable crops has increased in recent years while yields for fruits have been more variable with some fruit crops showing declines from 2014 to 2015. Valueadded Agricultural Products According to various interviewed stakeholders establishment of manufacturing operations to develop valueadded products such as pepper sauce beverages and canned fruit are priorities at both community and strategic policy levels ERM Personal Communications 5 10 14 and 15. A number of agricultural coops in Regions 2 and 3 have achieved varying levels of success in producing and marketing such products. Nationallevel agencies such as the Ministry of May 2017 185 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Agriculture and the Private Sector Commission emphasize the importance of developing markets for such products to provide better stability and security to farmers. However there are a number of challenges associated with this including high energy costs difficulty locating or establishing markets for

products and obtaining financing for startup costs. 6.3.5.2 Fisheries and Aquaculture Marine Fisheries There are four main types of marine fisheries in Guyana MOA 2013 that can be defined by the species targeted gear types used and the depth of water where the fishery takes place. Table 617 summarizes the characteristics of these fisheries. Table 617 Primary Characteristics of Marine Fisheries in Guyana Type of Fishery Industrial Species Seabob shrimps and prawns Gear Trawls Depth Primarily between 1316 m but can occur from 075 m Semiindustrial Artisanal Red snapper and vermillion snapper Mixed fish and shrimp Shark Various Fish traps and lines Edge of continental shelf Gillnets seines and others Trawls gillnets and hook and line 018 m Throughout the continental shelf waters Note Whitebelly identified in Figure 627 is a species of shrimp and is included in the artisanal shrimp fishery. According to data from the Private Sector Commission PSC and the Ministry of Agriculture fishery yields declined between 2014 and 2015. The PSC attributes this to El Niorelated weather phenomena while the Ministry of Finance characterizes this as part of a longerterm decline caused by unsustainable overfishing including illegal fishing by foreign vessels Ministry of Finance 2015. Fishing interests and the Fisheries Department personnel also acknowledged the prevalence of illegal fishing by both foreign and domestic vessels but did not specifically implicate illegal fishing in the recent declines ERM Personal Communications 2 14 15 and 16. Fishing catches for 2007 to 2015 are shown on Figure 627. The data indicate a declining trend for fish and seabob shrimp catches in recent years although the recent decline follows an increasing trend for 2010 through 2014. The prawn industry has been voluntarily scaled back in response to limited catches resulting from overfishing in previous years with approximately 15 Guyaneseregistered boats in operation in 2016. Prawn fishing boats operate from the coast out to about 40 fathoms ERM Personal Communication 2. May 2017 186 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 627 Commercial Fisheries Catch Volumes 20072015 TotalPrawnsWhitebellyFinfish ArtisanalFinfish IndustrialRed SnapperSeabobsennoTcirteMniseicepS300002500020000150001000050000600005000040000300

Ministry of Agriculture 2016a The industrial seabob shrimp sector continues to be an important commercial fishery for Guyana and industry leaders are currently in the process of applying for Marine Sustainability Council MSC certification an internationally recognized voluntary process used to assess and certify the sustainability of wild capture marine and freshwater species. The seabob fleet currently operates under a voluntary management plan the only fisheryspecific management plan for fisheries operating in Guyanas territorial waters that calls for a sevenweeklong closed season each year. Seabob sector representatives expect the management plan to be adopted by the government and made compulsory in the near future ERM Personal Communication 2.

Aquaculture According to data from the Ministry of Agriculture the main species produced in aquaculture establishments are the fish bashaw hassar mullet querriman tambaqui tilapia and black shrimp. Data show that tilapia once dominated aquacultural yields but have declined in production while yields of tambaqui and black shrimp have increased considerably in recent years. The total yield of aquaculture product has been variable in the period from 20092015 for which data are available Figure 628. May 2017 187 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 628 Fish Yields from Aquaculture 20092015 Source Ministry of Agriculture 2016a According to the president of the National Aquaculture Association aquaculture is still a small industry in Guyana. Establishments are typically set up in abandoned rice fields. By using the same water supply and drainage configuration used for rice production the aquaculture operations avoid dependency on brackish water and can raise freshwater species despite their coastal locations. Freshwater species currently being raised in rehabilitated rice fields include hassa arapaima tilapia and tobaki pacu ERM Personal Communication 18.

6.3.5.3 Mining and Quarrying The mining sector is an important sector for Guyana and contributed to over half of exports in 2015 Guyana Bureau of Statistics 2015. Most notably raw gold bauxite and diamonds equated to 43.5 percent 9.1 percent and 1.5 percent respectively of export totals in 2015. The Guyana Geology and Mines Commission estimated that in

2010 mining and quarrying accounted for 9 percent of GDP and employed over 11000 persons directly and almost 14000 indirectly GGMC 2010. Due in large part to the mining sector Guyanas economy in recent years has reflected the path of global commodity prices. Real GDP growth decelerated to 3.8 percent in 2014 and to 3.0 percent in 2015 as global commodity prices collapsed for Guyanas major mining exports World Bank 2016. May 2017 188 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment

6.3.5.4 Manufacturing Manufacturing contributed 7.4 percent of GDP in 2015 and grew by 5.3 percent from 2014 to 2015. The most important products in terms of volume include laundry soap detergent paints putty whitewash oxygen and acetylene as well as edible goods including rice sugar and rum PSC 2015. Many of the countrys manufacturing facilities are located in coastal areas UNDP 2005.

6.3.5.5 Tourism According to the World Travel and Tourism Council tourism contributed 3.3 percent to the countrys GDP in 2015. Although most tourism infrastructure e.g. hotels is located in the most populated townships such as Georgetown Linden and Berbice many of Guyanas tourist attractions are located in the countrys hinterland. These attractions offer nature culture and adventurebased experiences such as trips to waterfalls and Amerindian villages which range from sameday to multiple night excursions. Guyana is not a popular destination for cruise ships and receives only a few small ships each year. The country does not have the berthing capacity for large cruise ships ERM Personal Communication 3. Deposition of sediment from the mouth of the Amazon River along Guyanas coast means that there are few beach offerings for tourists. The highly turbid water along the coast also likely contributes to the relatively small numbers of tourists that visit Guyana relative to other locations with clearer water in the region. Some tourism occurs at the SBPA during the sea turtle nesting season but because infrastructure and systems have not yet been established to facilitate travel or provide convenient accommodations this number is limited. In general however Guyana is thought to have considerable ecotourism potential and development of tourism infrastructure at the countrys Protected Areas is considered a key part of the Protected Areas Commissions current strategic plan PAC 2016. Data from the Department of Tourism indicate

that the number of international visitors to Guyana has doubled since the early 2000s see Figure 629 with the largest number of visitors originating from the United States followed by the Caribbean Canada and Central and South America. Because the majority of visitors consist of Guyanese expatriates returning to visit family visitor numbers peak during the summer vacation July and August and key holidays e.g. Christmas in December. According to representatives of the Department of Tourism increases in tourism in recent years are also attributable to increased hosting of regional sporting tournaments particularly cricket events in the Georgetown area. This has brought many international visitors particularly those from the Caribbean. During major events such as the Cricket World Cup traffic congestion beyond the norm was observed in the Georgetown area

ERM Personal Communication 3. May 2017 189 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 629 Annual International Visitors to Guyana 20002015

9002010211022102310241025102Source Department of Tourism 2016 Most of the major tourist attractions in Guyana such as museums the zoo parks public gardens and the Stabroek Market are located in Georgetown. Georgetown and surrounding areas are known for their many historic buildings which date from the late eighteenth century through the midnineteenth century when Guyana was first a Dutch colony and then an English colony National Trust of Guyana 2009. Guided tours of Georgetown's historic buildings and sites are available as are guided tours of attractions such as the Essequibo River the El Dorado Rum Factory and the Georgetown City Centre.

6.3.6 Employment and Livelihoods

Results of the most recent national census indicate that 87.5 percent of the labor force was employed and 12.5 percent was unemployed at this time 2012. Data from the previous census in 2002 indicate that the unemployment rate did not change in this 10year period BSG 2012; BSG 2002. In 2012 the unemployment rate in Region 1 was the highest in the country at 19.3 percent of the labor force. Region 2 had the lowest rate of unemployment in the country at this time at 10.6 percent. Regions 3 and 4 had rates of 11.8 percent and 11.3 percent respectively.

Statistics from the 2012 census indicate that 23.0 percent of the employed population 15 years of age and over in Region 1 27.9 percent in Region 2 and 18.8 percent in Region 3 had occupations in the Agriculture Forestry and Fishing industry group in 2012 BSG 2016. This was the industry group employing the largest number of workers in Regions 2 and 3 while in Region 1 this group was second to Mining and Quarrying. After the Agriculture Forestry and Fishing category Mining and Quarrying employed the second largest group of people in Region 2 14.9 percent while in Region 3 Construction employed the second largest number of workers 12.1 percent. It should be noted that the Agriculture Forestry and Fishing industry group and the May 2017 190 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment primary sector¹⁶ in general is dominated by male workers with female workers making up less than ten percent of the workers employed in this industry group in these regions. Census data show that tertiary service sector jobs such as wholesale and retail trade public administration and accommodation and food services are dominant in Region 4 including Georgetown making up 67.0 percent of jobs there . Female representation in this sector is high with women making up 48.2 percent of workers in the sector BSG 2016. Secondary and primary sector jobs make up 21.0 percent and 12.0 percent of employment in Region 4. The issues facing indigenous groups of Guyana are typically related to lack of empowerment and inclusion into the mainstream economy. The standard of living for the indigenous minority of Guyana continues to be lower than that of the majority of the countrys citizens. A larger proportion of the Amerindian population is classified as socioeconomically disadvantaged Minority Rights Group International 2008 with the lack of formal employment opportunities as a significant contributing factor. Income generation opportunities in the indigenous coastal communities of Regions 1 and 2 are scarce and include heart of palm harvesting and the wildlife trade including sale of aquarium fish IDB 2007. In the past the Region 2 village of Mainstay operated an organic pineapple farm and processing facility; however the plant was shut down several years ago ERM Personal Communication 4. Some residents of Region 1 and 2 indigenous communities also work in mining and logging camps in the hinterland IDB 2007. 6.3.6.1

Fishing Fishing along the Guyanese coast varies in scale and type. At the easternmost end of Region 2 fishing occurs at a relatively small scale and catch is typically sold locally at roadside stands or out of vehicles See Figure 630. Boats venture only a few kilometers out from the coastline and fisherfolk typically only go out for the day. Species caught include catfish bangamary and bashaw ERM Personal Communication 19. Farther west in Region 2 at Lima larger scale fishing is practiced about 8 km 5 mi offshore. Small artisanal boats are still used because the coastal mudflats in this area do not allow for the use of larger boats. Fisherfolk go out for 1012 days at a time and fish for snapper snook trout wrasse patwa catfish bangamary and butterfish. Some fish are sold locally while others are sold wholesale for resale in Georgetown ERM Personal Communications 16 20 and 21 see Figure 631. There are no landing areas for commercial fishing vessels in Region 1; small scale fishing activity occurs along the Region 1 coast and is primarily for subsistence. Fishing yields vary by season with interviewed fisherfolk reporting the highest yields in June through August. From September to January catches are at their lowest due to high winds. 16 According to the BSG the primary sector industries e.g. agriculture fishing forestry and mining make direct use of natural resources and include the production of raw materials and basic foods. The secondary sector is engaged in manufacturing using raw products from the primary sector and includes processing construction textile production brewing and bottling etc. The tertiary sector provides services to the general population and businesses including retail and wholesale trade transportation and distribution entertainment tourism healthcare etc. May 2017 191 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 630 Salted Fish Drying Outside a Fisherpersons Home in Region 2 Source ERM 2016 Figure 631 Fresh Fish Being Sold at Stabroek Market in Georgetown Source ERM 2016 May 2017 192 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Challenges for the Fishing Industry When asked about changes in fishing yields over the years responses from artisanal Region 2 fisherfolk varied with most reporting no noticeable change in catch volume. However a fisherman with a relatively

largescale operation of three boats operating out of Charity stated that catches are declining and attributed this to an overallocation of fishing licenses by the government ERM Personal Communication 17. As indicated in Section 6.3.3 annual yields in the fishery sector have declined in the last four years for fish and three of the last four years for seabob although seabob yields recovered slightly between 2014 and 2015. Although there are no data available to quantify the impact of Illegal Unreported and Unregulated IUU¹⁷ fishing in Guyana its role in threatening sustainability of the countrys fishery is considered to be significant Ministry of Finance 2015; Ministry of Agriculture 2016b. Another challenge faced by fisherfolk is piracy. Most of the fisherfolk interviewed by ERM in Region 2 have been victimized by pirates at some time. This typically consists of the theft of boats and/or engines and fisherfolk are sometimes assaulted in these confrontations. Most respondents perceived that piracy had gone down in the last 5 or 10 years. Some implicated the recent establishment of a Coast Guard Station at the mouth of the Pomeroon River as having influenced the decrease in piracy. Of those who have encountered pirates they were typically unsure of their assailants nationality but speculated that they could be Venezuelan Guyanese Surinamese or a mixed group from different countries. The dynamic accretion and erosion of the Guyanese coastline as a result of natural forces can also pose challenges for fisherfolk. During the August/September 2016 field visit ERM personnel observed considerable mudflat and beach accretion at most coastal access points along the Region 2 coast which prevents fisherfolk from landing their boats in some areas Figure 632. 17 IUU fishing takes place where vessels operate in violation of the laws of a fishery. This can apply to fisheries that are under the jurisdiction of a coastal state or to high seas fisheries regulated by regional organizations. May 2017

193 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 632 Fishing Boat Landed on a Coastal Mudflat in Region 2 September 2016 Source ERM 2016 6.3.6.2 Farming and Agricultural Processing As discussed above agriculture is a major livelihood activity in Region 2. Rice farming dominates agricultural production in Region 2 but other crops such as red beans plantains bananas eggplants

and other vegetables are grown on a smaller scale in Region 2 as well. Most households also raise livestock such as cattle hogs poultry and small ruminants. The Amerindian community of Mainstay located approximately 6 km 3.5 mi from the coast in Region 2 is known for its organic pineapples which for a number of years were processed into canned chunks for export to European markets ERM Personal Communication 4. As discussed above coconut cultivation is becoming increasingly popular in the Pomeroon area as demand for coconut water and other valueadded coconut products continues to grow. A number of farms produce coconut water for export to Trinidad and Tobago while others produce coconut oil. A group established in 2001 the Pomeroon Womens AgroProcessors Association also produces a number of valueadded products including virgin coconut oil pepper sauce cooking sauce wine and carambola cake mix ERM Personal Communication 5. In the Amerindian communities of Region 1 agricultural activities occur on a small scale and include cultivation of tubers corn cucumber eggplant ginger peppers plantains bananas watermelon beans okra pumpkin and coconut. At least one community engages in cassava processing including cassava bread starch and cassareep Protected Areas Commission 2014. May 2017 194 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Challenges for Farmers and Agricultural Processors Climate change is perceived as a challenge for some agricultural producers. For example changes in sunshine and rain patterns are thought to have contributed to decreased pineapple yields in recent years ERM Personal Communication 4. Sea level rise potentially associated with climate change is also considered a threat for coastal farmers given that the coastal plains where the majority of the countrys agricultural activity occurs lies below sea level ECLAC 2011. Outside of flood events saltwater sometimes enters into the irrigation canals through sluice gates at high tide or up the Pomeroon River during the dry season. This can adversely impact some crops such as most vegetables but may be beneficial to others such as fruit trees ERM Personal Communication 5. As noted above however the irrigation canal system for rice fields and fish farms are separated from the drainage system and draw from the water conservancies. 6.3.6.3 Speedboat Operation Guyanas

unique geography means that boating is an important mode of transport for travel between the coastal regions. Other than air travel the most rapid and direct means of accessing Region 2 from the east coast of the Essequibo River is by speedboat though a ferry service is also available. Speedboat operators servicing the route between Parika in Region 3 and Supenaam in Region 2 belong to the SupenaamParika Speedboat Owners Association which currently numbers 91 boats See Figure 633. According to a member of the association the majority of customers for this route are business owners such as shopkeepers who travel to Georgetown for supplies ERM Personal Communication 6. Speedboats are also used for transportation to communities upriver in the Essequibo and Pomeroon Rivers and to areas of Regions 1 and 2 that are not accessible by road i.e. areas west of Charity. More information on speedboat use in the coastal areas is provided in Section 6.3.8 Figure 633 Speedboats Docked in Parika Region 3 Source ERM 2016 May 2017 195

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Challenges for Speedboat Operators Although natural forces e.g. wind waves sea currents and sediments transported from the mouth of the Amazon River create a dynamic and everchanging coastline speedboats are typically able to maneuver through mud and sandbanks where ferries would be unable to traverse ERM Personal Communication 6. As a result there are no notable seasonal factors that impact business or safety for speedboat operators. However some stakeholders noted that along the Pomeroon River where there are many coconut plantations and processing plants the practice of discarding coconut shells in the river poses a danger to speedboat operators and passengers ERM Personal Communication 5 and ERM Personal Communication 6.

6.3.7 Community Health and Wellbeing According to the Ministry of Health health outcomes in Guyana continue to improve steadily with life expectancy at birth increasing from 63 years in 1998 to 67 years in 2010 Ministry of Health 2013.

6.3.7.1 Health Status Causes of Death The leading causes of mortality in 2010 were chronic diseases including cardiovascular and cerebrovascular diseases cancers diabetes and hypertension Ministry of Health 2013b. According to the World Health Organization Guyana had the highest rate of suicide of any

country in the world in 2015 at 44.2 deaths per 100000 people versus the global average of 16 WHO 2014. According to Guyanas Chief Medical Officer rates are particularly high in Regions 2 3 and 6 with the most common method being ingestion of poisons such as pesticides. No single reason is pinpointed for this phenomenon but the shortage of mental health workers and the stigma associated with mental illness leading to untreated depression are thought to be contributing factors as well as the ease of access to pesticides and other toxic agricultural substances ERM Personal Communication 7. Burden of Disease As with many other developing countries Guyana is undergoing an epidemiological transition by which noncommunicable diseases are beginning to replace communicable diseases as the leading causes of illness and mortality. This shift is largely due to trends toward more sedentary occupations and lifestyles as well as unhealthy diets and habits such as tobacco and alcohol use. Obesity is on the rise in the country along with other forms of malnutrition. Although Guyana is considered selfsufficient for food accessibility and utilization of the right types of food to maintain health are of concern leading the Ministry of Agriculture to develop the Guyana Food and Nutrition Security Strategy 20112020 Plan. This plan aims among other things to integrate agricultural practices with improved food security and nutrition Ministry of Health 2013a. May 2017 196 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Communicable diseases also continue to impact productivity quality of life and wellbeing in Guyana particularly in the hinterland regions. This is due to a number of interrelated factors including poverty nutritional deficiency and inadequate access to health services. Malaria is found in much of Guyana and is most prevalent in Regions 1 7 8 and 9. Malaria control efforts such as distribution of insectietreated bed nets and indoor residual spraying¹⁸ have been ongoing in these regions for decades. After an initial reduction in malaria prevalence in the early 2000s the number of cases increased from 2007 to 2012. Data indicate a correlation with mining activities in the hinterland areas and the countrys Central Vector Control Service now sends mobile teams to work directly with populations residing in mining camps Ministry of Public Health 2014. Figure 634 shows the number of reported new malaria cases for each region

in 2010 the most recent year for which data are available. Figure 634 Malaria Incidence by Region 2010

4 5Region6Region7Region8Region9Region10Source Ministry of Public Health 2013b Dengue fever

chikungunya lymphatic filariasis and Zika are also locally transmitted in Guyana. Unlike malaria transmission of these diseases tends to be common in populated and urbanized areas. Tuberculosis

TB continues to be a priority health concern in Guyana. It was nearly eradicated in the 1980s but saw a resurgence in the 1990s due to its association with the HIV/AIDS epidemic. In 2010 the

national average for TB incidence was nine cases per 10000 people. Regional distribution of cases in 2010 is shown on Figure 635. 18 Indoor Residual Spraying involves coating the walls and other

surfaces of a house with an insecticide that has residual activity i.e. continues to work over several months killing mosquitos on contact with the sprayed surfaces. Source Centers for Disease Control

and Prevention 2012. May 2017 197 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 635 TB Incidence Rate

by Region 2010 Inoitaupop00001repsesaC1614121086420Source Ministry of Public Health 2013b In 2015 the number of people living with HIV in Guyana was estimated at 7800 and the prevalence

rate in the population aged 15 to 49 was 1.5 percent. According to the Joint United Nations Program on HIV/AIDS UNAIDS progress has been made in addressing the HIV epidemic in the country with a

reduction in the number of HIV cases reported since 2009 as well as a reduction in the number of AIDS cases Figure 636 and AIDS-related deaths. Figure 636 Annual Number of HIV and AIDS

Cases 20012014 Source UNAIDS 2015 The Neglected Tropical Diseases NTDs lymphatic filariasis and soil-transmitted helminthiasis continue to be problematic in Guyana leading to deformity

malnutrition and social stigma in May 2017 198 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment impacted

populations. Efforts to combat these diseases in the country include mass drug administration campaigns and improvements in sanitation in endemic areas. Maternal and Child Health Guyana

has made improvements in maternal and child health in recent years but has not achieved its Millennium Development Goal MDG targets of reducing child mortality rates by two thirds and maternal mortality ratio by three quarters between 1990 and 2015. Furthermore marked disparities exist in rural and hinterland areas with the rate of under age 5 mortality at 48 per 1000 live births in rural areas and 11 per 1000 live births in urban areas UNICEF 2014.

6.3.7.2 Health Care System

Government health spending compares favorably with other Latin American and Caribbean countries and has averaged about 3 percent of GDP in recent years equivalent to 11.5 billion GYD annually 57.5 million USD Ministry of Public Health 2013b. The healthcare system in the country is highly decentralized with Regional Democratic Councils and Regional Health Authorities managing financing and providing health services. The system experiences a number of challenges related to human resources capacity and infrastructure capacity.

Health Facilities

Health facilities in the coastal regions are summarized in Table 618 below. In addition to these facilities there is one National Ophthalmology Center and one National Psychiatric Hospital in the country both located in Region 6.

Table 618 Health Facilities in the Coastal Regions

Source Ministry of Public Health 2016

According to Guyanas Chief Medical Officer some of the biggest health system shortfalls are unreliable emergency care services. This includes the lack of a functioning air ambulance system which is needed to adequately respond to mining injuries in the countrys interior and to the large number of vehicle crash injuries. There are also shortages of blood at times and capacity in hospitals is inadequate. The public hospital in Georgetown once had 900 beds but due to fires and dilapidation over the years this has been reduced to 450

ERM Personal Communication 7.

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

Chapter 6 Description of the Existing Environment

Health Human Resources

Retention of health care professionals in Guyana is a challenge as in many other developing countries that see emigration of skilled workers to developed countries. The most recent available statistics from the

Ministry of Public Health indicate that there were 6.8 physicians and 13.3 nurses per 10000 people in the country in 2010 Ministry of Public Health 2013a. Guyana currently has a Health Human Resource Action Plan for Guyana 20112016 that is aimed at addressing this issue.

6.3.7.3 Quality of Life Water and Sanitation According to the most recent Guyana Multiple Indicator Cluster Survey MICS19 94 percent of Guyanas population had sustainable access to improved drinking water sources20 as of 2014 and 95.4 percent used an improved sanitation facility21 UNICEF 2014. Figure 637 shows the percentage of the population with access to improved sources of drinking water by region. Figure 637 Percent of Population with Access to Improved Water Sources by Region 2014

Region	1Region	2Region	3Region	4Region	5Region	6Source
UNICEF 2014	19					

The MICS program was developed by UNICEF and serves as an international household survey program to collect internationally comparable data on a wide range of indicators on the situation of children and women. 20 Improved water sources refer to any of the following types of supply piped water into dwelling compound yard to neighbor or to public tapstandpipe; tube wellborehole; protected well; protected spring; and rainwater collection. Bottled water is considered as an improved water source only if the household is using an improved water source for handwashing and cooking. 21 An improved sanitation facility is defined as a facility that flushes or pourflushes to a piped sewer system a septic tank a pit latrine a ventilated improved pit latrine or a pit latrine with slab. May 2017 200 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Electricity Results of the MICS indicate that an estimated 91.2 percent of the coastal population and 56.2 percent of the interior population have access to electricity. Figure 638 shows the percent of the population with electricity in each of the coastal regions. Figure 638 Percent of Population with Electricity by Region 2014

Region	1Region	2Region	3Region	4Region	5Region	6Source
UNICEF 2014						

Telecommunications In terms of telecommunications mobile telephone coverage is quite comparable among coastal regions and an average of 88.6 percent of

households in the country has at least one member with a mobile phone. There is more disparity in other forms of telecommunications with Region 1 in particular showing lower levels of access to computers television and radio relative to other regions Figure 639. May 2017 201 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 639 Household Access to Telecommunications 2014 Mobile PhoneComputerTelevisionRadioRegion 6Region 5Region 4Region 3Region 2Region 1020406080100Source UNICEF 2014 6.3.7.4 Natural Hazards Guyana is not threatened by many natural hazards but due to its lowlying coastal plain it faces severe risk of flooding. Both changes in rainfall patterns and predicted sea level rise associated with climate change pose threats to the Guyanese population and its livelihoods. As such the country invests continuously in the construction and maintenance of sea and river defense infrastructure as well as a system of reclaimed lands drainage and irrigation canals and conservancy dams to protect agriculture in the vulnerable coastal areas. In 2005 torrential rains caused many rivers and water conservancies in the coastal plain to overflow causing flooding in Regions 1 2 3 5 and 6. The floods resulted in the direct or indirect deaths of 19 people either from drowning acute dehydration or succumbing to an outbreak of leptospirosis that occurred in the aftermath of the flooding PAHO 2005. Direct economic losses of agricultural crops livestock fisheries forestry and roads in the coastal area were estimated to total over 10 billion GYD 50 million USD UNDP 2005. 6.3.8 Marine Use and Transportation 6.3.8.1 Introduction and Methodology This section describes Guyanas existing marine and coastal transportation infrastructure with particular focus on the Project AOI. Data and information in this section were primarily obtained the Projects Final Multiwell Environmental Management Plan February 2016 and Strategic Environmental Assessment March 2014. Other sources of information include key informant interviews reports studies and other publicly available information. from Projects specific documents including May 2017 202 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment 6.3.8.2 Regional Setting The EP Act requires EIAs to assess impacts on material assets. Nearly all the Project related

activities will occur at designated shorebases on the coast coastal marine waters or offshore. Therefore for the purposes of this EIA material assets were determined to include the marine infrastructure within the AOI which consists of waterways coastal shipping channels ports and offshore shipping lanes. Guyana has approximately 1000 km 620 mi of navigable rivers to most population and economic centers. Subsea which provide water access telecommunications cables are also present in or near the PDA.

6.3.8.3 Existing Conditions in the Project Development Area

The Minister of Public Infrastructures MARAD is responsible for ensuring the safe and efficient operation of shipping activities in Guyana territorial waters. MARAD operates in accordance with the IMO and is a party to a number of IMO Conventions including conventions on Safety of Life at Sea SOLAS; Standards of Training Certification and Watchkeeping STCW; and Prevention of Pollution from Ships. Jamaican and Trinidadian shipping lanes may cross the Stabroek Block Figure 640. As described in Section 6.3.2 fisheries are of significant importance to Guyanas economy particularly in coastal areas. Marine fisheries and subsistence fishing occur throughout Guyana coastal waters from the shore to the edge of the continental shelf approximately 150 km 93 mi from shore although most fishing activity occurs well inshore from the shelf edge. Figure 641 depicts the primary fishing zones offshore Guyana by fishery type and the primary fishing ports or landing sites in Regions 2 and 3. There are no formal landing sites in Region 1. The Port of Georgetown contains more than 40 separate wharves including six primary cargo wharves ranging from approximately 130 m to 247 m 427 ft to 810 ft in length as well as four tanker berths NGIA 2014. Other privately owned docks and portside facilities near Georgetown and the mouth of the Demerara River have staging areas or storage yards although these facilities are congested and space is limited. Vessel call data for the Port of Georgetown are not available. A shipping channel is maintained on the lower Demerara River for the use of private commercial and military vessels. Pilotage is required to access the channel and is provided by the Stabroek Harbour Master. As of 2014 the Superintendent of Surveys of the Harbour Master Department indicated that ship draft in the channel was approximately 4.5 m 15 ft at low water but that dredging work was ongoing to reach a target depth of approximately 5.5 m

18 ft. The Transport and Harbours Department is responsible for the management of the national ferry service. The department has four ferry vessels three of which operate in the Essequibo River and one in the Berbice River. The ferries on the Essequibo River serve several ports also known as Stellings on either side of the Essequibo River and on Leguan and Wakenaam Islands as shown on Figure 642. May 2017 203 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment In addition to the national ferry service many smaller vessels provide transportation between Regions 2 and 3 across the Essequibo River. These smaller vessels are collectively and informally known as speedboats because they typically travel faster than the ferries Figure 633. These speedboats vary in size power and capacity but can typically carry from 5 to 15 passengers. They operate at the same ports as the national ferry service and may also call at smaller informal landings as client demand and conditions warrant.

Telecommunications A publically mapped Guyana Telephone Telegraph GTT subsea telecommunications cable which is part of the Suriname Guyana Submarine Cable System SGSCS runs through the Stabroek Block but is outside the PDA.. Since the SGSCS is outside the area of direct impact and the Project would not have any indirect impacts on it the SGSCS is not discussed further in this EIA. May 2017 204 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 640 Offshore Shipping Lanes NOTE Map does not represent a depiction of the maritime boundary lines of Guyana. May 2017 205 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 641 Fishing Zones and Ports NOTE Map does not represent a depiction of the maritime boundary lines of Guyana. housing data from the 2012 census are not yet available and indicates that detached houses are the most common type of housing in all regions. Figure 643 Proportion of Housing Types by Region

	Undivided	private	house	Flat	apartment	condo	Duplex	Barracks	Unknown	Part of a private house	Townhouse	Combined business and dwelling	Other	Region 6	Region 5	Region 4	Region 3	Region 2	Region 1												
1020406080100	Source	Bureau of Statistics	2002	Figure 644	shows the breakdown of home ownership types by region and shows that the majority of homes in the coastal area are owned by their occupants. However Regions 3 and 4 have a higher proportion of rented and squatted homes. Informal housing settlements increased in the 1980s and 1990s due to housing supply constraints causing many people to squat on vacant parcels IDB 2016. The Ministry of Communities has worked in recent years to regularize informal settlements particularly in the Georgetown area by providing services such as paved streets drainage septic tanks and water supply. If settlement sites are not suitable for permanent neighborhoods they are moved to other locations ERM Personal Communication 8; IDB 2008 2016. There are currently 216 squatting areas in the country of which 154 have been brought under the regularization program. May 2017 208	EE PGL	Environmental Impact Assessment	Liza	Phase 1	Development Project	Chapter 6	Description of the Existing Environment	Figure 644	Proportion of Home Ownership Types by	Coastal	Region	Owned	Rented	Private	Leased	Dont know	Squatted	Rented	Government	Rentfree	Other	Region 6	Region 5	Region 4	Region 3	Region 2
1020406080100	Source	Bureau of Statistics	2002	Data from the 2014 MICS indicate that the majority of homes in Guyana have a finished floor 81.2 percent roof 97.0 percent and walls 93.2 percent. However housing stock in some regions is aging and in need of upgrade IDB 2016. According to the 2002 census more than 30 percent of the housing stock in Regions 3 4 5 and 6 was built before 1970.	6.3.9.2	Ground Transportation Infrastructure	Guyana has an approximately 3990 km 2480 mi road network that is used by the approximately 80000 vehicles in the country. There are six main national paved roads that each have two lanes except for fourlane segments along the East Bank and East Coast Demerara. The road network is dependent on a system of																								

bridges and culverts that provide crossings over a dense system of canals drains and sluices throughout the coastal lowlands. Georgetown has a compact gridbased street network. Road conditions vary widely and can be poor in some locations. Most streets are no more than two lanes wide with approximately 7 m to 8m 23 ft to 26 ft of paved width Google Earth 2016. The port area is linked to central Georgetown via East Bank Demerara Road. Most intersections are not signal controlled; where signals do exist they are frequently out of service. Traffic congestion is a chronic problem in and around Georgetown. Many different types of vehicles including cars large commercial vehicles minibuses horse drawn carts bicycles mopeds scooters and motorcycles all share the same travel lanes. Traffic congestion occurs frequently including just before and just after school hours. East Bank Demerara Road is particularly susceptible to congestion due to backups at the Demerara Harbour Bridge the only road crossing of the Demerara River Figure 645. Daily retraction of the bridge for a period of about one hour causes severe traffic congestion at both ends of the bridge. The limited number of bridge openings causes delays and inconvenience to May 2017

209 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment ocean going vessels. The Government of Guyana has investigated replacing the existing bridge with a new bridge with an elevated central span that would reduce or eliminate the need for drawbridge openings further downstream Kaieteur News 2015. Figure 645 Demerara Harbour Bridge Driving behavior also contributes to poor and dangerous land transportation conditions. Speeding aggressive driving and driving under the influence of alcohol contribute to traffic accidents in Georgetown. Driving at night poses additional concerns due to poor street lighting and road conditions as well as livestock and pedestrians congregating near the roadside OSAC 2016. At the time of writing the Ministry of Public Infrastructure was working with the IDB to develop a Sustainable Urban Transport Plan for Georgetown. This will focus more on management of current traffic than addition of significant new infrastructure; for example separation of slowermoving traffic from vehicular traffic in designated lanes ERM Personal Communication 9.

6.3.9.3 Water and Sanitation According to the Food and Agriculture Organization FAO 95 percent of

water usage in Guyana in 2010 was for irrigation and livestock with four 4 percent used by municipalities and one 1 percent by industry FAO 2015. Potable Water Most potable water is obtained from the deeper aquifers that underlie Georgetown and the coastal plain. Water is distributed by Guyana Water Inc. GWI a commercial public enterprise May 2017 210 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment that has five service areas along the coast and a separate program to serve communities in the hinterland. There are three major water treatment plants in the country located in Georgetown New Amsterdam and Guyamine FAO 2015. In rural areas not served by GWI domestic water is obtained from a mix of ground surface and rainwater sources. Rainwater is often used for potable household use while river water is typically used for cleaning and other nonpotable uses. Businesses that use large quantities of water such as beverage bottling and food processing plants generally have their own wells to meet their needs FAO 2015. Agricultural Water Areas with fully developed drainage and irrigation systems are called Declared Drainage and Irrigation Areas DDIA's and are found in Regions 2 3 4 5 and 6. In these regions irrigation is by gravity from surface water resources trapped by shallow earthen dams known as conservancies. These are located in the upper stream catchment areas and store water at higher elevations than the surrounding fields. The Tapakuma conservancy is a large humanmade conservancy. It serves Region 2 and has been designed to provide irrigation to about 120 square kilometers 29650 acres. During times of water shortage this conservancy is supplemented by pumping from the Pomeroon River FAO 2015. The National Drainage and Irrigation Authority NDIA has responsibility for the maintenance and delivery of the irrigation water supply throughout the country. 6.3.9.4 Power Most of the electricity in the coastal plain of Guyana is generated transmitted and distributed by the stateowned utility Guyana Power Light Inc GPL. However due to poor reliability of the electrical supply many users also have their own diesel generators. Coastal areas that are not serviced by GPL are the Region 2 area west of Charity and Region 1. Most areas of the hinterland do not have electricity service and the government has implemented a number of hinterland energy development projects in recent years

which have included installation of solar systems and feasibility studies for hydropower and wind projects GPL 2016. The PSC has noted that the high cost of electricity in Guyana is a major challenge for business. This was also raised as an issue by representatives of agricultural processing associations ERM Personal Communications 1 5 and 10. According to the PSC development of hydroelectricity should be a major priority for the country. The plan for the 165 megawatt MW Amaila Falls hydroelectric plant was cancelled in 2015 due to delays and the potential for cost overruns ERM Personal Communication 10. Total electricity generation output in Guyana in thousands of MWhours for the period 2009 through 2015 is presented on Figure 646.

May 2017 211 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 646 Electricity Generation in Guyana 20092015 s000HWM80060040020002009201020112012201320142015Source Ministry of Finance 2015

Although Guyana has significant potential for hydroelectric and biomassfueled electricity generation at this time 83 percent of its installed generation capacity is thermal relying on expensive imported liquid fuels and making average electricity prices among the highest in Latin America and the Caribbean. The remaining 17 percent of installed capacity is biomassbased using bagasse sugarcane fibers remaining after cane juice is extracted as fuel to selfgenerate power at GuySucos sugarcane factories. There are plans to enhance the generation capacity of the GuySuco factories such that excess power is available and can be exported to the National electrical grid and the government continues to explore options for a hydroelectric power project GEA 2015; ClimateScope 2015.

6.3.9.5 Telecommunications Infrastructure As described in Section 6.3.7 the majority of households in the coastal regions have access to mobile phone service. However the lack of 4G network access has been a major barrier to increased business investment in Guyana and an issue that the PSC has prioritized. In 2016 the first 4G network in the country was installed. Fiber optic cable is also a pressing need to improve reliability and accessibility PSC 2015 of mobile phone services.

6.3.9.6 Educational Facilities Table 619 shows the number of nursery primary secondary and postsecondary schools in each of the coastal regions. The majority of postsecondary institutions

technical schools colleges and universities are found in Georgetown. May 2017 212 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Table 619 Number of Educational Facilities in Guyanas Coastal Regions

May 2017 215 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 648 Locations of Security Facilities in Immediate Vicinity of Guyanas Coast NOTE Map does not represent a depiction of the maritime boundary lines of Guyana. May 2017 216 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment 6.3.10 Cultural Heritage 6.3.10.1 Underwater Cultural Heritage Prior to EEPGLs interest in the Stabroek Block no previous cultural surveys had been undertaken within the vicinity of the PDA. EEPGL retained Fugro Marine Geoservices Inc. Fugro to conduct a geophysical and remote sensing survey of the seafloor within the PDA to identify the occurrence of any potential cultural resources that may impact or be impacted by the design and placement of planned subsea equipment for the Project. Remote sensing surveys employ various instruments that use high and/or low frequency sound waves to collect information from the seafloor. This survey used several of these including Multibeam echo sounders MBES which collect bathymetric data via a wide band of high frequency sound waves and can detect abnormal shapes which could potentially include objects of cultural interest against the surrounding landscape both AUV and hull mounted used; Side scan sonars SSS which employ high frequency sound waves to collect textural data from the seafloor and provide high resolution images of objects on the seafloor surface AUV mounted; and Subbottom profilers SBP which collect data on subsurface sediments and objects located beneath the seafloor via low frequency sound waves and are capable of locating buried shipwrecks beneath the seafloor surface both AUV and hull mounted used. Submerged archaeological sites are not expected in waters deeper than approximately 125 m 410 ft

which was the approximate sea level during the Last Glacial Maximum 20000 years before present. Since all Project components with the potential to disturb the seafloor would be deeper than approximately 125 m 410 ft the only potential cultural resources in the Project area are manmade objects that have sunk most notably shipwrecks. Fugros Offshore survey operations employed AUV mounted highresolution multibeam echo sounder MBES sidescan sonar SSS chirp subbottom profiler SBP and digital camera as well as hull mounted MBES and SBP units. The remote sensing instruments utilized and the settings employed for each instrument are provided in Table 621. The survey was divided into three areas the Liza Field Development Main AUV Survey Area; the Upper Slope and Outer Shelf Reconnaissance USOS Survey Area; and the Skipjack Survey Area. May 2017 217 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Table 621 Type Instrument MBES SSS SBP Remote Sensing Instruments and Survey Settings of Model Survey Settings Kongsberg EM2040 bathymetric system Kongsberg EM302 bathymetric system EdgeTech model 2200 fullspectrum system Frequency of 200kHz swath coverage of 150 degrees Frequency of 30kHz Dual Frequencies of 105kHz and 410kHz Hull or AUV Mounted AUV Mounted Hull Mounted AUV Mounted EdgeTech model DW106 full spectrum system Frequency Range of 1kHz to 10kHz AUV Mounted Underwater Digital Camera EdgeTech 3300 full spectrum system Prosilica Allied Vision GE4000 Frequency Range of 1kHz to 10kHz 35 millimeter digital imagery 8 m 26 ft above seafloor Hull Mounted AUV Mounted Survey Areas in which Equipment was Used Main AUV Survey AreaWhere Possible in USOS Survey Area Skipjack Area USOS Survey Area Main AUV Survey AreaWhere Possible in USOS Survey AreaSkipjack Area Main AUV Survey AreaWhere Possible in USOS Survey Area Skipjack Area USOS Survey Area As Needed for Ground Truthing in all Survey Areas ERM assessed Fugros remote sensing survey methodology including the remote sensing equipment and instrument settings employed and the results produced according to internationally recognized standards. ERM found that the methods used by Fugro and the results yielded by their survey are sufficient to provide existing cultural heritage data for the area of anticipated impact as the

methodology and quality of data produced met the guidelines and requirements for near and offshore remote sensing cultural surveys as defined by the U.S. Bureau of Ocean Energy Management BOEM and the English Heritage whose guidelines together help frame internationally recognized practices for remote sensing surveys designed to locate and assess cultural heritage. The survey was divided into three areas the Liza Field Development Main AUV Survey Area; the Upper Slope and Outer Shelf Reconnaissance USOS Survey Area; and the Skipjack Survey Area. The main AUV Survey identified 73 Side Scan Sonar Targets UD01 UD073 which were assessed for their potential as marine hazards and/or cultural resources. The targets ranged from approximately 0.5 m to 10.5 m wide and from approximately 2 m to 27 m long. Only three targets UD03 UD06 and UD070 possessed recordable height measuring approximately 0.75 m 1 m and 0.5 m tall respectively. However none of these three targets possess shapes or other characteristics that might suggest they are culturally sensitive objects e.g. shipwrecks May 2017 218 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment and upon closer inspection all three targets are thought to be either pieces of debris or geological formations. Based on an analysis of the geophysical and remote sensing data Fugro concluded that One of the targets SC17 was initially considered to be a possible vessel and thus was subjected to follow up surveys using high frequency SSS and digital photography. During this second inspection however target SC17 could not be relocated though the seafloor at its previously recorded location showed signs of the object having moved downslope drag scars. This indicates that the object is not culturally sensitive because even if it were a cultural resource it no longer maintains its original context greatly diminishing its potential research value Figure 650; Another of the targets SC110 was initially thought to be a potential vessel but upon second inspection was identified as likely being a fishing net Figure 651; and The remaining 71 targets in the main AUV Survey area were judged to be modern debris e.g. debris associated with previous well development projects cable laying efforts or geological features e.g. rock clusters or formations of no significant cultural value. As examples of modern debris three of the targets UD08 UD011 and

UD021 Figure 649 were interpreted as discarded chain or cable coils. In summary upon review of the SSS imagery and data collected ERM concluded that these 73 SSS targets are likely modern debris fishing nets chain or cable coils or geological features of no significant cultural value. Figure 649 SSS Targets UD08 UD011 and UD021 Found within the Main AUV Survey Area May 2017 219

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment Figure 650 SSS Target SC17 in the Main AUV Survey Area Figure 651 SSS Target SC110 in the Main AUV Survey Area Remote sensing efforts in the USOS Survey Area revealed no discernable objects either geological or manmade in origin and thus it was concluded that there are no cultural concerns for the USOS Survey Area. Ten SSS targets were identified in the SkipJack Survey Area each of which appeared linear in shape with lengths ranging from approximately 4 m to 78 m 13 ft to 256 ft widths ranging from approximately 1 m to 5.5 m 3 ft to 18 ft and no measureable heights Figure 652. None of these targets were concluded to represent culturally significant objects and are likely to be either geological formations or modern debris. In addition a series of subtle reflections in the SSS data located in the southeast portion of the Skipjack Survey Area are understood to represent the SurinameGuyana Submarine Cable System SGSCS TrinidadGuyana cable. May 2017 220

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment These reflections run approximately 950 m 3116 ft to the southeast and parallel to the reported asbuilt position of the SGSCS TrinidadGuyana cable. The presence of this cable accounts for the presence of discarded cable or chain remains located within the main AUV survey area. Figure 652 SSS Mosaic Showing SSS Targets Including the Potential SGSCS TrinidadGuyana Cable in the Skipjack Survey Area

6.3.10.2 Coastal Cultural Heritage Maps obtained from the Guyana National Trust also show the presence of several shell mounds seashell deposits quarries and ceramicpottery sites i.e. scatters along the Atlantic coast of Guyana including archaeological sites found near Moruka Uitvlugt Stewartville and Leonora. These sites are of significant cultural value to both the people of Guyana as well as researchers from other parts of the world as they offer insight into the material culture of

native peoples inhabiting the land before during and after contact with Europeans. However only two of the ceramic pottery sites on the maps are shown to be located near the shoreline. May 2017 221

EEPG Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6

Description of the Existing Environment 6.3.11 Ecosystem Services Ecosystem services are typically defined as the benefits that people obtain from the natural environment including natural resources that underpin basic human health and survival needs support economic activities and provide cultural fulfilment. Ecosystem services are divided into provisioning regulating cultural and supporting services. Each of these is defined below Millennium Ecosystem Assessment [MA] 2005.

Provisioning services Goods or products obtained from ecosystems such as food freshwater timber fiber and other goods. Regulating services Benefits obtained from an ecosystems control of natural processes such as climate water flow disease regulation pollination and protection from natural hazards. Cultural services Nonmaterial benefits obtained from ecosystems such as recreation spiritual values and aesthetic enjoyment. Supporting services Natural processes such as erosion control soil formation nutrient cycling and primary productivity that maintain other services. Review of information indicates that the marine and coastal environments in Guyana provide all four categories of ecosystem services some of which are critical for the wellbeing and livelihoods of coastal communities. These are described by category below.

6.3.11.1 Provisioning Services As described above marine fishing for various species of fish and shellfish is a vital source of protein and income to coastal communities. In addition to cultivated agriculture communities in the coastal area particularly Amerindian communities in Region 1 harvest a range of naturally occurring resources for household use and sale. This includes coconuts manicole heart of palm mangrove bark timber tuli palm used for roof thatch and crabwood seeds that are processed to make crabwood oil. Fishing crabbing and shrimping also occur on a small scale in the mangroves. There is also potential for apiculture in the mangroves. There are currently five apiaries with a total of 100 beehives in Region 1 and seven apiaries with a total of 120 beehives in Region 2. However it is not clear whether any of these are located in mangrove forests. In Regions 4 5 and 6 apiculture does

occur in mangroves Ministry of Agriculture 2016. Despite their protected status sea turtles and their eggs are sometimes poached in the coastal area ERM Personal Communication 11.

6.3.11.2 Regulating Services

One of the most important regulating services provided by coastal ecosystems is shoreline and flood protection. Guyanas coastal plain is vulnerable to coastal flooding due to its low elevation and mangrove forests with their dense root systems are an important component of the countrys natural and manmade sea defense system. Mangroves also filter sediments protecting sensitive seagrass beds from being smothered. May 2017 222 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 6 Description of the Existing Environment

6.3.11.3 Cultural Services

Throughout Guyanas populated coastal regions the seashore is often utilized in religious Hindu funeral and cleansing ceremonies. The Hindu community in Guyana has a number of crematoriums along the coast and ashes are disposed in the ocean as part of funeral ceremonies. In addition prayer and bathing ceremonies are performed informally by members of the Hindu community year round but especially during the holy festival of Kartik Snan which occurs in October or November each year ERM Personal Communication 12. Some members of African ethnic organizations also make use of the seashore to commemorate African Holocaust day at the Kingston Seawall in Georgetown as well as other spiritual and religious events ERM Personal Communication 13. Although infrastructure in the area is not well developed and tourism activity is limited the SBPA has high aesthetic and educational value and potential for ecotourism due to its importance as a sea turtle nesting area.

6.3.11.4 Supporting Services

Mangrove forests along the coast play an active role in nutrient cycling and act as nurseries for ecologically and commercially important fish and shellfish species. Mangrove and other coastal ecosystems such as brackish lagoons brackish herbaceous swamps and swamp forests also provide habitat for a diversity of flora and fauna including those with tourism value and potential such as migratory shorebirds WWF 2016. Assessment of Potential Impacts 7.0 ASSESSMENT OF POTENTIAL IMPACTS This chapter of the EIA discusses direct indirect and induced impacts that could occur as a result of the Project. Sections 7.1 through 7.3 discuss impacts that are expected to occur due to planned Project activities. Section 7.4 discusses impacts that are not expected to occur but could potentially occur due to unplanned events. As described in Chapter 4 this impact assessment was performed using the methodology of the ERM Impact Assessment Standard. This methodology takes into consideration both the magnitude of an impact and the sensitivityvulnerabilityimportance of the impacted resource receptor to determine the significance of the impact see Figure 71; the methodology is described in more detail in Chapter 4. In Chapter 7 the potential impacts to resources receptors are described. For each potential impact the impact magnitude and resource receptor sensitivityvulnerabilityimportance are characterized and assigned ratings as noted in Figure 71. Once these ratings are assigned the matrix is used to determine the impact significance. Figure 71 is annotated to show an example of a potential impact considering embedded controls that are part of the Project design but not yet considering any proposed mitigation measures that is assigned a magnitude of Small and for which the resource has been characterized as having a Medium sensitivity. The resulting impact significance which is termed the premitigation significance is therefore determined to be Minor as shown by the dashed circle. If a mitigation measure were to be proposed such that it reduced the impact magnitude to Negligible for example the impact significance would be reduced to Negligible as shown by the solid circle. As described in Chapter 4 positive impacts i.e. benefits are not assigned magnitude ratings and the impact significance is simply expressed as Positive. Figure 71 Evaluation of Impact Significance The impact assessment covers the Project stages described in Chapter 2 i.e. drilling and installation hookup and commissioning production operations and decommissioning. The nature of activities comprising the hookup and commissioning stage are such that all potential impacts associated with this stage are also associated with at least one other Project stage. Accordingly this impact assessment focuses on potential impacts associated with the other three stages drilling and

installation production operations and decommissioning and this effectively also addresses impacts associated with the hookup and commissioning stage. May 2017 225 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts It is also noted that not all resources/receptors have potential impacts associated with every one of these three Project stages. Accordingly there are instances where a particular Project stage is not discussed with respect to a resource/receptor.

7.1 Physical Resources

For the purposes of this EIA physical resources are intended to include nonbiological natural resources.

7.1.1 Air Quality and Climate

7.1.1.1 Introduction

This section addresses potential impacts on air quality due to emissions resulting from Project activities. Additionally while potential climate impacts are more of a global concern from cumulative worldwide greenhouse gas (GHG) emissions the section addresses potential impacts on climate from Project GHG emissions. The key potential impacts assessed include increases in ambient concentrations of pollutants as a result of stationary and mobile combustion sources associated with the Project and GHG emissions from these same sources.

7.1.1.2 Relevant Project Activities and Potential Impacts

Emissions generated by the Project generally emanate from two source categories: a specific point sources such as the power generating units and diesel engines on drill ships and on the FPSO flares used nonroutinely to combust produced gas when not consumed as fuel gas on the FPSO or injected back into the Liza reservoir vents and onboard incineration of wastes; and b general area sources such as support vessels installation vessels tug boats and helicopters. Such emissions contribute to increases in the ambient air concentrations of certain pollutants. Depending on the magnitude and extent of the increases relative to the location of potential receptors onshore in Guyana the increases may have the potential to contribute to health impacts. Because air quality for Project workers will be addressed through standard occupational exposure guidelines the air quality is in consideration to these potential onshore receptors. With respect to climate the combustion of hydrocarbons in support of Project activities will generate GHG emissions. While the GHG emissions from the Project have been estimated with an acceptable level of confidence the potential influence of those GHG emissions on global climate change is not

measurable with an acceptable level of confidence and therefore is not addressed in this EIA.

impact assessment was limited Table 71 summarizes potential Project impacts on air quality and climate.

Climate Key Potential Impacts Increased concentrations of pollutants in ambient air potentially contributing to health impacts in onshore receptors. Increased emissions of GHGs potentially contributing to climate impacts more of a global concern. Increased concentrations of pollutants in ambient air potentially contributing to health impacts in onshore receptors. Increased emissions of GHGs potentially contributing to climate impacts more of a global concern. Please see discussion in Section 7.1.1.2

7.1.1.3 Characterization of Impacts Air Quality Magnitude of Impact Air Quality Project Emissions Emissions to air from the Project have been estimated based on a number of factors including activity levels fuel type equipment capacities and standard emission factors that are published by the USEPA in the publication AP42 Compilation of Air Pollutant Emission Factors AP42. As described in AP42 an emission factor is a representative value that relates the quantity of a pollutant released to the atmosphere with an activity associated with the release of that pollutant. These factors are usually expressed as the weight of pollutant divided by a unit weight volume distance or duration of the activity emitting the pollutant e.g. milligrams of NO_x emitted per cubic meter of natural gas combusted. The use of these factors allows estimation of emissions from various sources of air pollution. In most cases these factors are averages of available data of an acceptable quality and are generally assumed to be representative of longterm averages for a particular type of source. Table 72 provides a summary of expected annual emissions from various

Project activities for three time periods 20182019 development drilling SURF installation and commissioning and operation of related support vessels; 20202021 drilling FPSO startup and associated temporary nonroutine flaring beginning of production operations tanker loading; and 20222040 production operations following cessation of drilling including temporary nonroutine flaring operation of support vessels and tanker loading. For each of the time periods following 2019 the annual emissions summarized in Table 72 represent the maximum anticipated for any one year during that time period. While there are some differences in emissions for different May 2017 227

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts years within the time periods they are relatively minor and the use of maximum emissions for the impact assessment provides a degree of conservatism in the results.

1. The annual estimated totals generally reflect the current preliminary Project schedule see Section 2.14 which 1510 980 195 could change. 2. VOC emissions are shown in this table but were not included in the impact

assessment modeling as no ambient air quality criteria have been established for these substances.

3. PM emissions represent total PM; for the purpose of the impact assessment the total PM values were used for modeling of both PM₁₀ and PM_{2.5} emissions producing conservatively high modeling results. 4. The emission rates in this table reflect annual totals. In some cases the activities generating the emission are not continuous during the year or do not operate at full capacity throughout the year. For these sources the annual emissions estimates reflect this noncontinuous operation over the year. However for the purpose of modeling conducted to compare with shortterm up to 24hour guidelines activities were assumed to be operating at full capacity for the simulated period to reflect maximum shortterm emission rates. Ambient Air Quality Guidelines and Concentrations Ambient air quality guidelines are concentration levels in air that are established by governing authorities to protect human health in locations where exposure can occur. These generally include a margin of safety to ensure that vulnerable individuals are also protected. Guyana has not established specific ambient air quality standards AQSs; therefore the guidelines used for reference in this assessment were those established by the World Health Organization WHO. The WHO guidelines are summarized in Table 73. These guidelines were published in WHO Air Quality Guidelines for Particulate Matter Ozone Nitrogen Dioxide and Sulfur Dioxide Global Update 2005 WHO 2005 except for CO and H₂S which were published in WHO Air Quality Guidelines for Europe 2nd edition 2000 WHO 2000. Existing air quality is discussed in Section 6.1.1. A concentration value of 2.5 gm³ for PM_{2.5} from a Yale University 2015 study was identified for air quality onshore Guyana. No values were found in the literature for existing onshore air quality for the other substances modeled. However Yale University 2016 published a report that ranked Guyana 6th from the best out of 180 countries in air quality. Accordingly it was concluded that onshore Guyana is an undegraded airshed for the purpose of impact assessment process see below. May 2017 229

10000 7 Air Quality Dispersion Modeling Air dispersion modeling was carried out to assess air quality impacts for onshore human receptors. The key elements of the modeling are discussed below including receptors source inputs model selection and meteorological data. Receptors A grid of potential receptor points was established for onshore areas in the Project AOI. The intent of this grid was to identify maximum predicted pollutant concentrations generated by the Project across the onshore portion of the Project AOI. The methodology utilized was to predict maximum concentrations at all of the onshore grid points using the dispersion model and then to compare these maximum values to concentrations that may potentially result in significant impacts; if the maximum predicted concentrations are determined to be not significant it follows that air quality impacts on any specific receptors throughout the onshore Project AOI also would be not significant. For this reason specific locations of sensitive receptors were not identified at the onset of modeling.

Sources With regard to source characteristics point sources were modeled with fixed stack parameters including physical dimensions and exhaust characteristics. Flares were also modeled as stacks with additional calculations applied to adjust the release height and stack parameter to account for increased thermal buoyancy associated with the high temperature of the flare. All of the emissions sources on the FPSO were conservatively modeled at a single location representing the highest predicted ambient air concentration scenario. Area sources without fixed locations were modeled in a fashion to represent their transit across planned travel areas. For example support vessels and helicopters were assumed to operate and generate emissions within the PDA and also to transit between the shore at Georgetown and the PDA. There is a potential that additional support vessels for some stages of the Project may transit between Trinidad and Tobago and the PDA; however based on the low level of emissions contributed by support vesselhelicopter traffic relative to emissions from sources in the PDA and the expectation that most support vesselhelicopter traffic will originate from Guyana shorebase May 2017 230 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts facilities modeling of

support vessel area sources was limited to vessels transiting between Guyana and the PDA. Figure 72 displays the modeling domain used in this analysis showing the locations of the main Project point sources the FPSO and the drill centers and of the area sources including support vessels helicopters installation vessels and other sources without a fixed location as configured for the modeling. Terrain elevations used in the modeling are also depicted on this figure.

Model Selection

The CALPUFF model a nonsteadystate model used in the U.S. and around the globe for longrange transport and complex wind modeling was selected for use in the assessment. CALPUFF is a Lagrangian puff model that treats a plume as a series of puffs that it tracks as the wind carries the plume towards potential receptor locations. CALPUFF is also capable of modeling nearfield impacts. The selection of CALPUFF was based on the long distance between the principal Projectrelated sources and the receptors. As shown on Figure 72 the distance from the PDA to the closest shoreline is greater than 190 kilometers. At this distance emission plumes released from Project point sources would travel for 10 hours assuming an average wind speed of 5 meterssecond typical for the area. During this transport time winds can change direction and speed. Accordingly prediction of plume dispersion is most appropriately accomplished with a nonsteady state model.

May 2017 231 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

Chapter 7 Assessment of Potential Impacts Figure 72 Air Quality Modeling Domain

Meteorological Data

The Weather Research and Forecasting WRF model was used to develop hourly meteorology inputs for CALPUFF for one year calendar year 2014. WRF is a prognostic meteorological model that creates profiles of winds and temperature at grid points across a domain. The grid spacing chosen for this analysis was 12 km so that a twodimensional profile of hourly winds and temperature was developed every 12 km within the domain shown on Figure 72. The profiles were used by CALPUFF to simulate the transport and dispersion of emission plumes from Project sources allowing the model to calculate ambient constituent concentrations at potential receptor locations.

Predicted Ambient Air Concentrations

Using the methodology described above modeling was conducted with CALPUFF to estimate maximum ambient concentrations of Projectgenerated

constituents of interest at potential onshore receptor locations. Model results were developed for each modeled constituent for each averaging period with an associated WHO guideline concentration Table 73. Results are summarized in Table 74. May 2017 232 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 74 Modeling Results Summary at Potential Onshore Receptor Locations Pollutant Averaging Period Guideline Concentration gm3 Maximum Predicted Concentration gm3 202020182021 2019 20222040 Percent of WHO Guideline 20182019 20202021 20222040 NO2 SO2 PM10 PM2.5 CO H2S 1hour Annual 10minute 24hour 24hour Annual 24hour Annual 1hour 8hour 30minute 200 40 500 20 50 20 25 10 30000 10000 7 1.3 0.1 0.1 0.0 0.0 0.0 0.0 0.0 0.0 0.3 0.3 2.1 0.2 0.7 0.2 0.1 0.0 0.1 0.0 2.6 1.5 1.5 0.1 0.6 0.2 0.0 0.0 0.0 0.0 2.6 1.4 na na 0.00002 0.6 0.3 0.0 0.1 0.1 0.1 0.2 0.1 0.0 0.0 na 1.0 0.4 0.1 0.9 0.1 0.1 0.2 0.1 0.0 0.0 na 0.7 0.2 0.1 0.9 0.1 0.0 0.1 0.0 0.0 0.0 0.0002 The magnitude rating for air quality is determined on the basis of two factors The increase in pollutant concentrations in air as a result of the Project Project Contribution PC; and The total air pollutant concentrations arising as a result of the PC added to the existing conditions the Predicted Environmental Concentration PEC. The PC and PEC are considered in the context of the relevant WHO air quality guidelines. Once the PC and PEC have been estimated there are a number of approaches that may be used to determine the magnitude of impact. In jurisdictions such as Guyana that do not have specified approaches the most commonly used is based upon guidance from the International Finance Corporation IFC. This approach is set out below on Figure 73. As shown in Table 74 for all the modeled constituents the maximum onshore concentrations predicted to result from Project activities are negligible relative to WHO guidelines all less than or equal to 1 percent of the AQS. Accordingly a magnitude rating of Negligible was assigned for impacts on air quality. May 2017 233 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 73 Definitions for Magnitude Ratings for Potential Impacts on Air Quality Undegraded airshed environmental conditions where no existing concentrations exceed a specific air quality guideline coastal Guyana is considered an undegraded airshed based

on the existing concentrations presented above. Sensitivity of Resource Air Quality The standard approach taken assumes that the sensitivity for human health within the general population is Medium. This is on the basis that as air quality standards are set to protect the most vulnerable individuals in society there is inherently a margin of safety within air quality standards. There are a small number of specific cases where the sensitivity may be defined as High; these cases include where there are particularly vulnerable individuals e.g. a hospital where there are intensive care wards and high dependency wards where patients will be particularly sensitive to air pollution. As such the airshed at all potential onshore receptor locations would be either a Medium or a High sensitivity rating. Impact Significance and Mitigation Measures Air Quality Based on the magnitude of impact and receptor sensitivity ratings the significance of impacts on air quality for all receptors is Negligible. Based on this rating no mitigation is recommended.

May 2017 234 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.1.1.4 Characterization of Impacts Climate Table 75 summarizes the estimated annual GHG emissions for the Project throughout the projected Project lifecycle. Table 75 Estimated Annual Project GHG Emissions Estimated Annual GHG Emissions in kilotonnes CO₂ equivalents

All Project Activities	Notes 1.					

1. The annual estimated totals generally reflect the current preliminary Project schedule see Section 2.14 which 1510 980 195 could change. As potential climate impacts are more of a global concern from cumulative worldwide GHG emissions as opposed to concern for a local airshed modeling of GHG emissions is typically not performed as part of an EIA for a proposed project. Additionally as there are no applicable regulatory criteria to which GHG emissions can be compared this impact was not assigned magnitude and sensitivity ratings. However EEPGL environmental performance monitoring and reporting management systems are in line with international good practice methods with respect to GHG management. EEPGL will quantify direct Project GHG emissions from the Project facilities and equipment utilized within the Project AOI. Quantification of GHG emissions will be conducted annually internationally recognized methodologies and good practice. in accordance with 7.1.1.5

Summary of Impact Significance Ratings Table 76 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on air quality and climate and the impact significance rating resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

7.1.2 Sound As indicated in Section 6.1.2 the Project would not be expected to result in significant airborne sound impacts or groundborne vibration impacts due to the distance between Project sound sources and onshore communities and receptors the Stabroek Block is approximately 190 km offshore. The only airborne sound receptors will be workers onboard the FPSO drill ships and other Projectassociated vessels. With respect to worker protection EEPGL will utilize industry standard engineering and administrative controls for sound mitigation and will monitor sound levels and provide appropriate hearing protection PPE for workers as needed. Therefore the Projects potential impacts from airborne sound and groundborne vibration were not assessed. Potential impacts from Projectrelated underwater sound are discussed with respect to potential marine life receptors in Sections 7.2.5 and 7.2.7.

7.1.3 Marine Geology and Sediments 7.1.3.1 Introduction This section describes the assessment of potential impacts on marine geology and sediments. The potential impacts assessed include changes to seafloor morphology from accumulation of discharged drill cuttings on the seafloor and changes to sediment quality from the residual hydrocarbon contained on the

discharged drill cuttings. May 2017 236 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts During installation of the FPSO and SURF components there would be some localized disturbance of sediments in a limited area; however this impact would be negligible with respect to the seafloor morphology. Additional discussion regarding potential impacts on marine benthos from these activities is provided in Section 7.2.8 Marine Benthos. No impacts on marine geology and sediments would be expected as a result of activities associated with production operations or decommissioning.

7.1.3.2 Relevant Project Activities and Potential Impacts

The process of drilling the wells will produce drill cuttings that are discharged either directly to the seafloor in open hole sections drilled riserless and with seawater or from the drill ship into the ocean in hole sections drilled with a riser after treatment i.e. solids control and centrifugal cuttings dryer system. The planned development drilling program and its cuttings management approach is consistent with industry practices and protective of the environment. For each well approximately 2600 bbl of cuttings for the open hole sections will be discharged to the sea without treatment per standard industry practice as these sections are drilled using WBDF instead of NADF. For sections drilled with a riser approximately 3300 bbl of cuttings per well discharged from the drill ship into the ocean would first be treated to remove associated drilling fluids to acceptable discharge thresholds. EEPGL will utilize a cuttings dryer that incorporates a highspeed centrifuge to achieve high liquidssolids separation reducing waste volumes. Planned discharges of drill cuttings and fluids will locally impact the marine sediment layer as a result of accumulation of cuttings on the seafloor. Cuttings will accumulate on the seafloor around the well locations with the distribution of deposition determined by oceanographic conditions. Table 77 summarizes potential Project impacts on marine geology and sediments.

Stage	Project Activity	Potential Impacts
Drilling and Installation	Discharge of drill cuttings during drilling of wells and resulting deposition of cuttings on the seafloor	Localized disturbance of sediments in a limited area; negligible impact on seafloor morphology.
Production Operations	No planned Project activities associated with Production Operations	No impacts on marine geology and sediments.
Decommissioning	No planned Project activities associated with Decommissioning	No impacts on marine geology and sediments.

Key Potential

Impacts Changes to seafloor morphology from accumulated drill cuttings Impacts on sediment quality from residual hydrocarbon on discharged cuttings None anticipated May 2017 237 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.1.3.3 Characterization of Impacts Drill Cuttings Deposition Modeling Chapter 7 Assessment of Potential Impacts Modeling of the deposition of cuttings and fluids was performed using the Generalized Integrated Fate and Transport GEMSSGIFT model. This three-dimensional particle-based model uses Lagrangian algorithms in conjunction with currents specified mass load rates release times and locations particle size distributions settling velocities and shear stress values to calculate the fate and transport of discharged drill cuttings. Model outputs provide estimates of the thickness of deposits on the seafloor and the mass distribution of base hydrocarbon adhered to the cuttings across the seafloor. Four scenarios were modeled considering the drill centers with the shallowest and deepest water depths DC1I and DC2I respectively each under two current conditions the minimum and the maximum of the monthly-averaged and depth-averaged current speeds. These current speeds were derived from the SATOCEAN ocean circulation models. To provide a conservatively high estimate of the potential accumulation rate modeling was conducted assuming cuttings from the open hole sections containing WBDF will be discharged at the seafloor as noted above these cuttings may alternatively be discharged from the drill ship prior to treatment. Table 78 summarizes the results of the modeling for the four drill cuttings discharge scenarios. Releases deeper in the water column at DC2I traveled less distance and therefore resulted in a smaller depositional footprint since the currents near the seafloor were slower than currents near the seafloor at DC1I. Higher current velocities near the surface at DC1I also contributed to a larger overall footprint size. Table 78 Summary of Modeling Results for Drill Cuttings Discharge Scenarios

Scenario	Total Area m ² with Thickness 1 cm	Total Area m ² with Thickness 5 cm
1a DC1I shallowest water depth; Min Currents	1b DC1I; Max Currents	2a DC2I deepest water depth; Min Currents
2b DC2I; Max Currents	23928	14725
3801	4056	4575
5815	1442	1590

May 2017 238 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Magnitude of Impact

Sediment Morphology Modeling of cuttings discharge and deposition indicates the maximum depositional thickness of cuttings on the seafloor is predicted to be between 19 cm and 75 cm depending on currents and well location. The cuttings for the initial open hole sections settle relatively close to the well as they are discharged at the seafloor. In contrast the cuttings for the lower well sections are subjected to greater dispersion as they are distributed by the currents during their settling from near the sea surface. A literaturebased deposition threshold of 5 cm per month Ellis and Heim 1985; MarLIN 2011 was used to assess the extent of the area with the potential to impact benthic organisms via smothering an indirect impact resulting from impacts on marine sediment morphology further discussed in Section 7.2.8. This threshold represents the accumulation rate above which benthic organisms would be expected to be unable to overcome the rate of deposition and become smothered thereby limiting their mobility and access to oxygen. Modeling predicts the extent of cuttings deposition above this threshold is confined to within a relatively short distance from the well location with the largest modeled area predicted to be approximately 43 m in diameter. Deposition thicknesses decrease rapidly with increasing distance from the well. Although the 1 cm thickness does not represent an impact threshold Table 78 also shows the predicted areal coverage of deposition above this level for each scenario. While the above results are expressed in terms of total depositional thickness at completion of drilling of the well it is appropriate to compare these total thicknesses to the deposition threshold rate of 5 cm per month. This is based on the fact that the modeling was conducted assuming a constant well completion rate that simulates even the deepest of the modeled wells being completed in approximately 21 days. In reality it is likely there will be some pauses and delays during the drilling of a well meaning the actual drilling duration likely will be greater than 21 days. Under the assumption that a subsequent well at a given drill center would not be started any sooner than 30 days after the start of the previous well at that drill center the total depositional thicknesses therefore represent a conservatively high estimate of the average depositional rate across a full month. In terms of a magnitude rating the impact on sediment morphology was viewed in the context of the resources overall functionality with respect to providing

a habitat for benthic organisms. In this sense the magnitude rating is expressed based on the fraction of the overall resource being impacted at any one time by the Project. Assuming no more than two drill ships could be drilling at any one time the conservative approach is therefore to double the highest total area results from Table 78 to reflect the largest area predicted to be subjected to a cuttings deposition rate greater than 5 cm per month at any one time. This results in a predicted area of approximately 11600 m² 124860 ft² which represents approximately 0.00004 percent of the area of the Stabroek Block. Further as described above the currents are expected to redistribute the cuttings away from their initial deposition sites over time gradually reducing their thickness on the seafloor at these locations. Considering the extremely limited scale of impact relative to the overall sediment resource of the Stabroek Block the magnitude of impact on sediment morphology from drill cutting deposition was rated as Negligible.

May 2017 239 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

Sensitivity of Resource Sediment Morphology The sensitivity of the overall marine sediment resource to morphology impacts from drill cuttings deposition is considered Low as unlike the mud banks offshore Guyana that are of critical ecological importance as feeding zones for birds nursery areas for fish and habitat for a variety of invertebrates the deepwater sediments impacted by the drill cuttings discharge do not support high densities of marine species and are not unique. A separate consideration was made for the mud banks offshore Guyana; they are of critical ecological importance as feeding zones for birds nursery areas for fish and habitat for a variety of invertebrates. Thus they were assigned a sensitivity rating of High.

Impact Significance and Mitigation Measures Sediment Morphology Based on the magnitude of impact and receptor sensitivity ratings the significance of impacts on sediment morphology is Negligible. Based on this rating no mitigation is recommended. With respect to the mud banks as discussed in Section 6.1.3 these features exist within 40 km approximately 25 mi from the shore i.e. on the order of approximately 160 km 100 mi from the drilling locations. Based on the results of modeling the cuttings would not reach the mud banks; hence the impact magnitude rating specifically for the mud

banks is Negligible. Thus despite the High sensitivity rating for the mud banks the Negligible impact magnitude leads to a significance rating of Negligible for potential morphological impacts on the mud banks. Based on this rating no mitigation is recommended. Magnitude of Impact Sediment Quality

The embedded controls in the Project design to reduce the impact of drilling discharges on sediment quality include use of WBDF to the extent reasonably practicable for drilling of initial open hole well sections and use of IOGP Group III NABF in all other cases. WBDF contains no hydrocarbons and is less harmful to marine organisms; accordingly no treatment of WBDFbased cuttings is required. When NADF is used the discharge of treated cuttings will be controlled such that residual base fluid on discharged cuttings will average 6.9 percent wet weight. The NABF to be used in the NADF by EEPGL will be IOGP Group III with low to negligible aromatic reducing the potential that changes in sediment quality as a result of discharge of the treated cuttings will lead to toxicological impacts on benthic fauna. While the magnitude rating assigned for sediment quality was not based on a quantitative calculation as was the case for sediment morphology the calculation presented for sediment morphology illustrates the extremely low proportion of the Stabroek Block impacted by drill cuttings deposition. For this reason and considering the lowtoxicity nature of the NADF the magnitude of impact is considered Negligible.

May 2017 240 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Sensitivity of Resource Sediment Quality

As in the case of impacts on sediment morphology from drill cuttings deposition the sensitivity of the marine sediment resource to sediment quality impacts from drill cuttings deposition is considered Low as unlike the mud banks offshore Guyana that are of critical ecological importance as feeding zones for birds nursery areas for fish and habitat for a variety of invertebrates the deepwater sediments impacted by the drill cuttings discharge do not support high densities of marine species and are not unique.

Impact Significance and Mitigation Measures Sediment Quality

These magnitude and sensitivity ratings lead to a significance rating of Negligible for sediment quality impacts. Based on this rating no mitigation is recommended.

Summary of Impact Significance Ratings Table 79 summarizes the impact magnitude and resource

sensitivity ratings for potential Project impacts on marine geology and sediments and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

Table 79 Stage Marine Geology and Sediments PreMitigation and Residual Impact Significance Ratings

7.1.4.1 Introduction

This section describes the assessment of potential impacts on marine water quality. The potential impacts assessed include changes to marine water quality physicochemical conditions as a result of the various effluent discharges associated with the Project. The following subsections describe the various discharges for which marine water quality impacts were assessed the application of computational models for impact magnitude quantification and a discussion of the impact assessment.

7.1.4.2 Relevant Project Activities and Potential Impacts

Planned discharges of drill cuttings and fluids may have a localized impact on marine water quality as a result of increased TSS concentrations in the water column. Cuttings and fluids released during jetting and drilling of the initial sections of the well will increase TSS concentrations around the well near the seafloor. Cuttings discharged from the drill ship will increase TSS concentrations in the photic zone the more shallow level of the water column. These increases in TSS may clog fish gills or in the photic zone cause light inhibition for photosynthetic organisms. During installation and commissioning of SURF equipment hydrotesting fluids containing bioes oxygen scavengers and corrosion inhibitors as well as hydrate inhibiting fluid such as

methanol or ethylene glycol will be discharged to the sea resulting in localized changes to water quality. The FPSO will have several discharges related to its operation and maintenance during production operations. The impacts from these discharges include localized changes to water quality from effluent discharges during production operations and localized changes to water temperature from discharge of cooling water effluent. Table 710 summarizes potential Project impacts on marine water quality. May 2017 242 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 710 Project Activities and Potential Impacts Marine Water Quality ResourceReceptor Stage Marine water quality marine fauna as receptors Drilling and Installation Production Operations Project Activity Discharge of drill cuttings resulting in increased TSS concentrations in water column Liquid effluent discharges from drill ships and marine installation and support vessels chemical substances Discharge of hydrotesting fluids Liquid effluent discharges from FPSO and marine support vessels chemical substances and elevated temperature streams Decommissioning Liquid effluent discharges from marine support vessels chemical substances Key Potential Impacts Increased TSS concentrations in water column potentially contributing to health impacts on marine fauna Increased chemical concentrations in water column potentially contributing to health impacts on marine fauna Increased chemical concentrations in water column potentially contributing to health impacts on marine fauna Increased temperature in water column potentially leading to avoidance of the area by marine fauna Increased chemical concentrations in water column potentially contributing to health impacts on marine fauna

7.1.4.3 Characterization of Impacts Increased TSS from Drill Cuttings Discharge Magnitude of Impact Increased TSS from Drill Cuttings Discharge Modeling of the deposition of cuttings and fluids was performed using the Generalized Integrated Fate and Transport GEMSSGIFT model. This threedimensional particlebased model uses Lagrangian algorithms in conjunction with currents specified mass load rates release times and locations particle sizes settling velocities and shear stress values to calculate the fate and transport of discharged drill cuttings. Model outputs provide estimates of the TSS concentrations resulting from the planned discharges. Four scenarios were

modeled considering the shallowest and deepest water depths of the four drill centers DC1I and DC2I respectively each under two current conditions the minimum and the maximum of the monthlyaveraged and depthaveraged current speeds. These current speeds were provided by the SATOCEAN ocean circulation model. As was assumed with drill cutting deposition modeling Section 7.1.3 modeling of increases in TSS concentrations was May 2017 243 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts conducted assuming cuttings from the open hole sections containing WBDF will be discharged at the seafloor as noted above these cuttings may alternatively be discharged from the drill ship prior to treatment per standard industry practice. This was confirmed to be a conservative assumption as modeling indicated the highest predicted TSS concentration increases are associated with seafloor discharge see results discussion below. Modeling of cuttings discharge and deposition predicts the maximum TSS concentrations at the seafloor occurring during drilling of the initial sections of the well would be between approximately 4323 micrograms per liter mgL and 9737 mgL depending on currents and well location. These concentrations correspond to only the initial sections of the well where WBDF and cuttings are discharged directly from the casing. In contrast modeling indicates the maximum TSS concentrations in the water column for subsequent sections of the well would be between approximately 1.6 mgL and 5.3 mgL depending on currents and well location. These concentrations are much lower because drill cuttings and fluids from the subsequent well sections are treated on the drill ship to remove a substantial amount of the drilling fluid prior to discharge at the surface. Additionally the discharges near the surface are also subjected to greater mixing from the higher current speeds at the shallower depths. A TSS threshold of 35 mgL recommended by MARPOL IMO 2006 was used to assess the extent of the area with the potential to impact photosynthesis via a reduction in light penetration an indirect impact resulting from increased TSS concentrations in the water column. Table 711 summarizes the results of the modeling for the four drill cuttings discharge scenarios. Table 711 Summary of TSS Modeling Results for Drill Cuttings Discharge Scenarios

Scenario	Maximum TSS mgL	Surface	Seafloor	Area km with TSS 35 mgL
Scenario 1	4323			
Scenario 2	9737			
Scenario 3	1.6			
Scenario 4	5.3			

Threshold SurfaceSeafloor 1a DC1I shallowest water depth Min Currents 1b DC1I Max Currents 2a DC2I deepest water depth Min Currents 2b DC2I Max Currents 2.1 4323 2.9 5517 1.6 5260 5.3 9737 0 0.094 0 0.168 0 0.091 0 0.088

Modeling predicts that TSS concentrations above the 35 mg/L threshold would occur during drilling of the initial well sections only and these instances are confined to within a relatively small area around the well locations near the seafloor where water depths are too great to allow photosynthesis. In the case of subsequent well sections none of the maximum predicted TSS concentrations in the photic zone exceed the 35 mg/L threshold. Even at the seafloor the modeling indicates TSS concentrations would be reduced to below the threshold through settling and dispersion within approximately 1 hour of cessation of the halfday of jetting and drilling for the initial well section. Based on the limited area impacted and the short time period during which concentrations above the threshold are expected to persist the May 2017 244 EEPGL

Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts magnitude of impacts on marine water quality from TSS increases resulting from drill cuttings discharge was rated as Negligible. Sensitivity of Resource Increased TSS Concentrations from Drill Cuttings Discharge The sensitivity of the marine environment to increased TSS concentrations is considered Low as densities of receptors e.g. fish and photosynthetic organisms are expected to be low in zones affected by shortlived higher TSS concentrations. Furthermore photosynthetic impacts are less relevant to the area near the seafloor which is well below the photic zone. Impact Significance and Mitigation Measures Increased TSS from Drill Cuttings Discharge These magnitude and sensitivity ratings lead to a significance rating of Negligible for marine water quality impacts from increased TSS concentrations during drilling. Based on this rating no mitigation is recommended.

7.1.4.4 Characterization of Impacts Changes to Water Quality and Temperature

ProjectRelated Discharges Impacting Water Quality and Temperature The Project will include several discharges with the potential to impact water quality and temperature. These discharges based on the preliminary design information are listed in Table 712.

brines from the Sulfate Removal Unit SRU and freshwater Reverse Osmosis RO system all associated with the production operations stage are the operational discharges that were the focus of modeling to assess the nature and extent of associated marine water quality impacts. Additionally although the discharge of hydrotest water and commissioning fluids will occur over only a short time period during the installation and SURF commissioning stage they were also included in the offshore discharge modeling as a conservative measure. Potential impacts from the other effluent discharges listed above were considered to be of Negligible significance. There may be localized toxic effects on fish crustacean plankton and benthos from chemicals in the low volume of subsea hydraulic fluid discharge but the chemicals used will be of low toxicity and will dilute and disperse rapidly. The constituents modeled for each of these discharges are listed in Table 713. The constituents are associated with potential indirect impacts on marine aquatic life as indicated in the table. The cooling water discharge is the return flow associated with a routine operational process used to cool selected machinery onboard the FPSO. The cooling water discharge will have an elevated temperature relative to the marine environment water temperature and will contain a limited amount of hypochlorite generated from seawater and added as an antibiofouling agent. Aquatic species may be indirectly impacted by the elevated temperature and residual chlorine in the discharge. Elevated temperatures may result in avoidance of the discharge area by aquatic species. Residual chlorine may interact with naturally occurring organic matter resulting in chlorinated byproducts with the potential to result in indirect toxicity impacts on aquatic species. There are no regulatory limits for residual chlorine in marine discharges in Guyana. Residual chlorine toxicity depends not only on doseage concentration and exposure time but also on individual species sensitivity. This makes defining a single impact threshold for residual chlorine exposure difficult.

Increased residual chlorine concentrations and associated toxicity impacts on marine species. Increased concentrations of OG production chemicals and associated toxicity impacts on marine species. Increased chemical concentrations and associated toxicity impacts on marine species. Increased chemical concentrations and associated toxicity impacts on marine species. Gas Injection Line Commissioning Fluid Hydrate inhibitor e.g. methanol or monoethylene glycol Increased concentrations of hydrate inhibitor and associated toxicity impacts on marine species. Discharge of produced water containing OG and residual quantities of certain production and water treatment chemicals can result in locally increased concentrations of chemical constituents in the marine environment. Depending on the specific constituent concentrations in these discharges some aquatic species may experience indirect toxicity impacts from these constituents. Hydrotest water discharges may contain bioes oxygen scavengers and corrosion inhibitors which can result in locally increased concentrations of chemical constituents and associated potential for indirect toxicity impacts on aquatic species. The hydrotest discharge hydrate inhibitor discharge and initial FPSO ballast discharge will occur only during a limited time period during SURF installation and commissioning activities unlike the discharge of cooling water produced water and wastewater all of which will occur continuously during production operations. May 2017 248 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Magnitude of Impacts Changes to Water Quality and Temperature The model used to predict the nature and extent of discharge plumes from the various discharges was USEPAs CORMIX dilution model. CORMIX is a design tool routinely used by regulatory agencies to estimate mixing zones resulting from water discharges. Understanding the mixing characteristics of the various discharges and assessing impacts requires understanding the properties of the discharged effluent e.g. temperature the properties of the

receiving ambient water and the method by which the discharge stream enters the ambient water e.g. pipe diffusers. Collectively these factors control the nearfield mixing and dilution of the discharge. Discharge velocity an important determinant of the mixing characteristics of a discharge is directly related to the discharge pipe diameter. At a given discharge flow rate smaller pipe diameters result in higher exit velocities which facilitate increased mixing. However engineering constraints may limit the degree to which the pipe diameter can be reduced. As the design for the Project has not been finalized conservative assumptions were used for the modeled pipe diameter. Pipe diameters that are smaller than those considered in the modeling will result in increased mixing and reduced concentrations at the edge of mixing zone. For the receiving environment the ambient currents selected for modeling consisted of bounding cases 5th and 95th percentile for the range of current velocities identified as well as a typical case 50th percentile for the range of current velocities identified. Ambient temperatures selected for modeling also consisted of bounding cases 1st and 99th percentiles and a typical case 50th percentile. The modeling of potential impacts from these discharges found that even under the most conservative bounding case for each discharge modeling scenario the discharges were subject to rapid mixing and consequently experienced substantial reductions in constituent concentrations within a relatively small distance from the point of discharge. Guyana has not established a specific thermal discharge limit; therefore 3C maximum temperature rise at a distance of 100 m from the discharge point was used as a reference point for cooling water and produced water discharges consistent with recognized international benchmarks and a level appropriately protective of the marine environment. Table 714 summarizes the results of the modeling study of discharges for the most conservative bounding cases including percent reduction in constituent concentrations at the 100 m reference distance. International standards and guidelines and established regulatory requirements provide appropriate benchmarks for OG in produced water and MARPOL specifies limits on OG in bilge water. There are no prescribed limits for the constituents contained in the other discharge streams. May 2017 249 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

Table 714 Summary of Modeling Results for Most Conservative Bounding Case predictions at 100 m reference distance Discharge Scenario Most Conservative Bounding Case Conditions Modeled Parameters Constituents Modeled Results at 100 m Cooling Water Thermal Cooling Water Residual Chlorine Minimum ambient temperature maximum ambient current Minimum ambient temperature maximum ambient current Temperature Rise²² Ambient temperature rise 3C Residual Chlorine 89 reduction Produced Water Maximum ambient current Sulfate Removal Potable Water Processing Brines Maximum ambient current Hydrotest Water Minimum ambient current OG²³ Temperature Rise Residual production chemicals Hypochlorite Electrolytes Bioe Oxygen Scavenger Scale Inhibitor Bioe Oxygen Scavenger Corrosion Inhibitor Hydrate Inhibitor Gas Injection Line Commissioning Fluid Minimum ambient current ethylene glycol; high ambient current methanol Hydrate inhibitor either methanol or ethylene glycol 92 reduction 98 reduction 99 reduction Concentration reduces to 32 of published No Observed Effect Concentrations NOECs under worstcase discharge conditions In terms of impacts on marine water quality from hydrotesting and production operations Table 715 summarizes the assigned magnitude ratings based on consideration of the extent of impact and concentrations relative to the marine aquatic life thresholds identified. ²² Design specification for the cooling water discharge port were not finalized at the time of the EIA; modeling was conducted to determine the combinations of discharge port diameters and discharge depths that would result in a temperature rise less than 3C at the edge of the 100m mixing zone. ²³ Discharges will adhere to a limit of 42 mg/L oil grease daily maximum and 29 mg/L monthly average at the point of discharge consistent with recognized international benchmarks and appropriately protective of the PDA marine environment. May 2017 250 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 715 Magnitude Ratings for Modeled Hydrotesting and Production Operations Discharges Discharge Impact Magnitude Rating Rationale for Magnitude Rating Cooling Water Small Produced Water Negligible Sulfate Removal Potable Water Processing Brines Negligible Hydrotest Water Negligible Hydrate Inhibitor Gas Injection Line Commissioning Fluid Negligible Modeling indicates

the temperature differential in the water column will reduce to no greater than the reference temperature within the recommended 100 meter mixing zone. At this same distance chlorine concentrations are predicted to decrease by 89 percent. At the 100 meter reference distance OG and residual production and water treatment chemicals are predicted to decrease by 92 percent and temperature rise is predicted to be less than 3C. At the 100 meter reference distance hypochlorite electrolyte bioe oxygen scavenger and scale inhibitor concentrations are predicted to decrease by 98 percent. At the 100 meter reference distance bioe oxygen scavenger and corrosion inhibitor concentrations are predicted to decrease by 99 to 99.5 percent depending on pipe diameter. In addition to the minimal size of the plume the release is temporary approximately 60 minutes or less. At the 100 meter reference distance hydrate control fluid methanol or monoethylene glycol is predicted to decrease by 99.6 to 99.9 percent depending on the fluid selected. In addition to the minimal size of the plume the release is temporary matter of hours. Considering the information presented above the magnitude of quality and temperature impacts on marine water quality was rated as Negligible.

Sensitivity of Resource Changes to Water Quality and Temperature The sensitivity of the marine environment to elevated constituent concentrations and increased temperature is considered Low as the marine fauna used as representative receptors would not be sensitive to chemical constituent concentrations or temperatures at the modeled levels; furthermore species would only be expected to be present in the area of discharge for a limited time.

Impact Significance

Mitigation Measures

Changes to Water Quality and Temperature These individual magnitude and sensitivity ratings lead to a significance rating of Negligible for marine water quality impacts from the individual discharges.

7.1.4.5 Summary of Impact Significance Ratings Table 716 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on marine water quality and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment May 2017 251

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts methodology described in Chapter 4 and summarized at the beginning of this chapter. Although the

modeling results for the individual discharges predict that the impacts associated with each discharge would be individually insignificant the potential synergistic effects of these discharges on sensitive marine biota supports a higher rating than what would otherwise be supported by the impact ratings for each individual discharge. Therefore the overall magnitude of the water quality impacts has been elevated to Small for all Project stages.

7.2 Biological Resources For the purposes of this EIA biological resources is intended to include flora fauna and the habitats on which they depend.

7.2.1 Protected Areas and Special Status Species This section describes the assessment of potential impacts on protected areas and special status species.

7.2.1.1 Protected Areas Planned activities of the Project and associated air emissions effluent discharges and sound generation which will occur approximately 190 km 120 mi offshore will not impact Shell Beach Protected Area SBPA which is Guyanas only designated protected area within the Project AOI. The Projects only potential impacts on SBPA would be as a result of an unplanned event which is discussed in Section 7.4.

May 2017 252 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

7.2.1.2 Special Status Species Relevant Project Activities and Potential Impacts Chapter 7 Assessment of Potential Impacts Projectrelated impacts on special status species can be considered a subset of the biological resource impacts; however potential impacts on special status species require special consideration because these species are assumed to have a diminished capacity to recover due to their conservation status. A list of species occurring in Guyana and their conservation status is provided in Appendix H. As all of the marine turtles occurring in Guyanas waters carry a ranking of Critically Endangered Endangered or Vulnerable the assessment of potential impacts to marine turtles Section 7.2.6 effectively covers the assessment of

potential impacts to special status marine turtles. One of the marine mammals species observed in the PDA carries a Vulnerable status. Accordingly the assessment of potential impacts to marine mammals section 7.2.5 effectively covers the assessment of potential impacts to marine mammals. For these reasons marine turtles and marine mammals are not discussed in this section on special status species. With respect to fishes four Critically Endangered species Atlantic goliath grouper daggenose shark Caribbean electric ray and largetooth sawfish and six Endangered species Nassau grouper golden tilefish whale shark squatheaded hammerhead scalloped hammerhead and Atlantic bluefin tuna have the potential to occur in the nearshore and offshore areas of Guyana. All have been listed as Critically Endangered or Endangered due to a combination of fishing mortality both as target species or bycatch habitat loss slow maturation rates and low fecundity. For the Critically Endangered fish species all estuarine and nearshore fish species habitat loss is an important driver whereas for the Endangered fish species fish distributed farther offshore habitat loss is a much less important driver than fishingrelated mortality. As the Critically Endangered fish species are estuarine and nearshore species the planned activities of the Project will not directly impact habitat for these species. As the Endangered fishes are distributed farther offshore they will have the potential to encounter the Project marine vessels; however the Project will not permanently alter habitat conditions for these species. The Project will not impact fishingrelated mortality rates for any fish species. Furthermore the Project will not impact any of the underlying causes for these species declines across their ranges as cited by the IUCN. Giant otter *Pteronura brasiliensis* is also listed as Endangered. Giant otters are Endangered due to a combination of the legacy impacts of historically widespread hunting and presentday destruction of riparian tropical forests especially along large interior rivers IUCN 2014. The Project will not impact giant otter habitat nor will it impact the species capacity to recover or rate of recovery from legacy impacts. Vulnerable species other than whales and turtles include a mix of elasmobranchs sharks and their relatives marine mammals West Indian manatee fish groupers and snappers and the Agami heron *Agamia agami*. Deforestation hunting and use of pesticides are the primary factors for the Agami herons Vulnerable

status BirdLife International 2012b. Numerous May 2017 253 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts factors including habitat loss have been implicated in the declines of fish and the manatee. The Near Threatened category comprises fishes almost entirely of elasmobranchs the neotropical otter *Lontra longicaudis* and the semipalmated sandpiper *Calidris pusilla*. The elasmobranchs and bony fishes in both categories are listed primarily due to overfishing slow maturation rates and low fecundity. The neotropical otter is Near Threatened due to a combination of habitat destruction and local conflicts with fishermen and is also sensitive to chemical and organic pollution Rheingantz 2015. Deforestation hunting and use of pesticides are the primary factors for the semipalmated sandpipers Near Threatened status BirdLife International 2012c. Overfishing is the primary factor implicated in the status of the Near Threatened bony fish groupers snappers and tunas. The Project will be located within offshore habitat for several of these Vulnerable and Near Threatened species and near inshore habitats but will not alter the value of the habitats or the capacity of these habitats to support these species. The Project will not affect rates of coastal habitat loss recovery hunting or residual pesticide concentrations in the Agami herons or neotropical otters habitat so it will not affect these species capacity to recover from these impacts. The combination of overfishing slow maturation rates and low fecundity contribute to long recovery times for listed fishes but the Project will have no effect on these species capacity to recover. Characterization of Impacts Tables 717 and 718 provide the definitions used to assign impact magnitude and receptor sensitivity ratings for special status species the same rating definitions are employed for marine turtles and marine mammals in their respective sections. Table 717 Definitions for Magnitude Ratings for Special Status Species Criterion Definition Magnitude Negligible Impact is within the normal range of variation for the population of the species. Small Impact does not cause a substantial change in the population of the species or other species dependent on it. Medium Impact causes a substantial change in abundance and/or reduction in distribution of a population over one or more generations but does not threaten the long term viability/function of that population or any population dependent

on it. Large Impacts entire population or a significant part of it causing a substantial decline in abundance and/or change in and recovery of the population or another dependent on it is not possible either at all or within several generations due to natural recruitment reproduction immigration from unaffected areas.

Table 7.18 Definitions for Receptor Sensitivity Ratings for Special Status Species

Species	Criterion	Definition	Sensitivity
Negligible	Species with no specific value or importance attached to them.	Low	Species and subspecies of Least Concern on the IUCN Red List or not meeting criteria for medium or high value or without specific anatomical behavioral or ecological susceptibilities to Project-related impacts.
Medium	Species listed as Vulnerable Near Threatened or Data Deficient on the IUCN Red List species protected under national legislation nationally restricted range species nationally important numbers of migratory or congregatory species species not meeting criteria for high value and species vital to the survival of a medium value species.	High	Species on IUCN Red List as Critically Endangered or Endangered. Species having a globally restricted range i.e. endemic species to a site or found globally at fewer than 10 sites fauna having a distribution range less than 50,000 km ² internationally important numbers of migratory or congregatory species key evolutionary species and species vital to the survival of high value species.

For the marine fish species addressed in this section the starting assumption was that the same impact magnitude ratings used for potential impacts to marine fish in general section 7.2.7 are applicable for special status marine fish. However additional considerations were applied to the specific special status species to assess whether these magnitude ratings are appropriate. Based on these additional considerations magnitudes for the various special status marine fish categories were assigned as follows

- Critically Endangered** o These species are all nearshore species and thus will not be subject to the same level of potential interactions with planned Project activities that form the basis for the various potential impacts to marine fish in general. Accordingly a magnitude of Negligible was assigned.
- Endangered** o While Nassau grouper is listed as occurring in Guyana waters this species is primarily

a coral reef species. The PDA does not include coral reefs and this species is thus not likely to be present resulting in a magnitude rating of Negligible.

- o With the exception of golden tilefish the other species are pelagic species that are not prone to congregating around offshore structures; accordingly potential impacts that are predicated on marine fish occupying areas around Project vessels i.e those impacts related to marine discharges vessel sound attraction by light and entrainment by seawater intake are less of a concern than for other marine fish in general. Further related to bottom habitat disturbance and VSP or pile driving sound impacts are not a concern for pelagic species. Golden tilefish are known to prefer clay substrates and would not be expected to congregate over the mud substrate that dominates the PDA. For this reason the potential impacts listed in Section 7.2.7 are all assigned a magnitude rating of Negligible for Endangered fish species.
- o As described above the Project will not impact giant otter habitat nor will it impact the species capacity to recover from legacy impacts resulting in a magnitude rating of Negligible.

May 2017 255 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

- o While the same logic applies for some of the Vulnerable fish species as for the Endangered species described above some other Vulnerable species are likely to have similar behavioral characteristics as the marine fish in general; accordingly as a conservative measure the magnitude ratings from Section 7.2.7 were applied Small for several potential impacts.
- o The Agami heron is a coastal species unlikely to be subject to significant interaction with Project activities resulting in a Negligible impact magnitude.
- o Near Threatened
- o The same approach was used for Near Threatened fish species as for Vulnerable fish species i.e. a magnitude of Small was assumed consistent with marine fish in general.
- o The neotropical otter and semipalmated sandpiper are coastal species unlikely to be subject to significant interaction with Project activities resulting in a Negligible impact magnitude.

Considering the information above Table 719 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on special status species and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in

Chapter 4 and summarized at the beginning of this chapter. 7.2.2 Coastal Habitats The planned Project activities and associated air emissions effluent discharges and sound generation which will occur approximately 190 km 120 mi offshore will not impact any coastal habitats. Operation of the Guyana shorebases will have little to no impact on coastal habitat. The shorebases are expected to be located in existing developed areas. The Projects only potential impact on coastal habitats would be as a result of an unplanned event which is discussed in Section 7.4. May 2017 257

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.2.3 Coastal Wildlife and Shorebirds The planned Project activities will not impact any coastal wildlife or shorebirds. The Project will not involve any direct disturbance of these species and their habitats and the Projects air emissions water discharges and sound generation which will occur approximately 190 km 120 mi offshore will not impact these species. The use of the Guyana shorebases will have little to no impact on coastal species other than common generalist species that are adapted to living in developed areas. The shorebases are expected to be located in existing

developed areas. The Projects only potential impact on coastal wildlife and shorebirds would be as a result of an unplanned event which is discussed in Section 7.4.

7.2.4 Seabirds

7.2.4.1 Introduction

This section discusses potential impacts on seabirds from planned Project activities. Thirty seabird species have been documented in Guyanas offshore waters including the area in and around the PDA. Several resident seabird species occur in the area throughout the year and migratory seabirds typically occur in the area starting late summer with many remaining through winter. When seabirds are not breeding they primarily live in offshore environments moving with prey resources and roosting and loafing on islands or artificial structures in the ocean or simply rafting²⁴ on the ocean surface. The presence of seabirds in a given area is heavily resource driven with individuals and groups of seabirds primarily attracted to prey concentrations. No evidence suggests that large concentrations of seabird prey primarily fish consistently occur in the PDA that would promote regular use by foraging seabirds. Rather seabirds in the area are likely transients moving opportunistically with schools of fish and other prey. The turbid conditions in the PDA further reduce the likelihood that the area has significant importance for foraging seabirds. Further no islands or artificial structures occur in the PDA so the area does not contain any known roosting or loafing areas where large numbers of seabirds might congregate. As such it is expected that seabirds occur in the PDA throughout the year but at a low density and for short transient periods depending on prey availability.

7.2.4.2 Relevant Project Activities and Potential Impacts

Table 720 summarizes the potential impacts of planned Project activities on seabirds.

²⁴ Rafting is a common seabird behavior involving a tight aggregation of seabirds floating on the ocean surface to form a raft.

May 2017 258

Assessment of Potential Impacts Table 720 Project Activities and Potential Impacts Seabirds

Stage	Project Activity	Presence of drill ships and installation vessels	Drilling and Installation	Operation of supply and support vessels	Key Potential Impact
Physical presence of drill ships and installation vessels with lighting potentially acting as an attractant to seabirds exposing them to collision risks	additional energy expenditure and compromised navigation for nightmigrating birds. Vessels may be				

of benefit to some species that use the vessel for rest or shelter during long flights or adverse weather. Strikerelated injury or mortality particularly with rafting seabirds. Light and sound disturbance leading to attraction to or avoidance of the exposed area. Discharge of drill cuttings Exposures to permitted discharges Discharge of wastewater effluents Marine aviation Presence of FPSO Production Operations potentially leading to toxicological or metabolic impacts. Bird strike by helicopters. Physical presence of FPSO with lighting potentially acting as an attractant to seabirds exposing them to collision risks additional energy expenditure and compromised navigation for nightmigrating birds. Structures may be of benefit to some species that use the structure for rest or shelter during long flights or adverse weather. Discharge of cooling water and produced water Discharge of wastewater effluents Exposures to permitted discharges potentially leading to toxicological or metabolic impacts. Operation of supply and support vessels Strikerelated injury and mortality lighting disturbance. Nonroutine flaring Marine aviation Decommissioning Decommissioning activities PDA and related vessel traffic Mortality or injury from bird exposure to radiant heat from the flare. Bird strike by helicopters. Ship and helicopter strikerelated injury or mortality. Light and sound disturbance from decommissioning activities leading to attraction to or avoidance of the exposed area. Removal of a reliable food source if the FPSO acts as an attractant for seabird prey. May 2017 259 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Potential impacts from seabird exposure to discharge of drill cuttings produced water and other wastewater effluents are expected to be negligible because the effluents are not highly toxic the discharges would rapidly mix with ambient water and the numbers of seabirds potentially exposed to the effluents is expected to be low. Sections 7.1.3 and 7.1.4 provide further analysis of the impacts of these discharges on marine sediment and water quality respectively. While individual seabirds could be significantly impacted through contact with the flare structure its flame or its radiant heat plume the likelihood of a seabird being present in the heat zone when temporary nonroutine flaring is occurring is extremely low. Accordingly the assessment of potential impacts on seabirds is focused on a direct mortality and

injury of seabirds related to attraction to offshore Project facilities; and b direct mortality and injury related to vessel ship or air strikes. Potential benefits from the Project to seabirds are use of the FPSO drill ship and installation vessels for rest or shelter during adverse weather conditions and if such vessels acts as consistent attractants for seabird prey providing a reliable food resource for seabirds. However this is not expected to be a significant benefit to seabirds at the population level and is not discussed further herein.

7.2.4.3 Characterization of Impacts Direct Mortality and Injury Related to Attraction to Offshore Project Facilities

Magnitude of Impact Direct Mortality and Injury Related to Attraction to Offshore Project Facilities

Seabirds are known to aggregate around large offshore installations such as drill ships and can be present in aboveaverage numbers due to artificially increased food concentrations lighting and attraction to the structure itself for roosting Weise et al. 2001. The impacts of attraction and aggregation by seabirds around an offshore facility can be both positive and negative and can vary considerably by species and more specifically a species typical behavior and the type and length of use of the impacted area. The structure may be beneficial to seabirds by providing a resting place or shelter during feeding migration or adverse weather in areas where these places would otherwise not be found. The negative impacts of seabird attraction to offshore facilities primarily relate to lighting. The drill ships installation vessels and FPSO will operate 24 hours a day so at night time there will be a considerable source of artificial light in an otherwise dark environment. Lights on offshore oil platforms and other installations are known to act as an attractant to seabirds and typical offshore installation lighting extends roughly 3 to 5 km 2 to 3 mi around the source Weise et al. 2001. Poor weather such as fog precipitation and low cloud cover can exacerbate the impact of nocturnal attraction to lights especially when coincidental with bird migrations Ronconi et al. 2015.

May 2017 260 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

Lighting on offshore facilities can be disorienting to night migrating birds particularly waterfowl which migrate using stellar cues that can be obscured by lights Gaston et al. 2013. Birds lose their stellar cues for nocturnal navigation under low cloud ceiling or other adverse weather conditions and in these circumstances

artificial lights become the strongest cues that birds have for navigation. As a result they are attracted to the lights and will fly around them for extended periods a phenomenon which is referred to in the scientific literature as the trapping effect or light circling. The time individual birds spend circling ranges from a few minutes to several hours to days with an average of around 15 minutes Marquenie 2007. The consequences of this may be 1 energy wasted circling the installation which can be problematic for individual birds undergoing long migrations; 2 collision with the structure or other birds resulting in mortality or injury which can cause individual birds to remain on the structure for long periods where there is no drinking water; 3 increased exposure to Project facilities and activities from the attraction to the area and potential exposure to radiant heat from flaring events which can cause injury or death; and 4 increased risk of predation due to weakness disorientation or injury following long periods of circling or collision with a Project structure Baird 1990; Ronconi et al.. 2015; Platteeuw and Henkens 1997; Deda et al. 2007. As an embedded control to manage lightingrelated impacts from the Project lighting on the FPSO and major vessels will be directed where practicable to required operational areas rather than at the sea surface or skyward. This will reduce the intensity and locations of lighting that seabirds may be exposed to by the Project. Further the Project area is not located within a major seabird migratory flyway nor is it known to support large numbers of seabirds; accordingly the number of individuals that could be impacted by the potential impacts described above is expected to be small meaning the Project would not impact any seabird species at the population level. As such the overall magnitude of the impacts from seabirds being attracted to Project facilities is considered to be Small. Sensitivity of Receptor Direct Mortality and Injury Related to Attraction to Offshore Project Facilities Seabirds are expected to occur in the PDA throughout the year but at low densities and primarily as transients moving with prey resources. All of the 30 species of seabirds known to occur in the area are listed on the IUCN Red List as Least Concern. Several impact exposure events are likely to occur for seabirds; however taking into account their conservation status and that only a few individuals are likely to be impacted rather than whole populations the sensitivity of the seabird receptor is considered Low. Impact

Significance and Mitigation Measures Direct Mortality and Injury Related to Attraction to Offshore Project Facilities These magnitude and sensitivity ratings lead to a significance rating of Negligible for direct mortality and injury impacts on seabirds related to attraction to offshore Project facilities.

May 2017 261 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.2.4.4 Characterization of Impact Direct Mortality and Injury Related to Vessel or Helicopter Strikes Magnitude of Impact Direct Mortality and Injury Related to Vessel or Helicopter Strikes Rafting seabirds may suffer injury or mortality from collision with vessels transiting to and from the FPSO. However rafters are not likely to be present in large aggregations in the PDA because of the metocean conditions offshore Guyana namely a strong surface current which is likely to make the surface waters unsuitable for the large aggregations of species that favor more calm and sheltered conditions. The EEPGL seismic surveys conducted in the Stabroek Block in 2015 and 2016 did not document any concentrations of rafting seabirds in the area during their survey period RPS 2016. On the rare occasions that suitable conditions for rafting occur in the PDA and seabirds are present in high enough concentrations to form rafts individual seabirds could be susceptible to vessel strike and related injury or mortality. However large seabird rafts are easily detectable by oncoming vessels and these vessels could maneuver to avoid them if the birds do not move out of the vessels path. Helicopters will be used as a form of transit to from the Guyana shorebases and offshore vessels and could adversely impact seabirds through helicopter strike of individuals flying near helicopters transiting around or in route to from the drill ships FPSO and installation vessels. Helicopter trips to and from the PDA are not expected to exceed more than a few each day so the duration and number of helicopterbird interactions is expected to be low. Given the low likelihood of vessels encountering rafting seabirds and EEGPLs embedded control of providing standing instruction to Project dedicated vessel masters to avoid any identified rafting seabirds when transiting to and from PDA where safe and feasible if the birds do not move out of the vessels path as well as the limited number of helicopter flights per day to the Project facilities and vessels the magnitude of this potential impact is Small. Sensitivity of Receptor

Direct Mortality and Injury Related to Vessel or Helicopter Strikes On the same basis as described in Section 7.2.4.3 the sensitivity of the seabird receptor to this impact is considered Low. Impact Significance and Mitigation Measures Direct Mortality and Injury Related to Vessel or Helicopter Strikes These magnitude and sensitivity ratings lead to a significance rating of Negligible for direct mortality and injury impacts on seabirds related to vessel or helicopter strikes.

7.2.4.5 Impacts Related to Decommissioning Decommissioning activities for the FPSO and related vessel traffic may impact seabirds in similar ways to that described for the installation and production operations stages including potential for ship and helicopter strike-related injury or mortality and light and sound disturbance from decommissioning activities leading to avoidance of the exposed areas. As May 2017 262 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts stated previously in this section these impacts are expected to impact individual seabirds but have negligible impacts on seabirds at the population level. Once decommissioning activities are completed the absence of the FPSO and the activities of the related support vessels ships and helicopters will remove the attraction and strike-related risks and impacts to seabirds providing a benefit due to the elimination of ongoing risks and impacts. However should the FPSO become an attractant for seabird prey or a regular resting place for migrating seabirds during the production operations stage removal of the facility could have a temporary adverse impact due to the removal of a reliable food source and/or rest area. This impact would be temporary since the birds should quickly adjust to the changed condition.

7.2.4.6 Summary of Impact Significance Ratings Table 721 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on seabirds and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. Table 721 Seabirds PreMitigation and Residual Impact Significance Ratings

Stage	Receptor	Impact Magnitude	Sensitivity	PreMitigation Significance Rating	Negligible	Proposed Mitigation Measures	Residual Significance Rating	None
Negligible	Small	Low	Small	Low	Negligible	None	Negligible	Drilling and Installation Production

Operations All Project stages Seabirds direct mortality and injury from attraction to offshore Project facilities. Seabirds direct mortality and injury from vessel or helicopter strikes.

7.2.5 Marine Mammals

7.2.5.1 Introduction

As described in Section 6.2.6 toothed whales sperm melon headed and pilot whales and dolphins pantropical and bottlenose are the most likely marine mammal species that could be encountered in the PDA. Brydes whales and other unidentified baleen whales have also been observed in offshore waters in the PDA. Nearshore other dolphins such as common spotted and spinner dolphins may be encountered. The West Indian manatee is sparsely distributed in coastal and riverine waters of the region and may be encountered in the Demerara River area.

Chapter 7 Assessment of Potential Impacts

7.2.5.2 Relevant Project Activities and Potential Impacts

As shown in Table 722 certain planned Project activities could impact marine mammals either through direct mortality vessel strikes or through disturbance leading to changes in behavior and reduced vigor i.e. as a result of light sound and/or actions from Project activities.

Table 722 Project Activities and Potential Impacts Marine Mammals

Sound disturbance leading to deviation from area May 2017 264 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.2.5.3 Characterization of Impacts Injury and Mortality from Vessel Strikes Chapter 7 Assessment of Potential Impacts Collisions with vessels can injure or kill marine mammals. Marine mammals possess acute senses of hearing that they can use to detect approaching vessels and they have the necessary swimming speed capability to avoid collisions. Nevertheless marine mammals are inherently vulnerable to ship strikes when they surface to breathe or to feed. This vulnerability increases in shallow nearshore areas where opportunities to maneuver are reduced. Most Project activities will take place in deep ocean waters and vessel speeds within the PDA will be low reducing the potential for collisions. The only planned nearshore activities will be supply vessels entering/exiting shorebases but even at the peak of drilling and installation the incremental increase in traffic near shorebases will represent a small increase in overall risk to marine mammals. There is very little potential for collisions to occur within the PDA but the potential remains for individual dolphins or whales to collide with vessels transiting between the PDA and shorebases. The greatest potential for collisions to occur will be during drilling and installation when vessel traffic is at its peak; accordingly the risk of injury or mortality from vessel collisions will be higher during drilling and installation than during other stages of the Project. With respect to the potential for injury and mortality from vessels strikes EEPGL will utilize the following embedded controls measure for the Project see Section 2.11 Provision of awareness training to Project dedicated marine personnel to recognize signs of marine mammals at the sea surface; and Standing instruction to Project dedicated vessel masters to avoid marine mammals while underway and reduce speed or deviate from course as needed to reduce probability

of collisions. Injury from Underwater Sound The main sources of underwater sound associated with drilling activities are from the vertical seismic profiler VSP25 activities generating impulsive sound and marine vessels generating nonimpulsive sound. The primary sources of sound from installation activities is from impulsive sources impact pile drivers for the FPSO mooring system and for selected SURF equipment such as manifolds as well as nonimpulsive sources marine vessels. Sound from production operations and decommissioning activities is primarily limited to nonimpulsive sources marine vessels. Underwater sound can cause impacts on marine mammals due to behavioral changes impacting life functions e.g. feeding breeding migration route deviations direct physical impacts 25 The VSP has a small source that produces seismic impulses over a period of time for the purposes of this assessment it was assumed that the source will produce 20 to 40 seismic pulses less than 1 second in length over a 6 to 12 hour period. The wavefield generated by this source is recorded by instruments in the borehole. May 2017 265 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts affecting auditory systems or in extreme cases other physical damage or behavioral reactions leading to death. 7.2.5.4 Marine Mammal Auditory Functions The potential for anthropogenic sound to impact marine animals depends on how well the animals can hear the sound. Sounds are less likely to disturb if they are at frequencies that the animals cannot hear well. However when the sound pressure is high enough it can cause physical injury through nonauditory mechanisms i.e. barotrauma. For sound levels below such extremes frequency weighting may be applied to scale the importance of sound components at particular frequencies in a manner reflective of an animals sensitivity to those frequencies. Auditory weighting functions for marine mammals called Mweighting functions were proposed by Southall et al. 2007 and modified by the U.S. National Oceanic and Atmospheric Administration NOAA 2013 and Finneran 2015. For this study results are presented for both the Southall et al. 2007 Mweighting functions and the weighting functions suggested by Finneran 2015. Southall et al. 2007 proposed Mweighting functions for five functional hearing groups of marine mammals Lowfrequency cetaceans LFCsmysticetes baleen

whales; Midfrequency cetaceans MFCs some odontocetes toothed whales; Highfrequency cetaceans HFCs odontocetes specialized for using highfrequencies; Pinnipeds in water seals sea lions and walrus; and Pinnipeds in air not addressed here. NOAA 2013 suggested further modifications to the LFC function as well as two variations for pho and otariid pinnipeds to the Southall et al. 2007 Mweighting curve for pinnipeds in water. In 2015 a U.S. Navy Technical Report by Finneran 2015 recommended new auditory weighting functions. The overall shape of the auditory weighting functions is similar to human Aweighting functions which follows the sensitivity of the human ear at low sound levels. Although the inclusion of some species changed e.g. the addition of hourglass [*Lagenorhynchus cruciger*] and Peales [*Lagenorhynchus australis*] dolphins to the highfrequency functional hearing group the five recommended functional hearing groups remain those presented in the NOAA 2013. More information on the marine mammal auditory weighting functions described above including the analytical formulation of these metrics is provided in the document Underwater Sound Associated with Liza Phase 1 Project Activities JASCO 2016. The auditory weighting functions recommended by Southall et al. 2007 and Finneran 2015 are shown on Figure 74 and 75 respectively. 26 Pinnipeds were included in Southall et al 2007 but are not relevant to the analysis of auditory impacts because pinnipeds are either very rare or likely extinct offshore Guyana. May 2017 266 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 74 Auditory Weighting Functions for Marine Mammal Hearing Groups as Recommended by Southall et al. 2007 Source JASCO 2016 Figure 75 Auditory Weighting Functions for Marine Mammal Hearing Groups as Recommended by Finneran 2015 Source JASCO 2016 LFCs including baleen whales and MFCs including dolphins and small whales have been observed within or near the PDA so this section focuses on these marine mammal hearing groups only. JASCO Applied Sciences conducted underwater sound modeling for the proposed Project activities JASCO 2016. The modeling was performed for two types of sources impulsive and nonimpulsive. Impulsive sources such as VSP and impact pile driver activities are typically brief and intermittent with a rapid rise time and decay. Piles

can be driven to the seabed using different types of impact hammer types such as diesel hammer air or steam hammer and hydraulic hammer. Diesel hammers produce underwater sound waveforms with each pile strike that are similar to those of air hammers; hydraulic hammers produce a somewhat different waveform signature with a much more rapid rise time. Driven piles may be used in lieu of or in combination with suction piles. A suction pile or suction caisson can be conceptually described as an upturned bucket that is embedded in the marine sediment through pushing or May 2017 267 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts by creating a negative pressure inside the caisson skirt. The suction caisson technology functions very well in a seabed with soft clays or other low strength sediments and is in many ways easier and quieter to install than driven piles which must be hammered into the seabed. For the purpose of this assessment it was conservatively assumed that only impact pile drivers would be used i.e. no suction piles. In contrast nonimpulsive sources such as marine vessels main propulsion systems and internal machinery e.g. generators cranes can be brief or prolonged and continuous or intermittent. However nonimpulsive sources do not have the high peak pressure and rapid rise time that impulsive sounds do. Three complementary acoustic models AASM²⁷ MONM²⁸ and FWRAM²⁹ were used to predict underwater acoustic fields for the Projects potential sound sources. The model results were used to estimate distances to marine mammal injury permanent threshold shift [PTS]³⁰ thresholds based on best available science. Source levels for the VSP were predicted using JASCOs AASM. The VSP source considered here is a sixelement source array with a total volume of 1200 cubic inches. AASM produces a set of notional signatures for each array element based on Source array layout Volume tow depth and firing pressure of each element in the source array Interactions between different elements in the array For the modeling source level spectra from measurements of surrogate vessels including FPSO drill ship pipelaying vessel tugs and support vessels were adjusted to the specifications of the proposed Project vessels. Surrogate vessels were chosen based on the similarity in vessel specifications and types of operation. Underwater sound propagation i.e.

transmission loss was modeled with JASCOs MONM and FWRAM4. The 3D acoustic fields were computed by modeling transmission loss within multiple 2D vertical planes extending from the source. The underwater sound fields were modeled for water column sound speed profiles representative of the month of April. This time corresponds with historically lowest surface temperatures which lead to upward sound refraction and longer distance sound propagation. Predicted sound fields were assessed across three dimensions and the received sound level reported at each point in the horizontal plane is the maximum predicted sound level over all modeled depths for that point.

27 Airgun Array Source Model
28 Marine Operations Noise Model
29 Full Waveform Rangedependent Acoustic Model
30 PTS is a soundinduced impact that results in a permanent loss in hearing sensitivity due to destruction of sensory cells in the inner ear. This damage can be caused by longterm exposure to sound or acoustic trauma <https://www.osha.gov/dts/ostm/noise/health/effect/effects.html>. May 2017

268 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

Based on these reported sound levels in the horizontal plane two distance parameters were reported for each threshold Rmax maximum horizontal distance from the source where the predicted sound level reaches the threshold; and R95 maximum horizontal distance from the source where the predicted sound level reaches the threshold after the 5% of the predicted thresholdexceeding area farthest from the source is excluded. Regardless of the geometric shape of the maximumoverdepth footprint R95 is the predicted range encompassing at least 95% of the area in the horizontal plane that would be exposed to sound at or above the threshold. Six scenarios were considered in this modeling study which include

1. The operation of an FPSO vessel
2. The installation of the FPSO vessel which includes mooring the FPSO and using several installation and service vessels and
3. The installation and operation of a drill center which includes the operation of a drill ship and a pipelaying vessel for the installation of subsea flowlines and risers at Drill Center 2P approximately 13 km (8 mi) north of the FPSO
4. The operation of a VSP in the vicinity of Drill Centers 2P and 2I
5. The installation of manifold foundation piles for SURF equipment at Drill Center 2P through

underwater impact pile driving and 6. The installation of anchor mooring piles at the FPSO location through underwater impact pile driving. The sound footprint for each scenario was modeled to estimate the abovereferenced distance parameters assuming thresholds are equal to the injury criteria prescribed by Southall et al. 2007 and Finneran 2015. The sound footprints were calculated as frequencyweighted Mweighted sound exposure levels SELs assuming 24 hours of operation. The sound footprints account for sourcespecific sound emission characteristics and sitespecific environmental parameters. Additional information on the underwater sound modeling methodology including a detailed description of all model input parameters and approximate locations of modeled sources for all scenarios is provided in the document Underwater Sound Associated with Liza Phase 1 Project Activities JASCO 2016. Underwater Sound Criteria No regulations regarding underwater sound exist for Guyana. Accordingly in the absence of any such limits auditory impacts of the Project on marine mammals were evaluated using Southall et al. 2007 and Finneran 2015 acoustic threshold levels for onset of PTS in LFCs and MFCs Table 723. May 2017 269 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 723 Acoustic Threshold Levels for Onset of Permanent Threshold Shifts PTS in LowFrequency Cetaceans LFCs and MidFrequency Cetaceans MFCs Marine Mammal Hearing Group Estimated Auditory Bandwidth PTS Onset Acoustic Thresholds Injury Criteria Impulsive Nonimpulsive Peak Sound Pressure Level unweighted dB peak Sound Exposure Level SEL Mweighted SEL24h; dB re 1 Pa2.s Peak Sound Pressure Level unweighted dB peak Sound Exposure Level SEL Mweighted SEL24h; dB re 1 Pa2.s Southall et al. 2007 LFCs baleen whales MFCs dolphins toothed whales beaked whales bottlenose whales Finneran 2015 LFCs baleen whales MFC dolphins toothed whales beaked whales bottlenose whales 7 Hz to 22 kHz 150 Hz to 160 kHz 7 Hz to 25 kHz 150 Hz to 160 kHz 230 230 230 230 198 198 192 187 230 230 Not available Not available 215 215 207 199 Hz hertz kHz kilohertz dB decibel; SEL sound exposure level 24h 24 hour exposure Pa micro Pascal s second m meters Modeling Results Tables 724 to 729 present the abovereferenced distance parameters describing modeled horizontal distances to

PTS onset acoustic thresholds for LFCs and MFCs according to Southall et al. 2007 and Finneran 2015 criteria for the Scenarios 1 to 6 respectively. Decommissioning activities are currently not included in the scope for underwater sound modeling. Activities during the decommissioning stage would be similar to those of installation activities in terms of types of sound sources i.e. marine vessels only. However decommissioning activities would be shorter in duration and involve a smaller fleet of marine vessels; therefore the potential underwater sound impacts on marine fauna for decommissioning are expected to be less than or similar to those of the installation scenario Scenario 3. The results presented in the tables below account for embedded underwater control measures. Specifically EEPGL will utilize the following embedded underwater sound control measures for the Project see Section 2.11 Gradually increasing intensity of seismic impulses to allow sensitive species to vacate the area before injury occurs i.e. soft starts use of Marine Mammal Observers MMOs during VSP and implementation of other measures recommended by the Joint Nature Conservation Committee JNCC 2010 as applicable; and Maintaining equipment marine vessels and helicopters in good working order and operating them in accordance with manufacturers specifications so as to limit sound levels to the extent reasonably practicable. NV NV Modeling results for the six scenarios are presented below. It is important to note these results assume that the sources are stationary for 24 hours and that the marine mammal is present within the stated distance for the entire accumulation period 24 hours. This adds an element of conservatism to the assessment because no marine mammal would be expected to stay within the modeled injury zone for the entire 24 hour duration on which the threshold is based.

Scenario 1 Marine Vessels during FPSO Operations Modeling predicted that nonimpulsive underwater sound for Scenario 1 would attenuate to PTS onset acoustic

thresholds for LFCs and MFCs at maximum horizontal distances of 6 and 5 meters respectively based on the more conservative injury criteria for the marine mammal hearing groups. Scenario 2 Marine Vessels during FPSO Installation Modeling predicted that nonimpulsive underwater sound for Scenario 2 would attenuate to PTS onset acoustic thresholds for LFCs at a maximum horizontal distance of 5 meters based on the more conservative injury criteria for the marine mammal hearing group. Modeling predicted that MFCs would not be impacted at any distance under this scenario because the predicted underwater sound in the midfrequency range would be below PTS onset acoustic thresholds at all locations. Scenario 3 Marine Vessels Drill Ship SURF installation vessels Modeling predicted that nonimpulsive underwater sound for Scenario 3 would attenuate to PTS onset acoustic thresholds for LFCs and MFCs at maximum horizontal distances of 9 and 5 meters respectively based on the more conservative injury criteria for the marine mammal hearing groups. Scenario 4 Vertical Seismic Profiler during Drilling and SURF Installation Modeling predicted that impulsive underwater sound from the VSP for Scenario 4 would attenuate to PTS onset acoustic thresholds for LFCs and MFCs at maximum horizontal distances of 73 and 35 meters 240 and 115 ft respectively based on the more conservative injury criteria for the marine mammal hearing groups. May 2017 273 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Scenario 5 Pile Driving during Drilling and SURF Installation Modeling predicted that impulsive underwater sound from pile driving for Scenario 5 would attenuate to PTS onset acoustic thresholds for LFCs and MFCs at maximum horizontal distances of 1300 and 762 meters 4270 and 2500 ft respectively based on the more conservative injury criteria for the marine mammal hearing groups. These maxima occur at depths of greater than 1000 meters. Scenario 6 Pile Driving during FPSO Installation Modeling predicted that impulsive underwater sound for Scenario 6 would attenuate to PTS onset acoustic thresholds for LFCs and MFCs at maximum horizontal distances of 1375 and 725 meters 4510 and 2380 ft respectively based on the more conservative injury criteria for the marine mammal hearing groups. These maxima occur at depths of greater than 1000 meters. Summary of Potential for Injury Due to

Underwater Sound Modeling results indicate sound levels from vessels and the VSP are insignificant compared to the predicted sound levels from impact pile driving. The distances to injury thresholds for both LFCs and MFCs would be determined by sound from pile driving both at the FPSO and the drill centers although the area within which injury could potentially occur would be over 40 smaller for MFCs than for LFCs. Regardless of which type of pile installation methodology impact driven or suction is used neither group of marine mammals would be expected to result in a populationlevel impact. Based on the premise that marine mammals would actively avoid physical discomfort associated with Projectrelated sound if impactdriven piles are used MFCs would be expected to generally avoid the area within at least 700 m from the location where pile driving is taking place and LFCs would be expected to generally avoid the area within at least 1400 m of the activity. Both categories of cetaceans would avoid these areas for the duration of the pile driving activity. Some species including many of the larger baleen whales and dolphins would naturally avoid the area of potential effect especially around Drill Center 2 because it would be deeper than their typical maximum dive depths. Others such as sperm whales dive deep enough that they could potentially be exposed to injurious sound levels throughout the PDA; however they would not be expected to dive to sufficient depths for a sufficient duration to be exposed to potential injury. PTS were it to occur would be irreversible by definition but given the depth of the water in the PDA and the physiological limitations that would prevent marine mammals from diving deep enough and for a long enough period of time to experience PTS piling driving is not expected to cause permanent injury to marine mammals or irreversible effects on their hearing abilities. Disturbance from Underwater Sound Anthropogenic sounds below injury thresholds have the potential to mask relevant sounds in the animals environment. This masking can occur due to both natural and anthropogenic sounds Hildebrand 2005. The behavioral changes that can occur due to masking can have major ecological consequences for marine mammals. These may include changes in biologically May 2017 274 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts important behaviors e.g. breeding calving

feeding or resting; changes in diving behavior e.g. reduced or prolonged dive times increased time at the surface or changes in swimming speed; and changes in historical migration routes NMFS undated. Although the above changes could occur in the PDA as a result of Projectgenerated sound findings from US territorial waters suggest that the populationlevel significance of disturbance from impulsive sound over a small area such as the PDA would likely be minor. NMFS reported that available data do not indicate that sound and disturbance from oil and gas exploration and development activities since the mid1970s had lasting population level adverse impacts on bowhead whales. Data indicate that bowhead whales are robust increasing in abundance and have been approaching or have reached the lower limit of their historic population size at the same time that oil and gas exploration activities have been occurring in the Beaufort Sea and to a lesser extent the Chukchi Sea. NMFS 2006. BOEM found that despite over 50 years of oil and gas exploration and development in the Gulf of Mexico there are no data to suggest that these activities are significantly impacting marine mammal populations BOEM 2014. Furthermore the PDA is not known to be an important feeding breeding or calving area. Therefore individual animals may divert around an operating pile driver or VSP to avoid Projectgenerated sound but no significant impacts to life functions or potential populationlevel implications from underwater sound are expected.

Exposure to Permitted Discharges The Project will involve routine permitted discharges of waste streams to the sea. These discharges would begin during the drilling and installation stages and continue into the decommissioning stage. As described in Section 7.1.4 these discharges will be treated as needed in accordance with industry guidelines. Furthermore marine mammals would be transient in the PDA and their exposure to any discharges would be very limited. Any impacts would be expected to be acute and recovery would be expected to occur quickly after the affected individuals exit the mixing zone.

Impacts from Artificial Lighting Artificial lighting is not known to directly attract or disturb marine mammals so any impacts of artificial light on marine mammals are likely to be indirectly caused by a potential change in local forage availability through changes in prey distribution. Fish are known to be attracted to artificial light and even plankton are sometimes capable of weak

volitional movement through the water column in response to changing ambient light levels. Small fish and/or plankton make up a substantial part of most marine mammals' diets so to the extent that Project vessels could facilitate the concentration of plankton and/or small fish at the surface or around the vessels food density would increase and marine mammals may also be attracted to the vessels to feed more efficiently. This impact is expected to be limited to only the immediate vicinity of the vessels.

May 2017 275 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Summary of Impact Significance Ratings

As discussed in Section 7.2.1 because one of the marine mammals observed in the PDA is listed as Vulnerable by IUCN the impact assessment was conducted with the conservative assumption that this Vulnerable species i.e. sperm whale would be the receptor for the potential impact. Accordingly the sensitivity rating definitions used for special status species Table 730 was used for all potential impacts.

Table 730 Definitions for Receptor Sensitivity Ratings for Impacts to Special Status Species

Criterion	Sensitivity Definition
Negligible	Species with no specific value or importance attached to them.
Low	Species and subspecies of Least Concern on the IUCN Red List or not meeting criteria for medium or high value or without specific anatomical behavioral or ecological susceptibilities to Project-related impacts.
Medium	Species listed as Vulnerable Near Threatened or Data Deficient on the IUCN Red List species protected under national legislation nationally restricted range species nationally important numbers of migratory or congregatory species species not meeting criteria for high value and species vital to the survival of a medium value species.
High	Species on IUCN Red List as Critically Endangered or Endangered. Species having a globally restricted range i.e. endemic species to a site or found globally at fewer than 10 sites fauna having a distribution range less than 50000 km ² internationally important numbers of migratory or congregatory species key evolutionary species and species vital to the survival of high value species.

Considering the description of potential impacts above Table 731 summarizes the impact magnitude and receptor sensitivity ratings for each potential impact together with the rationale for the ratings.

Table 731 Impact Magnitude and Receptor Sensitivity Ratings Marine

Mammals Key Potential Impact Injury and mortality from vessel strikes Sensitivity Rating Medium
Magnitude Rating Negligible Injury PTS from underwater sound Medium Negligible May 2017 276

Rationale for Magnitude Ratings Although vessel traffic will be substantial during installation the likelihood of a collision event with an Project vessel would be mitigated due to embedded controls such as standing instructions to vessel operators low vessel operating speeds and typical marine navigation good practices. Accordingly the magnitude of impact considering embedded controls is considered to be Negligible. With no control measures in place magnitude ratings for VSP and pile driving would be Medium based on the predicted extent of impact zones; however the Negligible magnitude rating is based on several factors including

EEPGL Environmental Impact Assessment
Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Rationale for Magnitude Ratings

The activity that presents the greatest risk of injury to marine mammals pile driving would only occur during the initial stages of the installation phase and at great depth and therefore represents a short term risk to mammals. EEPGL has committed to using MMOs and soft start procedures for VSPs in accordance with JNCC guidelines and soft starts for pile driving to further reduce the potential for impacts on marine mammals. Many marine mammals do not dive to the depths that would be required or remain submerged for sufficient time to be exposed to impacts above injury thresholds especially near Drill Center 2. If an individual mammal were to approach an operating VSP or pile driver they would experience disturbance prior to being exposed to sound levels above injury thresholds and would be expected to divert away from the source. The potential impact zone for disturbance effects is expected to be larger than the extent for potential injury effects; accordingly the magnitude of potential impact is considered Medium. Permitted discharges will be treated as needed prior to discharge and will reduce in concentration rapidly with increasing distance from the discharge point. The magnitude is therefore considered Negligible. Impacts to marine mammals from Project lighting are considered to be Positive due to the potential for attraction of food sources and no documented adverse effects on marine mammals from lighting.

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Based on consideration of all of the potential impacts on marine mammals assessed the overall residual significance rating for potential impacts on marine mammals from planned Project activities is considered to be Negligible to Moderate.

7.2.6 Marine Turtles 7.2.6.1 Introduction As described in Section 6.2.6 five sea turtle species are found in the Guyanese waters and could be encountered in the PDA. Four of these speciesgreen turtle leatherback hawksbill and Olive Ridley turtlenest on Guyanas beaches particularly in the SBPA located near Guyanas border with Venezuela. Loggerhead turtles also occur in offshore Guyanese waters but rarely come ashore.

7.2.6.2 Relevant Project Activities and Potential Impacts As shown in Table 733 planned Project activities could potentially impact marine turtles through direct mortality from vessel strikes disturbance leading to changes in behavior from underwater sound lighting and/or actions from Project activities and exposures to permitted discharges. Key potential sources of impact include impulsive sound from acoustic sources VSP activity driven piles and nonimpulsive sound from marine vessels FPSO drill ship supply vessels

work vessels barges light installation vessels pipelay vessels multi service vessels field intervention vessels large crane vessels and tug boats. Table 733 Project Activities and Potential Impacts Marine Turtles

7.2.6.3 Characterization of Impacts Injury and Mortality from Vessel Strikes

strikes. Exposures to permitted discharges potentially leading to toxicological or metabolic impacts. Displacement from habitat to avoid disturbance from vessel activity. Collisions with vessels can injure or kill marine turtles. Sea turtles tend to spend most of their time at sea at or near the sea surface and do not possess the acute sense of hearing or the swimming speed that cetaceans use to avoid collisions. Sea turtles are inherently more vulnerable to ship strikes in the shallow nearshore areas where they congregate prior to coming ashore to nest than they are in the open ocean. This increased vulnerability is caused by the higher concentrations of turtles and reduced opportunity to maneuver in shallow water. Most Project activities will take place in deep ocean waters and vessel speeds within the PDA will be low further reducing the potential for

collisions. The only planned nearshore activities will be supply vessel entering/exiting shorebases; the anticipated options for shorebases are all located over 100 km away from the nearest portion of the SBPA where most sea turtle nesting in Guyana occurs. There is very little potential for collisions to occur within the PDA but the potential remains for individual turtles to collide with vessels transiting between the PDA and shorebases. The potential for the greatest number of collisions to occur will be during drilling and installation when vessel traffic is at its peak so the risk of injury or mortality from vessel collisions will be slightly higher during drilling and installation than during other stages of the Project. With respect to the potential for injury and mortality from vessels strikes EEPGL will utilize the following embedded control measure for the Project see Section 2.11 Standing instruction to Project dedicated vessel masters to avoid marine turtles while underway and reduce speed or deviate from course as needed to reduce probability of collisions. May 2017 280 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Injury from Underwater Sound Chapter 7 Assessment of Impacts Hearing capabilities have been studied in only a few individual marine turtles but the available data suggest that turtles have limited hearing capacity compared to other marine taxa e.g. cetaceans. Turtles have been shown to respond to low frequency sound with indications that they have the highest hearing sensitivity in the frequency range 100 to 700 Hz Bartol and Musick 2003. Startle responses to sudden sounds have also been observed in sea turtles. For example McCauley et al. 2000 found that turtles showed behavioral responses to approaching seismic survey sound at approximately 166 dB re 1 uPa and more significant disturbance at 175 dB re 1 uPa. Startle responses and other behavioral changes are more likely from high level pulsed sound sources such as those produced during VSP activities and pile driving rather than from nonpulse sources such as those from vessels. Since turtles have been shown to respond to low frequency sounds modeling results pertinent to low frequency cetaceans LFCs see Section 7.2.5 were used as a proxy for injury predictions for marine turtles. Modeling predicted that impulsive underwater sound from VSP and pile driving activities would attenuate to PTS onset acoustic thresholds for LFCs at maximum horizontal distances of 73 and 1300 meters

240 and 4270 ft based on the more conservative injury criteria for the LFC marine mammal hearing group. Diveprofile data from tagged Kemps ridleys showed that they spent an average of 97 percent day or 87 percent night of their time within 1 m of the surface and observational records suggest that most sea turtles show a similar pattern. The VSP source for the Project will be located within 5 m of the ocean surface so marine turtles may be present at the same general depth as the source. However since the sound pressure field is zero at the surface the sound levels in excess of the proxy injury threshold will be limited to depths well below the zone where marine turtles will typically be present. While the horizontal extent of the modeled potential impact zone is significantly larger for pile driving than for VSP turtles are not known to dive a sufficient depth 1000 m to enter the zone within which PTS would occur as a result of pile driving. The only low frequency sound that marine turtles could potentially be exposed to other than VSP and pile driving would derive mainly from vessels operating in the Project area and vessel sounds will decrease below the threshold for injury to LFCs at 5 to 6 meters from the source. At that range injury from a collision with the vessel poses a more likely risk to a marine turtle than injury from sound. Anthropogenic sounds below injury thresholds have the potential to mask relevant sounds in the animals environment Hildebrand 2005; however there are no quantitative data demonstrating masking impacts for sea turtles and turtles do not vocalize or use sound for communications so the potential risk of impacts from masking is considered insignificant. The highest potential for auditory impacts on marine turtles will occur during VSPs and the use of marine observers to detect sea turtles and soft start techniques will further reduce the risks to sea turtles when VSPs are occurring. May 2017 281 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts With respect to the potential for injury from underwater sound EEPGL will utilize the following embedded underwater sound control measures for the Project see Section 2.11 Gradually increasing intensity of seismic impulses to allow sensitive species to vacate the area before injury occurs i.e. soft starts Use of MMOs during VSP although use of MMOs is more effective for identification of marine mammals these individuals can also detect marine turtles depending on weather conditions and they

will be tasked with observing for marine turtles as well and implementation of other measures recommended by the Joint Nature Conservation Committee JNCC 2010 as applicable; and Maintaining equipment marine vessels and helicopters in good working order and operating them in accordance with manufacturers specifications so as to limit sound levels to the extent reasonably practicable Displacement from Habitat as a Result of Disturbance During the Project life cycle levels of human activity e.g. vessel traffic equipment and materials in the water will be higher than the very low levels that currently exist in the PDA. Marine turtles are not known to be sensitive to human activity while at sea so this increase in human activity is expected to have little or no impact on them within the PDA. Project activity related to potential disturbance would decrease during the production operations phase so impacts on sea turtles would decrease as well. There would be a small increase in human activity during decommissioning but that increase would be of relatively short duration and would not rise to the same level of activity associated with drilling and installation. In summary disturbance from human activity would be expected to have little to no impact on marine turtles throughout the duration of the Project.

Exposure to Permitted Discharges The Project will involve routine permitted discharges of waste streams to the sea. These discharges would begin during the drilling and installation stage and continue into the decommissioning stage. As described in Section 7.1.4 these discharges will be treated as needed in accordance with industry guidelines. Furthermore sea turtles would be transient in the PDA and their exposure to any discharges would be very limited. Any impacts would be expected to be acute and recovery would be expected to occur quickly after the affected individuals exit the mixing zone.

Disturbance to Nesting from Artificial Lighting Sea turtles are known to be sensitive to artificial light in close proximity to nesting beaches because artificial light can cause a variety of impacts on the behavior of nesting turtles and hatchlings including reduced nesting rates premature abandonment of nests interruption of the egg laying process and disorientation of hatchlings Witherington and Martin 2003; NOAA 2014. There will be artificial lights in the PDA from various vessel types and the amount of light in the PDA will vary between stages of the Project; however at no point is offshore light

Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts expected to have significant impacts on marine turtles because sea turtles are not known to be sensitive to artificial light in the open ocean and the PDA is located so far offshore that light from the PDA will not be visible from the shore. Summary of Impact Significance Ratings As discussed in Section 7.2.1 because the marine turtles occurring in the PDA carry listings of Critically Endangered Endangered or Vulnerable by IUCN the impact assessment was conducted with the conservative assumption that the Critically Endangered or Endangered species i.e. Hawksbill green loggerhead would be the receptor for the potential impact. Accordingly the sensitivity rating definitions used for special status species Table 734 was used for all potential impacts. Table 734 Definitions for Receptor Sensitivity Ratings for Impacts to Special Status Species Criterion Definition Sensitivity Negligible Species with no specific value or importance attached to them. Low Species and subspecies of Least Concern on the IUCN Red List or not meeting criteria for medium or high value or without specific anatomical behavioral or ecological susceptibilities to Projectrelated impacts. Medium Species listed as Vulnerable Near Threatened or Data Deficient on the IUCN Red List species protected under national legislation nationally restricted range species nationally important numbers of migratory or congregatory species species not meeting criteria for high value and species vital to the survival of a medium value species. High Species on IUCN Red List as Critically Endangered or Endangered. Species having a globally restricted range i.e. endemic species to a site or found globally at fewer than 10 sites fauna having a distribution range less than 50000 km² internationally important numbers of migratory or congregatory species key evolutionary species and species vital to the survival of high value species. Table 735 summarizes the impact magnitude and receptor sensitivity ratings for marine turtles. Table 736 summarizes the potential impact significance ratings for marine turtles based on the discussion presented above. The impact significance ratings were assigned based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. Based on consideration of all of the potential impacts on marine turtles assessed the overall residual significance rating for potential

impacts on marine turtles from planned Project activities is considered to be Negligible to Minor.

May 2017 283 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

Chapter 7 Assessment of Impacts Table 735 Impact Magnitude and Receptor Sensitivity Ratings

Marine Turtles Key Potential Impact Injury and mortality from vessel strikes Sensitivity Rating

Magnitude Rating High Small drilling and installation Injury PTS from underwater sound High

Negligible other Project stages Negligible Displacement from habitat to avoid disturbance from

vessel activity Low Small Impacts from permitted discharges Disturbance to nesting from artificial

lighting High Negligible Low open ocean Small open ocean High on or near shore Negligible on or

near shore Rationale for Ratings Although vessel traffic will be substantial during installation the

likelihood of a collision event with a Project vessel would be mitigated due to embedded controls

such as standing instructions to vessel operators low vessel operating speeds and typical marine

navigation good practices. The magnitude of impact considering embedded controls is considered to

be Small during drilling and installation when higher vessel traffic level will occur and Negligible

during other stages. Sea turtles spend most of their time within a few meters of the sea surface

where the intensity of sound from VSP will be highest but sound from pile driving will be lowest.

Considering the relatively small size of the PTS radius surrounding the VSP and the embedded

controls described above the likelihood of marine turtle exposure to sound levels above injury

thresholds is low resulting in an overall magnitude rating of Negligible. Increased activity in the PDA

and between the PDA and shorebases could cause turtles approaching nesting beaches from the

northeast to deviate from their normal migration route but marine turtles are not known to be

sensitive to human activity while at sea. Accordingly sensitivity is considered Low; this is used in lieu

of the special status rating based on the lack of an anticipated sensitivity. The increase in vessel

traffic between the shorebases and PDA could cause general avoidance in the nearshore area but

would represent an incrementally insignificant increase in total vessel traffic in the area. Permitted

discharges will be treated as needed prior to discharge and will reduce in concentration rapidly with

increasing distance from the discharge point. The magnitude is therefore considered Negligible.

Adults and newly hatched turtles are highly sensitive to artificial light in the immediate proximity to nesting beaches but much less sensitive while offshore. Accordingly an overall sensitivity rating of Low for the open ocean and Medium for the nearshore environment was assigned; the open ocean rating is used in lieu of the special status rating based on the lack of an anticipated sensitivity for this impact. Project vessels will constitute a source of light that is distinct from the surrounding environment yielding a magnitude rating of Small for the offshore environment. The PDA is located so far offshore that light from the PDA will not be visible from the shore yielding a magnitude rating of Negligible for the nearshore environment.

May 2017 285 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts 7.2.7 Marine Fish

7.2.7.1 Introduction This section describes the potential impacts of the Project on marine fish. Key potential impacts on marine fish assessed include localized changes in the distribution of pelagic

species as a result of altered water quality; localized changes in distribution and habitat usage due to altered bottom habitats and the presence of Project infrastructure; entrainment in water intakes; auditory impacts from vessel traffic and installation activities; and the attractive potential of artificial lights on the FPSO drill ship and major installation vessels. Marine Fish receptors will include pelagic and demersal marine fishes. These groups include a combination of migratory and resident species. Some receptors will receive a larger proportion of certain impacts than others. For example surface dwelling pelagic fish will potentially experience greater water quality impacts related to planned discharges than will bottomdwelling species and bottom dwelling species will be more impacted by changes in physical habitat structures than pelagic species.

7.2.7.2 Relevant Project Activities and Potential Impacts

Table 737 summarizes the Project stages and activities associated with each potential impact assessed. The highest number of impacts would be expected to occur during the initial stages of the Project when most habitatdisturbing activities take place and humanvessel activity in the PDA will be highest. At this stage impacts will occur throughout the water column and at the seafloor. Once drilling and installation and hookupcommissioning are complete and production operations are the only activities occurring offshore biological conditions at the seafloor will return to equilibrium and most of the ongoing impacts will be isolated to the upper portions of the water column and to the pelagic segment of the fish community.

Table 737 Project Activities and Potential Impacts
Marine Fish Stage Project Activities

7.2.7.3 Discussion of Potential Impacts

Exposures to permitted discharges potentially leading to toxicological or metabolic impacts. Auditory impacts from vessel sound. Attraction of structure-oriented species. Loss of fish eggs and larvae due to entrainment of immature life stages. Temporary disturbance of deepwater fish communities and possible gill fouling during decommissioning TSS. Permanent loss of structural habitat FPSO only and artificial light due to decommissioning. Exposures to permitted discharges potentially leading to toxicological or metabolic impacts. Changes in the Distribution of Fish Due to Altered Water Quality

The Project will routinely discharge several waste streams to the sea. These discharges would begin during the drilling and installation stages and continue into the decommissioning stage. Two discharges unique to the drilling and installation phases will be discharges of drilling fluids and cuttings. For the initial well sections which will use WBDF the cuttings and fluids will be discharged either at the seafloor causing turbidity around the immediate vicinity of each well or from the drill ship. For subsequent well sections cuttings and residual drilling fluids will be discharged from the drill ship. For discharges from the drill ship turbidity plumes will impact a larger area as the cuttings fall through the water column but the turbidity plume will be diluted across a larger area thereby reducing impacts in any single location. Fish will be expected to generally avoid these turbidity plumes while drilling is occurring reducing respiratory impacts associated with gill fouling but would be expected to return after drilling is complete. WBDF and the residual quantities of low-toxicity NABF adhered to discharged cuttings are expected to have no measureable impacts on fish.

May 2017 287 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts

As described in Section 7.1.4 most of the planned discharges that would occur during production operations are not known to have negative impacts on marine life or would occur at negligible volumes but the increased temperature and chlorine concentrations in the cooling water

discharges were identified as having the potential to negatively impact marine life. Elevated temperature is known to have several physiological lethal and sublethal impacts on fish including reduced reproductive success reduced early life stage survivorship and increased metabolic stress. Thermal thresholds for such impacts vary widely by species but thresholds from the scientific literature range from about 1.5 C to 6 C Donelson et al. 2014; Pankhurst and Munday 2011. Under the conservative assumptions described in Section 7.1.4 localized sea surface temperatures are expected to increase as a result of the Project but these increases are predicted to diminish to 3 C above ambient temperatures within 100 m 330 ft horizontal distance from the discharge outlet. This finding indicates that within 100 m 330 ft of the FPSO the thermal impact of routine discharges would diminish to near the lower end of the range within which thermal impacts on fish are expected to occur. Most of the research on thermal thresholds for these types of impacts has focused on reef or structureoriented species that spend their entire adult lives in a small area rather than the openocean pelagic species that would occur near the surface in the PDA. Pelagic species would be much more likely to move away from a thermal mixing zone that exceeds their optimum range than would structureoriented species so not only would thermal impacts affect a very small area of the ocean surface but the species that occur within the PDA would also be resilient to these thermal impacts based on their propensity to actively avoid suboptimal water temperatures. Similar to temperature increases chlorine can also induce a range of negative impacts in fish including disruption of cardiac function respiration and growth. There are no regulatory limits for residual chlorine in marine discharges in Guyana. Chlorine toxicity depends not only on dosage concentration and exposure time but also on individual species sensitivity to chlorine. This makes defining a single impact threshold for chlorine exposure difficult. While chlorine concentrations within the immediate vicinity of the FPSO could exceed levels that may result in toxicity impacts to fish assuming the fish remained in the area long enough to experience the impact concentrations are expected to decrease by approximately 89 percent within 100 m of the discharge point. The combined impact of increased temperature and chlorine concentrations would make the localized

mixing zone inhospitable to some species. However unless they are physically confined or otherwise prevented from escaping lethal water quality conditions or water quality conditions decline so quickly that escape is impossible fish are usually capable of detecting and avoiding harmful water quality conditions. This is especially true of water quality conditions that cause discomfort or are otherwise physically apparent at sublethal levels like chlorine and is also especially true of the pelagic species that move throughout their lives and would be in the most direct contact with elevated temperatures and chlorine concentrations. Decommissioning will cause small turbidity plumes near the seafloor if selected components of the SURF are removed and as mooring lines from the FPSO are placed on the seafloor. Impacts from these turbidity plumes will be similar to those associated with drilling and installation although they will be smaller and have a shorter duration. May 2017 288 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts For these reasons declines in water quality would be expected to negatively impact fish abundance in the immediate vicinity of the well heads SURF and drill ship during drilling and installation the FPSO and tankers during production operations and the SURF during decommissioning but would not be expected to cause significant fish mortality. Limited localized impairments in water quality will not be significant enough to cause substantial changes in fish populations nor will they significantly impact sensitive or important species see Section 7.2.1 but they will likely cause limited changes in the distribution and composition of the fish community within parts of the PDA. As discussed below the physical attraction that offshore facilities can exert on fish could actually result in net increases in the abundance of certain fish species even under slightly impaired water quality conditions. The net impact in this case is often a shift away from sensitive species including some pelagic and sedentary species toward sedentary or structureoriented species that are more tolerant of minor water quality impairments. Any impacts on transient fish swimming through the mixing zone would be expected to be acute and affected individuals would be expected to recover quickly after exiting the mixing zone. Auditory Impacts to Fish from Vessel Activity Vertical Seismic Profiling and Pile Driving The same sound sources associated with the

Project that could impact marine mammals Section 7.2.5 could also impact fish. These can be broadly separated into nonimpulsive sources e.g. vessel sound and impulsive sources pile driving and VSP. Hearing abilities and sensitivities differ significantly among fish species. Certain species can be classified as hearing generalists or specialists³¹ based on differences in hearing ability conveyed by specific anatomical traits. Although hearing specialists are thought to be more susceptible to auditory impacts within certain audio frequencies than other species there are no generally accepted thresholds for auditory impacts in either specialist or generalist species and many species hearing abilities have yet to be quantified.

Nonimpulsive Sound A recent EIS conducted by the U.S. Department of the Interior as part of a Programmatic Environmental Impact Statement for proposed geological and geophysical investigations in the Atlantic Outer Continental Shelf off the south eastern U.S. in 2014 BOEM 2014 contained a comprehensive review of auditory impacts on fish from nonimpulsive and impulsive sources including seismic surveys. This study found that fish may experience a range of impacts from nonimpulsive sound including increased stress and threshold shift and fish may employ behavioral strategies to avoid the sound source BOEM 2014. However the extent to which these impacts would actually occur is highly dependent on the hearing abilities and sensitivities ³¹ Hearing specialists are species that have developed heightened sensitivities to sounds in a specific frequency range. This adaptation occurs in some species to facilitate feeding or social behavior. Hearing specialists are distinguished from hearing generalists which hear equally well across a wider range of frequencies but do not possess the acuity of the specialists within their specific frequency range. May 2017 289

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts of the species of fish that occur within the PDA and these abilities and sensitivities are currently unknown.

Impulsive Sound The impact of impulsive sounds on hearing specialists is the most important factor to consider when rating Projectrelated auditory impacts on fish because of the following Impulsive sound is usually considered more important than nonimpulsive sound in terms of impacts on fish because impulsive sound is the category most often associated with hearing loss injury or death of

fish; Impulsive sources also tend to have more severe impacts on hearing specialist species and those species with welldeveloped swim bladders³² than others because they tend to be more sensitive to auditory impacts especially within the range of frequencies that they are specially adapted to detect; High peak pressures and rapid onset and decay tend to be associated with the most severe auditory impacts on fish and are characteristic of impulsive sources; and As described in Section 7.1.2 impulsive sound from driven piles and VSP would impact a larger area of the ocean than the nonimpulsive sources modeled by JASCO especially to the north of the source and therefore could impact a larger number of species and individual fish than would the nonimpulsive sources. Larson 1985 concluded that lethal impacts in the most sensitive taxa can occur at peak pressures exceeding 229 Db re 1Pa with onsetdecay times less than 1 ms. Turnpenny and Nedwell 1994 reviewed historical studies of seismic impacts on fish and determined that for exposures at close range 10 m transient behavioral impacts began appearing at 192 dB re 1Pa a variety of injuries appeared at about 220 dB re 1Pa and mortality began appearing at exposures above 230 dB re 1Pa although these impacts did not always occur and some exposures up to 240 dB re 1Pa resulted in no observable adverse impacts. There have been no published reports to date documenting a lasting impact on fishing or fish stock as a result of seismic surveys. BOEM 2014 concluded that although hearing specialists are more susceptible than hearing generalists to hearing loss from impulsive sound such impacts do not always occur and are generally not permanent. Impacts would be expected to be most severe in resident fish that are oriented to structural bottom habitats and would therefore be exposed to repeated impulses at a given location over time. One such genus *Sebastes* spp. showed startle and alarm responses to 10min exposures of seismic impulses at 180 dB re 1 Pa at ranges from 11m to several kilometers but the impacts appeared to be transitory Pearson et al. 1992. Another study of the reeforiented pollack *Pollachius pollachius* documented only minor changes in behavior when exposed to seismic impulses with peak sound pressures 32 Caged exposure tests have determined that species with large swim bladders or other highly vascularized low density organs or structures tend to be more susceptible to acute acoustic

injury than species that lack these features when exposed to such sources within a few meters. May 2017 290 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts between 195-218 dB re 1 Pa at ranges of 5.3-109 m Wardle et al 2001. Documented recovery times vary but generally range from a few hours to a few days. The available literature described above suggests that behavioral impacts from impulsive sound sources may begin to occur at peak sound pressures between 180-195 dB re 1 Pa and that injury could occur at peak sound pressures around 220 dB re 1 Pa. Given the most sensitive receptors do not always experience impacts from impulsive sound they usually recover from such impacts and impulsive sound would only occur during the initial phases of the Project population level impacts on marine fish from auditory impacts are highly unlikely. Auditory impacts will not significantly impact any rare sensitive or important species see discussion in Section 7.2.1. Changes in Distribution and Habitat Usage Due to Altered Bottom Habitats and the Presence of Project Infrastructure Installation of moorings for the FPSO installation of SURF equipment and drilling wells will disturb the seafloor temporarily within the PDA. These disturbances will create turbidity plumes and alter localized bottom contours within the area. The main potential impacts of turbidity plumes on fish are gill fouling and reduced visibility. Visibility is a minor factor at the depths that occur in the PDA but fouled gills can lead to respiratory distress over long exposures. The turbidity plumes are expected to dissipate rapidly downcurrent and fish will be expected to temporarily vacate the immediate vicinity of activities at the seafloor until turbidity reaches acceptable levels. This behavioral response will limit fishes exposure to turbidity and fish would be expected to return to the vicinity of the Project subsea infrastructure once seafloor disturbance activities are complete. Some of the deepwater species from the red fish zone and all of the reef-associated species identified in the McConnell study Section 6.2.7 are structure-oriented species. Physical structures provide many benefits to these species including refuge from currents and predators as well as foraging opportunities. These species would be expected to congregate around the well heads and manifolds once the disturbance associated with installation has abated and the Project enters the production operations

stage. The isolated marine communities that develop around the SURF components could contain some species that are rare or absent elsewhere in the Project AOI due to the apparent lack of hard substrate outcrops in the area. These communities could be disturbed temporarily during decommissioning if the flowlines are disconnected from the manifolds and retrieved. However the manifolds and well heads may remain in place in perpetuity subject to the decommissioning plan so these facilities will continue to provide habitats for the fish community over the long term. Minor localized impairments in water quality will not be significant enough to cause substantial changes in fish populations nor will they significantly impact sensitive or important species see discussion in Section 7.2.1 but they will cause small changes in the distribution and composition of the fish community within the PDA. May 2017 291 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Attraction to Artificial Light Chapter 7 Assessment of Impacts Artificial light has been known for many years to attract fish in a variety of settings and this phenomenon has been documented around floodlights on offshore petroleum infrastructure Hastings et al. 1976 Stanley Wilson 1997 Lindquist et al. 2005. Results from studies of platforms in the northern Gulf of Mexico suggest that platforms benefit all life stages by attracting and concentrating prey and providing sufficient light to locate and capture them Keenan et al. 2007. While this may benefit predatory species in the short term artificially lit structures have the potential to alter predatorprey interactions by creating conditions that favor predatory species at night and disadvantaging the prey while simultaneously attracting the prey species. This could ultimately have longterm negative impacts on predatory species if localized depletion of prey resources occurs Becker et al. 2012; Nightingale et al. 2103. The artificial light produced from vessels will not be substantial enough to alter fish populations nor will it significantly impact sensitive or important species see discussion in Section 7.2.1 but may cause small changes in the distribution and/or behavior of fish in the immediate vicinity of the FPSO and possibly the drill ships and installation vessels. . Entrainment in Water Intakes Seawater will be withdrawn from the ocean to provide water to inject into the reservoir to cool the FPSOs processing equipment during the production operations stage and for ballast of vessels.

Larval and juvenile fish have the potential to be entrained in the intake or impinged on the screens that will be installed to remove particulates from the water before it is pumped into the treatment unit on the FPSO. Most research on entrainment and impingement involves sitespecific studies at onshore power plants and has been conducted in North American and European estuaries or nearshore coastal areas where immature fish are concentrated Barnthouse 2013. Nearshore intakes generally pose a higher risk of entrainment and impingement than offshore intakes WaterReUse 2011. Information on the entrainment andor impingement rates at offshore intakes is sparse but there is some recent evidence that losses from entrainment and impingement are insignificant at the population level even at power plants in coastal and estuarine settings Barnthouse 2013 and the U.S. Minerals Management Service noted that coastal power plants require much higher volumes of water than individual offshore oil and gas facilities approximately 10 million gallons per minute for a nuclear power plant; MartinezAndrade and Baltz 2003 meaning that the entrainment losses at oil and gas facilities would likely be much lower than at power plants. In most cases extrapolation of the losses of larval fish and eggs at power plant intakes to an equivalent number of adults indicates that entrainment losses are insignificant compared to natural and fishingrelated mortality Barnthouse 2013; WaterReUse 2011. Cooling and ballast water intakes on the FPSO and drill ships will be equipped with screens to prevent fish entrainment. Entrainment will not significantly impact sensitive or important species see discussion in Section 7.2.1. May 2017 292 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.2.7.4 Characterization of Impacts Magnitude of Impact Chapter 7 Assessment of Impacts The assessment of the Projects magnitude of impacts on marine fish from the potential impacts described above is determined based on the size of the impact relative to natural variations in the impacted population where known the temporal scale of the impact and the population level at which the impact is anticipated to occur. The magnitude of potential impacts on marine fish is defined according to the definitions provided in Table 738. Table 738 Definitions for Magnitude Ratings for Potential Impacts to Marine Fish Criterion Magnitude Definition Negligible Impact is within the normal range of variation for the population of the species.

Small Impact does not cause a substantial change in the population of the species or other species dependent on it. Medium Impact causes a substantial change in abundance and/or reduction in distribution of a population over one or more generations but does not threaten the long term viability/function of that population or any population dependent on it. Large Impacts entire population or a significant part of it causing a substantial decline in abundance and/or change in and recovery of the population or another dependent on it is not possible either at all or within several generations due to natural recruitment reproduction immigration from unaffected areas. The Project includes several embedded controls that will reduce the magnitude of impacts on marine fish including FPSO onboard treatment of produced water bilge water and sanitary wastewater prior to discharge; Use of oilwater separators to ensure compliance with an oil in water of 15 ppm per MARPOL for bilge water; Use of WaterBased Drilling Fluids WBDF and lowtoxicity IOGP Group III NABF; Utilization of solids control and drill cuttings dryer systems to treat cuttings prior to discharge; Gradually increase intensity of seismic pulses during VSP and hammer energy during pile driving to allow sensitive species to vacate the area before injury occurs; and Provide screening on vessels for cooling water and ballast water intakes for FPSO and drill ship to minimize the entrainment of fish.

Sensitivity of Receptor The assessment of marine fish as a receptor of impacts from the Project is based on the conservation status of the marine fish expected to occur in the vicinity of the Project. The sensitivity of marine fish is defined according to the definitions provided in Table 739.

May 2017
293 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7
Assessment of Impacts Table 739 Definitions for Receptor Sensitivity Ratings for Impacts to Marine Fish

Criterion	Definition
Sensitivity	Negligible Species with no specific value or importance attached to them.
Low	Species and subspecies without specific anatomical behavioral or ecological susceptibilities to Projectrelated impacts.
Medium	Species with one of the following characteristics: specific anatomical behavioral or ecological susceptibilities to Projectrelated impacts; importance to local or regional fisheries; or vital importance to the survival of another medium sensitivity species but not meeting criteria for high value sensitivity.
High	Species with two of more of the following

characteristics specific anatomical behavioral or ecological susceptibilities to Project-related impacts; importance to local or regional fisheries; or vital importance to the survival of another medium-sensitivity species. Impact Significance and Mitigation Measures Table 740 summarizes the magnitude sensitivity and impact significance ratings for the potential impacts on marine fish discussed above. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. 7.2.8 Marine Benthos

7.2.8.1 Introduction

This section describes the potential impacts of the Project on marine benthic biological resources. The key potential impacts assessed include injury to benthos as a result of deposition of drill cuttings via smothering and/or toxicity impacts from residual oil contained

in the cuttings and as a result of disturbance of the seafloor during installation of Project components.

7.2.8.2 Relevant Project Activities and Potential Impacts The PDA is located in the eastern portion of the Stabroek Block in water depths ranging from approximately 1500 to 1900 m. This area's macrofauna community is dominated by polychaete worms as the most abundant major taxonomic group followed by crustaceans, mollusks, and other taxa. Benthic epifauna appear scarce on the basis of the EBS survey results; however, tube-dwelling may be present. May 2017 295 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts building polychaetes possibly Sabellidae and Terebellidae and burrowing shrimp were observed. The Project has the potential to impact these organisms through smothering from deposition of drill cuttings, toxicological impacts from NABF adhered to deposited cuttings, and crushing or displacement from placement of subsea infrastructure. These impacts will be balanced somewhat by the creation of artificial substrate in the form of manifolds, wellheads, and other infrastructure permanently installed on the seafloor, which will provide small amounts of hard substrate available for colonization. Table 741 summarizes potential Project impacts on marine benthos.

Table 741 Project Activities and Potential Impacts

Marine Benthos Stage	Drilling and Installation	Discharge of drill cuttings and Project Activity	accumulation on seafloor	Installation of FPSO anchor structures and SURF infrastructure on the seafloor	Production Operations	Presence of nonmoving infrastructure on seafloor	Decommissioning	Presence abandonment of subsea infrastructure on the seafloor	Key Potential Impacts
									Smothering of benthos as a result of accumulation of drill cuttings. Toxicological impacts on benthos from NABF adhered to deposited drill cuttings. Crushing of benthos where subsea infrastructure is placed. Creation of artificial substrate for use by benthos temporary for duration of production operations positive. Creation of artificial substrate for use by benthos positive.

7.2.8.3 Characterization of Impacts

Drill Cuttings Deposition Magnitude of Impact Drill Cuttings Deposition Planned discharges of drill cuttings and fluids will impact marine benthos as a result of accumulation of cuttings on the seafloor around the well locations. Potential routes of impact include physical and toxicological pathways. With regard to potential physical impacts, discharged drill

cuttings will accumulate on the seafloor close to the individual wells and some benthic fauna will likely be impacted through burial and smothering. Smothering is a biological impact on benthos induced by the physical impact of burial. The severity of burial impacts depends on the sensitivity of the benthic organism the thickness of deposition the amount of oxygen depleting material and the resulting anoxic conditions beneath the depositional layer and the duration of the burial. Thickness thresholds vary by species and sediment permeability. A threshold deposition rate of 5 cm per month for smothering impacts to benthic communities is recommended based on publications by Ellis and Heim 1985 and MarLIN 2011. Smaller threshold values as low as 1 mm have been reported e.g. Smit et al. 2006; however they are associated with instantaneous burials on benthic species not gradual smothering impacts. May 2017 296 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts As described in Section 7.1.3 modeling of drill cuttings discharges for four wellcurrent combination scenarios indicated the maximum depositional thickness of cuttings on the seafloor is predicted to be between 19 cm and 75 cm depending on currents and well locations. The model predicted extent of cuttings deposition above the 5 cm per month threshold will be confined to within a relatively short distance from the well locations with the largest area predicted to be approximately 43 m 141 ft in diameter. Figure 7.6 depicts the maximum total accumulated cuttings as predicted by modelling in the vicinity of both drill centers. May 2017 297 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Figure 76 Sediment Sample Locations and Deposition Areas deposited cuttings over time and additional noncutting sediments will gradually mix with and overlay the cuttings gradually returning the surficial sediment layer to a chemical state similar to existing conditions. Additionally the NABF used by EEPGL will be a lowtoxicity substance reducing the potential that changes in sediment quality will lead to toxicological impacts on benthic fauna. Based on consideration of the above the overall magnitude of drill cuttings deposition impacts on marine benthos was rated as Negligible. Sensitivity of Receptor Drill Cuttings Deposition A study of benthic megafauna in a similar environment offshore Venezuela found that abundances in the

vicinity of offshore development sites were significantly reduced after drilling. Highly mobile organisms returned to the area soon after drilling was completed. However the species composition of sessile taxa was altered with analyses suggesting that their density increased further away from areas that had been disturbed. The recovery potential of deepsea marine benthic biological resources particularly sessile taxa following cessation of drilling activities is unknown Jones et al. 2012. Sessile individuals will likely experience injury or mortality in areas where drill cuttings deposition exceeds the abovereferenced threshold; however longterm impacts on the benthos population are not expected as a result of smothering of these individuals.

May 2017 298 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts

With respect to toxicity impacts contaminants deposited on the seafloor can pose risks to those deepsea benthos living within or in close association with bottom substrates that are unable to avoid exposure due to their relatively sedentary existence. These benthos perform functional roles in the deepsea ecosystem including sediment bioturbation and stabilization organic matter decomposition and nutrient regeneration and serve as food sources to higher trophic levels; accordingly toxicity could impact the population size as well as move up the food chain via bioaccumulation. Based on consideration of the above the overall sensitivity of marine benthos to drill cuttings deposition impacts was rated as Low.

Impact Significance and Mitigation Measures

Drill Cuttings Deposition These magnitude and sensitivity ratings lead to a significance rating of Negligible for impacts on marine benthos from drill cuttings deposition. Based on this rating no mitigation is recommended.

7.2.8.1 Characterization of Impacts FPSO and SURF Installation

Magnitude of Impact FPSO and SURF Installation The shallow sediment layer would be disturbed during installation of subsea infrastructure SURF and FPSO mooring structures on the seabed. In addition to disturbance of the habitat individual benthic organisms are likely to be crushed dislocated from the substrate sessile organisms or dismembered as a result of these occurrences. With respect to installation impacts as indicated in Table 742 which summarizes the area that will be disturbed by installation of various infrastructure components approximately 390000 m² 30 ha 74 acres

incorporating a 50 percent contingency factor will be subject to essentially onetime disturbance by the installation activity. The use of anchors by vessels other than the FPSO is not expected; other vessels will utilize dynamic positioning to maintain station offshore.

Table 742 Area of Benthic Habitat Disturbed by FPSO and SURF Subsea Infrastructure Installation Equipment Quantity Unit

The mortality of benthos particularly sessile taxa which are directly contacted during installation of subsea infrastructure within this area is anticipated to be high. Although some organisms will survive they may be left with injuries that may impair their survival by making them prone to infection or vulnerable to predators. In addition the population structure in the specific disturbance areas may temporarily change as more motile benthos taxa enter the disturbed area to scavenge organisms that did not survive. However this impact will only occur within a small percentage of the Stabroek Block approximately 0.001 percent by area. From a benthic population standpoint this leads to an impact magnitude rating of Negligible.

Sensitivity of Receptor FPSO and SURF Installation The sensitivity of the marine benthos population to FPSO and SURF installation impacts is considered Low. While the mortality rate of sessile taxa individuals from physical disturbance resulting from installation of the subsea infrastructure will be high the population is not anticipated to be sensitive to the reduction in individuals.

Impact Significance and Mitigation Measures FPSO and SURF Installation These magnitude and sensitivity ratings lead to a

significance rating of Negligible for impacts on marine benthos from FPSO and SURF installation. Based on this rating no mitigation is recommended.

7.2.8.2 Characterization of Impacts Presence and Abandonment of Subsea Infrastructure

Magnitude of Impact Presence and Abandonment of Subsea Infrastructure As described in Section 2.12 at the end of operations some subsea infrastructure including the SURF equipment that is connected to the FPSO e.g. risers umbilical SURF equipment sited on the seafloor and FPSO mooring system may be disconnected and abandoned in place on the seafloor in accordance with standard industry practice consistent with the decommissioning plan. This would constitute an irreversible loss of natural soft bottom habitat within the collective footprint of these structures but some species of benthos may colonize this hard substrate or be attracted to it as an artificial reef as found in shipwrecks in the Gulf of Mexico Kilgour and Shirley 2008. This will only occur within the immediate footprint of the abandoned infrastructure and is expected to affect a relatively small number of organisms. The addition of small amounts of hard substrate will likely increase the diversity of the local benthic community as species that require hard substrate colonize the area where none existed before but this must be balanced with the loss of soft substrate that will continue to be unavailable within the footprint of the subsea infrastructure. These effects will occur over a small area of the direct AOI. The magnitude of the net effect on marine benthos will be Small. This positive impact is also relevant for the production operations stage as benthic organisms will have the opportunity to colonize elements of subsea infrastructure which remain stationary through the production operations stage. These positive impacts will be temporary for any infrastructure that is removed at the time of decommissioning.

Sensitivity of Receptor Presence and Abandonment of Subsea Infrastructure The sensitivity of the marine benthos to this impact is considered Low as only a small number of organisms would be impacted and those are species that are accustomed to colonizing hard substrate in an area where this type of surface is not common.

Impact Significance and Mitigation Measures Presence and Abandonment of Subsea Infrastructure These magnitude and

sensitivity ratings lead to a significance rating of Negligible for impacts on marine benthos from the presence and subsequent abandonment of subsea infrastructure. Based on this rating no mitigation is recommended.

7.2.8.3 Summary of Impact Significance Ratings Table 743 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on marine benthos and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

Table 743 Marine Benthos PreMitigation and Residual Impact Significance Ratings	Stage	Key Potential Impact	Drilling and Installation	Production Operations	Decommissioning

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts

7.2.9 Ecological Balance and Ecosystems

7.2.9.1 Introduction This section describes the potential impacts of the Project on the key components and functions of the marine ecosystem. For over 30 years the US National Oceanographic and Atmospheric Administration NOAA has used the Large Marine Ecosystem LME concept as a model to assess and manage ecological functions at the regional scale. LMEs are defined as relatively large areas of ocean space of approximately 200000 km² 20000000 ha or 80000 mi² or greater adjacent to the continents in coastal waters where primary productivity is generally higher than in open ocean areas. The PDA is located in the northwestern portion of the North Brazil Shelf LME which comprises the coastal waters adjacent to northeastern South America from the eastern edge of the Caribbean Sea to the Parnaiba River in Brazil. Its width varies but it extends roughly 500 km 300 mi off the coast of Guyana NOAA 2016.

7.2.9.2 Discussion of Potential Impacts All of the Project activities are broadly relevant to an assessment of impacts on ecological balance and ecosystems because the potential impacts will occur within the ecosystem and could impact one or more of its components. Therefore rather than focusing on individual Project activities and

their separate impacts on specific ecosystem components this section identifies key ecosystem components and functions and assesses the ecosystem level implications of the impacts identified in Sections 7.2.1 through 7.2.8 that could impact those key components and functions. Although there is no universally accepted definition of key ecological functions in generic terms or with respect to the North Brazil Shelf LME they generally include such basic processes as nutrient cycling gene flow and maintenance of biodiversity.

Changes in the Marine Nutrient Cycle

The three most important nutrients in the marine nutrient cycle are nitrogen phosphorous and silicon Nihoul and Chen 2008. The primary source of all of these nutrients in the marine food web is phytoplankton which assimilate the nutrients from the surrounding seawater. Nitrogen and phosphorous are essential nutrients to all plant life and silicates enter the marine nutrient cycle largely through diatoms a specific class of phytoplankton that construct hard silicate exoskeletons. The Project could potentially indirectly impact the marine nutrient cycle through its impacts on marine water quality which could in turn impact phytoplankton growth. As discussed in Section 7.1.4 the Project is predicted to have negligible impacts on water quality and these impacts are predicted to be limited to a relatively small localized mixing zone around the FPSO. These impacts are likely to reduce nutrient uptake by phytoplankton within the mixing zone but based on the significance of water quality impacts as assessed in Section 7.1.4 and the very small portion of the North Brazil Shelf LME that would be exposed to these impacts the Project is predicted to have little if any ecosystemlevel impacts on nutrient cycling.

May 2017 302 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Impacts on Gene Flow Chapter 7 Assessment of Impacts

Maintaining gene flow

is critical to supporting the genetic diversity in marine biological populations which in turn is an important factor in the general resilience and vigor of marine flora and fauna. Obstacles to efficient gene flow occur whenever physiochemical barriers to migration breeding or dispersalcolonization occur. Oceanic currents are a key driver of biological dispersal because many marine species spend all or part of their lives drifting as part of the plankton. A project could potentially have significant impacts on gene flow if it impacted large scale current

patterns or prevented site specific reproductive events such as spawning aggregations from occurring. The Project is not predicted to have any appreciable impact on regional current patterns that define the North Brazil Shelf LME nor is it predicted to impact any sitespecific reproductive activities that could be considered significant at a regional or ecosystem scale. Impacts on Biodiversity The Project is predicted to have numerous impacts on marine species but is not expected to impact largescale distribution of species or cause the loss of any species from within the North Brazil Shelf LME. Some benthic species may be locally displaced from the footprint of the SURF components and some pelagic species may be locally displaced from the surface mixing zone that will form around the wastewater outfall but these impacts would be insignificant at the ecosystem scale. Additionally there is a negligible risk of the Project causing the extinction or extirpation of any species from the North Brazil Shelf LME or exacerbate any of the risk factors that have contributed to the listing of the special status species assessed in Section 7.2.1.

Ballast Water and Invasive Species Ballast water is water carried in ships ballast tanks to improve vessel stability balance and trim; it is essential for the safe operations of oceangoing ships. It is taken onboard or discharged when cargo is unloaded or loaded or when a ship needs extra stability in foul weather. When ships take on ballast water aquatic plants and animals may also be entrained into the ballast tanks. These organisms are transported in the ballast tanks of the ships and upon being discharged some of these organisms may survive and establish themselves in the new environment if the habitat conditions are suitable. The global movement of ballast water is considered to be the largest transfer mechanism for marine nonindigenous species Ruiz et al. 2005 . If the nonindigenous species become invasive they may cause serious ecological economic and public health impacts MCA 2008. If the invasive species become dominant in the new environment they can displace native species change localregional biodiversity and affect local economies based on fisheries. In addition these invasive species may also affect industries that withdraw coastal water and affect public health ESMA 2017 . The Caribbean Invasive Alien Species Working Group of which Guyana is a member has identified one species the green mussel *Perna viridis* as having been introduced to

Assessment of Impacts The Project has the potential to contribute to the spread of marine invasive species as the discharges of ballast water will be required for initial FPSO installation and recurring tanker offloading during production operations. As discussed in Section 2.5.8.4 ballast water will be required for FPSO transit from the shipyard to the site. Once on site the unneeded ballast water from the FPSO may be discharged overboard. The initial FPSO ballast discharge will occur only during a limited time period during SURF installation and commissioning activities. It is estimated that no more than 500000 barrels of ballast water would be discharged into Guyanese waters Table 25 during this time. In order to mitigate the risk of invasive species the ballast water taken on will be exchanged with water from deep international waters. This practice is generally thought to reduce the likelihood of introducing invasive species to new coastal habitats because oceanic organisms are considered unlikely to colonize coastal habitats Ruiz et al. 2005. The environmental conditions at the point where the water is withdrawn will likely be similar to the conditions in the PDA which means that at least some organisms discharged into the PDA would be likely to survive the event but it also means that these organisms would likely include many of the same openocean species that occur naturally in the PDA. During production operations offloading tankers will routinely discharge ballast water in Guyanese waters as oil from the FPSO is loaded. It is estimated that a maximum of 1100000 barrels of ballast water Table 25 will be discharged during each loading. These ballast water discharges would be conducted in accordance with internationally recognized standards and in compliance with IMO requirements. The ecological effect would be similar to the effect of the ballast discharge from the FPSO in the sense that organisms from the open ocean could be discharged at the FPSO. However ballast discharges from tankers will occur routinely during the production phase as opposed to the onetime FPSO ballast discharge during the installation phase.

7.2.9.3 Characterization of Impacts Magnitude of Impact The Projects predicted ecosystemlevel impacts are indirect impacts that would potentially occur as a result of direct impacts

on specific abiotic and abiotic components of the larger ecosystem. The assessment of the Projects magnitude of impacts on the North Brazil LME from the potential impacts described above is determined based on the geographic extent of the impact compared to the size of the North Brazil LME and the initial rating of the direct impact that would drive the indirect ecosystemlevel impact. The magnitude of potential ecosystemlevel impacts is defined according to the definitions provided in Table 744. Table 744 Definitions for Magnitude Ratings for Potential Impacts to Ecological Balance and Ecosystems Criterion Magnitude Definition Negligible Impact is within the normal range of variation for the ecosystem as a whole. Small Impact is predicted to be outside the range of natural variation but does not cause a substantial change in any of the key ecosystem functions identified in Section 7.2.9.1. May 2017 304 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Medium Impact is predicted to be outside the range of natural variation and causes a substantial change in one or more of the key ecosystem functions identified in Section 7.2.9.1. Large Impact is predicted to be outside the range of natural variation and causes a substantial change in two or more of the key ecosystem functions identified in Section 7.2.9.1. All of the embedded controls identified in Section 2.11 will minimize impacts on one or more physical biological or chemical attributes of the ecosystem and will therefore play a role in reducing the initial magnitude of impacts on the ecosystem. Sensitivity of Receptor The assessment of the ecosystem as a broad receptor of indirect impacts from the Project is based on the sensitivity of the receptor to the initial direct impact that will drive the ecosystemlevel impacts. Ecosystem level sensitivity is defined according to the definitions provided in Table 745. May 2017 305 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 745 Definitions for Receptor Sensitivity Ratings for Impacts to Ecological Balance and Ecosystems Criterion Definition Sensitivity Negligible Biological impacts affect receptors with no specific value or importance attached to them. Low Biological impacts affect species and subspecies of Least Concern on the IUCN Red List or not meeting criteria for medium or high value or without specific anatomical behavioral or ecological susceptibilities to Projectrelated

impacts. Medium Biological impacts affect species listed as Vulnerable Near Threatened or Data Deficient on the IUCN Red List species protected under national legislation nationally restricted range species nationally important numbers of migratory or congregatory species species not meeting criteria for high value and species vital to the survival of a medium value species. High Biological impacts affect species on IUCN Red List as Critically Endangered or Endangered. Species having a globally restricted range e.g. fauna having a distribution range less than 50000 km² 20000 mi² internationally important numbers of migratory or congregatory species key evolutionary species and species vital to the survival of high value species. Impact Significance and Mitigation Measures Table 746 summarizes the magnitude sensitivity and impact significance ratings for the potential ecosystem level impacts discussed above. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. Table 746 Summary of Impact Significance Ratings and Recommended Mitigation Measures Ecological Balance and Ecosystems Sensitivity Magnitude PreMitigation Low Small Significance Rating Negligible Proposed Mitigation Measures None Residual Significance Rating Negligible Low Medium Minor None Minor Stage Resource Receptor Impact All Project stages Production Operations Nutrient uptake by phytoplankton; localized and temporary changes in species distribution Marine biota that could be affected by invasive species introduced by ballast water May 2017 306 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.3 Socioeconomic Environment Chapter 7 Assessment of Impacts For the purposes of this EIA socioeconomic environment is intended to encompass the human aspects of the affected environment with specific emphasis on the social and economic characteristics of society that could be affected by the Project. This section identifies and assesses the potential impacts on the existing socioeconomic environment in the Project AOI including community health and cultural heritage as a result of Projectrelated activities. The methodologies specific to the assessment of socioeconomic impacts build upon the general assessment methodology outlined in Chapter 4. This general approach and methodology has been adapted for use in evaluating impacts

to socioeconomic receptors. The evaluation criteria used to determine impact magnitude and sensitivity for specific socioeconomic receptors are summarized in Table 42. Stakeholder engagement is critical to a robust impact assessment process. A range of stakeholders were interviewed to deepen ERM's understanding of the existing socioeconomic conditions presented in Chapter 6. The information gathered was also used to inform the sensitivity and magnitude designations used in this assessment. The following socioeconomic resources with the potential to be impacted by the Project within the Project AOI are assessed in this section: Economic conditions, Employment and livelihoods, Community health and wellbeing, Marine use and transportation, Social infrastructure and services, Land use, Ecosystem services, Indigenous Peoples, Cultural Heritage.

7.3.1 Project Activities and Receptors As the Project's primary activities are located more than 190 kilometers (120 miles) offshore, impacts on socioeconomic resources as a result of planned Project activities are expected to be limited. The main Project activities³³ with potential to result in socioeconomic impacts are: Installation and operation of the FPSO and SURF, Drilling of wells, Government revenue generation from Project, Project employment and procurement, Worker presence in the Georgetown area. ³³ Other Project activities considered in this assessment include discharges of process and waste waters; utilization of an FPSO marine exclusion zone; changes in land use; and aviation activities. However, impacts on socioeconomic conditions from these activities were considered negligible.

May 2017 307 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts

Project use of emergency and health services in the Georgetown area, Project use of roads and transportation services in the Georgetown area, Marine vessel transit between the PDA and shorebase facilities in Guyana and Trinidad.

Potential receptors for socioeconomic impacts during planned Project activities are outlined in Table 747 along with the rationale for their inclusion and the associated potential impacts.

Table 747 Socioeconomic Receptors and Potential Impacts as a Result of Project Activities

Receptor: General Guyanese population

Rationale for Inclusion: The Project could have far-reaching economic impacts throughout the country, which could impact all segments of the population. Potential Impacts

Increased government revenues potentially leading to increased social spending and investment throughout the country. Increased business activity and related employment. General population of Georgetown Road users in Georgetown both motorized and nonmotorized [e.g. cyclists pedestrians] modes Marine vessel operators in the Georgetown Harbour and along the coast The limited amount of time that offshorebased Project workers those who are foreign will be onshore will likely be spent in transit in Georgetown where they will interact with and make use of the same resources and infrastructure as the local population. Project procurement and increased worker spending level may result in higher demand for goods and services. The Project may result in induced influx of jobseekers from other areas of Guyana to the Georgetown area. The Project may rely in a very limited manner on some medical and health facilities in the Georgetown area to address worker illness and injury. The Project will use existing roads for transporting materials and equipment from warehouses or storage facilities to the Georgetown area shorebases. The Project will involve transit of various marine vessels such as support vessels and tugs from the Georgetown area shorebase facilities to the PDA. Changes to community dynamics identity and sense of safetysecurity. Increased cost of living. Increased risk of communicable disease transmission. Decreased accessibility or quality of medical and health service. Increased traffic congestion. Increased risk of property to injury due damage and vehicle acent. Increased traffic marine congestion Georgetown in Harbour and coastal waters between Georgetown and the PDA. Increased acent. of marine risk Marine vessel operators in the vicinity of the PDA The Project will establish marine safety exclusion zones around the FPSO drill ship and major installation vessels precluding use of this area for other activities such as fishing. Reduced availability of ocean areas for nonProject livelihood activities such as fishing. May 2017 308 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Receptor Archaeology and heritage resources Rationale for Inclusion The Project will disturb the seafloor in the process of drilling development wells installing FPSO components and installing SURF components Chapter 7 Assessment of Impacts Potential Impacts Damage to underwater archaeological or historical sites. 7.3.2 Economic Conditions 7.3.2.1

Introduction This section assesses potential Project impacts on economic conditions in the Project AOI. The key impacts considered for planned Project activities include Projectrelated revenue generation and increased tax revenues for the government potentially resulting in increased government spending typically on social services and infrastructure; potential increased local business activity and related employment as a result of Project procurement and employment; potential increased Project worker spending levels; and potential increased cost of living to citizens due to higher demand for goods and services. The extent and type of Guyanese employment and procurement opportunities are outside the scope of the EIA. Such considerations will be addressed as part of EEPGLs preparation of a local plan consistent with the requirements of the petroleum agreement.

7.3.2.2 Relevant Project Activities and Potential Impacts The Project would contribute directly and positively to increased national revenues through a petroleum agreement between EEPGL and the government. The Project would also benefit the economy through local procurement of select goods and services limited direct local employment and spending in local communities by Project workers. In addition to direct expenditures and employment the Project would also likely generate induced economic benefits as other nonProject related businesses benefiting from direct Project purchases or worker spending will reinvest locally or expand spending in the area thereby also generating more local valueadded tax. These beneficial multiplier impacts will occur throughout the Project life. Potential adverse impacts of the Project on economic conditions associated with planned Project activities could include the potential for cost of living to increase due to a higher demand for some goods and services either through direct Project procurement or through Project worker purchases. Potential impacts on economic conditions from the Project are summarized in Table 748.

May 2017 309 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 748 Project Activities and Potential Impacts

Economic Conditions	Stage	Receptors	Project Activity	Project revenue generation	Key Potential Impacts
Potential government investment in social services and economic development diversification.					Potential government infrastructure projects. Project procurement of selected goods

and services Increased sales tax revenues. Increased local All Project stages Guyanese population Project worker spending business activity and growth. Increased demand for services and infrastructure leading to increased cost of living. Limited local employment direct and indirect 7.3.2.3

Magnitude of Impact Economic Conditions The Project has the potential to impact economic conditions both positively and negatively. Project revenues to the government through its revenue sharing agreement with EEPGL can allow for increased government spending on social infrastructure services and programs as well as investment in infrastructure programs and different economic sectors. Economic conditions can also be impacted positively by select local Project procurement and through Project worker spending. An adverse impact could occur from increases in the cost of living due to higher demand for some goods and services. Given the Projects small workforce and predominantly offshore footprint such increases are expected to be limited. Economic benefits of the Project are expected to outweigh potential negative impacts such that overall impacts on the economy are expected to be Positive. As described in Chapter 4 this assessment does not develop ratings for positive impacts. May 2017 310 EEPGL Environmental Impact Assessment Liza

Phase 1 Development Project Chapter 7 Assessment of Impacts 7.3.2.4 Sensitivity of Receptors

Economic Conditions The receptors most likely to be most impacted by impacts to economic conditions are residents in the Georgetown area. As discussed below vulnerable lowerincome populations are considered to be more sensitive to this impact and are therefore considered separately. Sensitivity of the receptors is determined based on the definitions in Table 749. Table

749 Definitions for Receptor Sensitivity for Impacts to Economic Conditions Criterion Definition

Sensitivity Low The local and regional economies are highly diversified and not highly dependent on any one sector. The workforce is highly skilled would not experience major challenges in shifting to different occupations and is well positioned to benefit from the Project. Medium The local and regional economies are somewhat diverse and dependent on a few key industrial sectors that are not all natural resourcesbased. Alternate economic opportunities including from the Project are possible but the workforce may require additional training to be able to pursue such opportunities.

High The local and regional economies are highly dependent on one or a few industrial sectors that are largely natural resource sectors. There are few alternate economic opportunities in the area and the workforce does not have the skills to shift to pursue alternate economic opportunities. Receptors in the Georgetown area Region 4 are considered to have a Medium level of sensitivity to economic impacts since the economy in this region is relatively diverse and less dependent on natural resources than in other areas of the country with 12 percent of jobs in the primary sector 21 percent in the secondary sector and 67 percent in the tertiary sector³⁴. Individuals and households of lower socioeconomic status are considered to have a High level of sensitivity to economic impacts due to their lower capacity to benefit from the Project and the business opportunities it may bring and to their higher level of vulnerability to an increased cost of living. However this vulnerable population would benefit from increased government revenues along with the general population should such government revenues be invested in social infrastructure services and programs as well as investment in infrastructure programs and different economic sectors.

7.3.2.5 Impact Significance and Mitigation Measures

Economic Conditions As discussed above this impact is considered to be Positive for both the general population and the lowincome subpopulation in the Georgetown area. As described in Chapter 4 this assessment does not develop significance ratings for positive impacts. ³⁴ According to the BSG the primary industrial sectors e.g. agriculture fishing forestry and mining make direct use of natural resources and include the production of raw materials and basic foods. The secondary sector is engaged in manufacturing using raw products from the primary sector and includes processing construction textile production brewing and bottling etc. The tertiary sector provides services to the general population and businesses including retail and wholesale trade transportation and distribution entertainment tourism healthcare etc. May 2017 311 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts As this is a positive impact no mitigation measures are required. To enhance the benefits from this positive impact the Project intends to procure select Project goods and services locally to the extent reasonably practicable. While it is expected that the number of Guyanese workers will be

small the Project also intends to utilize Guyanese nationals where reasonably practicable. Table 750 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on economic conditions and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

Table 750	Economic Conditions	PreMitigation	and	Residual Impact	Significance Ratings	Magnitude	Sensitivity	Not assessed	Medium	PreMitigation
Significance Rating	Positive	Proposed	Mitigation Measures	None	Residual	Significance Rating	Positive	High	lower socioeconomic groups	Phase All Project stages
Resource	Receptor	Impact	Guyanese population including lower income subpopulation	increased government revenues	increased employment	increased local business activity	potential for increased cost of living.	7.3.3	Employment and Livelihoods	7.3.3.1 Introduction

This section assesses potential Project impacts on employment and livelihoods in the Project AOI. The key impacts considered for planned Project activities are potential increased local business activity and employment due to select Project employment and select Project procurement and due to Project worker spending; potential occupational health and safety impacts to Project workers; and potential for restricted access to fishing locations and damage to fishing vessels and equipment from Project vessel movements. The extent and type of Guyanese employment and procurement opportunities are outside the scope of the EIA. Such considerations will be addressed as part of EEPGLs preparation of a local plan consistent with the requirements of the petroleum agreement.

May 2017 312 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts 7.3.3.2 Relevant Project Activities and Potential Impacts

The primary Project activities will occur approximately 190 kilometers 120 miles offshore and are not expected to significantly impact nonProject activities occurring on the Guyana coast. Project workers onboard the FPSO and other Project vessels may be exposed to occupational hazards which will be managed through training and the use of protective equipment as appropriate. The only direct planned Project activities that will be perceptible from the shore will be support vessel trips originating from and returning to

shorebase facilities in Georgetown. In addition the Project will engage select local companies for the provision of various goods and services e.g. catering transportation logistics to support Project activities. Table 751 summarizes potential Project impacts on employment and livelihoods. Table 751 Project Activities and Potential Impacts Employment and Livelihoods Stage Receptors Project Activity Project procurement of select goods and services Population of Georgetown and vicinity Worker spending All Project stages Fishing vessel operators in the coastal area Limited local employment direct and indirect Transit of Project vessels between the PDA and shorebases in Georgetown and in Guyanese waters between PDA and shorebases in Trinidad and Tobago Key Potential Impacts Increased local business activity and growth Increased employment Damage to fishing vessels and equipment impacting fishing livelihoods

7.3.3.3 Magnitude of Impact

Employment and Livelihoods

The assessment of the Projects magnitude of impacts on employment and livelihoods is determined based on consideration of geographic extent frequency duration and scale. The scale of potential impacts on employment and livelihoods is defined according to the definitions provided in Table 752.

May 2017 313 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 752 Definitions for Scale Ratings for Potential Impacts on Employment and Livelihoods

Criterion	Scale	Definition
Negligible	Changes do not bring about any loss of livelihood or employment. Small	The changes impact some individual receptors ability to engage in their current livelihoods at the same level of productivity.
Medium	The changes impact the receptors ability to engage in their current livelihoods at the same level of productivity and/or cause a loss of working days. An entire sector within a community may be impacted in this way.	Large
Large	The changes cause the receptors to cease their current livelihood activities for an extended period of time or indefinitely. An entire sector within a community or region may be impacted in this way. Few adverse impacts on employment or livelihoods are expected as a result of planned Project activities. Current fishing activities both industrial and artisanal rarely occur as far offshore as the PDA and therefore the FPSO marine safety exclusion zone will have little or no impact on existing current fishing activity. There is an emerging deepwater tuna fishery that may	

approach the southern boundary of the PDA and abandoned fishing gear has been found entangled in the mooring lines for the metocean instruments described in Section 6.1.1.1. If this fishery continues to develop in the vicinity of the PDA then the number of industrial fishing vessels affected by Projectrelated activities offshore may increase modestly in the future. Considering the small number of operators that are currently participating in this fishery the uncertainty concerning the ultimate size of the fishery and the relatively small area of ocean that would be affected the magnitude of the Projectrelated impacts on industrial fishing operations is considered Small. As a mitigation measure the Project intends to issue notices to mariners via MARAD the Trawlers Association and fishing coops for major marine vessel movements including movements of the FPSO drill ship and major installation vessels. The Project will also communicate major vessel movements to commercial cargo commercial fishing and subsistence fishing vessel operators who might not ordinarily receive Notices to Mariners and where possible communicate Project activities to those individuals to aid them in avoiding Project vessels through the stakeholder engagement process. This will allow fishing boat operators to adjust their fishing locations if needed to avoid these offshore locations with higher densities of Project vessels. The highest probability for Project interactions with fisherfolk would likely remain limited to encounters with support vessels transiting between the PDA and the shorebases in Georgetown and Trinidad and Tobago. This could result in some limited and temporary disruption to fishing activity. Unlike the deepwater industrial fisheries the artisanal fisheries would not lose access to any fishing areas or be affected by expansion of oil and gas industryrelated traffic into areas where it does not currently exist however the increase in shipping traffic near the coast and within the Demerara Harbour carries a small increase in the potential for support vessels to cause damage to fishing vessels or equipment such as nets during transiting. Many of the artisanal craft engaged in subsistence fishing activities do not carry radios may use remote ports and/or may not receive notices of increased vessel activity issued by the Project through May 2017

314 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts the channels described above. Considering

the occasional and temporary nature of impacts on subsistence fishing activity from the Project-related marine traffic balanced with the abovementioned limitations on the effectiveness of the measures proposed to manage these impacts the magnitude of the impacts is considered to be Small. In addition to direct employment the Project will result in the indirect employment of workers through procurement of select local goods and services such as food transportation and logistical support. Local and foreign workers that are off shift also will spend a portion of their salaries in the Georgetown area on local accommodations food transportation and entertainment. This increase in business for these local service providers could potentially lead to increased incomes additional hiring and continued investment in these local businesses allowing for further growth. This impact is considered to be Positive and as such a magnitude rating is not assigned.

7.3.3.4 Sensitivity of

Receptors Employment and Livelihoods Potential receptors for employment and livelihood impacts are the general population in Georgetown and its vicinity; subsistence and commercial fisherfolk as well as farmers operating on the Guyanese coast; and Project workers based offshore. The receptor sensitivity ratings for employment and livelihoods are defined according to the definitions provided in Table 753.

Table 753	Definitions for Receptor Sensitivity Ratings for Employment and Livelihood Impacts	Criterion	Definition
Sensitivity	Low	The receptor can easily adapt to the change without assistance or can shift to alternate livelihood opportunities without impacting ability to subsist and/or earn income.	
Medium	The receptor may adapt to the change or shift to alternate livelihood activities with assistance and with some disruption to ability to subsist and/or earn income.		
High	The receptor cannot adapt to the change without difficulty and cannot easily transition to alternate livelihood activities. Impacts on current livelihood activities will pose a threat to the receptors ability to subsist earn income and maintain current quality of life.		

The Guyanese population continues to rely heavily on primary sector livelihoods such as agriculture and fisheries; however the share of primary sector jobs has been decreasing steadily in favor of more secondary and tertiary service sector jobs. Based on the definitions above the general Guyanese population is considered to have a Medium level of sensitivity to potential employment and livelihood impacts from planned Project activities. Fisherfolk

engaging in fishing on the Guyanese coast are also considered to have a Medium level of sensitivity to such impacts.

7.3.3.5 Impact Significance and Mitigation Measures Employment and Livelihoods

Based on the magnitude of impact and the receptor sensitivity ratings the significance of livelihood and employment impacts on fisherfolk operating in the coastal area is Minor. The May 2017 315

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7

Assessment of Impacts significance of livelihood and employment impacts for Project workers based offshore is also Minor. As discussed above the positive impacts on employment and livelihoods that will result from Project employment procurement and worker spending will outweigh potential adverse impacts for an overall Positive impact. As discussed above the Project will as a mitigation measure seek to enhance positive benefits by procuring select goods and services locally potentially leading to enhanced local employment and livelihood benefits to the extent reasonably practicable and this has been considered as part of the Positive rating. Beyond these mitigation measures no additional mitigation measures for potential adverse impacts are necessary. Table 754 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on employment and livelihoods and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

Table 754	Employment and Livelihoods PreMitigation	and Residual Impact Significance Ratings	Magnitude	Sensitivity	PreNot assessed	Medium
Mitigation	Significance Rating	Positive	Proposed Mitigation Measures	Residual	Significance Rating	None
None	Positive	Small	Medium	Minor	None	Minor
Stage	Resource	Receptor	Impact	All Project stages	Population of Georgetown and vicinity increased employment local business activity and household incomes.	Fisherfolk
Impacts on fishing livelihoods	exclusion from PDA for commercial fishing operations;	nearshore navigation and safety for subsistence fishing operations	May 2017 316	EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7	Assessment of Impacts	7.3.4 Community Health and Wellbeing
7.3.4.1 Introduction	This section assesses potential impacts from the Project on community health and wellbeing in the Project AOI.					

The key potential impacts considered as a result of planned Project activities are increased risk of communicable disease transmission decreased public safety from interactions with Project activities and decreased availability of emergency medical and health services. Increased risks of marine and road accidents to the public are assessed in Section 7.3.5 and Section 7.3.6 respectively.

7.3.4.2 Relevant Project Activities and Potential Impacts

The Project will involve a range of activities that could potentially impact public health. Shifts in demographic patterns including the influx of foreign workers or the spatial concentration of working-age populations has the potential to cause changes in disease transmission patterns and to impact public safety. Project onshore and nearshore transportation activities could increase the risk for vehicular and marine accidents. The potential for these impacts are limited due to the Project's limited onshore footprint.

May 2017 317 EEPGL
Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 755 Project Activities and Potential Impacts Community Health and Wellbeing Stage All Project Stages Receptors General population of Georgetown and vicinity Project Activity Project worker presence

Road users in Georgetown and vicinity
Project transportation marine and road
Marine users in vicinity of Georgetown shorebases
communicable disease transmission. Impacts on public safety. Overburdening of medical and health services. Increased risk of vessel collisions and vehicle accidents refer to assessments in section 7.3.5 and 7.3.6.

7.3.4.3 Magnitude of Impact Community Health and Wellbeing

The assessment of the Project's magnitude of impacts on community health and wellbeing is determined based on consideration of geographic extent frequency duration and scale. The scale of potential impacts on community health and wellbeing is defined according to the definitions provided in Table 756.

Table 756 Definitions for Scale Ratings for Potential Impacts on Community Health and Wellbeing	Criterion	Definition
Scale		
Negligible		No discernible change in health status of the population. Small Changes to health status occur in some individuals and households but changes are minor temporary and reversible without medical or public health intervention.
Medium		Changes to health status occur at the population level

and are reversible over time or with medical or public health intervention. Large Profound and measurable changes to health status are evident at the population level. Some health impacts may be severe or permanently debilitating requiring medical or public health intervention or other forms of assistance for treatment and recovery. Population shifts caused by the influx of workers from other parts of the country or from foreign countries has the potential to cause changes in transmission patterns of some communicable diseases particularly if workers originate from countries with higher rates of diseases that are transmitted person to person such as TB and sexually transmitted infections. At this time the countries of origin of the Project workers are not known. Guyana has a lower rate of TB incidence than the global average 90 cases per 100000 population versus the global average of 133 but has a higher rate than most developed countries. Guyana's rate of HIV prevalence is comparable to the global average. Potential communicable disease transmission risks will vary according to the workforce's primary countries of origin; however regardless of worker origin the Project will establish a worker health screening program and take May 2017 318 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts precautions to avoid both internal and external communicable disease risks. Given the small size of the Project workforce in comparison with the receiving community less than one percent of the population of Georgetown the Project workers limited onshore presence and the embedded health controls in place to further reduce risk the magnitude of impact is expected to be Negligible. Increases in population and the presence of transient populations has the potential to contribute to increased rates of crime. Georgetown has a high rate of crime with reported cases on the rise in recent years. This is attributed largely to high rates of poverty and unemployment. It is not expected that the influx of Project workers through the Georgetown area would contribute significantly to local crime rates. Furthermore the Project workforce will represent less than one percent of the population of Georgetown and workers onshore presence will be limited and occasional. As such the magnitude of impact is expected to be Negligible. The Project will have a medical facility onboard the FPSO to treat minor medical issues. Installation vessels will also have

their own medical facility and a medical professional. In the event that an offshore worker requires medical evacuation referral onshore a medical professional will be available onshore to support the response referral. In the event of more serious illness or injury that cannot be handled by the offshore medical professionals patients would be medically evacuated to a healthcare facility in Georgetown and potentially outside of Guyana depending on the type of medical issue. Reliance on Guyanese healthcare facilities could potentially compromise availability and access for the Guyanese local population. The Project currently plans to make use of a designated local Guyanese physician as well as hospitals in Georgetown in the event of both work related and nonwork related medical and health emergencies. However for the most part these hospitals will be relied upon only for initial evaluations or in the case of lifethreatening emergencies stabilization before evacuation of foreign workers out of country to another facility. Given that reliance on local Guyanese facilities will be limited the magnitude of impact is therefore considered to be Small.

7.3.4.4 Community Health and Wellbeing Sensitivity of Receptors

The receptors that could potentially experience health and wellbeing impacts as a result of planned Project activities are residents of Georgetown and its vicinity. The receptor sensitivity ratings for community health and wellbeing are defined according to the definitions provided in Table 757 below.

May 2017 319 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 757

Definitions for Receptor Sensitivity Ratings for Community Health and Wellbeing Impacts

Criterion	Definition
Sensitivity Low	The population does not have many areas of health vulnerability. Individuals and households have the personal resources and capacity to protect and promote health. The community is well equipped with resources and infrastructure to provide routine medical and health care and address medical and health emergencies.
Medium	The population has multiple areas of health vulnerability due either to environmental or social factors. Portions of the population face socioeconomic challenges that act as barriers to health protection and promotion. There are shortfalls in local medical and health resources and infrastructure that compromise ability to provide timely and appropriate medical and health care in some situations.
High	The population has many

areas of health vulnerability due to environmental and social factors. A large proportion of the population is disadvantaged which acts as a barrier to protecting and promoting health. Adequate medical health resources and infrastructure are lacking often not allowing for timely and appropriate medical and health care. The Guyanese population is in a transitional phase whereby both communicable and noncommunicable diseases contribute considerably to the burden of illness and mortality. However urban populations have measurably higher health status than rural populations and are less likely to suffer from some communicable diseases such as malaria lymphatic filariasis and soiltransmitted helminths. Georgetown has a high concentration of medical and health facilities relative to other parts of Guyana although emergency care capacity and health related human resources are considered lacking throughout the country. Guyanas emergency medical system is in transition at this time; until recently the country did not have an ambulance system to respond to emergencies. As of 2014 an ambulance pilot program through the Georgetown Public Hospital Corporation GPHC and with assistance from Vanderbilt University had been established with seven ambulances and 21 trained emergency medical technicians EMTs. According to Guyanas Chief Medical Officer the countrys emergency medical services are still insufficient to respond to the needs of the population. The country does not have an air ambulance to transfer injured patients from mining areas in the hinterland and to respond to serious vehicle collisions that occur on Guyanas roads. Hospital capacity is also lacking; at this time the GPHC has 450 beds but requires about 600 to adequately serve the population ERM Personal Communication 7. Based on the definitions above the population in Georgetown has a Medium level of sensitivity to community health and wellbeing impacts. 7.3.4.5 Impact Significance and Mitigation Measures Community Health and Wellbeing Based on the magnitude of impact and receptor sensitivity ratings the significance of increased communicable disease risk is Negligible while the significance of impacts on public safety is Negligible and impacts on emergency health services access are Moderate. Assessment of transportation safety risks are presented in Sections 7.3.5 and 7.3.6. May 2017 320

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7

Assessment of Impacts Given the Negligible significance of communicable disease and public safety impacts from the Project mitigation measures are not required but the Project will nonetheless work closely with police and other public safety authorities to address any related concerns. In addition the Project workers will be required to adhere to a worker code of conduct. Table 758 summarizes the impact magnitude and resource sensitivity ratings for potential Project impacts on community health and wellbeing and the impact significance ratings resulting therefrom. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

Table 758	Community Health and Wellbeing
PreMitigation	Impact Significance Rating Negligible
Proposed Mitigation Measures	None
Residual	Impact Significance Rating Negligible
All Project stages	General population of Georgetown and vicinity increased risk of communicable disease transmission
General population of Georgetown and vicinity	impacts on public safety
General population of Georgetown and vicinity	reduced access to emergency and health services
Medium	Negligible
Negligible	None
Negligible	Medium
Small	Minor
Minor	None

7.3.5 Marine Use and Transportation

7.3.5.1 Introduction

The Project involves the drilling of development wells the installation and longterm operations of an FPSO and SURF and transit of Project support vessels between the PDA and the Guyana shorebases as well as between the PDA and shorebases in Trinidad and Tobago. The specific shorebases and onshore support facilities e.g. warehouses laydown yards to be utilized in Guyana have not yet been identified by EEPGL. Accordingly ERM has performed

May 2017 321 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts the impact assessment on the basis that the Project will utilize existing shorebases located in Georgetown. Should any new or expanded shorebases or onshore support facilities be utilized the constructionexpansion and any required dredging as well as the associated permitting of such facilities would be the responsibility of the owneroperator and such work scope would not be included in the scope of the EIA. The assessment of potential impacts on marine use and

transportation from these Project activities was based on the following assumptions. Most support vessel trips would originate from and return to shorebase facilities in Georgetown while larger draft vessels such as drill ships could transit between the PDA and shorebases in Trinidad and Tobago. The drilling stage could potentially utilize up to two drill ships on station simultaneously. The marine safety infrastructure available in Guyana e.g. navigation aids is adequate.

7.3.5.2 Relevant Project Activities and Potential Impacts

Table 759 summarizes the relevant Project activities and their potential impacts on marine use and transportation. The FPSO will be anchored to the seafloor for the duration of the production operations stage which is intended to last approximately 20 years. During the production operations stage the FPSO will have a 2 nautical mile (nm) radius marine safety exclusion zone covering approximately 4300 ha in which no unauthorized vessels will be allowed to enter. In addition the drill ship and drill centers will have 500 meter radius marine safety exclusion zones during drilling operations and well workovers; a 500 meter radius marine safety exclusion zone will also be maintained around major installation vessels during the installation stage. Notices to mariners would be issued via MARAD to the Trawlers Association and fishing coops for planned Project marine vessel movements including the FPSO drill ship and major installation vessels to be utilized during the installation stage. EEPGL will also communicate major Project vessel movements to commercial cargo commercial fishing and subsistence fishing vessel operators who might not ordinarily receive Notices to Mariners and where possible communicate Project activities to those individuals to aid them in avoiding Project vessels through the stakeholder engagement process. The Project would generate a variety of marine support vessel trips throughout the Project life. Support vessel activities would consist of approximately five vessels conducting resupply trips to the FPSO and drill ships; Tanker movements and tugs supporting tanker loading activities; Subsea installation and maintenance activities; and Other vessels supporting installation activities. Based on similar developments the Project would generate an average of 12 vessel roundtrips between the PDA and shorebase per week during development drilling and FPSOSURF installation and 7 vessel roundtrips per week during FPSOSURF production.

operations. May 2017 322 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts These vessel roundtrips would originate from and return to shorebase facilities in Guyana and/or Trinidad and Tobago. As described in Section 2.9 End of Operations EEPGL has not prepared detailed plans for the decommissioning phase. As such the number of vessel trips associated with decommissioning is not known. For the purposes of the impact analysis vessel traffic associated with Project decommissioning is assumed to be similar to that for the drilling and installation stage 12 vessel round trips per week. For the purposes of the impact assessment marine safety exclusion zones are an embedded control considered part of the Project design. Accordingly the premitigation impact assessment considered the inclusion of this measure.

Table 759 Project Activities and Potential Impacts Marine Use and Transportation Stages		
Project Activity	Maritime transport of Project materials supplies and personnel	Key Potential Impacts
Increased vessel traffic in Georgetown Harbour coastal waters between Georgetown and the PDA along transit routes leading to Georgetown.	Drilling and Installation	Presence of FPSO drill ship and installation vessels
Maritime transport of Project materials supplies and personnel	Production Operations	Presence of FPSO tanker drill ship and workover vessel
Decommissioning	Maritime transport of Project materials supplies and personnel	FPSO removal and decommissioning vessel support
Increased risk of marine casualty event e.g. collision grounding involving third parties and Project vessels in Georgetown Harbour or in coastal waters.	Reduced availability of ocean surface areas for nonProject activities due to marine safety exclusion zones around the FPSO drill ship and major installation vessels.	Increased risk of marine casualty events e.g. collision grounding involving third parties and the FPSO in transit and while anchored as well as drill ship installation vessels in transit and on station.
Increased vessel traffic in Georgetown Harbour coastal waters between ports and the PDA and along transit routes leading to Georgetown.	Increased risk of marine casualty event e.g. collision grounding involving third parties and Project vessels in Georgetown Harbour or in coastal waters.	Reduced availability of ocean surface areas for nonProject activities due to marine safety exclusion zones around the FPSO tanker drill ship and workover vessel.
Increased risk of		

marine casualty event e.g. collision grounding involving third parties FPSO tanker drill ship and tankers on station. Increased vessel traffic in Georgetown Harbour coastal waters between ports and the PDA and along transit routes leading to Georgetown. Increased risk of marine casualty events e.g. collision grounding involving third parties and the FPSO in transit as well as decommissioning support vessels. May 2017 323 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts 7.3.5.3 Magnitude of Impact Marine Use and Transportation Table 760 summarizes the definitions used to rate impact scale of the Projects potential impacts on marine use and transportation. Considering these definitions Table 761 summarizes the assigned impact magnitude ratings for the various impacts. The Projects marine activities would impact cargo vessel traffic into and out of the Port of Georgetown openocean shipping in the vicinity of the Stabroek Block in Guyanese waters and commercial and subsistence fishing activity throughout impacted portions of Guyanas coastal waters. As described in Section 7.3.5.1 support vessel traffic would be higher during the development drilling stage relative to the production operations stage. Because the FPSO and support vessels would be present throughout the duration of the Project the nature of impacts on marine use and transportation would generally be similar across various stages of the Project. Vessels transiting the PDA would need to avoid the marine safety exclusion zones around the drill ships major installation vessels and the FPSO. The FPSO marine safety exclusion zone would require nonProject vessels to avoid approximately 4300 ha 10600 acres approximately 0.2 percent of the Stabroek Blocks approximately 2.7 million ha 6671845 acres for approximately 20 years. Because the FPSO will be anchored to the seafloor its marine safety exclusion zone would essentially be a permanent navigation feature until the decommissioning stage. The marine safety exclusion zones around the drill shipsdrill centers would be small 79 ha and would be in force only during development drilling activity which is anticipated to last approximately 3 years and on occasion during well workover activity in later years. Similar sized marine safety exclusion zones around major installation vessels would occur only during the installation stage or in the event repairs or maintenance. The Stabroek Harbour Master has advised

EEPGL that Jamaican and Trinidadian vessel shipping lanes intersect the Stabroek Block. As such shipping traffic could potentially intersect the PDA as well. Shipping lane maps indicate the FPSO would likely be more than 30 nautical miles from the nearest generalized shipping lane. More importantly the shipping lanes in question are traditional and are not precisely demarcated. Accordingly even if Project vessels are in close proximity of mapped lanes shipping lane users would have ample warning and space to navigate and there is no reason to believe that the Project would meaningfully impede nonProject shipping traffic. No interference with shipping traffic was experienced during previous seismic surveys or the Liza exploration drilling activities. Fishing vessels would lose use of the defined marine safety exclusion zones for fishing activities and as described in Sections 6.3.2 and 6.3.3 most subsistence fishing occurs in nearshore areas. Most commercial fishing occurs between the coast and the edge of the continental shelf i.e. shoreward of the PDA but as described in Section 7.3.3.3 the recovery of derelict fishing gear from the PDA indicates that some fishing activity does take place within or near the PDA and the emerging deepwater tuna fishery may potentially increase this activity in the future. The highest potential for interactions between fishing vessels and Project vessels in Guyana waters is near the Port of Georgetown and the Demerara River mouth where commercial vessel traffic is already present. As a result the Projects impacts on marine use for subsistence activity are likely to be limited but challenges in communicating with the May 2017 324 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts subsistence fishing fleet may limit the effectiveness of efforts to advise the fleet of Project operations. The social and economic impacts of the Projects exclusion zones on commercial and subsistence fishing are described in Sections 7.3.2 and 7.3.3. With respect to commercial fishing the majority of the PDA is in deeper waters that are less often used for commercial fishing and the size of the FPSO marine safety exclusion zone is negligible relative to the water available for fishing. As a result the Projects impacts on marine use for current commercial fishing activities also are likely to be limited. During development drilling and again during decommissioning the Project could generate one or two daily

vessel departures and arrivals from the Port of Georgetown. Although call data for the Port are not available this frequency of activity is unlikely to exceed the Ports vessel throughput capacity. Support vessels would typically be smaller and more maneuverable than the cargo or tanker vessels that call on the Ports of Georgetown or ports in Trinidad and Tobago and thus would not present significant incremental navigation hazards within or near these ports. The scale of potential impacts on maritime use and transportation are defined according to the definitions provided in Table 760 below.

Table 760	Definitions for Scale Ratings	Potential Impacts on Maritime Use and Transportation	Criterion Definition
Negligible	No discernible change in transportation activity or demands on other infrastructure.	Small	Increased transportation activity or marine infrastructure demand is perceptible but does not measurably impact the capacity of transportation or other infrastructure and does not measurably increase safety risks on waterways.
Scale Medium	Increased transportation activity or marine infrastructure demand is perceptible reduces transportation system or infrastructure capacity and/or measurably increase safety risks on waterways. These impacts do not require a change in typical travel behavior.	Large	Increased transportation activity or marine infrastructure demand causes substantial delay congestion and/or increased safety risks on waterways to the point where vessel operators or other users of infrastructure must consistently and frequently change their typical daily behavior.

May 2017 325
 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7
 Assessment of Impacts Table 761 Magnitude Ratings Potential Impacts on Marine Use and Transportation

Stage	Drilling and Installation	Decommissioning	Potential Impact	Maritime safety in Georgetown Harbour and shipping channel	Offshore maritime travel and safety	Production Operations	Maritime safety in Georgetown Harbour and shipping channel	Offshore maritime travel and safety	Magnitude	Rationale for Rating
Small	Small	Small	Small	Small	The drilling and installation stages would involve regular supply vessel trips in and out of Georgetown Harbour. While the marine safety exclusion zones around the FPSO and drill ships would be medium to longterm the FPSO will remain moored in one location and the drill ships would only move between the two					

established drill centers. Operations stage marine transport activity would be similar to but less frequent than for the drilling and installation stages. The FPSO will be stationary for the life of the Project and its associated marine safety exclusion zones would become a known mapped navigation feature for other vessel operators.

7.3.5.4 Sensitivity of Receptors Marine Use and Transportation

Potential receptors for the Project's marine use and transportation impacts include current users of Georgetown Harbour and Guyanese coastal waters. Table 762 defines the receptor sensitivity ratings used in the assessment.

Table 762	Definitions for Receptor Sensitivity Ratings
Potential Impacts to Maritime Use and Transportation	Criterion Definition
Sensitivity Low	The receptor is accustomed to or specifically anticipates the type of activity proposed by the Project; existing transportation activities can easily adapt to additional transportation activity with no outside assistance or mitigation.
Medium	The receptor is not specifically accustomed to the type of activity proposed by the Project. The receptor can adapt to additional transportation activity and maritime safety risks with outside assistance or mitigation.
High	The receptor is poorly suited to the type of activity proposed by the Project and cannot fully adapt to increased transportation activity and maritime safety risks even with outside assistance or mitigation.

Table 763 identifies and characterizes the sensitivity of receptors that could potentially experience marine use and transportation impacts from the Project.

May 2017 326 EEPGL Environmental Impact Assessment
Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 763 Sensitivity Ratings for Marine Use and Transportation Receptors

Sensitivity	Vulnerability Rating
Low	Medium

Receptor Definition and Rationale for Inclusion

Commercial cargo vessels	Commercial fishing vessels
Includes all international and regional commercial cargo vessel activity making calls at Georgetown Harbour as well as traversing the northern coast of South America. Project activities would occur in areas potentially used by commercial shipping organizations and would require use of Georgetown Harbour.	Includes commercial fishing vessels i.e. those who sell their product to local or international markets that operate in Guyana coastal waters. These vessels may interact with Project vessels or may currently conduct fishing operations in or near defined marine safety

exclusion zones in the PDA. Subsistence fishing vessels Includes individuals whose fishing activity is primarily or solely to feed themselves their family or their community and not for commercial sales. These individuals generally operate near shore. Medium Rationale for Rating Georgetown Harbour is an active commercial port where vessel trafficsuch as Projectrelated trafficis expected. Commercial vessels in international waters are expected to be able to safely navigate around other vessels whether in transit or stationary. Commercial fishing vessel would lose access to fishing areas that are currently available to them and would have to avoid Projectrelated vessel traffic where none currently exists; however industrial operators are likely to be aware of Project activities or at least of commercial shipping activity in the vicinity of Georgetown and can alter their fishing grounds to avoid defined marine safety exclusion zones in the PDA. Subsistence fishing vessels are usually small with limited ability to identify or avoid Project vessels. They will not lose access to existing fishing areas or encounter Projectrelated vessel traffic outside of existing areas of high vessel traffic but may not receive notice of Project related activities.

7.3.5.5 Impact Significance and Mitigation Measures Marine Use and Transportation

To further reduce the possibility and severity of marine use and transportation impacts EEPGL will augment its ongoing stakeholder engagement process and will work with government authorities through their existing notificationcontrol processes to identify commercial cargo commercial fishing and subsistence fishing vessel operators who might not ordinarily receive Notices to Mariners and communicate Project activities to those individualsentities to aid May 2017 327 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts them in avoiding major Project vessels where possible as further mitigation. No additional mitigation measures have been proposed related to vessel activity or maritime navigation. Considering these mitigations Table 764 summarizes the premitigation and residual significance of the Projects potential maritime use and transportation impacts. Residual impacts related to maritime capacity navigation and safety are Negligible to Minor. As discussed above impacts during decommissioning are assumed to be similar to those experienced during drilling and installation. The Project may induce shorebase operators to make

improvements to existing facilities to make the shorebases fit for purpose. These improvements would enhance the value of the shorebases as material assets. Assuming that these improvements were small in scale and did not require physical expansion of the existing facilities they would be considered a Positive impact on Guyana's marine infrastructure. Larger scale improvements would be outside the scope of the EIA. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. Considering all of the individual impacts listed in Table 764 the Project would have overall Negligible residual impact significance for marine use and transportation.

May 2017 330 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

Chapter 7 Assessment of Impacts 7.3.6 Social Infrastructure and Services 7.3.6.1Introduction This section assesses potential Project impacts on social infrastructure and services in the Project AOI. The planned Project activities that have the potential to impact social infrastructure and services are Project worker presence with the potential to impact availability or cost of housing and utilities and ground and air transportation with the potential to increase traffic congestion and impact public safety. The impacts associated with these two Project activities are assessed separately in this section. Impacts on health service access are assessed in Section 7.3.4. 7.3.6.2 Housing and Utilities Relevant Project Activities and Potential Impacts The Projects limited onshore activity during drilling installation production operations and decommissioning has the potential to impact housing and utilities in the Georgetown area. Table 765 summarizes the potential impacts on housing and utilities. Table 765 Project Activities and Potential Impacts Social Infrastructure and Services Housing and Utilities Stage All Project Stages Receptors General population in Georgetown and vicinity Project Activity Project worker presence in Georgetown area Induced influx of jobseekers to Georgetown area Key Potential Impacts Increased demand or use of housing and utilities service and infrastructure leading to reduced availability and/or increased cost Magnitude of Impact Housing and Utilities The assessment of the Projects magnitude of impacts on housing and utilities is determined based on consideration of geographic extent frequency duration and scale. The scale of potential impacts on housing and utilities is defined according to the definitions provided in Table 766. May 2017 331 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Table 766 Definitions for Scale Ratings for Potential Impacts on

Housing and Utilities Criterion Definition Negligible No discernible change in demand for housing or utilities. Small Limited increases in demand for housing and utilities are perceptible causing slight changes in the availability quality and/or cost of these resources and services. Scale Medium Increases in demand for housing and utilities are evident and lead to frequent and widespread shortfalls in availability or quality of housing and utilities or measurable increases in costs. Large Increases in demand for housing and utilities are sufficient to cause conditions of chronic shortage and inflated costs. The Project will require up to approximately 1200 workers during the peak of drilling and installation stages and up to approximately 140 workers during the production operations stage. Since the majority of the workforce for these stages will be based offshore the limited time spent onshore would be in temporary accommodations such as hotels. As such the Project workforce is not expected to impact forsale or rental housing stock and thus would not be expected to require any new utilities connections. It is not anticipated that the Projects worker presence onshore at any given time would be enough to drive development of new temporary housing hotel establishments. Some induced population influx from other regions of Guyana may occur as jobseekers move to the Georgetown area seeking direct or indirect employment from the Project; this incoming population could access forsale or rental housing stock. This influx is expected to be limited and short term in nature given EEPGLs efforts to communicate the Projects limited workforce requirements to stakeholders. Based on the definitions presented in Table 766 the magnitude of impact on housing and utilities is considered to be Minor during the drilling installation and decommissioning stages of the Project and Negligible during the production operations stage.

Sensitivity of Receptors Housing and Utilities The receptors that could be potentially impacted by changes to housing and utilities are the current general population of Georgetown. The receptor sensitivity ratings for housing and utilities are defined according to the definitions provided in Table 767. Table 767 Definitions for Receptor Sensitivity Ratings for Housing and Utilities Impacts

Criterion Definition Sensitivity Low Existing infrastructure and services have excess capacity and/or the community has the resources and capability to expand in a timely manner. Medium Existing

infrastructure and services have little excess capacity and the community has limited resources or capability to expand in a timely manner and thus would require assistance in upgrading or supplementing current infrastructure and service provision in the community. High Existing infrastructure and services have little or no excess capacity and the community does not have the resources or capability to respond to a potential increase in population. May 2017 332 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts As the capital of Guyana Georgetown has a relatively high concentration of social services and infrastructure; however according to a study by the InterAmerican Development Bank IDB there are currently shortfalls of housing and appropriate utilities infrastructure in Georgetown which the government is addressing with regularization initiatives for informal communities. Given these shortfalls the population has a Medium level of sensitivity to increased demand for housing and utilities infrastructure. Impact Significance and Mitigation Measures Housing and Utilities Based on the magnitude of impact and receptor sensitivity ratings the significance of housing and utilities impacts for the drilling installation and decommissioning stages is Minor. During the production operations stage this is reduced to a Negligible level of significance. No mitigation measures are required to address potential impacts on housing and utilities. However the Project will proactively manage messaging about the Projects limited workforce needs to stakeholders in order to reduce the potential for induced population influx. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. Table 768 below summarizes potential Project impacts on housing and utilities. The impact will remain Negligible after mitigation. Table 768 Housing and Utilities PreMitigation and Residual Impact Significance Ratings Magnitude Sensitivity PreSmall Medium Mitigation Significance Rating Minor Proposed Mitigation Measures Residual Significance Rating Minor Proactive messaging regarding Project employment opportunities Negligible Medium Negligible None Negligible Stage Drilling Installation and Decommissioning Production operations Resource Receptor Impact General population of Georgetown and vicinity Decreased availability increased cost of housing and utilities

General Georgetown population and vicinity Decreased availability increased cost of housing and utilities May 2017 333 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.3.6.3 Onshore and Air Transportation Relevant Project Activities and Potential Impacts Chapter 7 Assessment of Impacts The specific shorebases and onshore support facilities e.g. warehouses laydown yards to be utilized in Guyana have not yet been identified by EEPGL. Accordingly ERM has performed the impact assessment on the basis that the Project will utilize existing shorebases located in Georgetown. Should any new or expanded shorebases or onshore support facilities be utilized the construction expansion and any required dredging as well as the associated permitting of such facilities would be the responsibility of the owner operator and such work scope would not be included in the scope of the EIA. The travel route frequency and type of vehicle trips between the Georgetown shorebases and offsite facilities i.e. not contained within the shorebases are not known. Such offsite activity could impact onshore transportation by adding vehicle trips likely in the form of heavy truck trips between the offsite facility and the Georgetown shorebases. As was the case for the Liza exploration activities a Road Safety Management Procedure would be developed for all Project related land transport activities. This assessment includes a qualitative analysis of the impacts of those land based trips. The impact scenario assumes vehicle movements between an offsite facility somewhere along the East Bank Demerara Road and a shorebase within the Port of Georgetown. Table 769 summarizes the potential impacts to onshore transportation. The Project would also generate up to 35 roundtrip helicopter flights per week during development drilling and installation and up to 25 roundtrips per week during production operations. All roundtrip flights would originate from and return to Correia International Airport hereafter referred to as Ogle Airport east of Georgetown. As described in Section 2.9 End of Operations EEPGL has not prepared detailed plans for the decommissioning stage. As such the level of onshore and air transportation activity associated with decommissioning is not known. For purposes of impact analysis onshore and air traffic associated with Project decommissioning is assumed to be similar to that of the drilling and installation stage. Table 769 Project Activities and Potential Impacts Onshore

and Air Transportation Stage All Project stages Receptors Road users including drivers cyclists and pedestrians Project Activity Onshore movement of Project materials supplies and personnel All Project stages Other aircraft and users of Ogle Airport Helicopter flights to/from PDA Key Potential Impacts Increased vehicle traffic on public roads in and around Georgetown. Increased air traffic leading to potential impacts on Ogle Airport capacity. May 2017 334 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Magnitude of Impact Onshore and Air Transportation If offsite storage/warehousing facilities are required materials would be transported between the offsite facilities and the shorebases by road. The Projects land activities would impact vehicle traffic in Georgetown particularly in the vicinity of the shorebases and any offsite yards or warehouses. As stated above the assessment assumes that land transport would include heavy truck trips along the East Bank Demerara Road. The number and frequency of these trips is unknown. It is assumed that truck trips would occur over the course of the Project. During this period of time truck trips are unlikely to measurably change existing traffic congestion due to the relatively small number of likely truck trips. Project-related air activity would include approximately five helicopter flights per day during the drilling installation and decommissioning stages and three to four flights per day during the production operations stage. This level of activity is unlikely to meaningfully impact Ogle Airports capacity or operations. The assessment of the Projects magnitude of impacts on onshore and air transportation is summarized in Table 770. Table 770 Magnitude of Impacts Onshore and Air Transportation Stage Drilling and Installation; Decommissioning Production Operations Impact Road capacity and congestion from transportation of materials to the Georgetown shorebases. Capacity limitations and safety risks from Project-related helicopter flights to and from Ogle Airport. Road capacity and congestion from transportation of materials to the Georgetown shorebases. Capacity limitations and safety risks from Project-related helicopter flights to and from Ogle Airport. Magnitude Rationale for Rating Small Although the number of trips between yard/warehouse sites is not known these trips are unlikely to contribute to traffic congestion. Negligible Five helicopter round trip flights per day i.e. less than one movement

per daylight hour are unlikely to meaningfully impact operations or air safety. Negligible Similar type of impacts but lower traffic volume than during the drilling and installation stages. Negligible Three to four helicopter round trip flights per day i.e. less than one movement per daylight hour are unlikely to meaningfully impact operations.

May 2017 335 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Impacts Sensitivity of Receptors Onshore and Air Transportation

The receptors that could potentially experience impacts on onshore transportation include current users of the Georgetown road network. Existing drivers would have a medium level of sensitivity. This rating reflects relatively high traffic volumes and existing congestion in the vicinity of the Demerara Harbour Bridge as well as the lack of travel alternatives i.e. other travel routes or modes of transportation for nonProject drivers. Receptors for air transportation impacts include airport and airspace users and commercial cargo and private pilots crew and passengers. The receptor sensitivity ratings for onshore and air transportation are summarized in Table 771.

Receptor	Drivers	Definition and Rationale for Inclusion of Receptors	Sensitivity Rating	Rationale for Rating
Onshore	Drivers of motor vehicles	Includes existing travelers in and around Georgetown who could interact with and be impacted by Projectrelated traffic.	Medium	Existing traffic congestion and road safety risks in parts of Georgetown. Additional traffic would likely be viewed as incremental but not a fundamental shift in conditions.
Air Transportation	Airport and airspace users	Includes existing air travelers who could be impacted by Projectrelated aviation operations.	Low	The aviation environment is highly regulated. Other air trafficsuch as Projectrelated flightsis expected. All pilots are expected to be able to navigate in the presence of other aircraft.

Impact Significance and Mitigation Measures

Onshore and Air Transportation Based on the magnitude of impact and receptor sensitivity ratings the significance of onshore transportation impacts for the drilling installation and decommissioning stages will be Minor. During the production operations stage this is reduced to Negligible. The significance of air transportation impacts would be Negligible. No mitigation measures are required to address potential impacts on onshore and air transportation. Table 772 below summarizes

potential Project impacts on onshore and air transportation. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter.

May 2017 337 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.3.7 Cultural Heritage 7.3.7.1 Introduction This section assesses potential Project impacts on cultural heritage. The laws and conventions governing the protection and management of Guyanas cultural heritage include Guyanas National Trust Act 1972 Guyanas Maritime Zones Act 2010 the 1972 United Nations Educational Scientific and Cultural Organization UNESCO Convention on Cultural Heritage and the 2001 UNESCO Convention on Underwater Cultural Heritage. Guyanas National Trust Act as well as the 2001 UNESCO Convention on Underwater Cultural Heritage urge the protection of submerged monuments within Guyanas territorial waters and encourage the practice of in situ preservation of cultural heritage whenever possible.

7.3.7.2 Relevant Project Activities and Potential Impacts Project drilling and installation activities that have the potential to adversely impact cultural heritage located on or beneath the seafloor include the drilling of development wells the installation of FPSO anchoring structures and the installation of SURF components. The Project is not expected to require grounddisturbing activities in onshore areas that have not already been disturbed by prior development. Furthermore any constructionexpansion of onshore facilities which would disturb new

onshore areas would be performed by the owners/operators of such facilities and would be out of the scope of this EIA. As a result the Project will not impact any terrestrial archaeological sites. Onshore logistical support would involve use of Guyana port facilities warehouses pipe yards and waste management facilities e.g. landfills. Use of these facilities will not impact any archaeological sites as these lands have already been disturbed and therefore are unlikely to contain intact archaeological sites. Table 773 summarizes potential Project impacts on marine cultural heritage. Table 773 Summary of Relevant Project Activities and Potential Key Impacts Stage Drilling and Installation Project Activity Drilling of Development Wells. Installation of FPSO Anchoring Structures Installation of SURF Components. Key Potential Impact Damage to Shipwrecks and Submerged Archaeological Sites 7.3.7.3 Magnitude of Impact Cultural Heritage The assessment of the Projects magnitude of impacts on cultural heritage in the Project AOI is determined based on consideration of geographic extent frequency duration and scale. The scale of potential impacts on cultural heritage is defined according to the definitions provided in Table 774. May 2017 338 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 774 Definitions for Scale Ratings for Potential Impacts on Cultural Heritage Impacts Criterion Definition Scale Negligible No discernible change in the physical condition setting or accessibility of sites. Small A small part of sites are lost or damaged resulting in a loss of scientific or cultural value; setting undergoes temporary or permanent change that has limited impact on the sites perceived value to stakeholders; stakeholderpublic or scientific access to the sites is temporarily impeded. Medium A significant portion of sites are lost or damaged resulting in a loss of scientific value; setting undergoes permanent change that permanently diminishes the sites perceived value to stakeholders; sites become inaccessible for the life of the Project to stakeholders including traditional users or researchers. Large Entire sites are damaged or lost resulting in a nearly complete or complete loss of scientific or cultural value; setting is sufficiently impacted to cause sites to lose nearly all or all cultural value or functionality; sites become permanently inaccessible to stakeholders including traditional users or researchers. The Project will not impact any known

underwater cultural heritage based on the geophysical survey and remote sensing studies conducted for the Project. However there is the potential for previously unrecorded cultural remains or chance finds to be encountered and impacted during Project drilling and installation activities. Underwater chance finds could include shipwrecks and associated artifact scatters that were not identified during the geophysical survey and remote sensing studies. It is conservatively assumed that the scale of impact on a previously unidentified cultural resource could be as high as Medium if seabed disturbing activities took place in the location of a previously unidentified cultural heritage site. If this were to occur the Project would most likely relocate the SURF component up to a few meters to the extent practicable. Given this and considering the low likelihood that surveys failed to identify significant cultural heritage in the planned disturbance area the magnitude of impact for drilling and installation stages is considered Low. For the production operations stage disturbance of the seafloor will not occur; accordingly the magnitude rating for this stage is Negligible.

7.3.7.4 Sensitivity of Resource Cultural Heritage The resource sensitivity ratings for cultural heritage are defined in Table 775.

May 2017 339 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 775 Definitions for Sensitivity Ratings for Potential Impacts on Cultural Heritage

Criterion	Definition
Sensitivity Low	Site is not specifically protected under local national or international laws or treaties; site can be moved to another location or replaced by a similar site or is of a type that is common in surrounding region; site has limited or no cultural value to local national or international stakeholders; and/or site has limited scientific value or similar information can be obtained at numerous sites.
Medium	Site is specifically or generally protected by local or national laws but laws allow for mitigated impacts; site can be moved or replaced or data and artifacts recovered in consultation with stakeholders; site has considerable cultural value for local and/or national stakeholders; and/or site has substantial scientific value but similar information can be obtained at a limited number of other sites.
High	Site is protected by local national and international laws or treaties; site cannot be moved or replaced without major loss of cultural value; legal status specifically prohibits direct impacts or encroachment

on site and/or protection zone; site has substantial value to local national and international stakeholders; and/or site has exceptional scientific value and similar site types are rare or nonexistent. Depending on the nature of the specific resources encountered, encountered shipwrecks and/or submerged archaeological sites could be specifically protected by national laws such as the Guyana National Trust Act or international conventions such as the 2001 UNESCO Convention on Underwater Cultural Heritage and could possess research and cultural value. For the purpose of this assessment it was assumed that an as-yet unidentified cultural resource could have a sensitivity rating of Medium.

7.3.7.5 Impact Significance and Mitigation Measures Cultural Heritage

Based on the magnitude of impact and the receptor sensitivity ratings the significance of potential cultural resource impacts during drilling and installation is Minor. Since production operations are not anticipated to involve any seabed-disturbing activities the significance of potential cultural resource impacts during production operations is Negligible. As discussed in Chapter 6 ERM has conducted a survey of the planned seabed disturbance area to assess the presence of any marine cultural heritage. This has significantly increased the level of certainty that planned Project activities will not disturb significant cultural heritage. In any case ERM has developed a Chance Finds Procedure which requires temporary cessation of Project activities in the event of a chance find, assessment of the chance find by a cultural heritage specialist and the development of a treatment plan for significant chance finds in consultation with the Guyana National Trust and other cultural heritage stakeholders as appropriate. The Chance Finds Procedure also addresses monitoring and training requirements to support the Procedure. Considering the implementation of the measures outlined in the Chance Finds Procedure the scale of impact would be expected to be reduced as activities would be adjusted/curtailed upon discovery of a previously unidentified cultural resource. This would reduce the impact significance rating to Negligible.

May 2017 340 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 7.76 summarizes potential Project impacts on cultural heritage. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at

the beginning of this chapter. Table 776 Summary of PreMitigation and Residual Impacts Cultural Heritage Magnitude Sensitivity PreMitigation Significance Rating Proposed Mitigation Measures Residual Significance Rating Low Medium Minor Implement Chance Finds Procedure as needed Negligible Negligible Medium Negligible NA Negligible Stage Drilling and Installation Production Operations Resource Receptor Impact Marine cultural heritage destruction from Project activities disturbing the seabed Marine cultural heritage destruction from Project activities disturbing the seabed

7.3.8 Land Use

7.3.8.1 Introduction

This section assesses potential impact on land use and ownership by the Project. The key potential to another physicaleconomic displacement and change of land ownership type. impacts considered are conversion of from one use land

7.3.8.2 Relevant Project Activities and Potential Impacts

The majority of the Projects activities will occur offshore. Some limited onshore activities will occur particularly at the beginning of the drilling and installation stage while wells are being drilled and SURF infrastructure is being installed. These facilities would not be owned or operated by EEPGL. If the ownersoperators of such facilities find it necessary to expand the existing sites onto adjacent land or in separate new areas potential land use impacts associated with these expansions would be addressed by the ownersoperators of such facilities and would be out of the scope of this EIA.

May 2017 341 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 777 summarizes the potential impacts on land use from Project activities. Table 777 Project Activities and Potential Impacts Land Use Stage All Project stages Receptors Current owners and/or users of land in Georgetown Project Activity Use of land for Project materials storage Key Potential Impacts Conversion of land from other uses

7.3.8.3 Magnitude of Impact Land Use

The assessment of the Projects magnitude of impacts on land use is based on consideration of geographic extent frequency duration and scale. The scale of potential impacts on land use is defined in Table 778. Table 778 Definitions for Scale Ratings for Potential Impacts on Land Use Criterion Definition Scale Negligible No change in land use type or ownership type. Small Land use change occurs for one or multiple parcels but consists of change to a land use type similar to the current use e.g. change from

one type of agricultural activity to another or from industrial to commercial. No changes occur in ownership type governmentowned Amerindianowned or privately owned. Medium Land use changes occur for multiple land parcels or tracts and may consist of profound changes e.g. clearing of forest or other vegetation loss of residential units. Changes to ownership type governmentowned Amerindianowned or privately owned do not occur. Large Land use changes occur for large areas of land and may consist of profound changes e.g. clearing of forest or other vegetation loss of residential units. Changes may occur to ownership type. The Project may require the use of offsite onshore storage facilities for Project materials e.g. pipe joints. At this time potential storage facility locations are not known but it is expected that any such facility will be located as near to the shorebases as possible to minimize hauling time. Given that the storage facilities will likely be located in an industrial area rather than natural or agricultural in character it is not expected that major changes in land use types or any change in land ownership type would occur. The magnitude of impact is therefore considered to be Small. May 2017 342 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.3.8.4 Sensitivity of Receptors Land Use Receptors for this impact would be the current owners of the land to be used for the storage facility as well as the users or beneficiaries of that land if any. The receptor sensitivity ratings for land use are defined in Table 779. Table 779 Definitions for Receptor Sensitivity Ratings for Land Use Impacts Criterion Definition Sensitivity Low Receptors do not currently reside on the land or make use of it for subsistence or primary livelihood activities or recreation. Medium Receptors do not currently reside on the land or make use of it for subsistence but may rely on it for income generation or recreation. High Receptors currently reside on the land and/or use it for subsistence or for their primary/sole means of livelihood. At this time it is not known whether the onshore storage facilities will be required or where such a facility would be located if it is required. However assuming that the property used for the storage facility will be on land currently used for industrial purposes it is not expected that this property would be relied upon for residential agricultural commercial or recreational use. As such receptors are expected to have a Low level of

sensitivity. 7.3.8.5 Impact Significance and Mitigation Measures Land Use Based on the magnitude of impact and receptor sensitivity ratings the significance of land use impacts for the drilling and installation stage is Negligible. No mitigations are required or planned since it is not yet known whether the offsite storage facilities will be required. If it is deemed a storage facility is required the owners/operators of the facilities will select the site in a manner that will avoid or minimize land use impacts. Table 780 below summarizes potential Project impacts on land use. The significance of impacts was assessed based on the impact assessment methodology described in Chapter 4 and summarized at the beginning of this chapter. Table 780 Summary of PreMitigation and Residual Impacts Land Use Stage Drilling and Installation Resource Receptor Impact Current owners or users of land at site of future storage facility Magnitude Sensitivity PreMitigation Significance Rating Proposed Mitigation Measures Residual Significance Rating Small Low Negligible None Negligible

May 2017 343 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.3.9 Ecosystem Services Chapter 7 Assessment of Potential Impacts Planned Project activities will not impact ecosystem services³⁵. Although the Project will have minor impacts on water quality benthic communities and marine wildlife in the immediate vicinity of the SURF components and in the mixing zones surrounding the FPSO and the tanker these impacts are not expected to have significant impacts on ecosystem services. They are not expected to impact the processes that regulate the physiochemical attributes of the North Brazil Shelf LME as a whole e.g. water quality currents oceanographic conditions bathymetry nor are they expected to cause significant impacts on fishery production offshore Guyana. There are no human communities located offshore of Guyana so the offshore environment does not provide any cultural services that could be impacted. The only Project-related impacts in nearshore marine waters would be an incremental increase in ship traffic in and out of Georgetown Harbour as ships transit between the shorebases and the PDA. As discussed previously an increase in ship traffic could have minor effects on marine life but none that would be significant at the ecosystem level. Therefore the Project would have no impacts on ecosystem services provided by the nearshore marine ecosystem. The Project will not involve any

direct disturbance of any coastal habitats and the Projects air emissions water discharges and sound generation all of which will occur approximately 190 km 120 mi offshore will not impact these habitats. Project use of the Guyana shorebases and onshore support facilities will have no impact on ecosystem services. The Projects only potential impact on ecosystem services would be as a result of an unplanned event which is discussed in Section 7.4.

7.3.10 Indigenous Peoples Planned

Project activities will not impact indigenous peoples typically referred to as Amerindians in Guyana. The Project will not involve any direct disturbance of any indigenous communities or coastal habitats upon which they rely and the Projects air emissions water discharges and sound generation all of which will occur approximately 190 km 120 mi offshore will not impact their communities or associated habitats. Project use of the Guyana shorebases and onshore support facilities will have no impact on indigenous peoples. These facilities are well removed from any traditional indigenous communities. The Projects only potential impact on indigenous peoples would be as a result of an unplanned event which is discussed in Section 7.4.

35 Ecosystem services are typically defined as

the benefits that people obtain from the natural environment including natural resources that underpin basic human health and survival needs support economic activities and provide cultural fulfilment.

May 2017 344 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.4 Unplanned Events 7.4.1 Introduction An unplanned event is defined as an event that is not planned to occur as part of the Project e.g. accidents but that has the potential to occur. Since such events are not planned they are evaluated in a different manner from planned events specifically by evaluating the consequence of a realistic scenario for an unplanned event and taking into consideration the likelihood that the event will occur. Three levels of likelihood are used unlikely possible and likely as defined in Table 781.

Table 781 Levels of Likelihood for Unplanned Event Impact Assessment	Likelihood	Unlikely	Possible	Likely	Definition
Considered a rare event and there is a small likelihood that an event could occur;					
The event has a reasonable chance to occur at some time during normal operating conditions; and					
The event is expected to occur during the life of the facility.					

is used As described in Chapter 4 a risk

matrix using the likelihood and consequences severity of the event the potential significance of unplanned events. The consequences severity of the unplanned event is measured in terms of the importance vulnerability sensitivity of the resource receptor and the magnitude of the impact. to evaluate Figure 77 Unplanned Events Risk Matrix For the purposes of the Project the following unplanned events are considered as having the potential to occur during the Project life should a combination of standard and Project specific safety controls fail concurrently Hydrocarbon spill Marine vessel collision Onshore vehicular accident These potential unplanned events are described in more detail below. There are other minor unplanned events e.g. dropped objects small spills on deck that do not enter the ocean that have a realistic probability of occurrence but which would not significantly impact any resource receptors considered in this EIA. These other unplanned events would occur on the drill ship installation vessels supply vessels or the FPSO and their impacts would tend to be limited to Project employees and contractors e.g. a variety of accidents that could result in worker injury but no measurable impact on natural resources or the public. These events are May 2017 345 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts addressed primarily through EEPGL and its contractors health and safety policies and procedures which are beyond the scope of this EIA. The specific shorebases and onshore support facilities e.g. warehouses laydown yards to be utilized in Guyana have not yet been identified by EEPGL. Accordingly ERM has performed the impact assessment for unplanned events on the basis that the Project will utilize existing shorebases located in Georgetown. Should any new or expanded shorebases or onshore support facilities be utilized the construction expansion and any required dredging as well as the associated permitting of such facilities would be the responsibility of the owner operator and such work scope would not be included in the scope of this EIA. 7.4.1.1 Hydrocarbon Spill Producing processing storing and offloading oil are core Project activities. There are multiple layers of control in place with respect to these activities; however if multiple controls fail there is the potential for an oil spill to occur. EEPGL categorizes oil spills into three tiers Tier I Spill is small the source of spill is under control and response would be managed by EEPGL and its

contractors using local resources; Tier II Spill is moderate the source can be quickly brought under control local response equipment immediately available and broader response would be managed in a coordinator manner using regional resources as needed; and Tier III Spill is large the source of the spill is not under control and response would be managed in a coordinated manner with regional and internationally sourced resources. Hydrocarbons that could potentially be released include crude oil marine diesel fuel oil lubricating oil and nonaqueous drilling fluid NADF. EEPGL and ERM have identified nine possible spill scenarios categorized below in Table 782 by tier. These scenarios consider spills at the Guyana shorebases Georgetown area basis into the Demerara River or other estuarine waters e.g. from supply vessels and into the Atlantic Ocean e.g. from drill ship supply vessels tankers and the FPSO.

May 2017 346 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 782 Possible Hydrocarbon Spill Scenarios by Tier

Tier	Location	Possible Scenario	Potential Impact
1 I	Shorebase	Onshore spill of less than 10 bbl Contained onshore; no shoreline impact. e.g. partial loss of diesel storage tank	2
1 I	Drill ship or FPSO offshore	Offshore spill of less than 50 bbl e.g. leak or release due to human error or failure of equipment Contained on deck of vessel or enters offshore Atlantic Ocean; no shoreline impact likely.	3
1 I	Supply vessel offshore	Offshore spill of less than 50 bbl e.g. accidental discharge of untreated bilge water Hydrocarbons enter water creating sheen on the water surface; no shoreline impact likely.	4
2 II	Shorebase	On water spill of less than 100 bbl e.g. shore to vessel bunkering spill Diesel enters Demerara River estuary; possible minor shoreline impact.	5
2 II	Drill ship well offshore	Offshore release of 2200 bbl of NADF due to loss of riser after emergency disconnect due to Dynamic Positioning DP station keeping failure On water release of 500 bbl of diesel e.g. shore to vessel bunkering NADF enters water near the seafloor; no shoreline impact likely. Diesel enters Demerara River estuary; possible shoreline impact.	6

May 2017 347 Potential Response Strategies OnshoreNear Shore Response Waste Management Decontamination Demobilization Surveillance and Monitoring Assisted Natural Dispersion Offshore Containment and Recovery Wildlife Response Waste Management

Decontamination Demobilization Surveillance and Monitoring Assisted Natural Dispersion Offshore Containment and Recovery Wildlife Response Waste Management Decontamination Demobilization OnshoreNear Shore Response Surveillance and Monitoring Assisted Natural Dispersion Waste Management Decontamination Demobilization Surveillance and Monitoring Assisted Natural Dispersion OnshoreNear Shore Response Surveillance and Monitoring Assisted Natural Dispersion EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Tier Location Possible Scenario Potential Impact 7 II Drill shipwell offshore Well control release of less than 250 bbl e.g. well becomes unbalanced during the drilling process and begins flowing at a low release rate prior to containment Hydrocarbons enter Atlantic Ocean; no shoreline impact likely. Potential Response Strategies Waste Management Decontamination Demobilization Surveillance and Monitoring Assisted Natural Dispersion Offshore Containment and Recovery Dispersant Application Wildlife Response Waste Management Decontamination Demobilization See above 8 II FPSO offloading tanker offshore III Drill ship well offshore 9 Offshore release of 2500 bbl of oil e.g. failure of offloading hose during offloading from FPSO to tanker Offshore release of oil from well control event 30 day duration at 20000 bpd Oil enters Atlantic Ocean; no shoreline impact likely. Oil enters Atlantic Ocean; possible shoreline impact. See above Hydrocarbon releases under Scenarios 1 through 4 would all be small and under control quickly and would be managed with locally available spill control equipment. A temporary visible sheen on the water surface may occur water quality would be temporarily impaired in a small area a very sensitive receptor e.g. plankton and possibly some shorebirds may be locally affected but there is not considered to be potential for any longterm or ecosystem level impacts on ecologically important or protected species. These spills are therefore not considered further in this EIA. A hydrocarbon release under Scenario 5 would involve a spill of approximately 2200 bbl of NADF into the ocean near the seafloor. Under this scenario the spill would be somewhat controlled because the volume is limited to the capacity of the drilling riser. There is the potential for temporary impacts on several resourcesreceptors such as water quality and marine fish and wildlife but these

impacts would be generally short term and limited in area with rapid resource receptor recovery expected. A hydrocarbon release under Scenario 6 would involve a spill of approximately 500 bbl of diesel into the Demerara River. Under this scenario the spill would be quickly controlled and contained because of the relatively small volumes and the ready access to spill control equipment. There is the potential for impacts on several resource receptors such as water quality and coastal fish and wildlife but these impacts would occur in a more developed urban harbor setting be generally short term limited in area and readily mitigated with rapid resource receptor recovery expected. May 2017 348 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Hydrocarbon releases under Scenarios 7 minor well control release during drilling 8 release during offloading from FPSO to tanker and 9 major well control incident would all involve an oil spill in the PDA either at a well or at the FPSO. Although the potential spill volumes vary i.e. from 250 bbl total to 20000 BOPD for a duration of 30 days and the location of the spill differ i.e. at seafloor or ocean surface the resource receptors at risk are similar although the magnitude of the risk increases from Scenario 7 to Scenario 9. Oil spill modeling and coastal sensitivity mapping have been conducted to identify and characterize the resource receptors with the potential to be exposed to oil. An overview of this modeling and mapping for Scenarios 8 and 9 is provided in Sections 7.4.1.4 and 7.4.1.5. The potential risks associated with the smaller volume offshore oil spills are encompassed within the modeling. It should be noted however that an oil spill and release of NADF are considered highly unlikely primarily because of controls EEPGL and its contractors put in place to prevent a spill from occurring. Section 2.11 Embedded Controls provides a description of the embedded controls related to spill prevention. Despite the unlikely probability of an oil spill the impacts assessment addresses potential impacts associated with Scenario 6 which are referred to as Coastal Oil Spill as well as Scenarios 7 8 and 9 which are collectively referred to as Marine Oil Spills. Scenario 5 is referred to as a NADF Release and impacts on relevant receptors are assessed as a separate category of release. 7.4.1.2 Factors Impacting Severity of Hydrocarbon Spills Several factors impact the severity

of hydrocarbon spills and the options for and effectiveness of a range of spill response measures. These factors include the hydrocarbon properties volume and location of the spill metocean conditions and seasonal factors impacting the presence of wildlife Dicks 1998. Hydrocarbon products vary widely in their physical and chemical properties as well as their potential impacts on marine organisms Figure 78. Heavy oils have the potential to cause more significant and longer term impacts as they may persist along shorelines and cause smothering of intertidal plants and coral reef habitats. In contrast light oils tend to be more toxic but dissipate much more quickly through evaporation and dispersion so they are generally less impactful overall and their potential toxic impacts are likely to be localized and short lived ITOPF Undated; ITOPF No. 2 Undated; Dicks 1998. The oil produced from the Liza field is a light crude oil with a specific gravity less than water. If spilled this oil would rise quickly to the water surface other than small fragmented droplets that become entrained in the water column due to mixing energy. As a result the potential for persistent slicks shoreline impacts and smothering is reduced relative to heavy hydrocarbon products. The Project will use lowtoxicity NADF which is denser than the light crude in the Liza field and contains specific weighting materials used during the drilling process. As such the NADF would tend to remain near the seafloor if released from the bottom of the riser during an emergency disconnect scenario. May 2017 349 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 78 Typical Impacts on Marine Organisms across a Range of Oil Classes Source ITOPF Technical Information Paper 13 undated The well control event considered for the purpose of this EIA would occur in the ocean approximately 190 km approximately 120 miles offshore from Guyana. The open waters of the ocean and associated pelagic and seabed communities are typically more resilient to spills than are shoreline environments Dicks 1998. Climate and weather can also impact the behavior of an oil spill. For example oils become more viscous i.e. flow less readily at lower sea surface and air temperatures. In this case the surface waters in the AOI are warm typically ranging from 24 to 30C which results in the oil remaining fluid and increasing spill response options. 7.4.1.3 Weathering Processes As soon

as hydrocarbons are introduced to the ocean advection and spreading begin immediately and result in a rapid increase in the exposure area of the product to subsequent weathering processes Figure 79. These processes include evaporation dissolution vertical dispersion emulsification and sedimentation. All of these processes are influenced by the specific composition of the introduced hydrocarbon. In addition some components are degraded by photochemical oxidation induced by sunlight. Figure 79 Weathering Processes Acting on Spilled Oil Source ITOPF 2013 The products of these processes may include hydrocarbon fractions and reaction products introduced to the atmosphere slicks and tar lumps on the surface of the ocean dissolved and particulate hydrocarbon materials in the water column and similar components in the May 2017 350 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts sediments. While physical and chemical processes are occurring biological processes including degradation of oil by microorganisms to carbon dioxide or organic components in intermediate oxidation stages uptake by larger organisms and subsequent metabolism storage or discharge also act on the different fractions of the original oil. Although not all of the same processes e.g. photochemical oxidation evaporation occur at the depths that a NADF Release could occur the NADF would be exposed to biological degradation. Biological degradation proceeds slower under anoxic conditions than under welloxygenated conditions so biological degradation tends to occur most rapidly when the NADF is thinly distributed over a wide area of seafloor rather than in thicker clumps over a small area.

7.4.1.4 Oil Spill Modeling Overview

Oil spill models have been in use for over 30 years to support the development of Oil Spill Response Plans OSRP. Trajectory and fate models simulate oil transport and predict the changes the oil undergoes as it interacts with water air and land oil fate. The models simulate spill events using the best available characterization of the wind and hydrodynamic marine currents forces that drive oil transport. The models quantify the potential consequences from a spill which can then be used to guide response planning and prioritize response asset deployment. There are typically two modes under which the models can be used 1 the stochastic statistical mode that examines many potential releases from the same point

utilizing the full range of historical data for wind and currents; and 2 the deterministic mode that examines a single potential release utilizing specific historic wind and hydrodynamic datum from the range of potential data or utilizing forecast data for an ongoing or future event. Extreme weather events are considered qualitatively in the oil spill modeling. The PDA is not in a seismically active area. The Project is designed to withstand other potential extreme events e.g. hurricanes unusual temperatures high winds strong currents. In fact these extreme events have little to no effect on the wells which are located approximately 1500 to 1900 m below the ocean surface. Weather forecasts provide advance notice of these events and would enable EEPGL to take appropriate precautions with the FPSO. A typical approach to using oil spill models in OSRP is to first apply the stochastic model to determine the most likely trajectory for the spill scenarios of interest. The stochastic approach captures variability in the trajectory by simulating hundreds of individual spills and generating a map that is a composite of all of the trajectories and provides a probability footprint showing the most likely path for a given spill scenario. Spill scenarios are typically modeled in stochastic mode to provide composite footprints to estimate probability and timing for each season or wind regimes in the region. Each stochastic scenario results in a probability map of the extent and mass of sea surface oiling the extent of shoreline oiling and the minimum time of oil arrival in each location contaminated by the oil. Examples of stochastic maps are shown in Section 7.4.1.5 Oil Spill Modeling Results. Calculation of the probabilities is based on oil present in excess of a specified thickness threshold. The thresholds are specific to the purpose of the modeling or the type of impact

May 2017 351 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project
Chapter 7 Assessment of Potential Impacts being considered including ecological and socioeconomic. They are used in the determination of oiling probability to determine if oil is present in a quantity exceeding the threshold. For example a surface slick thickness threshold can be based on the minimum thickness that can be mechanically recovered or on the minimum thickness that is thought to cause ecological or socioeconomic impacts. When applied in this way a trajectory and fate model can quantify the likelihood of specific spill consequences which is supportive of OSRP

planning and environmental impact analysis. When considering oil contamination thresholds surface oil thickness is typically expressed in units of mass per unit area e.g. grams per square meter [gm²].

Table 783 lists approximate thickness and mass per unit area ranges for surface oil of varying appearance.

Minimum	Maximum	Appearance
0.05	0.2	1
10	1000	0.2
0.8	4	100
Colorless and silver sheen		
Rainbow sheen		
Dull brown sheen		
Dark brown sheen	10000	Black oil

Oil spill deterministic models predict where spilled oil from a single release will go and how quickly it travels and arrives at given locations. The trajectory of the spill is determined by the specific modeled wind and current and the properties of the discharged oil. The model determines the spill pathway by calculating the movement of the oil for individual short increments of time over the spills duration which cumulatively results in the spill trajectory. Knowing the distance traveled by the oil over a period of time also provides a prediction of the time of travel for the spill. Consequences from the spill are determined by running the model within a geospatial framework so that interactions between the oil and elements of the environment habitats and species can be considered. Given an adequate definition of currents winds and the environment a deterministic model can provide comprehensive predictions of the trajectory fate and effects of the oil. Oil spill trajectory and fate models provide a quantifiable and consistent means to quantify spill consequences. A trajectory and fate model can also simulate spill response activities such as mechanical recovery dispersant application and insitu burning. Model simulations run with and without spill mitigation measures calculate the effectiveness of different response strategies and equipment which can be used to help validate and improve spill response plans and contribute to a Net Environmental Benefit Analysis NEBA process. The NEBA process examines the benefit of using various spill response technologies against the effect of the oil spill itself prior to deploying the preferred technologies in a spill event. Once individual spill events have been identified based on the desired criterion a deterministic map showing the trajectory and fate of the spill is generated along with a graphical

May 2017 352 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts representation of the oil quantities

predicted to reach the different parts of the environment. This breakdown of the oil quantities by environmental compartment referred to as an oil mass balance provides a time history of the entire spilled oil mass over the period of the model simulation. The trajectory maps and oil mass balance graphs can be generated for a range of spill scenarios and included in an OSRP. Examples of these and other deterministic maps and oil mass balance graphs are shown in Section 7.4.1.5 Oil Spill Modeling Results. When applied to OSRP activities an oil spill model is used to simulate scenarios selected to be representative of anticipated spill events. These typically include operational spills smaller volume releases to the water surface and larger volume spills related to production or drilling operations originating either at the sea surface or from the seabed. In both cases the oil spill model is applied to determine the most likely pathway for a spill from each scenario and to quantify the oil fate. The trajectory and fate model provides input to the OSRP process by determining spill pathways and quantifying potential spill consequences. Determining the consequences from a spill typically has two components determining the likelihood that a spill will contaminate a given part of the environment and; what will be its ecological and socioeconomic consequences.

7.4.1.5 Oil Spill Modeling Results

Oil spill modeling results for oil spill Scenarios 8 and 9 are summarized in this section. Additional modeling results are included in the OSRP. Scenario 8 includes the modeling of a 2500 bbl leak associated with FPSO offloading to a conventional tanker. Scenario 9 includes the modeling of a 20000 BOPD well control event of a 30day spill duration which included an extension of an additional 15 days after oil discharge ceased. The model was run two ways the initial model runs showed potential impacts in the absence of spill response measures which represent a worstcase for each scenario. Then the deterministic model was run again factoring in response measures which would be expected to significantly reduce the severity and extent of a spill and its impacts. Subsequent sections of this document describe how EEPGL and its contractors will respond to mitigate environmental impacts in the unlikely event of an event similar to or less severe than the modeled scenario. Spills originating at the seafloor were simulated using the OILMAP DEEP model to predict the discharge plume geometry droplet size distribution discharged into the

water column and the fate of the oil plume. The SIMAP model system was used to predict the probability of the extent of oil contamination on the sea surface and the shoreline taking into account the weathering profile of the oil that would result in a proportion of the product evaporation or dispersing into the water column. Spills were simulated taking into consideration the quantity of product released the type of product and its characteristics e.g. density historical seasonal wind and current patterns and water depth among other factors. May 2017 353 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Modeling has been performed for the summer season June through November as well as the winter season December through May. The results of modeling for the winter season are presented in the figures below as they provide more conservative results for the purposes of the EIA based on higher current speeds and more northerly winds. Figure 710 Stochastic Map for Scenario 8 Unmitigated 2500Barrel Release of Crude Oil December through May May 2017 354 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts The top panel of Figure 710 is a stochastic map which based on hundreds of simulations shows the probability of surface oiling above a minimum thickness of 1.0 gm² in the winter season from a 2500 barrel spill that originates at the FPSO location. This stochastic map indicates there is a zero percent probability that oil at that thickness would make contact with the Guyanese coast. The bottom panel of Figure 710 is a stochastic map based on hundreds of simulations which shows the minimum amount of time for surface oiling above a minimum thickness of 1.0 gm² to occur from a 2500 barrel spill that originates at the FPSO location in the winter season. Figure 711 is a deterministic map that predicts where a simulation of a 2500 bbl spill from the FPSO location would go under a set of wind and current conditions typical of the winter season. This deterministic map indicates that oil would not make contact with the Guyanese coast. The gray area shows the swept area which is the path the oil spill is projected to follow. The black area shows the fate of the surface oil. The red area shows the fate of the oil that makes shoreline contact. Figure 712 shows the same deterministic model run as Figure 711 but with mitigation measures applied. No coastline would be

impacted and the potential area of impact by such a release to the marine environment has been dramatically reduced. Figure 711 Deterministic Map for Scenario 8 Unmitigated 2500Barrel Release of Crude Oil December through May Depicting Weathering and Fate May 2017 355 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 712 Deterministic Map for Scenario 8 Mitigated 2500Barrel Release of Crude Oil December through May Depicting Weathering and Fate Figure 713 is an oil mass balance graph that is associated with the deterministic map in Figure 711 which shows where a simulation of a 2500 bbl spill from the FPSO location would go in the winter season. Figure 713 provides a graphical representation of the oil quantities predicted to reach different parts of the environment over time. May 2017 356 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts The green line represents the volume of spilled oil which would be on the ocean surface over time. The red line represents the volume of spilled oil which would make coastal contact in this case outside of Guyana over time. The blue line represents the volume of spilled oil which would remain in the water column over time. The dotted orange line represents the volume of spilled oil which would decay over time. The dotted gray line represents the volume of spilled oil which would be released to the atmosphere over time which represents the vast majority of the spill volume approximately 50 percent. For perspective a Scenario 8 oil spill has the potential to occur during the production operations stage at least 20 years. Figure 713 Oil Mass Balance Graph for Scenario 8 Unmitigated 2500Barrel Release of Crude Oil December through May Depicting Weathering and Fate The top panel of Figure 714 is a stochastic map which based on hundreds of simulations shows the probability of surface oiling above a minimum thickness of 1.0 gm² in the winter season from a 20000 bpd spill that originates at a well location in the PDA and lasts for 30days. This stochastic map indicates there would be a 5 to 10 percent probability that oil at that thickness would make contact with the northwestmost area of the Guyanese coast. The value of 1.0 gm² is commonly used as a threshold in oil spill modeling as it represents the mass of oil where biological impacts can occur based on research and experience

McCay 2016. The bottom panel of Figure 714 is a stochastic map which based on hundreds of simulations shows the minimum amount of time for surface oiling above a minimum thickness of 1.0 gm² to occur from a 20000 bpd spill that originates at a well location in the PDA and lasts for 30days in the winter season. Minimum time for reaching the northwestmost area of the Guyanese coast would be approximately 5 to 10 days although some of the oil may arrive in the 10 to 15 day time period.

May 2017 357 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 714 Stochastic Map for Scenario 9 Unmitigated 20000BarrelperDay Release of Crude Oil for 30 days December through May

May 2017 358 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 715 is a deterministic map which predicts the fate of a simulation of a 20000 bpd spill that originates at a well location in the PDA and lasts for 30days in the winter season. This deterministic map indicates that oil would not make contact with the Guyanese coast. The gray area shows the swept area which is the path the oil spill is projected to follow. The black area shows the fate of the surface oil. The red area shows the fate of the oil that makes shoreline contact. Figure 716 shows the same deterministic model run as Figure 715 when mitigation measures have been applied the release has been stopped containment has been restored in 21 days and a capping stack is in place. No coastlines would be impacted and the potential area of impact by such a release to the marine environment has been significantly reduced.

Figure 715 Deterministic Map for Scenario 9 Unmitigated 20000BarrelperDay Release of Crude Oil for 30 days December through May Depicting Weathering and Fate

Figure 717 is an oil mass balance graph that is associated with the deterministic map in Figure 715 which shows where a simulation of a 20000 bpd spill that originates at a well location in the PDA and lasts for 30 days in the winter season. This panel provides a graphical representation

of the oil quantities predicted to reach different parts of the environment over time. The green line represents the volume of spilled oil which would be on the ocean surface over time. The red line represents the volume of spilled oil which would make coastal contact in this case outside of Guyana over time. The blue line represents the volume of spilled oil which would remain in the water column over time. The dotted orange line represents the volume of spilled oil which has decayed over time. The dotted gray line represents the volume of spilled oil which would be released to the atmosphere over time which represents the vast majority of the spill volume approximately 50 percent. For perspective the Scenario 9 oil spill has the potential to occur during the drilling stage approximately up to four years. May 2017 360 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Figure 717 Oil Mass Balance Graph for Scenario 9 Unmitigated 20000BarrelperDay Release of Crude Oil for 30 days December through May Depicting Weathering and Fate 7.4.1.6 Coastal Sensitivity Mapping Coastal sensitivity mapping was conducted for the entire coastal area identified in the oil spill modeling as being potentially exposed to hydrocarbons as a result of a Tier III Marine Oil Spill Scenario 9. The mapping included the following resources and receptors Environmental protected areas wetlands mangroves beach types seagrass beds coral reefs and other sensitive habitats; and Socioeconomic coastal and/or indigenous peoples communities e.g. location and socioeconomic characteristics coastdependent commercial and artisanal activities e.g. fishing foraging other industrial activities and infrastructure e.g. water intake facilities. This information enables EEPGL to prioritize the mobilization of emergency response resources manpower and equipment to those areas most sensitive to a spill. These maps are included in the OSRP. 7.4.1.7 Oil Spill Prevention Control and Emergency Response Measures Regarding spill prevention controls associated with Scenario 9 well control release EEPGLs well control philosophy is focused on spill prevention using safety and risk management systems management of change procedures global standards and trained experienced personnel. EEPGL has a mature OIMS that emphasizes attention to safety well control and environmental protection. Measures to avoid any loss of well control include proper May 2017

Assessment of Potential Impacts preparation for wells well design well control equipment inspection and testing automatic detecting of any excess pressure entering the well during drilling the use of physical barriers including automatic BOPs personnel training and proficiency drills for well control and the use of drilling fluids to control pressures within the well. See Chapter 2 for additional information. A summary list of the spill prevention mitigation measures and embedded controls found in the EIA and supporting plans can also be found in Appendix F of the OSRP. Regarding spill prevention controls associated with Scenario 8 FPSO offloading spill the major spill prevention controls associated with FPSO offloading include FPSO and tanker collision avoidance controls described in Section 7.1.4.8; use of a certified engineered floating hose system; floating hose damage protection controls; use of emergency disconnect controls on the floating hose system; use of load monitoring systems in FPSO control room; and use of leak detection controls including infrared leak detection flood lighting for night operations and volumetric checks during offloading. See Section 2.11 Embedded Controls for additional information. Spill controls associated with other Scenarios are also included in Section 2.11. In addition to the established spill prevention controls EEPGL also has developed a detailed Oil Spill Response Plan OSRP which is included in the Projects ESMP to ensure an effective response to an oil spill if one were to occur. The OSRP builds on the coastal sensitivity mapping and oil spill modeling described herein. The OSRP describes the response measures which are dependent on the magnitude and complexity of the spill. The OSRP clearly delineates the responsibilities of each entity that would take part in a response and describes how EEPGL and its contractors would mobilize local oil spill response resources which would be complemented by the regional and international resources provided by its oil spill response contractors. The OSRP describes the EEPGL process for notifying the government of Guyana with respect to mobilizing its resources. The lead agency for oil spill response in Guyana is MARAD which falls under the Ministry of Public Works and Communication. Maritime responsibilities are handled by several departments and ministries though the Coast Guard under the auspices of

MARAD which enforces all maritime regulations and is the primary response organization in any marine pollution incident in navigable waters. In addition the Guyana Defense Force and the Fire Service also assume an operational role for pollution response. Due to the precautionary measures utilized by EEPGL to prevent and control an oil spill as described above and in Chapter 2 the likelihood of a Tier II or III oil spill occurring is expected to be Unlikely.

7.4.1.8 Vessel Collision Two

scenarios for vessel collisions which can be enabling incidents for oil spills have been considered based on the nature of Project operations. Collision between the FPSO and an offloading tanker during offloading of crude oil for export the offloading tanker must approach at a controlled safe speed within about 120 m 390 ft of the FPSO. To minimize the risk of collision during the approach to the FPSO and

May 2017 362 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts during offloading EEPGL will utilize a Mooring Master onboard the offloading tanker. The Mooring Master will guide the offloading tanker to the FPSO for offloading remain on board during offloading and then guide the offloading tanker away from the FPSO upon completion of offloading. Up to three assistance tugs will assist in positioning the offloading tanker during the approach to the FPSO to maintain a safe separation from the FPSO. During offloading these tugs along with a hawser taut line connecting the FPSO and tanker will help ensure the offloading tanker maintains a safe distance from the FPSO at all times see Figure 218. Offloading will only occur when weather and sea conditions allow for safe operations. If the environmental conditions prior to the commencement of offloading are not suitable the tanker will standby at a safe distance away until conditions are within acceptable limits. If unexpected adverse weather e.g. a squall occurs during offloading operations the offloading operation will be stopped and the tanker disconnected and moved away from the FPSO until conditions are again within approved safe limits. Considering these precautions the potential for a collision between the FPSO and the offloading tanker is considered Unlikely. In the unlikely event that a collision would occur during the tanker approach to or departure from the FPSO the risk of a hull breach is greatly reduced by the design of the vessels i.e. double hull and the fact that the

FPSO would be stationary and the offloading tanker would be travelling at a very slow maneuvering speed assisted by tugs therefore there is not expected to be sufficient collision energy to breach the hulls. Collision near shore between a Project supply vessel and another nonProject vessel or structure there are a variety of vessels that will supply and support drilling installation and production operations activities. These vessels will operate from Guyana and Trinidad shorebases. There is the potential for collisions between these vessels and other vessels/structures in the Georgetown Harbour/Demerara River or the grounding of a vessel. Such an incident may result from navigation error or a temporary loss of power that affected the ability of a vessel to steer. The potential environmental impacts from such a collision might result from a spill of fuel oil or lubricating oils from the vessels involved in the incident. Damage to structures may result in the requirement for repairs and in extreme cases temporary closure of the structure which have occurred before in Guyana e.g. damage to and temporary closure of the Demerara Harbour Bridge. Note the Georgetown shorebases are downstream of the Demerara Harbour Bridge which reduces the probability of collision with this structure. A number of controls will be implemented to prevent these types of vessel incidents from occurring. EEPGL has comprehensive contractor selection guidelines to ensure contractors are qualified and have robust safety health and environmental management systems. EEPGL will provide active oversight over its contractors to verify they are complying with its requirements. Contractors are required to perform regular inspections of their vessels which address marine safety and maintenance considerations which should reduce the risk of loss of power incident scenario. In addition vessels operating within the Georgetown Harbour or other coastal areas will be adhering to speed restrictions and navigation aids. Therefore the risk of vessel accidents May 2017

363 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7

Assessment of Potential Impacts causing any significant damage to vessels or structures or significant injury is considered unlikely. Other vessel collisions e.g. collisions between drill ship installation vessels or the FPSO and other vessels are not considered reasonably foreseeable scenarios given the following safety measures that will be put in place MARAD will issue notices to

mariners concerning safety at sea and the location of the drill ship installation vessels and FPSO. EEPGL will also communicate major Project vessel movements to commercial cargo commercial fishing and subsistence fishing vessel operators who might not ordinarily receive Notices to Mariners and where possible communicate Project activities to those individuals to aid them in avoiding Project vessels through the stakeholder engagement process. Marine safety exclusion zones with a 500 m 1640 ft radius will be established around the drill ship during drilling operations and around drill centers during well workovers in accordance with industry standards and practices. No unauthorized vessels will be allowed to enter these marine safety exclusion zones. Similar marine safety exclusion zones will be established for the major installation vessels. A marine safety exclusion zone of 2 nautical miles will be established around the FPSO. No unauthorized vessels will be allowed to enter this marine safety exclusion zone. EEPGL will utilize a Simultaneous Operations procedure to safely manage Project marine vessels which are performing work in the same vicinity of each other which will include considerations to avoid vessel collisions. Marine vessels will have industry proven stationkeeping systems e.g. FPSO mooring system dynamic position systems on drill ship support vessels to maintain station in the offshore environment.

7.4.1.9 Onshore Vehicular Accident The Project will result in an increase in onshore vehicular traffic generated primarily by additional activity around the Georgetown bases that support the Project. As a result of this increased traffic there will be an increased risk of vehicular accidents that could cause property damage and/or injury to third parties. The likelihood of a vehicular accident causing a major injury or fatality is considered possible given the relatively low Project-related traffic volumes and the generally low vehicular speeds in Georgetown. EEPGL will implement a Road Safety Management Procedure as described in Section 7.4.4.2 to minimize this risk.

7.4.1.10 Summary of Unplanned Events Interactions with Resources/Receptors Table 784 indicates which resources/receptors would potentially be impacted by a NADF Release Scenario 5 oil spills i.e. Coastal Oil Spill [Scenario 6] and Marine Oil Spill [Scenarios 7, 8 and 9] and by vehicular or vessel accidents. The remainder of Section 7.4 evaluates the significance of these unplanned events on each of these

resourcesreceptors. For simplicity May 2017 364 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts although NADF is technically a hydrocarbon and not an oil releases of both NADF and oil are generically referred to as oil spills in the remainder of this section. Table 784 ResourcesReceptors Potentially Impacted by Unplanned Events ResourceReceptor Oil Spill Marine Coastal NADF Vehicular or Vessel Acen Physical Resources Air Quality and Climate Sound airborne Marine Geology and Sediments Marine Water Quality Biological Resources Protected Areas and Special Status Species Coastal Habitats Coastal Wildlife and Shorebirds Seabirds Marine Mammals Marine Turtles Marine Fish Marine Benthos Ecological Balance and Ecosystems Socioeconomic Resources Economics Conditions Employment and Livelihoods Community Health and Wellbeing Marine Use and Transportation Social Infrastructure and Services Cultural Heritage Land Use Ecosystem Services Indigenous Peoples

7.4.2 Physical Resources	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X

X X X X X X X As shown in Table 784 the only unplanned event with the potential to significantly impact physical resources is a Marine Oil Spill event in the Project AOI. Accordingly discussions of potential impacts in this section relate to that unplanned event only. May 2017 365 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.4.2.1 Air Quality and Climate Chapter 7 Assessment of Potential Impacts Crude oil is a mixture of hydrocarbons made up of light medium and heavy constituents. In the event of an oil spill the lighter hydrocarbons including benzene xylene and toluene tend to quickly evaporate into the air. Accordingly concentrations of these constituents typically drop rapidly during the first 24 hours of a spill. Elevated hydrocarbon concentrations in air are primarily found in the immediate vicinity of a spill and some distance downwind depending on wind speeds. These constituents would primarily impact oil spill response workers so air monitoring equipment would be deployed to monitor levels of air pollutants and appropriate PPE would be provided as necessary to those oil spill response workers who are exposed. For an offshore spill the potential for any harmful concentrations of air contaminants to reach the Guyana coastline is considered very low even for a large Marine Oil Spill considering

prevailing winds away from the mainland and the distance to shore approximately 190 km [120 miles]. Further any air quality impacts would be temporary. Similarly in the event of a spill reaching shorelines air contamination would be generally localized to the area where the oil came ashore. Therefore the consequence to air quality of an oil spill is considered Low. In combination with a likelihood rating of Unlikely for a large Marine Oil Spill the overall risk to air quality from an oil spill is Minor. With respect to climate impacts there would be an indirect impact associated with additional fossil fuel combustion by response vessels and equipment and with some potential for release of methane to the atmosphere resulting in increased GHG emissions as compared to planned activities. However the scale and duration of these additional GHG emissions would be limited leading to a consequence rating of Low. In combination with a likelihood rating of Unlikely for an oil spill the overall risk to climate from an oil spill is Minor. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure for the drill ship lighter oil fractions would likely rise into the mid water column and dissipate laterally as they rise while the NADF would remain at or near the seafloor and would not reach the atmosphere. Therefore a NADF Release would have no impact on air quality or climate.

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence
Marine Oil Spill	Air Quality	Unlikely	Low	Risk Rating	Minor
Climate	Unlikely	Low	Minor	May 2017	366
Proposed Mitigation Measure	Implement OSRP air quality monitoring during response provision of PPE to response workers	None	Residual Risk Rating	Minor	Minor

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.4.2.2 Marine Geology and Sediments

An oil spill would not impact marine geology but in the event of sedimentation where hydrocarbons adhere to other material and settle or shoreline stranding of the spill hydrocarbons may be mixed within marine or intertidal sediments. This would primarily be expected in the vicinity of the well release offshore and in the nearshore wave zone. One study determined that less than 1 percent of the oil from a major loss of well control event in the U.S. Gulf of Mexico was found in sediments and this was principally within an 8 km 5mile radius of the release

point U.S. National Research Council 1985. The heavier oil fractions that may sink to the seafloor would continue to be subjected to weathering processes. Research has indicated that the overall impact of a Marine Oil Spill on the seafloor is Low especially when lighter oils are involved ITOFF Undated. Therefore the consequence of an oil spill on the seabed and marine sediments is considered Low. In combination with a likelihood rating of Unlikely for a large Marine Oil Spill the overall risk to marine geology and sediments from an oil spill is Minor. In the event of an emergency disconnect of the drilling riser and release of NADF near the seafloor cuttings would also be released. Neither the NADF nor the cuttings would have any effect on the underlying marine geology of the PDA. The NADF would remain suspended in the water column and have no effect on sediments but the cuttings would accumulate on the seafloor. Cuttings deposits would tend to be deeper and coarser in the immediate vicinity of the wellhead and decrease in thickness and grain size with increasing distance from the well. The strength of the bottom currents in the PDA would likely erode any significant deposits near the wellhead over time dispersing all but the coarsest cuttings down current. The only lasting effect of such an event would likely be a change in the grain size distribution of marine sediment within the deposition field; although this effect would diminish over time as benthic infauna and natural sediment deposition would bury the deposited cuttings. The NADF to be used by EEPGL contains IOGP Group III NABF with low to negligible aromatic reducing the potential that changes in marine sediments as a result of discharge of the NADF will lead to toxicological impacts on benthic infauna. Given the shortterm nature of such an event the lowtoxicity NADF and that the total volume of material that would be discharged would be limited to the volume of the riser the consequence of a release of NADF on the seabed and marine sediments is considered Low. In combination with a likelihood rating of Unlikely for such an event the overall risk to marine sediments from a release of NADF is Minor. Table 786 Risk Rating for Oil Spill Impacts on Marine Geology and Sediments

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating	Proposed Mitigation Measures	None	Residual Risk Rating	Minor	Minor
Minor	None	Minor	Marine Oil Spill	NADF Release	Marine Sediments	Marine Sediments	Unlikely				

Unlikely Low Low May 2017 367 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project 7.4.2.3 Marine Water Quality Chapter 7 Assessment of Potential Impacts

As described in Section 7.4.1 marine oil spills are subject to a range of weathering processes that will result in the hydrocarbon partitioning in different parts of the marine environment and include the loss of some of the spill by way of evaporation and photooxidation. Microbial and photochemical degradation processes will gradually remove remaining contamination from the marine environment. The proportion of the spill that becomes entrained in the water column through wave energy will be subject to rapid high levels of three-dimensional dilution along with biodegradation. Some oil constituents especially aromatics are also soluble in water. Together the entrained and dissolved fractions will increase hydrocarbon concentrations in the water column and result in localized reductions in water quality. Monitoring of oil spills has shown that concentrations of oil and its constituents in the water column rapidly decline after a spill and are usually confined to an area near the source ITOPF Undated. The oil that would be released from a spill in the PDA would be what is known as a light crude. Lighter crude oils generally have higher biological availability and are generally associated with higher toxicity impacts versus heavier crudes. This impact however is offset by the relatively rapid dissipation of light oils through evaporation and dispersion which means light oils may be less impacting to the environment overall relative to heavier oils as long as sensitive resources are sufficiently distant from the immediate source of the spill. The mixing energy resulting from a loss of well control event may result in higher levels of entrained and dissolved hydrocarbons than a surface spill as the slick will be fragmented into smaller droplets by reservoir pressure. Accordingly a Marine Oil Spill is considered to have a High severity rating with respect to impacts on water quality taking into consideration the higher toxicity of the light oil fractions and the magnitude and extent of the spill scenario balanced against the limited geographic extent and duration of the toxicity impacts as a result of relatively rapid loss of lighter fractions. In combination with a likelihood rating of Unlikely for a large Marine Oil Spill the overall risk to marine water quality from an oil spill is Moderate. Even with implementation of the OSRP the residual risk rating remains

Moderate. As discussed in Section 7.4.2.3 NADF would be exposed to biological degradation after being released from the drilling riser. This process can result in localized decreases in dissolved oxygen concentrations although this is more likely to be observed in the pore water between the cuttings grains deposited on the seafloor than in the water column due to the dissolution of NADF in the water column caused by the strong marine currents in the region. Organic enrichment of sediments speeds the biodegradation process which tends to accelerate oxygen depletion and NADF cuttings tend to contain higher concentrations of biodegradable matter than WBDF. Conditions favoring eutrophication and hypoxia in the nearsurface pore water within the deposition zone may exist temporarily following a release of NADF but the high current velocities in the area would tend to prevent formation of large piles of cuttings where these conditions would persist. Eutrophication and resulting hypoxia at the seafloor or within the pore water could be sufficient to cause localized changes in the marine biota but these changes would likely be short term. Although the NADF used by EEPGL will contain IOGP May 2017 368 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Group III NABF it will have low to negligible aromatic reducing the potential that changes in marine water quality as a result of discharge of the NADF will lead to toxicological impacts. Therefore a NADF Release is considered to have a Medium severity rating with respect to impacts on water quality. In combination with a likelihood rating of Unlikely the overall risk to marine water quality from a NADF Release is Minor. Table 787 Risk Rating for Oil Spill Impacts on Water Quality

Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating
Marine Oil Spill	NADF Release	Water Quality	Water Quality	Unlikely	High
Marine Oil Spill	NADF Release	Water Quality	Water Quality	Unlikely	Moderate
Marine Oil Spill	NADF Release	Water Quality	Water Quality	Unlikely	Medium
Marine Oil Spill	NADF Release	Water Quality	Water Quality	Unlikely	Minor

Proposed Mitigation Measures Implement OSRP None Residual Risk Rating Moderate Minor

7.4.3 Biological Resources

The only unplanned events with the potential to impact biological resources would be a Marine Oil Spill a Coastal Oil Spill or a NADF spill collectively referred to as oil spills. Oil spills can impact marine biological resources both as a result of physical smothering and toxic impacts. The severity of the impact typically depends on the location of the spill the quantity and type of hydrocarbon

spilled the environmental conditions e.g. wind currents and the sensitivity of the impacted receptors and their habitats ultimately exposed to the oil ITOPF undated. Due to rapid dilution of hydrocarbons in the water column the most significant impacts on biological resources are generally impacts on seabirds and other species that encounter surface slicks. Impacts may also occur in shallow subtidal or intertidal areas that are exposed to higher concentrations where hydrocarbons are entrained by breaking waves or where species are foraging on sand mudflats or wetlands.

7.4.3.1 Protected Areas and Special Status Species

Potential impacts from a Marine Oil Spill or a Coastal Oil Spill on protected areas and special status species are discussed in this subsection.

Protected Areas

The Shell Beach Protected Area SBPA provides habitat for numerous coastal wildlife and shorebird species including several species of critically endangered marine turtles. The SBPA would be highly sensitive to a large Marine Oil Spill if it were to reach the shoreline. However as discussed in Section 6.1.4.1 Guyanas oceanic waters are influenced by the Guiana Current and the North Brazil Current and oil spill modeling indicates that oil spilled from the modeled loss of well control event would have a 5 to 10 percent probability would reach the Guyana shoreline without considering the effects of emergency spill response. Nevertheless May 2017 369 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts SBPA has been included in the coastal sensitivity mapping and in the event of an oil spill resources and equipment would be mobilized to protect Shell Beach as necessary. Based on the sensitivity of the SBPA the consequence of an oil spill reaching the SBPA would be High. The low probability 5 to 10 percent of oil from a large Marine Oil Spill actually reaching the Guyana shoreline supports a likelihood rating of Unlikely. Therefore the overall risk to the SBPA from a large Marine Oil Spill is considered Moderate. With the effective implementation of the OSRP the residual postmitigation risk is considered Minor. A Coastal Oil Spill e.g. Scenario 6 from Table 782 would not be expected to impact SBPA because it would be limited to near Project shorebases and onshore support facilities which would be distant from SBPA. A NADF spill would not be expected to impact the SBPA because of the limited volume spilled and the depth and distance to shore at which the

spill would occur. Special Status Species Special Status Species include critically endangered endangered threatened and vulnerable species that are found in the Project AOI. The Critically Endangered species in the AOI are all coastal fish species that would only be exposed to oil if it reached coastal waters. If oil were to reach the coast in sufficient quantities to cause lethal or sublethal impacts on fish the loss of even a few individuals in this category could cause significant impacts at the population level. Based on this rationale the consequence or severity of an oil spill on Critically Endangered species is considered High. A large Marine Oil Spill or a Coastal Oil Spill are the only spill scenarios that could result in such quantities of oil reaching coastal waters and these events are considered Unlikely. Therefore the overall risk of a large Marine Oil Spill or a Coastal Oil Spill to Critically Endangered species is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by further reducing the probability of oil reaching the Guyana coast line. There are a few terrestrial special status species such as the Agami heron and Semipalmated sandpiper that could encounter weathered oil along the coast or ingest fish that had been exposed to or ingested oil themselves. This would be most likely to occur under a large Marine Oil Spill or Coastal Oil Spill in which oil could approach or reach the Guyana coast. Such an event could cause significant impacts at the population level depending on the size of the spill and the proportion of available forage and habitat affected. Therefore the consequence or severity of an oil spill on Critically Endangered species is considered High. The likelihood rating of such an event occurring is considered Unlikely for the same reasons cited above for Critically Endangered species. Therefore the overall risk of a large Marine Oil Spill or a Coastal Oil Spill to terrestrial special status species is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by further reducing the probability of oil reaching the Guyana coast line. The Endangered and Vulnerable species are primarily open water fish that would occur in the PDA. Fish have no need to surface and can therefore avoid floating oil and the depths present.

May 2017 370 EEPGL
Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts offshore of Guyana would provide sufficient opportunity to do avoid slicks and

sheens. Fish would have the potential to encounter emulsified oil rising through the water column from a loss of well control at the wellhead but most of the Endangered and Vulnerable species are pelagic species that would be expected to rapidly vacate areas with harmful concentrations of oil in the water column so exposure times would be brief. Losses of a small numbers of individuals of Endangered or Vulnerable species could have significant population level effects but would have less of an impact than losses of equivalent numbers of Critically Endangered species. Based on this rationale the consequence or severity of a large Marine Oil Spill on Endangered or Vulnerable species is considered Medium. The severity of a spill events impacts on green sea turtles and black capped petrels would be higher than on the fishes that comprise most of the Endangered and Vulnerable categories and impacts of unplanned events on sea birds and sea turtles are assessed in other sections with the higher sensitivities of these two species to oil spills are not sufficient to elevate the consequence rating for impacts on the remaining species in the Endangered and Vulnerable categories. Therefore the overall risk of a large Marine Oil Spill to Endangered and Vulnerable species is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by further reducing the probability of oil reaching the Guyana coast line. The Near Threatened category includes a mix of offshore and coastal species but most species are primarily found offshore. These species are considered less atrisk than Endangered or Vulnerable species so the consequence or severity of a large Marine Oil Spill or Coastal Oil Spill on these species is considered Medium. Most species in the Endangered and Vulnerable categories occur offshore so the likelihood of an oil spill impacting these species is rated as Unlikely based on the same rationale presented above for Endangered or Vulnerable species. Therefore the overall risk of a large Marine Oil Spill or Coastal Oil Spill to Endangered and Vulnerable species is considered Minor. Effective implementation of the OSRP would further reduce the geographic extent of a spill. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure for the drill ship lighter oil fractions would likely rise into the mid water column and dissipate laterally as they rise while the NADF would remain at or near the seafloor. A few of the deepwateradapted special

status fishes e.g. hollownose grenadier and frilled shark may occur occasionally in the shallowest portion of the PDA but the PDA is too deep to be within the preferred habitat of any special status species. Therefore a NADF Release would not be expected to have a population level impact on special status species.

Minor Marine Oil Spill	Marine Oil Spill or Coastal Oil Spill	Protected Areas	SBPA	Special Status Species	Critically Endangered Species	Endangered Fish and Black Capped Petrel	Vulnerable	Near Threatened Species	7.4.3.2 Coastal Habitats	As indicated in Table 784 the unplanned events with the potential for any measureable impacts on coastal habitats would be from a large Marine Oil Spill or Coastal Oil Spill. In Guyana the coastal habitats most at risk from an oil spill would be mangroves and other wetland habitats e.g. mudflats. Other habitats that are known to be sensitive to oil spills are coral reefs and seagrass beds but which are not present in Guyana. Mangroves of which the largest remaining stands in Guyana occur in the SBPA are important providers of a number of ecological services upon which fish wildlife and humans rely. Mangroves provide valuable habitat for crabs and important nursery areas for fish and shrimp and provide coastal protection from wave action. Mangroves are typically found along the margins of shorelines at the saltwater interface Due to this physical location mangroves are vulnerable to exposure during oil spills. Mangroves are considered to be sensitive to heavy contamination by oil for several reasons ITOPF undated Mangroves rely on oxygen supplied through small pores lenticels on their aerial roots. Smothering of the aerial roots by heavy hydrocarbons can block this important oxygen pathway; The toxic component of oil can interfere with mangroves systems for maintaining salt balance impacting their ability to tolerate salt water;	May 2017 372 EEPGL Environmental Impact Assessment Liza Phase 1																

Development Project Chapter 7 Assessment of Potential Impacts Oil can become trapped in mangrove sediments where it may remain in a relatively unweathered state and be gradually remobilized over a long period causing repeated pulses of exposure; and If impacted mangrove habitats are typically slow to recover from oil exposure often taking 10 years or longer especially where the shoreline protection services of the mangroves has been compromised. For these reasons the consequence or severity of a large Marine Oil Spill on mangroves is considered High. However oil spill modeling of a loss of well control event indicates a 5 to 10 percent chance of oil reaching the Guyana shoreline supporting a likelihood rating of Unlikely. Therefore the overall risk of a Marine Oil Spill on coastal habitats is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by further reducing the probability of oil reaching the Guyana coast line. There is also the potential for a Coastal Oil Spill in the Demerara River or near shorebases located elsewhere in Guyana see Section 7.5 for discussion of shorebases in Trinidad. Scenario 6 Table 782 assumes a spill of 500 bbl of diesel oil which may occur during bunkering. Under this scenario the spill would be quickly controlled and contained because of the relatively small volumes and the ready access to spill control equipment. Although mangrove forests are not extensive near the mouth of the Demerara or the Essequibo rivers fringe mangroves do exist and would be susceptible to exposure to an oil spill. Other coastal habitats that are particularly susceptible to oil spills e.g. coral reefs seagrass beds are not found in these coastal areas of Guyana. These impacts would generally be temporary limited in area and readily mitigated with rapid habitat recovery expected. Nevertheless considering the sensitivity of mangroves to oil spills the consequence or severity of a Coastal Oil Spill on mangroves is considered High and the occurrence of this event is considered Unlikely. Therefore the overall risk of a Coastal Oil Spill to coastal habitats is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by further reducing the spread of oil in coastal waters. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure on the drill ship the NADF would not be expected to reach the coast. Therefore a NADF Release would have no impact on coastal habitats. Table 789

EEPGLEnvironmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

7.4.3.3 Coastal Wildlife and Shorebirds

As indicated in Table 784 the unplanned events with the potential for any measureable impacts on coastal wildlife and shorebirds would be a large Marine Oil Spill or a Coastal Oil Spill. As described in Section 6.2.3 the Guyana coastal habitats support a rich and diverse collection of species including shorebirds. Many of these species are dependent on mangroves and other wetland habitats which are particularly sensitive to oil spills. In addition there is the potential for some oil that reaches the Guyana shoreline to move upstream into the tidal portions of rivers and other estuarine areas as a result of tidal action where it could impact furbearing species like the neotropical and giant river otter. Oil can impact the physical structure of feathers and fur causing a loss of waterproofing and thermoregulation. In addition animals can inhale hydrocarbons or ingest oil when they groom themselves or feed which can damage their lungs cause ulcers and result in liver and kidney damage. For these reasons the consequences or severity of a large Marine Oil Spill on coastal wildlife and seabirds is considered High. However oil spill modeling of a loss of well control event indicates a 5 to 10 percent chance of oil reaching the Guyana shoreline supporting a likelihood rating of Unlikely. Therefore the overall risk of a large oil spill on coastal wildlife and shorebirds is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by reducing the probability of oil reaching the Guyana coast line. A Coastal Oil Spill e.g. Scenario 6 from Table 782 would more directly impact estuarine wildlife than the small portion of a larger Marine Oil Spill that reaches the coastal portion of Guyana. The giant river otter however is not found in estuarine waters and emergency response measures should be able to prevent any hydrocarbons from a spill like this from migrating upstream into fresh water habitats where this species may be found. There could be

impacts to the neotropical otter which can be found in estuarine areas shorebirds and other wildlife from oiling but because of the more limited magnitude of the spill and its location in a more controllable setting i.e. riverine vs open ocean the impacts would be limited to those individuals in the limited impacted area and these impacts would be expected to be temporary with no impacts at the population level for any species. Nevertheless considering the sensitivity of some of these coastal species the consequence or severity of a Coastal Oil Spill on coastal wildlife and shorebirds is considered High and the occurrence of this event is considered Unlikely. Therefore the overall risk of a Coastal Oil Spill on coastal habitats is considered Moderate. Effective implementation of the OSRP would further reduce this risk to Minor by further reducing the spread of oil in coastal waters. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure on the drill ship the NADF would not be expected to reach the coast. Therefore a NADF Release would have no impact on coastal wildlife or shorebirds. High	Moderate	Implement OSRP	Minor	Marine Oil Spill	Coastal Oil Spill	Coastal Wildlife and Shorebirds

7.4.3.4 Seabirds As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on seabirds would be a Marine Oil Spill. During most oil spills seabirds are harmed and killed in greater numbers than other kinds of creatures NOAA 2016b. An oil spill could pose a risk to seabirds through direct and indirect mechanisms including the following Loss of insulating and water repelling properties from oiling of plumage leading to increased mortality; Loss or impairment of flight and buoyancy from oiling of plumage which can render birds unable to feed at sea which can quickly lead to dehydration and starvation; Toxic impacts from the ingestion of hydrocarbons during preening ingestion of contaminated prey inhalation of fumes or absorption of hydrocarbons through skin or eggs leading

to increased mortality; Habitat degradation at sea and at island or shoreline breeding sites; and Mortality of food resources. Since most oils float at least initially following a release seabird species that spend significant time resting or foraging on the waters surface are most at risk from direct exposure. Diving birds and waterfowl are considered to have the highest risk of oiling. No marine Important Bird Areas IBAs e.g. seabird breeding colonies and surrounding foraging areas nonbreeding concentrations feeding areas for pelagic species have been identified in Guyana. For colonial nesting species if a spill occurs during the breeding period and oil reaches a breeding colony or impacts individuals that introduce oil to the colony the impacts on seabirds would be more severe compared with those during the nonbreeding season. This is because colonial seabird species typically nest close together on islands or shorelines and forage at higher density in proximity to the nesting sites making larger numbers of birds and their eggs susceptible to oiling. Reproducing requires a lot of energy and a birds demand for food resources can double or triple during the breeding season. If an oil spill causes

May 2017 375 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

mortality or contamination of the birds food resources it can inhibit the birds ability to successfully mate and produce eggs Henkel et al. 2012. Eggs and very young birds are particularly sensitive to oil exposure which typically causes embryonic mortality in eggs or death from exposure in chicks Finch et al. 2011. Some seabirds lay only one egg at a time so they have an already low reproductive rate which makes these species more susceptible to adverse impacts from spills that occur in the breeding season because they could lose an entire recruitment year NOAA 2016. Given their susceptibility and sensitivity the consequence of a Marine Oil Spill on seabirds is considered High. This is offset to some extent by the Unlikely likelihood of a Marine Oil Spill. Therefore the overall risk of an oil spill on seabirds is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by limiting the geographic extent of the oil spill and the number of individual birds impacted. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure on the drill ship the NADF would not be expected to

reach the surface of the ocean where seabirds are active. Therefore a NADF Release would have no impact on seabirds. Table 791 Risk Rating for Oil Spill Impacts on Seabirds

Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating	Proposed	Residual	Risk Rating
Minor	Mitigation Measures	Implement	OSRP	Marine Oil Spill	Seabirds	Unlikely	High	Moderate

7.4.3.5 Marine Mammals As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on marine mammals would be a Marine Oil Spill. In the unlikely event of an oil spill marine mammals i.e. whales dolphins manatees may be exposed when they surface to breathe or breach in the area of a fresh slick. Exposure to oil may harm their respiratory tissue and eyes and increase their susceptibility to infections. Baleen whales may be more susceptible because of the potential for oil to foul their baleen plates if the whales filter feed in the vicinity of the oil spill. Although not the most common whales in the Project AOI three species of baleen whales have been documented in the area Sei Minke and Brydes whales. Marine mammals may also be impacted by indirect impacts associated with oil spills including increased exposure to sound and risk of injury from ship strikes by response vessels. Despite these risks serious health impacts or deaths in marine mammals due to oil spills are rare. This is attributed to their smooth hairless skin to which oil does not readily adhere and their ability to take evasive action and avoid areas impacted by spills. Depending on time of year however marine mammals could be directly exposed to oil and suffer a range of health consequences.

May 2017 376 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

For these reasons and especially considering the presence and susceptibility of baleen whales the consequence of a Marine Oil Spill on marine mammals is considered High. This is offset to some extent by the Unlikely likelihood of an oil spill. Therefore the overall risk of an oil spill on marine mammals is considered Moderate. Effective implementation of the OSRP would reduce the geographic extent of the spill but considering the susceptibility of baleen whales to oil spills their presence in the Project AOI and their endangered/threatened status the risk remains Moderate. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure for the drill ship lighter oil

fractions would likely rise into the mid water column and dissipate laterally as they rise while the NADF would remain at or near the seafloor. This is deeper than most marine mammals occur and it would be too deep to affect the preferred forage species of any marine mammal species known occur in the AOI. Therefore a NADF Release would have no impact on marine mammals. Table 792 Risk Ratings for Oil Spill Impacts on Marine Mammals

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating	Proposed	Residual	Risk Rating	Mitigation
Measures Implement	OSRP Marine Oil Spill	Marine Mammals	7.4.3.6	Marine Turtles	Unlikely	High	Moderate			

As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on marine turtles would be a Marine Oil Spill. In the unlikely event of an oil spill several aspects of sea turtle biology place them at particular risk across all of their life stages. Marine turtles nest on sandy beaches. If such beaches were to become oiled the laid eggs may be contaminated either because there is oil in the nest or the adult turtles pick up oil as they cross the beach. The eggs are susceptible to oil through absorption which can inhibit their development. Newly hatched turtles can become oiled after emerging from their nests and crossing an oiled beach on their way to the water. Oiling of juvenile and adult turtles in the water can adversely impact their eyes mucous membranes skin blood digestive and immune systems and salt glands. Several aspects of sea turtle behavior also compound their biological susceptibility to oil. These behaviors include Lack of avoidance behavior marine turtles are not known to consistently take evasive action away from oil spills; Indiscriminate feeding marine turtles have a habit of ingesting floating objects including the ingestion of oilfouled food and floating tar balls they mistake for food; and Large prediving inhalations if turtles surface to breathe in a fresh slick the oil can impact their eyes and damage their airways and/or lungs especially with their large prediving breaths which can introduce airborne toxins deep into their respiratory system.

May 2017 377 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

There are five species of marine turtles found in Guyana waters four of which are known to nest at Shell Beach. The populations of all of these species are under threat and they are classified as Vulnerable to Critically Endangered

by the IUCN. The consequence of a Marine Oil Spill on marine turtles is considered High taking into consideration their susceptibility to oil contamination their presence and important nesting site in the Project AOI and their threatened status. As explained previously a large Marine Oil Spill from a well control event is considered Unlikely with oil spill modeling indicating a 5 to 10 percent chance that oil would reach the Guyana shoreline and Shell Beach. Therefore considering both consequence and likelihood the overall risk to marine turtles from an oil spill is Moderate. Effective implementation of the OSRP would reduce the overall risk by reducing the probability of oil reaching the Guyana coast line. However given the Critically Endangered and Endangered IUCN classifications for several of these turtle species the residual postmitigation risk rating remains Moderate. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure for the drill ship lighter oil fractions would likely rise into the mid water column and dissipate laterally as they rise while the NADF would remain at or near the seafloor. No marine turtles are known to dive to the depths that occur in the PDA and it would be too deep to affect the preferred forage species of any marine turtle species known occur in the AOI. Therefore a NADF Release would have no impact on marine turtles.

Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating	Proposed	Residual	Risk Rating
Moderate	Mitigation Measures Implement OSRP	Marine Oil Spill	Marine Turtles	7.4.3.7	Marine Fish	Unlikely	High	Moderate

As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on marine fish would be a Marine Oil Spill. Impacts to fish are related to both water column concentrations of and the duration of exposure to dissolved hydrocarbons primarily polynuclear aromatic hydrocarbons or PAH. Contamination in the water column changes rapidly in space and time such that exposures are typically brief i.e. typically measures in hours. Exposure to microscopic oil droplets may also impact aquatic biota either mechanically especially filter feeders or as a conduit for exposure to semisoluble hydrocarbons which might be taken up in the gills or digestive tract via dissolution from the microdroplets. Fish are generally only slightly impacted by oil spills because of their limited exposure to surface slicks and the dispersed oil being

rapidly diluted to very low concentrations in open water environments. Fish may also actively avoid oil as they can detect hydrocarbons in the water. May 2017 378 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts water. Juvenile life stages of marine fish tend to be more susceptible to impacts from oil spill than adults for several reasons including Most marine fishes spend at least their initial larval stages in the plankton which renders them unable to move away from oil at the surface; Oil tends to concentrate at the water surface at least initially following a release; and In addition to acute ingestion and dermal contact related impacts early life stages are also exposed to developmental related impacts which may include deformities in heart jaw and eye tissues that may manifest later in life Press 2015. Despite the susceptibility of juvenile stages of fish to relatively low concentrations of oil in the upper water column high mortality of planktonic life stages of fish would be expected to have minor impacts on the longterm populations of most openocean species. Very high natural mortality rates for larval life stages exceeding 99 percent for most marine fishes MBC 2011 suggest that most ichthyoplankton that could be killed during an oil spill event would die naturally from other causes in the absence of a spill. Therefore localized high losses of these juvenile life stages rarely equate to any measurable loss of adult life stages in the population. Although adult fish tend to be resilient to the impacts of oil spills in the open ocean fish at all life stages can be substantially impacted in some circumstances especially when oil spills into shallow or confined waters. In exceptional circumstances depletion of a year class for a particular species has been recorded in industry but mass fish mortalities as a result of an oil spill are rare. Mortalities that have occurred have been associated with very high localized concentrations of dispersed oil in the water column in storm conditions with the release of substantial quantities of light oils into breaking surf along a shoreline or with spills in rivers ITOPF Undated. If a spill were to reach these areas and penetrate the shallow creeks and lagoons within the mangroves mortality of adult and subadult life stages could be much higher. The consequence of an oil spill impacting marine fish is therefore considered Moderate. The likelihood of oil reaching the coast where fish would be most vulnerable to adverse impacts would be

highest under a large Marine Oil Spill scenario. But even if such an event occurred during the season when winds and currents were most favorable for oil to reach the coast the probability of oil actually reaching the Guyanese coast would remain between 5 to 10 percent supporting a likelihood rating of Unlikely. This means that the impacts of most oil spills on marine fish would be mostly confined to early life stages of pelagic fish and would have limited impacts at the population or species level. Considering the consequence and likelihood ratings the risk to marine fish from a Marine Oil Spill is rated as Minor. Effective implementation of the OSRP would further reduce the risk by limiting the geographic extent of the oil spill. In the event of a Tier II or Tier III marine oil spill implementation of the OSRP may include use of dispersants Scenarios 7 8 and 9 in Table 782. EEPGL is seeking preapproval from the EPA for the potential use of the three primary i.e. most broadly approved and studied dispersants Corexit 9500 Finasol OSR 52 and Dasic Slickgone NS. These dispersants have been found to have low toxicity are effective across a broad range of oil types and environmental conditions and are readily available globally. For reference in a 2010 study conducted by the May 2017 379 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts US EPA Corexit 9500A was found to be practically nontoxic³⁶ to *Menidia* spp. which is commonly used as a biological model representing fish in general during standard acute toxicity tests USEPA 2010. Although it is impossible to predict the exact quantity of dispersant that would be required under every foreseeable oil spill scenario based on previous industry experience the three scenarios identified in the OSRP for which application of dispersants would be recommended could require the application of an estimated total of between 2 m³ and 159 m³ of dispersant depending on how the dispersant is applied the volume of oil spilled the relative speed with which other mitigation measures could be applied and their effectiveness and sea conditions at the time of the spill as well as other factors. The same factors that will cause rapid dilution of oil in the open ocean e.g.; marine currents wind and wave action will also act to rapidly dilute a dispersant/oil mixture. Since dilution in the marine environment occurs rapidly especially in areas with strong current activity such as the PDA the

potential for acute impacts from dispersed oil is limited in duration and space and chronic exposure is not expected to be a significant factor in the overall risks posed to marine biota during a spill event. Undispersed oil generally has similar toxicity as most dispersant/oil mixtures so the responsible use of dispersants generally does not represent an additional risk to marine biota. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure for the drill ship lighter oil fractions would likely rise into the mid water column and dissipate laterally as they rise while the NADF would remain at or near the seafloor. In the event of a release of NADF caused by an emergency riser disconnect due to DP station keeping failure on the drill ship the NADF would remain at or near the seafloor. Such an event would expose deepwater adapted fishes within the PDA to NADF but a NADF release would be expected to only temporarily affect a small area around the release point. Therefore the risk to marine fish from a NADF Release is rated as Minor. Table 794 Risk Rating for Oil Spill Impacts on Marine Fish Unplanned Event Resource Receptor Likelihood Severity Consequence Risk Rating Proposed Mitigation Measures Implement OSRP None Residual Risk Rating Minor Minor Marine Oil Spill NADF Release Marine Fish Unlikely Moderate Minor Marine Fish Unlikely Low Minor

7.4.3.8 Marine Benthos As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on marine benthos would be a Marine Oil Spill. 36 The US EPA classifies substances with LC50 values concentration that will kill 50 of the test animals with a single exposure of 100 ppm as practically nontoxic. May 2017 380

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Benthic resources would be in close proximity to spilled oil from a loss of well control event. The impact of oil contamination on deepsea benthic biological resources however is poorly understood by academia and industry. As discussed previously most of the spilled oil would be expected to rapidly surface but some oil may bind with sediments and settle to the bottom with the potential to expose benthic organisms to toxic constituents. Results from a study initiated after the Deepwater Horizon oil spill found that areas within about 3 km 1.8 miles of the wellhead had low taxa richness and high nematode/harpacticoid/copepod ratios indicative of

contamination Montagna et al. 2013. It should be noted that these impacts are considered to have resulted from attempts to kill the well by injection of drilling fluids into the open wellhead rather than the loss of well control. Polychaete worms the most common benthic species in the PDA display varied responses to oil pollution. After an initial dieoff some polychaete species may increase in abundance and rapidly colonize damaged habitat while other species may experience reduced populations Xerces Society 2014. In a 2010 study conducted by the US EPA Corexit 9500A was found to be slightly toxic³⁷ to Mysid shrimp which are commonly used as a biological model representing crustaceans and other benthos in general during standard acute toxicity tests USEPA 2010. As described above oil spill scenarios 7 8 and 9 as identified in Table 782 and in the OSRP could require the application of an estimated total of between 2 m³ and 159 m³ of dispersant but if subsea application of dispersant were to be used the upper end of that range would decrease by a factor of five to a total of approximately 32 m³. This means that although subsea application would place the dispersant closer to the seafloor where benthos are located the incremental increase in relative toxicity to benthos as compared to fish would be largely balanced by the much smaller amount of dispersant that would be required in such an application. Considering the depth of water relatively low species diversity and likely limited geographic extent of impact the consequence of a Marine Oil Spill on marine benthos is considered Low. Combined with the Unlikely event of a large Marine Oil Spill the overall risk to marine benthos from an oil spill is considered Minor. There is little in the way of mitigation that would minimize the impacts of an oil spill on marine benthos in proximity to the well; rather EEPGLs proposed embedded controls to prevent a spill from occurring represent the most effective approach to minimizing this risk. Marine benthos would be the most sensitive of all the marine biological resources/receptors to an unplanned release of NADF from an emergency riser disconnect and loss of DP on the drill ship due to their close proximity to the release point the tendency of the NADF and cuttings plume to remain at or near the seafloor and their limited capacity to move away from the impacted area compared to other marine biota. A review of impacts of NADF and cutting deposition on marine benthos documented burial changes in sediment texture and

hypoxia in sediments as the three primary mechanisms of impact on marine biota from a release such as 37 The US EPA classifies substances with LC50 values concentration that will kill 50 of the test animals with a single exposure of 10100 ppm as slightly nontoxic. May 2017 381 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Scenario 5 IOGP 2016. The smaller and less mobile organisms including burrowing species worms and sessile lifeforms such as sponges bryozoans gorgonians and most mollusks are usually affected to greater degree by such events while the larger and more mobile species e.g. large crustaceans cephalopods are affected to a lesser degree and can move away from impacted areas. As described in Sections 7.4.2.2 and 7.4.2.3 marine currents in the AOI would mitigate the potential for burial and formation of hypoxic zones within the sediment. When such events occur recovery through natural recruitment from adjacent undisturbed areas is typically well underway within a year of the impact having occurred but the potential does exist for short term impacts on marine benthos in the event of a release and such an event would likely cause at least a temporary decrease in both the abundance and diversity of marine benthos within the deposition zone. While the NADF to be used by EEPGL contains IOGP Group III NABF with low to negligible aromatic reducing the potential that changes in marine sediments as a result of discharge of the NADF will lead to toxicological impacts on marine benthos a NADF Release is considered to have a Medium severity rating with respect to impacts on marine benthos. In combination with a likelihood rating of Unlikely the overall risk to marine water quality from a NADF Release is Minor. Table 795 Risk Rating for Oil Spill Impacts on Marine Benthos

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating	Proposed Mitigation Measures	None	Residual Risk Rating
Minor	Unlikely	Medium	Minor	None	Minor	Marine Oil Spill	NADF Release	Marine Benthos	Marine Sediments

7.4.3.9 Ecological Balance and Ecosystems As described in Section 7.2.9.2 maintaining ecological balance in the North Brazil Shelf LME is essential to maintaining nutrient cycling gene flow and biodiversity. As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on ecological balance and ecosystems would be a large

Marine Oil Spill. Impacts on the Marine Nutrient Cycle Nitrogen phosphorous and silicon all enter the marine food web through metabolism by phytoplankton Nihoul and Chen 2008 so the impact on the food web from an oil spill would be determined by the impact of the spill on phytoplankton. The available literature suggests that toxicological impacts of oil on phytoplankton vary widely according to nutrient of the water temperature type of oil and exposure. A persistent heavy surface slick has the potential to reduce gas exchange and light transmission at the waters surface which generally reduces photosynthetic activity and primary productivity in the impacted area Ozhan et al. 2014. Reduced cellular activity in the phytoplankton would reduce the uptake of nutrients nitrogen phosphorous and silicates into the base of the aquatic food web. However these May 2017 382

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7

Assessment of Potential Impacts impacts would be short lived localized and the proportion of the phytoplankton populations impacted would be limited. As the oil weathers the slick would begin to break apart and light transmission would be restored and plankton not impacted would be carried into the Project AOI from unaffected areas to the east by the Guiana Current. Hydrocarbons in the water column would be rapidly diluted to levels below those expected to cause toxicity to planktonic species. The phytoplankton community would be expected to recover quickly due to the influx of unaffected plankton and phytoplanktons short generation times relative to other marine taxa.

Impacts on Gene Flow As described in Section 7.2.9.2 obstacles to efficient gene flow occur when physiochemical barriers to migration breeding or dispersalcolonization occur. A large Marine Oil Spill would represent a potential short term physiochemical barrier to migration through the Project AOI although the significance of this barrier impact would vary across species and seasons. Impacts on gene flow in marine fish would be negligible because there are no known sensitive spawning aggregations or habitat that would support such aggregations in the vicinity of the Project AOI and because fish traveling through the Project AOI en route to more distant aggregation sites would be expected to take an alternate route to avoid an area impacted by a spill. Marine mammals would also be expected to avoid the impacted area although in the initial stages of a spill they could be

impacted to a greater degree than the fish if they inhaled vapors or oil at the surface prior to vacating the area. Sea turtle and birds would more sensitive to impacts on gene flow because they do congregate to breed in portions of the Project AOI see Sections 7.4.3.4 and 7.4.3.6. Impacts on Biodiversity A large Marine Oil Spill has the potential to cause a shortterm decline in biodiversity. Some species may exhibit avoidance behavior and sensitive species that remain in the area may experience localized population declines or a declines in vigor. Small spill events would have little if any longterm impact on biodiversity across the North Brazil LME because these events would impact relatively localized areas and although there can be minor local decreases in biodiversity associated with even a small spill recovery would be expected to occur relatively rapidly. The same factors would impact biodiversity in the event of a more extensive oil spill but declines in biodiversity within the Project AOI may occur over a larger area and impact a larger number of ecosystem types so recovery may occur more slowly. For taxonomic groups that could experience significant reproductive and/or gene flow impacts depending on the timing duration and extent of the spill such as sea turtles declines in biodiversity could be regional and span multiple generations. Trophic Impacts A large Marine Oil Spill from a well control event could have ecosystemlevel trophic level impacts if hydrocarbons persisted in the food web and had toxic impacts on organisms or if May 2017 383 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts underlying changes in abundance or distribution of prey caused shifts in feeding behavior or effectiveness in upper trophic levels. Although the assimilation of hydrocarbons into living tissues is well established at multiple trophic levels Teal and Howarth 1984; Neff 2002; Chanton et al. 2012; GOMRI 2015 there has been no conclusive documentation of biomagnification of hydrocarbons up the food chain following a major oil spill. Research on fish following oil spills has documented residence of PAHs in fatty tissues but also indicates that fish and other higher vertebrates are able to dispose of the hydrocarbons rapidly through metabolic means such as the Cytochrome P 450 process Neff 2002. Most marine taxa would be able to avoid oil spills and would be able to recover relatively quickly from impacts should they occur. Several studies have

documented postspill shifts in feeding behavior in birds and fish but studies of spillrelated impacts on other marine taxa are generally lacking. Most studies cite shortterm adjustments in feeding strategies by birds or fish following a spill but many cite the need for longerterm study to document the role of spills in these shifts or an inability to identify hydrocarbon contamination as a driving factor due to confounding environmental impacts or both GOMRI 2015; Piatt and Anderson; 1996. Studies that successfully control for such factors and purport to document a causal relationship between oil spills and trophic shifts typically document a shift back to prespill conditions within a few years Moreno et al. 2013; GOMRI 2015. For these reasons the consequence of impacts from a large Marine Oil Spill on ecological balance and ecosystems is rated Medium. Combined with the Unlikely event of a large Marine Oil Spill occurring the overall risk to ecological balance and ecosystems from an oil spill is considered Minor. Additionally at the onset of an oil release a wildlife response program would be established to help minimize these impacts. Release of NADF near the seafloor as described under Scenario 5 would enrich the nutrient of the marine sediment down current of the wellhead due to the presence of biodegradable organic material in the fluid and the eutrophic condition that could result would cause temporary shifts in the food chain as the makeup of the marine benthos changed. It is unlikely that these changes in the benthic community would cause substantial changes in upper trophic levels however so a NADF Release is considered to have a Low severity rating with respect to impacts on ecological balance and ecosystems. In combination with a likelihood rating of Unlikely the overall risk to ecological balance and ecosystems from a NADF Release is Minor.

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating

Minor	Minor	Marine Oil Spill	NADF Release	Ecological Balance and Ecosystems	Ecological Balance and Ecosystems	Unlikely
Medium	Minor	Unlikely	Low	Minor	May 2017	384

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

7.4.4 Socioeconomic Resources

The only unplanned events with the potential to impact

socioeconomic resources would be a large Marine Oil Spill or a Coastal Oil Spill. A NADF spill would not be expected to impact socioeconomic resources with the possible exception of submerged cultural heritage because of the limited volume of the potential spill and the water depth and distance to shore at which the spill would occur.

7.4.4.1 Economic Conditions Employment and Livelihoods

As indicated in Table 784 the unplanned events with the potential for any measureable impacts on economic conditions or employment and livelihoods in the Project AOI would be a large Marine Oil Spill or a Coastal Oil Spill which through decreased fishery and agricultural yields could potentially impact the fishery and agriculture sectors that currently account for a large part of the country's GDP. The economy in Regions 1 2 and 3 are highly dependent on fishing and agriculture for employment income generation and subsistence. Although the economy in Region 4 is relatively diversified populations in the rural areas also rely on agriculture and fishing with the largest number of fishermen in the country located in Region 4. These economies would be sensitive to any impact on fisheries and crop production that could result from an oil spill. These potential impacts are discussed below. Fisheries could be impacted by a large Marine Oil Spill especially if the oil reaches nearcoastal waters where most artisanal and commercial fishing occurs. Although considered unlikely based on the results of modeling and the sensitivity of fish species to spills as discussed above these fisheries may be impacted by any reduction in fish populations or closure of active fishing areas to allow for cleanup or to avoid potential public health impacts or potential tainting of commercial products. Impacts on mangrove habitats could impact fishery nursery grounds and impact future year class populations. Adult fish however are relatively resilient to oil spills because they are mobile and can quickly relocate away from an oil spill see Section 7.4.3.7. Further oil spill modeling for a well control event indicates 5 to 10 percent probability of oil reaching nearcoastal waters in the unlikely event an oil spill occurs. There would be several days advance notice before any oil would reach the Guyana coast so fisherfolk would be able to move their boats to unaffected areas. Therefore while the consequence of a large Marine Oil Spill impacting commercial fisheries could be considered High given that a large Marine Oil Spill reaching the Guyana coast is

considered Unlikely the risk to commercial fishing is considered Moderate. The coastal sensitivity mapping that supports the OSRP includes mangroves as a sensitive coastal resource and in the unlikely event of an oil spill; EEPGL will deploy emergency response equipment to protect these sensitive resources as appropriate. Effective implementation of the OSRP would reduce this risk to Minor by reducing the probability of oil reaching the Guyana coast. Additionally a claims process would be established at the onset of a large Marine Oil Spill May 2017 385 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

inent to compensate fisherfolk for loss of harvest due to regional fisheries closures that were attributed to the oil spill. In the event that a spill reaches the shore there would be the potential to impact agriculture. Rice farming which makes up the majority of agricultural activity in the coastal area of Region 2 would not be impacted by potential oiling of the coastline since rice fields are irrigated from inland water conservancies. Nontraditional crops such as fruits vegetables and coconuts particularly along the Pomeroon River have the potential to be impacted by contaminated seawater entering the drainage system through sluice gates but this is considered highly unlikely as the movement of oil upstream would be limited by tidal action farmers would have ample notice to close sluice gates and spill responders would have time to install absorbent booms or other spill control equipment to prevent oil from reaching farmers crops or drainage inlets. Therefore the consequence of an oil spill that reaches the Guyana coast on economic conditions in coastal communities is considered Medium and considering the Unlikely likelihood of an oil spill that reaches the Guyana shoreline the overall risk to agricultural activities in coastal communities is considered Minor. Effective implementation of the OSRP and a claims process would further reduce this risk by reducing the probability of oil reaching the Guyana coast line and compensating for economic losses. In the event of a smaller Coastal Oil Spill the spill would be quickly controlled and contained because of the smaller volumes and the ready access to spill control equipment. There is the potential for a spill in these coastal areas because of its proximity to fishing grounds to impact fisherfolk. These impacts however would be Minor because of the limited affected area short

duration of the impact and the relatively rapid expected environmental recovery. Although the response time would be less for a small oil spill relative to a larger oil spill response efforts should be able to prevent oil from reaching agricultural areas because of the limited geographic areas impacted.

Implement OSRP and claims process

May 2017 386 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts 7.4.4.2 Community Health and Wellbeing

As indicated in Table 784 unplanned events with the potential for any measureable impacts on community health and wellbeing include a large Marine Oil Spill Coastal Oil Spill and vehicle accidents. Guyana is one of the poorest countries in South America and this is particularly in rural populations. Although Guyana as a nation is considered self-sufficient for food disparities in food supply and family incomes create challenges in maintaining food security and proper nutrition in some communities with the result that malnutrition and anemia are among the leading causes of death in Guyanese children. Rural communities on the Guyanese coast are dependent on fishing and agriculture for subsistence and livelihoods. Fish catches and traditional crops such as vegetables and fruits are often sold locally at markets or roadside stands. In indigenous communities in Regions 1 and 2 crabbing shrimping and hunting of coastal game such as caiman and shorebirds are also practiced for subsistence. Adverse impacts on these resources as a result of an oil spill could have direct health impacts through entry of harmful substances into the food chain or through malnutrition if local food supplies become unavailable. Impacts on these sectors could also have impacts via the social determinants of health; if livelihoods are impacted increased household poverty can impact economic security quality of life access to education and other

healthpromoting and healthprotective resources. Increased economic hardship can also lead to or exacerbate familial problems and mental health impacts. Given their dependence on the coastal environment for subsistence and income their high rate of poverty and the current health challenges faced by the coastal population in Guyana the health consequences of an oil spill impacting food availability in coastal communities is considered High. Oil spill modeling indicates that the probability of the oil from a well control event actually reaching the Guyana coast with the potential for contaminating crops or coastal game is 5 to 10 percent supporting a likelihood rating of Unlikely. Accordingly the overall risk to community health and wellbeing from a large Marine Oil Spill is considered Moderate. Effective implementation of the OSRP would reduce this risk to Minor by reducing the probability that oil would reach the Guyana coast. A Coastal Oil Spill e.g. Scenario 6 from Table 782 could also have similar Minor effects on community health and wellbeing as a large Marine Oil Spill. The geographic area affected however would be more limited which would create more potential for subsistence fisherfolk to access alternative areas for fishing. With regard to the impact of onshore traffic agents on community health increased vehicular trips would be expected to increase the risk of vehicular agents the severity of which may be greater when industrial trucks are involved. However the Projectrelated increase in traffic is expected to be a minor incremental addition to the existing traffic. The relatively low traffic speeds in Georgetown due to existing congestion may reduce the likelihood of serious injuries although the presence of bicyclists and pedestrians increases that risk. Overall vehicular agents are considered Possible and the consequence could range from Low to High May 2017 387 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts depending on the extent of damage or the severity of injury. This leads to a risk rating for vehicular agents of Minor to Major. Consistent with international best practice EEPGL will develop and implement a Road Safety Management Procedure covering drivers and equipment dedicated to the Project to mitigate these risks. The Plan will include at a minimum the following components Definition of typical primary travel routes; Definition of required driver training including but not

limited to defensive driving loading/unloading procedures and safe transport of passengers if applicable; Designation and enforcement of speed limits through speed governors GPS or other monitoring systems; Avoidance of deliveries during typical peak traffic hours as well as scheduled openings of the Demerara Harbour Bridge to the extent reasonably practicable; Monitoring and management of driver fatigue; Definition of vehicle inspection and maintenance protocols that include all applicable safety equipment; Community safety program for impacted schools and neighborhoods to improve traffic safety and Community outreach to communicate information relating to major delivery events or periods. With the implementation of these measures the risk rating for vehicular accidents could be reduced to Minor to Moderate. Accidents involving Project vessels in Georgetown Harbor or near shorebases could lead to consequences ranging from cosmetic damage to injury or loss of life. Vessels operating in these areas however will be adhering to speed restrictions and navigation aids which should reduce the potential for significant injury or loss of life so the potential severity of these accidents is considered Low. Project contractors will utilize their own safety health and environmental programs and EEPGL will provide active oversight of its contractors to minimize safety health and environmental risks. Therefore the overall risk to Community Health and Wellbeing is considered Minor.

7.4.4.3 Marine Use and Transportation

Chapter 7 Assessment of Potential Impacts

Proposed Mitigation Measures: None Required

Residual Risk Rating: Minor

As indicated in Table 784 the unplanned events with the

potential for measureable impacts on marine use and transportation would be a large Marine Oil Spill and a Coastal Oil Spill. As an oil spill would likely have some impact on marine use and transportation as additional marine vessels and resources would need to be mobilized to support spill response likely resulting in increased congestion in Georgetown Harbour and/or near shorebases and vessel movement may be restricted in some areas. The severity of these impacts could be higher if the spill occurred close to shore and impacted nearshore vessel traffic but oil spill modeling indicates that the probability of the oil from a well control event actually reaching the Guyana coast is 5 to 10 percent for a large oil spill scenario. Accordingly the severity of impacts on marine use and transportation from a spill is considered Low. Therefore considering that an oil spill is considered Unlikely the overall risk to marine use and transportation is considered Minor. Effective implementation of the OSRP would further reduce the risk by reducing the probability that oil would spread in coastal areas. In the event of a loss of DP on the drill ship the drill ship would move away from the exact drilling location as a result of ocean currents until DP power is restored and it could be brought back on station but the event would be short term and would not constitute a hazard to shipping so it would have no impact on marine use and transportation. Accidents involving Project vessels in Georgetown Harbor or coastal areas e.g. groundings or collisions could interfere with marine use and transportation. Vessels operating in these areas however will be adhering to speed restrictions and navigation aids which should reduce the likelihood and severity of such an event. Prompt emergency response in the event of such an accident and removal of any grounded or damaged vessel would limit the severity of the event so the overall risk for marine use and transportation is considered Minor.

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating

7.4.4.4 Social Infrastructure and Services As indicated in Table 784 both unplanned events considered herein a Marine Oil Spill a Coastal Oil Spill and a vehicular accident have the potential to result in measureable impacts on social infrastructure and services. A large Marine Oil Spill could impact social infrastructure and services primarily as a result of supporting spill response and cleanup teams. These teams could overburden housing medical and other infrastructure and services in Guyana. These infrastructure and service demands would only be temporary for the duration of required cleanup likely on the order of a few weeks to months depending on the extent of the spill and whether any oil reaches the Guyana coast. If the spill remains offshore then most of these infrastructure and service demands would likely be concentrated in Georgetown where most response vessels would likely be based but also where infrastructure and services are concentrated. If oil were to reach the Guyana shoreline then landbased cleanup would be required potentially in Regions 1 2 and/or 3 where little infrastructure or service capacity exists. Oil spill modeling however indicates the probability of oil reaching the Guyana shoreline in the unlikely event of a large oil spill associated with a well control event is only 5 to 10 percent. The consequence of an oil spill on social infrastructure and services is therefore considered Medium given the anticipated temporary impact on services. Given that a large Marine Oil Spill is considered Unlikely the overall risk to social infrastructure and services is considered Minor. Effective implementation of the OSRP would further reduce this risk by reducing the probability that oil would reach the Guyana coast. A smaller Coastal Oil Spill would not require spill response measures and teams that would cause any meaningful impact to social infrastructure and services. Response to a release of NADF under Scenario 5 would involve a fraction of the crew and vessels that would be required to respond to a large Marine Oil Spill so it would not be expected to cause any impact on social infrastructure and services. With regard to impacts of vehicular accidents on social infrastructure and services accident rates from ground transportation associated with the Project e.g. workers commuting truck transport of materials are expected to be low and would represent a negligible fraction of the accidents occurring in Georgetown.

As a result the potential consequence level for isolated temporary impacts on road congestion and healthcare utilization resulting from vehicle accidents would be Low. The risk of vehicle accidents associated with the Project causing measurable impact on congestion or healthcare utilization is considered Minor. Consistent with international best practice EEPGL will develop and implement a Road Safety Management Procedure as summarized in Section 7.4.4.2 to further reduce this risk.

Table 7100 Risk Rating for Oil Spill and Vehicular Accident Risks to Social Infrastructure and Services

Unplanned Event	Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating

Development Project Unplanned Event Resource Receptor Likelihood Severity Consequence Risk Rating Coastal Oil Spill Vehicular Accident and Services Social Infrastructure and Services Social Infrastructure and Services 7.4.4.5 Cultural Heritage Unlikely Medium Minor Possible Low Minor

Chapter 7 Assessment of Potential Impacts Proposed Mitigation Measures Residual Risk Rating Minor Minor Implement OSRP Road Safety Management Procedure As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on cultural heritage would be a large Marine Oil Spill or a Coastal Oil Spill. Desktop research identified two known ceramic pottery sites near the coastline. Based on the ubiquity of past human occupations and thus archaeological sites especially along coastlines it is likely that there are many more unidentified archaeological resources along Guyanas coastline. It should be noted however that Marine Oil Spills from well control events that reach the coast 510 percent probably of contacting the coast generally only impact the intertidal zone unless the spill coincides with a significant storm surge. While archaeological sites are common along coastlines sites in the intertidal zone tend to lack stratigraphic integrity due to the dynamic interface between the ocean and the land especially along beaches. Some oil would be expected to settle to the seafloor and could damage submerged cultural heritage e.g. shipwrecks but this would be expected to be in proximity to the spill source. No shipwrecks or associated artifact scatters were identified within the PDA and therefore the risk to underwater cultural heritage is

considered Low. The same factors would apply to a release of NADF so the risk to underwater cultural heritage posed by Scenario 5 is also considered Low. As a result the consequence of a large Marine Oil Spill or release of NADF on coastal archaeological sites and submerged cultural heritage is considered to be Low. NADF is not expected to reach the coast under any conditions and considering the Unlikely likelihood of an oil spill that reaches the Guyana shoreline the overall risk to coastal cultural heritage from an oil spill or NADF Release is considered Minor. The consequence of a Coastal Oil Spill on archaeological sites would be similar to that for a large Marine Oil Spill. Effective implementation of the OSRP would further reduce the risk of a large oil spill by reducing the probability and limiting the geographic extent of oil reaching the Guyana coast.

Chapter 7 Assessment of Potential Impacts OSRP None Minor

As indicated in Table 784 none of the identified unplanned events are expected to have any impact on land use.

7.4.4.7 Ecosystem Services

As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on ecosystem services would be a large Marine Oil Spill. Guyana is a country that is rich in natural resources and these are still relied upon by a large proportion of the population for livelihoods and subsistence. Fisheries and agriculture are still among the top contributors to the countrys GDP and these activities occur primarily in the coastal areas. The Region 2 and 3 economies derive a large share of their income from farming with rice being predominant in Region 2 and sugarcane in Region 3. Populations in these regions also grow many nontraditional crops for local sale and consumption. In Region 1 agriculture occurs at a relatively small scale but a number of other natural resourcebased activities take place particularly by indigenous communities. Along the coast and at the river mouths these include fishing crabbing hunting and trapping. Some

communities also hunt shorebirds and sea turtles as well as collect sea turtle eggs from the Shell Beach area. While the Region 4 economy is more diversified relative to the other coastal regions there is still a large fishing sector and considerable agricultural activity in the rural parts of the region. In addition to provisioning services the marine and coastal ecosystems in Guyana render a range of other important services that offer protection and are necessary for the functioning and support of ecosystems and both human and nonhuman life. This includes the coastal flood protection offered by mangrove forests and wildlife habitat provided by mangrove forests mud banks and coastal swamps. In the unlikely event of an oil spill from a well control event reaching the coast important habitats such as mangrove forests mud flats swamps and beaches could be impacted. These provide a range of ecosystem services to coastal populations in Regions 1 and 2. If oiling is severe enough to cause the loss of some mangrove forests this would weaken a critical component of the countrys sea defense system and expose the coastal population to increased coastal flooding hazard especially in Region 1 where agricultural areas are not protected from flooding by the same system of irrigation and drainage canals as in Regions 2 to 6. In terms of cultural services the coast is important for religious and traditional ceremonies for ethnic groups in Guyana. Many members of the Hindu community conduct funeral ceremonies on the seashore with disposal of ashes in the ocean. Throughout the year and during holy festivals Hindus also perform cleansing ceremonies on the seashore. African cultural organizations perform traditional emancipation ceremonies at a specific seawall location in the Georgetown area.

May 2017 392 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Table 7102 provides a summary of the potential ecosystem services impacts that could be experienced by various receptor groups as a result of a large Marine Oil Spill from a well control event. A Coastal Oil Spill would affect a limited geographic area and would not be considered to pose any significant risk to ecosystem services other than in the localized area of the spill. Table 7102 Potential Ecosystem Services Receptors and Impacts from a Large Marine Oil Spill Receptors Coastal population in Regions 1 2 3 and 4 Key Potential Impacts Impacts on agriculture nontraditional crops e.g.; coconut

palm hearts and fisheries Impacts on shoreline protection provided by mangroves Hindu population in Regions 1 2 3 and 4 Disruption of religious ceremonies funeral and cleansing ceremonies AfroGuyanese population in Region 4 Disruption of traditional ceremonies emancipation ceremonies Coastal indigenous communities in Regions 1 and 2 Impacts on agriculture fishing crabbing hunting trapping nontimber forest product harvesting Impacts on shoreline protection provided by mangroves Considering the reliance of much of the population of Regions 1 2 3 and to a lesser extent Region 4 on ecosystem services e.g. for food housing materials medicinal plants income producing products the extent these services would be impacted by an oil spill if it were to reach shore and the lack of alternatives to replace the lost sources of sustenance and income the consequence of a large Marine Oil Spill from a well control event reaching the coast is rated as High. As explained previously such an oil spill is considered unlikely and even if one were to occur the probability of oil reaching the Guyana coastline is only 5 to 10 percent according to the oil spill modeling supporting a likelihood rating of Unlikely. Therefore the overall risk of an oil spill to ecosystem services is considered Moderate. The Project will establish an OSRP that will be followed in the event of a spill of any size. Additionally a claims process would be established at the onset of a large Marine Oil Spill inent to compensate for loss of sustenance and income. Effective implementation of the OSRP and a claims process would further reduce this risk to Minor by reducing the probability of oil reaching the Guyana coast line and compensating for economic losses. Table 7103 Risk Rating for Oil Spill Impacts on Ecosystem Services Unplanned Event

Resource	Receptor	Likelihood	Severity	Consequence	Risk Rating	Proposed	Residual	Risk Rating
Minor	Mitigation Measures	Implement OSRP and Marine Oil Spill	Ecosystem Services	Unlikely	High

Project	Chapter 7	Assessment of Potential Impacts	Coastal Oil Spill	Ecosystem Services	Unlikely			
Medium	Minor	claims process	Implement OSRP and claims process	Minor	7.4.4.8	Indigenous Peoples		

As indicated in Table 784 the only unplanned event with the potential for any measureable impacts on indigenous peoples would be a large Marine Oil Spill. Indigenous peoples are often

among the most marginalized segments of the population in their respective societies. The majority of Guyana's indigenous people live in remote portions of the country and many continue to operate outside of the formal economy depending on a subsistence way of life. Those living on the coast including along the coastal road of Regions 2, 3 and 4 tend to be culturally integrated with the Afro and Indo-Guyanese population but indigenous groups typically have a lower overall standard of living than the general population. As discussed in Section 7.3.9 indigenous populations in the more remote coastal areas of Regions 1 and 2 make use of a range of coastal resources for subsistence and livelihoods. Communities that are directly adjacent to the coast include Three Brothers Almond Beach, Fathers Beach and Unity Grant. Indigenous villages located 5 to 10 km (3 to 6 mi) inland from the coast in Regions 1 and 2 are Santa Rosa, Waramuri, Manawurin, Assakata and Wakapau. These communities engage in a number of natural resource-based activities including agriculture, fishing, crabbing, shrimping, hunting, palm harvesting and natural medicine harvesting on the coast. In the SBPA, fishing and crabbing activity is particularly active at the westernmost end of Shell Beach at the mouth of the Waini River although these activities also occur to a lesser extent at the eastern end of Shell Beach by the community of Fathers Beach. The percent of indigenous people in Regions 3 and 4 is less than the national average. Indigenous communities in remote areas of Regions 1 and 2 rely on the coastal habitats for subsistence and livelihoods and have less availability of alternative food particularly in Region 1. In the event of an oil spill reaching the coast, provisioning resources could be adversely impacted. In the event that mangrove forests and swamps along the coast are oiled, species such as fish, crabs and caiman which are depended upon for protein are likely to be impacted. For these reasons the consequence of a Marine Oil Spill on coastal Indigenous Peoples communities could be High. As explained previously, a large Marine Oil Spill from a well control event is considered unlikely and even if one was to occur, oil spill modeling indicates a 5 to 10 percent chance oil would reach the Guyana shoreline supporting a likelihood rating of Unlikely. Therefore, considering both consequence and likelihood, the overall risk to Indigenous Peoples of a large Marine Oil Spill is Moderate. The area potentially impacted by a Coastal Oil Spill would be

limited to areas near Project shorebases which are not expected to occur in the more remote areas supporting larger May 2017 394 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts indigenous populations. The Project will establish an OSRP that will be followed in the event of a spill of any size. Additionally a claims process would be established at the onset of a large Marine Oil Spill inent to compensate for loss of sustenance and income. Effective implementation of the OSRP and a claims process would reduce this overall risk to Minor by reducing the probability of oil reaching the Guyana coast line and compensating for economic losses. Table 7104 Risk Rating for Oil Spill Impacts on Indigenous Peoples Unplanned Event Resource Receptor Likelihood Severity Consequence Risk Level Marine Oil Spill Indigenous Peoples Unlikely High Moderate Residual Risk Level Minor Proposed Mitigation Measures Oil Spill Response Plan 7.4.5 Transboundary Impacts The planned Project is not predicted to have any measureable transboundary impacts i.e. impacts outside the Guyana Exclusive Economic Zone [EEZ]. All impacts from planned activities will occur within the Guyana EEZ. However there is the potential for transboundary impacts to result from unplanned events such as oil spills that may occur. As the oil spill modeling indicates transboundary impacts may occur under Scenarios 8 2500 bbl offloading spill and 9 20000 bpd release from a well control event over 30 days as defined in Table 782. The unmitigated model results indicate that there is the potential for oil to reach at least portions of Venezuela Trinidad and Tobago Grenada St. Vincent and the Grenadines and St. Lucia see Figure 714 although this would be much less likely in a realworld scenario in which mitigation measures would be applied. The unmitigated models predict that surface oil would travel towards the northwest in all scenarios during both the summer June to November and winter December to May seasons. Differences in seasonal wind speed and direction result in a range of shoreline length oiled. Stronger easterly winds would result in the potential for more significant shoreline oiling particularly in Venezuela and Trinidad and Tobago while lower wind speeds allow the surface plume to be transported to the north of Trinidad and Tobago and into a portion the Caribbean Sea. Impacts on resources and receptors in these other countries would be

similar to those discussed in Sections 7.4.2 to 7.4.4 for Guyana. Although the likelihood of a spill remains unlikely there would be the potential to impact water quality; sediments; protected areas; marine fish turtles mammals and seabirds; coastal fish and wildlife; coastal communities and indigenous peoples who rely on coastal resources for their livelihoods or sustenance. There are however some resources e.g. coral reefs found in these other potentially affected countries that are not found in Guyana. The coastal mapping that was conducted as described in Section 7.4.1 included the coastal regions of the countries that could be impacted by a large Marine Oil Spill event and May 2017 395 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts include these other potentially affected resources; therefore this information is available to support the OSRP. A general overview of potential effects on these countries is provided below.

Potential Effects on Trinidad and Tobago

The probability of shoreline oiling tends to be highest on the coast of Trinidad and Tobago because of the predominant current flow through the Stabroek Block and into the Caribbean Sea. The unmitigated oil spill modeling indicates that the probability of oil from a large Marine Oil Spill i.e. Scenario 9 from Table 782 reaching the Trinidad and Tobago coastline ranges up to approximately 90 percent with the time of first arrival ranging from 5 to 15 days for a spill occurring during both the winter and summer seasons respectively. The mitigated scenarios show oil travelling in generally the same direction. However effective application of multiple response strategies prevents oil from reaching any coastline including Trinidad and Tobago as indicated in Figure 716. The coastal sensitivity mapping indicates that Trinidad and Tobago have several marine resources that could be impacted by an oil spill. While Trinidad lacks coral reefs Tobago has several reefs. Most are on the west side of the island and would therefore be sheltered from oil carried west toward the island but a few are located on the northern and southern ends of the island including the islands largest reef Buccoo Reef located at Tobagos southern end that could be exposed to oiling in the unlikely event that oil reached the island. Trinidads seagrass communities are mostly located along the northwest coast near Chaguaramas and should be sheltered from an oil spill. Tobagos seagrass communities are

mostly clustered near the southern end of the island and would be more exposed to oiling if a spill reached Tobagos shoreline. Four species of sea turtles hawksbill leatherback green and olive ridley nest on Trinidad and all of these except olive ridley nest on Tobago. Significant numbers of both islands nesting beaches would be exposed to oiling by a slick approaching from the east however slightly more than half of Tobagos nesting beaches would be protected along the west coast. Nearly all of Trinidads nesting beaches are located along the northern and eastern coasts and would be at risk of oiling if a spill reached Trinidad. The most sensitive coastal species to an oil spill reaching Trinidad and Tobago is probably the West Indian manatee. Its known habitat in the country is exclusively located on east coast of Trinidad in an area that would have up to a 90 percent probability of being oiled in the event of an unmitigated large Marine Oil Spill from a well control event. Several marine Important Bird Areas IBAs e.g. seabird breeding colonies and surrounding foraging areas nonbreeding concentrations feeding areas for pelagic species of global or regional importance to seabirds have been designated in Trinidad and Tobago. Numerous fishing areas are located east of Trinidad and could be impacted by a large unmitigated Marine Oil Spill. The largest and most concentrated coastalnearshore fishing activities in this part of Trinidads EEZ are located along the southeastern coast from Cocos Bay in the north to Guayaguayare Bay in the south. These areas extend from the coast to May 2017 396 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts approximately 20 km 12 mi offshore. Further north in the vicinity of Salybia Sena and Saline Bays fishing is concentrated slightly further offshore approximately 15 to 30 km 9 to 18 mi from the coast. All of these areas would have a high probability of being impacted by a large unmitigated Marine Oil Spill from a well control event. Potential Effects on Venezuela The probability of shoreline oiling is high for the coast of Venezuela because of the predominant westerly current flow through the Stabroek block. The Gulf of Paria in Venezuela is located west of Trinidad and would be mostly protected from the impacts of a spill approaching from the east however southern portions of the gulf could be impacted by a large unmitigated Marine Oil Spill if it penetrated west of Trinidad. In such a scenario

the probability of oiling would vary widely. The southern and eastern portions of the gulf would have a high probability of being oiled up to 70 percent depending on location and season while areas slightly north and west would have a much lower probability of being oiled. The Orinoco River Delta would have a 5 to 10 percent probability of being oiled during the summer season but that probability would increase to approximately 40 percent if a large unmitigated Marine Oil Spill were to occur in the winter. The unmitigated oil spill modeling indicates that the time of first arrival would be about 15 to 25 days for a spill occurring during the summer season and approximately 5 to 10 days during the winter season. The most important areas in Venezuela that could be impacted by a large unmitigated Marine Oil Spill would be the Gulf of Paria and the Orinoco River Delta. The Orinoco River Delta is located south of Trinidad in eastern Venezuela. The Orinoco River Delta and the Gulf of Paria support numerous biological resources of regional and global significance including extensive mangroves diverse shorebird and estuarine fish communities threatened and endangered sea turtles and marine mammals and artisanal and commercial fisheries Miloslavich et al. 2011. Several marine IBAs of global or regional importance to seabirds have been designated in Venezuela.

Potential Effects on Other Islands The probability of shoreline oiling from an unmitigated spill is less for the other potentially affected countries i.e. Grenada St. Vincent and the Grenadines and St. Lucia and would be less than for Trinidad and Tobago and Venezuela ranging from 5 to 40 percent with the time of first arrival ranging from 10 to 15 days depending on the island and the time of year. The benefit of the longer time for first arrival of oil is that more time is available to implement the OSRP and provide measures to protect sensitive habitats. These islands are important tourist destinations and support valuable coral reefs seagrass beds and other habitats and species sensitive to oil.

May 2017 397 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts Summary

It should be noted that the oil spill modeling did not take into consideration any emergency response actions. Implementation of the OSRP would help minimize transboundary impacts just as it would minimize impacts within the Guyana EEZ. EEPGL will work with representatives for the respective countries

to be prepared for the unlikely event of a spill by Establishing operations and communication protocols between different command posts. Creating a transboundary workgroup to manage waste from a product release including identifying wastehandling locations in the impacted region and managing commercial and legal issues. Identifying places of refuge in the impacted region where vessels experiencing mechanical issues could go for repairs and assistance. Determining how EEPGL and the impacted regional stakeholders can work together to allow equipment and personnel to move to assist in a spill response outside the Guyana EEZ. Assigning or accepting financial liability and establishing a claims process during a response to a transboundary event. Informing local communities regarding response planning.

May 2017 398 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 7 Assessment of Potential Impacts

Page Intentionally Left Blank May 2017 399 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment

8.0 CUMULATIVE IMPACT ASSESSMENT

Cumulative impacts arise as a result of Projectrelated impacts on a resourcereceptor interacting with impacts on that same resourcereceptor from other nonProject activities. Cumulative impacts can potentially result from individually insubstantial but collectively substantial actions undertaken over time or from the collective effect of modest impacts stemming from different sources acting on a receptor at the same time. Cumulative impact assessment considers interaction between potential impacts from the Project and impacts of other nonProject activities relevant existing activities or sufficiently approvedplanned activities that are considered reasonably foreseeable. The cumulative impact assessment for this EIA included the following two major tasks

- Determining the scope of the cumulative impact analysis including identification of
 - Potentially eligible resourcesreceptors;
 - Other relevant existingplanned activities that are part of or caused by the Project;
 - Relevant resourcesreceptors i.e. those that might be affected by the nonProject activities; and
 - Appropriate geographic extent and time frame of analysis
- Conducting the cumulative impacts analysis on relevant resourcesreceptors. The specific shorebases and onshore support facilities e.g. warehouses laydown yards to be utilized in Guyana have not yet been

identified by EEPGL. Accordingly ERM has performed the impact assessment on the basis that the Project will utilize existing shorebases located in Georgetown. Should any new or expanded shorebases or onshore support facilities be utilized the construction expansion and any required dredging as well as the associated permitting of such facilities would be the responsibility of the owneroperator and such work scope is not included in the scope of this EIA.

8.1 Scope of the Cumulative Impact Analysis

8.1.1 Potentially Eligible Resources

Resourcesreceptors considered initially in the cumulative impacts analysis are those that would be impacted by the Project. If the residual impacts on a resourcereceptor of at least one phase of the Project was rated Minor or higher the resourcereceptor was identified as potentially eligible for the cumulative impact analysis. Unplanned events i.e. oil spills were not considered in this analysis as their likelihood is considered to be Unlikely. Positive impacts are also excluded from the analysis. Table 81 lists the resourcesreceptors identified as potentially eligible for the cumulative impacts assessment based on the Projects residual impact significance ratings presented in Chapter 7.

May 2017 400 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment Table 81 Eligibility of ResourcesReceptors for Cumulative Impact Analysis

a None the planned Project activities are not expected to have any impact on the resourcereceptor.

8.1.2 Other nonProject Relevant Activities

Two other nonProject activities have been identified as relevant with respect to the potential for their impacts to interact

with Project impacts on a given resource receptor. First although no confirmed plans are in place there is a reasonable likelihood that oil and gas companies will conduct oil and gas exploration and development offshore of Guyana outside of the scope of the proposed Project. As an example depending on the experience gained from the proposed Project EEPGL may identify opportunities to expand the development of the Liza Field. Further EEPGL or other operators may pursue activities targeting resources outside of the Stabroek block. Future activities by EEPGL or other operators could include seismic surveys drilling of wells installation of subsea or surface production infrastructure and production operations. Although other operators may conduct their activities concurrently with the Project their activities would occur outside the Stabroek Block with exception of periodic transit. The closest that another operators activities could be expected to approach the Project would be approximately 20 km 12 mi which is well beyond the geographical range of the Projects impacts. There would therefore be no opportunity for cumulative effects between the Project May 2017 401 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment and activities in other blocks so interactions between the Project and other operators activities as well as potential EEPGL activities in other blocks are not considered further in this analysis. Second the Government of Guyana is currently considering replacement of the heavily used Demerara Harbour Bridge as a means of relieving congestion of both vehicular road and riverbased vessel traffic induced by opening or closing respectively of the retractor spans that allow large vessels to pass. In November 2015 the Ministry of Public Infrastructure sought Expressions of Interest EOIs to complete a feasibility study and design for a new bridge across the Demerara River. The EOIs were due by December 1 2015 Kaieteur News Online 2015 but it is currently unclear when or if the replacement project will proceed. The bridge is located several kilometers upriver from the shorebases that EEPGL currently may use to support the Project. If construction of a new bridge moves forward there is a chance it might occur contemporaneously with some stages of the proposed Project.

8.1.3 Relevant Resources identified

in Section 8.1.2 to be experienced by Table 82 presents the results of the analysis to determine

whether or not there is a reasonable potential for Project impacts and the impacts of at least one of the identified other relevant the potentially eligible activities resourcesreceptors listed above. If a reasonable potential for nonProject related impacts was identified the resourcereceptor was considered to be a relevant resourcereceptor and was therefore included in the cumulative impact analysis. Therefore the cumulative impact assessment effort focuses on impacts on resources that are potentially eligible because they will be affected by the Project and relevant because they would also be exposed to impacts of one or more nonProject activities. In this case eight eligible resourcesreceptors were determined to be relevant resourcesreceptors with respect to at least one of the cumulative impact sources. In the cases of Marine Water Quality and Ecological Balance and Ecosystems the effects of the Project would have to persist beyond the boundaries of the Stabroek Block in order for the Project to contribute to cumulative impacts on these resources which is unlikely given the relatively small footprints of the Project and its predicted impacts on water quality. Therefore these receptors were not considered relevant to the cumulative impact assessment because they would not be exposed to impacts from the Project and one or more nonProject activities.

Table 82 Identification of Relevant ResourcesReceptors for the Cumulative Impact Analysis

ResourceReceptor	Highest Residual Impact	Significance Rating	Potential Interaction between impacts of Project and Future Offshore OG Activity
Demerara Harbour Bridge Replacement	Special Status	Species	Marine Mammals
Marine Turtles	Minor	Minor	Minor

8.1.4	Geographical Extent of Analysis	Potential Interaction between impacts of Project and	Yes
Yes	Yes	Yes	Yes
Yes	Yes	Yes	Yes
No	No	No	No
Included in Cumulative Impact	Yes	Analysis as	Yes
Relevant	Yes	Resource	Yes

Yes Receptor Yes No No The geographic extent of the cumulative impacts analysis was defined as the direct and indirect AOI for the Project see Chapter 4 excluding the area associated with a potential unplanned event i.e. oil spill.

8.1.5 Time Frame for Analysis

Potential impacts of the Project will have the possibility of interacting with other nonProject impacts throughout the Project life cycle i.e. extending approximately 20 years from the start of production operations. However there is naturally a limit to the knowledge of what other relevant activities may occur during this period. Considering the other relevant activities described above it was assumed that the Demerara Harbour Bridge replacement project would occur within the Project lifecycle and that other oil and gas exploration and development would extend through the end of anticipated Project production operations. Accordingly the time frame for the cumulative impact analysis was defined as the Project life cycle.

8.2 ResourceReceptorSpecific Cumulative Impact Assessment

This section contains a summary of the cumulative impacts that would potentially result from the impacts of the Project interacting with impacts of the other relevant activities on the relevant resourcesreceptors listed in Table 82.

8.2.1 Special Status Species

The Project was rated as having a Negligible significance for residual impacts on several species listed as Critically Endangered Endangered Vulnerable and Near Threatened. The Project was rated as having a Minor significance for residual impacts on several fish species. Similar to Chapter 7 the assessment of potential impacts on marine mammals Section 8.2.2 effectively covers the assessment of potential impacts to marine mammals and the assessment of potential impacts to marine turtles Section 8.2.3 effectively covers the assessment of potential impacts to special status marine turtles. This section is limited cumulative impacts on special status fish species.

May 2017 403 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment

8.2.1.1 Cumulative Impacts from Future EEPGL Activities

While additional production activities within the Stabroek Block may occur in the future currently such activities are undefined e.g. timing location and development concept. Cumulative impacts of future production activities have therefore not been considered in this assessment but would be included as appropriate in future assessments. However future

exploration activities within the Stabroek block and in close proximity to the Liza field would likely include many of the same impacts on fish associated with the Project e.g. auditory impacts entrainment in water withdrawals permitted discharges. The Critically Endangered species are coastal and would not be affected by the Project. The Endangered species are mostly wide ranging marine pelagic species that could be exposed to effects of the Project as well as other EEPGL activities across the Stabroek Block but these activities would be focused on other areas of the Stabroek Block and the species would be expected to recover from temporary exposures to Project related impacts in the immediate vicinity of the Project before encountering similar impacts elsewhere. The Vulnerable and Near Threatened categories contain a mix of pelagic fish that would also be expected to recover from short term exposures at individual projects and resident species which would not move between projects and therefore would not be exposed to impacts from multiple projects. Provided that impacts from other EEPGL activities would not occur in the same place and time as Project related impacts there would be no significant cumulative effects on pelagic or resident fish and the significance of cumulative impacts on special status fish would not increase above Minor.

8.2.1.2 Cumulative Impacts from the Demerara Harbour Bridge Replacement The Critically Endangered fishes in the Project Area are generally estuarine species and most of the remaining Endangered and Vulnerable species are exclusively marine. None of the special status fishes potentially affected by the Project would also be expected to be present in the vicinity of the Demerara Harbour Bridge project so no cumulative impacts on special status fishes would be expected as a result of the bridge replacement project. Based on the factors discussed above the significance rating for potential cumulative impacts on special status species was set equal to the individual Project significance rating Minor.

8.2.2 Marine Mammals The Project was rated as having a Minor significance for residual impacts on marine mammals resulting primarily from behavioral disturbance.

8.2.2.1 Cumulative Impacts from Future EEPGL Activities In terms of potential cumulative impacts between other EEPGL activities within the Stabroek Block and the Project there is potential for spatial overlap between the impacts of individual activities but the extent of this

potential overlap is currently unknown. While additional production activities within the Stabroek Block may occur in the future currently such activities are undefined e.g. timing location and development concept. Cumulative impacts of future production activities have therefore not been considered in this assessment but would be May 2017 404 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment included as appropriate in future assessments. However many of EEPGLs future activities within the Stabroek block and in close proximity to the Liza field would likely include many of the same impacts associated with the Project e.g. additional vessel traffic permitted discharges. The potential for oil and gas related impacts on marine mammals would logically rise in proportion to an increase in exploration activity but EEPGLs future exploration activities would likely be focused on areas outside of the Projects Direct AOI. EEPGLs future development activities could occur within the Projects Indirect AOI and could therefore have potential cumulative auditory impacts on marine mammals but only if they occurred simultaneously with the installation phase of the Project when auditory impacts will be most severe which is extremely unlikely. The greatest additional risk of ship strike would occur in near shore areas where vessels would congregate to enter and after exiting Georgetown Harbour; however this increased risk would represent a minimal increment to the existing risk posed by fishing and commercial vessels transiting to and from the port at Georgetown and other fishing vessels operating in coastal waters west of Georgetown. Provided that the areas within which marine mammals could be affected by future exploration activities e.g.; mixing zones surrounding future exploration vessels auditory disturbanceinjury thresholds do not cooccur at the same place and time as Project related impacts there would be no increase in the significance of cumulative impacts on marine mammals. The significance of cumulative impacts on marine mammals would not increase above Minor.

8.2.2.2 Cumulative Impacts from the Demerara Harbour Bridge Replacement

A few marine mammals could be present in the vicinity of the Demerara Harbour Bridge project including boto Guyana dolphin tuxuci and West Indian manatee. All of these species are known to enter estuarine settings so they could encounter activities at the Georgetown shorebases that the

Project will be utilizing as well as the Demerara Harbour Bridge. Pile driving and other sources of impulsive noise from bridge construction activity are likely to have a much greater effect on the underwater soundscape and hence the potential for auditory injury than the occasional a few times a day transit of Project vessels which would represent a minor increment to existing river traffic. Considering the typical patterns of bridge construction activity and the low speeds at which Project vessels would be travelling within the harbor there is no expectation of an interaction between the activities leading to increased probability of vessel strikes. Based on the factors discussed above the significance rating for potential cumulative impacts on marine mammals was set equal to the individual Project significance rating Minor.

8.2.3 Marine Turtles

Many of the same factors that determine cumulative potential impacts on marine mammals are relevant to marine turtles. The Project would have Minor significance for residual impacts on marine turtles primarily as a result of potential injury from vessel strikes.

May 2017 405 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment

8.2.3.1 Cumulative Impacts from Future EEPGL Activities

Just as there is potential for spatial overlap between the impacts of individual future EEPGL activities on marine mammals the impacts of future EEPGL activities on marine turtles could also overlap with impacts from the Project but their sensitivity to some Project impacts differs from that of mammals. Like marine mammals turtles would not be expected to congregate around Project vessels. Marine turtles are less susceptible to auditory impacts than marine mammals but spend much of their time at the sea surface and are generally slower than marine mammals so the most likely potential for cumulative impacts between the Project and future offshore oil and gas exploration would likely be vessel strikes. Although vessel strikes are generally rare the potential for oil and gas related vessel strikes of turtles would logically rise in proportion to the amount of oil and gas exploration activity offshore. However collective oil and gasrelated shipping would be expected to represent a small incremental increase in risk compared to the existing risk posed by fishing and commercial vessels transiting to and from the port at Georgetown and other fishing vessels operating in coastal waters west of Georgetown. The

significance of cumulative impacts on marine turtles would not be expected to increase above Minor.

8.2.3.2 Cumulative Impacts from the Demerara Harbour Bridge Replacement The marine turtle species considered in this EIA are not found within the Demerara River. As a result the Demerara Harbour Bridge project would not be expected to contribute to potential cumulative impacts on marine turtles. Based on the factors discussed above the significance rating for potential cumulative impacts on marine mammals was set equal to the individual Project significance rating Minor.

8.2.4 Marine Fish The Project was rated as having a Minor significance for potential residual impacts on bottomoriented fish species as a result of altered bottom habitats e.g. from cuttings discharge during drilling and from disturbancecoverage by installation of SURF infrastructure and on pelagic fish species as a result of altered water quality and potential for entrainment in water intakes during production operations as well as of potential auditory impacts from VSP during drilling and from pile driving during installation. These impacts would be most significant during drilling and installation when most of the habitatdisturbing activities and vessel traffic would occur.

8.2.4.1 Cumulative Impacts from Future EEPGL Activities With respect to bottomoriented and resident species impacts related to disturbance of bottom habitats will be temporary in nature and fish would be expected to return to the vicinity of subsea infrastructure once seafloor disturbance activities are complete. Further these effects would be limited to the immediate locality of Project drilling operations and SURF infrastructure and would not overlap with impacts of additional exploration activities which May 2017 406 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment would be focused on other areas of the Stabroek Block. Impacts on pelagic species from future operations within the Stabroek Block would also be expected to be limited to the immediate vicinity of the vessels engaged in those activities and those activities would be focused on other areas of the block so interaction between the impacts of Project and those of other activities is not expected. Provided that impacts on fish associated with future exploration activities e.g.; mixing zones surrounding future exploration vessels auditory disturbanceinjury thresholds do not overlap spatially and temporally with Project related impacts

there would be no interaction between them and therefore no increase in the significance of cumulative impacts on marine fish. The significance of cumulative impacts on fish would not increase above Minor. 8.2.4.2 Cumulative Impacts from the Demerara Harbour Bridge Replacement

The marine fish species that would be present offshore in the PDA are generally not found within the Demerara River and to the extent that they may enter the Demerara River as vagrants or use the mangroves in the harbor as nursery habitat the harbor bridge would have insignificant impacts on adults and would not be expected to affect existing mangroves to a significant degree. As a result the Demerara Harbour Bridge project would not be expected to contribute to potential cumulative impacts on marine fish. Based on the factors discussed above the significance rating for potential cumulative impacts on marine mammals was set equal to the individual Project significance rating Minor. 8.2.5 Community Health and Wellbeing The Project was rated as having a Minor significance

on community health and wellbeing due to potential residual impacts on medical and health service accessibility during all Project stages. 8.2.5.1 Cumulative Impacts from Future EEPGL Activities In the event of a serious medical emergency for either offshore or onshore personnel the Project may rely on some local Guyanese health resources. However such events are expected to be rare. Further the Project will have the capability to provide medical services offshore and onshore and has protocols to acquire medical support outside of Guyana when required. Therefore it is expected that the Project impacts on emergency medical services would be rare and of very limited duration.

EEPGL would scale its own onshore medical capacity and on its vessels to the size of its workforce so additional EEPGL projects would exert very little to no additional demand on local Guyanese health resources. Therefore the significance of cumulative impacts from other EEPGL activities on medical and health services would not increase above Minor. 8.2.5.2 Cumulative Impacts from the

Demerara Harbour Bridge Replacement While the Demerara Harbour Bridge project will be shortterm in duration relative to the Project its location near Georgetown means that most medical emergencies would likely be May 2017 407 EEPGL Environmental Impact Assessment Liza Phase

1 Development Project Chapter 8 Cumulative Impact Assessment handled at medical facilities in

Georgetown. As such cumulative impacts on medical and health services from the bridge replacement project and the Project as well as any potential future offshore oil and gas activity are possible. However cumulative impacts on health service accessibility are still considered to be Minor due to the shortterm construction period for the bridge project the likely availability of project sitebased medical facilities for minor medical issues in the case of potential future offshore oil and gas projects the low frequency of occurrence of severe injuries the limited numbers of personnel involved and the limited duration of patient stays. As a result the Demerara Harbour Bridge project would not be expected to contribute to significant cumulative impacts on the accessibility of health services. Based on the factors discussed above the significance rating for potential cumulative impacts on community health and wellbeing was set equal to the individual Project significance rating Minor.

8.2.6 Marine Use and Transportation The Project was rated as having a Minor significance for potential residual impacts on commercial fishing vessels due to loss of access to fishing areas and subsistence fishing vessels due to potential difficulties notifying these vessels of increased vessel traffic during drilling installation and production operations.

8.2.6.1 Cumulative Impacts from Future EEPGL Activities EEPGL has exclusive rights to oil and gasrelated activity in the Stabroek Block and will manage its own future operations to avoid conflicts with other vessels and ensure maritime safety in cooperation with MARAD. Therefore cumulative impacts on marine use and transportation as a result of future EEPGL activities are considered to be Minor.

8.2.6.2 Cumulative Impacts from the Demerara Harbour Bridge Replacement The Demerara Harbour Bridge project would involve construction vessels which would add to the vessel traffic on the Demerara River. Bridge construction activities and thus most of the bridge construction vessel traffic however would be focused near the bridge site. The site for the new bridge is not yet determined nor has the shorebases to be used by the Project been selected. However the shorebases being considered are seaward of the existing bridge location which would limit Project vessel interaction with the new bridge construction area. Projectrelated vessel traffic along the river is expected to be modest limited to a few vessels per day and are not expected to appreciably affect the volume of

vessel traffic on the river. Thus cumulative impacts on marine use and transportation from the bridge replacement project are considered to be Minor. Based on the factors discussed above the significance rating for potential cumulative impacts on marine use and transportation was set equal to the individual Project significance rating Minor.

May 2017 408 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment 8.2.7 Social Infrastructure and Services Residual impacts on housing and utilities during the drilling and installation stage of the Project were rated as Minor in significance as this stage will require the largest number of Project workers up to approximately 1500 at peak of which approximately 150 would be based onshore and would likely have the most potential for induced population influx to the Georgetown area by job seekers. Operations stage impacts were rated as Negligible and are therefore out of scope for the cumulative impact assessment.

8.2.7.1 Cumulative Impacts from Future EEPGL Activities At this time the number nature and timing of additional offshore activities that EEPGL may undertake during the Project life cycle and thus the number of workers at any given time cannot be predicted. However increases in the offshore workforce would likely occur gradually or at different stages over a relatively long timeframe during which time housing markets and utility providers would be able to respond to increases in demand. Given the uncertainty regarding the extent of additional EEPGL activities during the life of the Project the significance of cumulative impacts on housing and utilities combined with other offshore oil and gas activity is considered to range from Minor to Moderate in significance depending on the scale of worker and jobseeker influx associated with potential future offshore projects.

8.2.7.2 Cumulative Impacts from the Demerara Harbour Bridge Replacement Construction of the Demerara Harbour Bridge may potentially attract workers and jobseekers from other areas of the country. The bridge replacement project would likely coincide with the Project's production operations stage when the Project's offshore workforce is estimated at about 100 to 140 workers and most of these workers would be based on the FPSO except when off rotation. Onshore workers for the Project during this period are estimated at about 100. The bridge replacement project is also expected to be of short duration relative to the

Project. Given the short duration of the Demerara Harbour Bridge replacement project relative to the Project and the likelihood that it would overlap primarily with the operations and productions phases of the Project when traffic is expected to be relatively low the cumulative impact on onshore transport generated from the bridge replacement project and the Liza Phase 1 Project is considered to be Minor.

8.2.8 Employment and Livelihoods

The Project was rated as having a Minor significance for potential residual impacts on commercial fishing vessels due to loss of access to fishing areas and subsistence fishing vessels due to potential difficulties notifying these vessels of increased vessel traffic during drilling installation and production operations. These potential for the Project and other potential future activities to interact and create cumulative impacts on fishing operations is assessed under Marine Use and Transportation in Section 8.2.6. The minor impacts on fishing livelihoods will be driven entirely by the May 2017 409 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 8 Cumulative Impact Assessment interactions discussed in Section 8.2.6 which set the significance rating for potential cumulative impacts on marine use and transportation as Minor. Based on this impact rating and the fact that impacts on fishing livelihoods will be driven by the same factors that affect Marine Use and Transportation the significance rating for potential cumulative impacts on employment and livelihoods was also set at Minor which is equal to the individual Project significance rating on this receptor.

May 2017 410 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Environmental and Socioeconomic Management Plan Framework Chapter 9

9.0 ENVIRONMENTAL AND SOCIOECONOMIC MANAGEMENT PLAN FRAMEWORK

9.1 Introduction

This chapter provides a framework for the Project Environmental and Socioeconomic Management Plan ESMP. The ESMP is the document that describes the measures EEPGL will implement to manage the Projects potential environmental and socioeconomic risks and reduce impacts to the environment and communities. The scope of this chapter includes the following

- Provide an overview of the policy framework underpinning the ESMP;
- Describe the ESMP structure;
- Describe general ESMP guiding principles;
- Describe the general of the Management Plans; and
- Describe how

changes to the ESMP will be managed. The individual Management Plans that comprise the ESMP have been prepared consistent with this framework. Management Plans are required to be completed prior to Environmental Authorisation of the Project and will be updated to include final conditions from the Environmental Authorisation.

9.2 Regulatory and Policy Framework

The Project is subject to various regulatory requirements as further described in Chapter 3 of the EIA as well as the conditions established by the Guyana EPA upon issuance of the environmental authorization for the Project and the conditions of the Petroleum Production Licence and approval of the Project Development Plan by the GGMC. Other Guyana government agencies including but not limited to the Fisheries Department of the Ministry of Agriculture MoA Guyana Revenue Authority GRA Civil Defense Commission CDC and Maritime Administration MARAD have regulatory authority over aspects of the Project. EEPGL is committed to ensuring compliance with the laws and regulations of Guyana while conducting business in a manner that is compatible with the environmental and socioeconomic needs of the communities in which it operates and in a manner that protects the safety security and health of its employees those involved with its operations its customers and the public. These commitments are documented in its Safety Security Health Environmental and Product Safety policies. These policies are put into practice through a disciplined management framework called the Operations Integrity Management System OIMS which is described in Section 3.4.

May 2017 411 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project

9.3 ESMP Structure

Environmental and Socioeconomic Management Plan Framework

Chapter 9

The overall structure of the Project ESMP is depicted in Figure 91. The specific Project Management Plans are organized into five categories Environmental Management Plan EMP Socioeconomic Management Plan SMP Environmental and Socioeconomic ES Monitoring Plan Oil Spill Response Plan OSRP Preliminary End of Operations Decommissioning Plan³⁸ Each of these categories includes one or more specific management plans which are included in this document unless otherwise noted as shown in Figure 91.

³⁸ In alignment with the EPAs Initial Closure and Reclamation Plan

May 2017 412 EEPGL Environmental Impact Assessment Liza Phase 1

Development Project Figure 91 ESMP Structure Chapter 9 Environmental and Socioeconomic Management Plan Framework ESMP Framework Environmental Management Plan Socioeconomic Management Plan Environmental and Socioeconomic Monitoring Plan OSRP Preliminary End of Operations Decommissioning Plan Air Quality Stakeholder Engagement Plan Oil Spill Modeling Water Quality Grievance Management Coastal Sensitivity Maps Waste Management Plan Transportation and Road Safety Response Procedures Marine Ecosystems Cultural Heritage and Chance Finds Wildlife Response Plan Due to the size and complexity of these documents these are standalone plans and are provided either as an Appendix to this ESMP or as a separate volume to the regulatory submittal for the Liza Phase 1 Project i.e. OSRP. May 2017 413 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10 Conclusions and Summary of Impacts 9.4 General ESMP Guiding Principles The overall ESMP and each of the specific Management Plans it contains have been developed consistent with these guiding principles. Each Covers all Project stages i.e. there are not separate Management Plans for each Project stage although there is a Preliminary End of Operations Decommissioning Plan ; Contains a level of detail for each individual Management Plan that is fit for purpose and varies among the individual Management Plans; Represents a living document which may be revised or amended as the Project progresses in response to changing circumstances lessons learned or other appropriate reasons; and Reflects all regulatory commitments and obligations including those from the EIA supporting plans and environmental authorizations. 9.5 Management Plan The Management Plan Framework contains an introduction and scope as well as a summary of the applicable regulations standards and guidelines. As indicated above each Management Plan is fit for purpose and therefore varies to some extent in but contains specific Management Measures for each component that are based on the Embedded Controls provided in this EIA. The plans also include the following information for each controlmeasure The specific Project stage or component that will be responsible for implementing the Management Measure e.g. FPSO Support Vessels Shorebase etc. The specific stage or stages of the Project during which each measure will be implemented e.g.

Drilling Installation Production Operations Operational requirements; and Monitoring requirements

9.6 Management of Change During Project implementation changes may be required to address unanticipated conditions or situations. Managing change is an integral part of OIMS. Risk assessments audits inspections and/or observations may identify the need for amendments to the ESMP. In these cases the ESMP will be updated to reflect change. In addition the ESMP will be updated when applicable environmental laws regulations standards and or company processes systems and/or technologies change. The EPA will be notified of any significant planned changes to the ESMP and will be provided with an updated version of the document for their records and use. The ESMP is also envisioned to be a living and adaptive document that will be updated to reflect continuous learning and improvements and shared with the Government of Guyana. May 2017 414

EEPSL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10

Conclusions and Summary of Impacts 10.0 CONCLUSIONS AND SUMMARY OF IMPACTS This section summarizes the predicted environmental and socioeconomic impacts of the Project resulting from planned activities and potential unplanned events specifically an oil spill as well the Projects contributions to cumulative impacts on important resources and receptors. 10.1 Planned Events The planned Project is predicted to have minor impacts on physical resources i.e. air quality marine sediments water quality no impacts on coastal biological resources minor impacts on marine biological resources little if any noticeable negative impact on communities and largely positive impacts on socioeconomics. These predictions are based on the fact that the bulk of the Project will occur approximately 190 km 120 miles offshore and the Project will capture and reinject recovered natural gas which is not used as fuel on the FPSO back into the Liza reservoir treat all significant wastewater streams prior to discharge to the sea have a very small physical footprint e.g. installation of infrastructure will only physically disturb about 0.3 km² of benthic habitat and use MMOs during VSP operations to minimize the potential for auditory damage and injury from ships strikes to marine mammals. The Project will generate benefits for the citizens of Guyana through revenue sharing with the Government of Guyana a minor increase in employment and select Project purchasing from

Guyanese businesses. 10.2 Unplanned Events Unplanned events such as a potential oil spill are considered unlikely to occur because of the extensive preventative measures employed by EEPGL; but nevertheless an oil spill is considered possible. The number of resources that would be impacted and the extent of the impact on those resources would depend on the volume and duration of the release as well as the time of year the release were to occur but impacts would tend to be most significant for a well control event during the drilling stage. EEPGL has conducted oil spill modeling to evaluate the range of likely spill trajectories and rates of travel. The location of the Project 190 km 120 miles offshore prevailing northwest currents the light nature of the Liza field crude oil and the regions warm waters would all help minimize the severity of a spill. Accounting for these factors the unmitigated modeling indicates only a 5 to 10 percent probability of oil reaching the Guyana coast without taking into consideration the effectiveness of any oil spill response and in the unlikely event that a spill were even to occur. Although the probability of an oil spill reaching the Guyana coast is very small a well control spill at a Liza well would likely impact marine resources found near the well such as sea turtles and certain marine mammals especially baleen whales that may transit or inhabit the area impacted by a spill. Air quality water quality seabirds and marine fish could also be impacted although likely to a lesser extent because the duration of acute impacts would not be long and the impacts are reversible. A spill could potentially impact Guyanese fishermen if commercial fish and shrimp were impacted. The magnitude of this impact would depend on the volume and duration of the release as well as the time of year the release were to occur e.g. whether a spill would coincide with the time of year [May to September] when these species are more common.

May 2017 415

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10

Conclusions and Summary of Impacts common in the PDA. Effective implementation of the OSRP would reduce this risk by further reducing the ocean surface area impacted by a spill and thereby reducing the exposure of these species to oil.

10.3 Cumulative Impacts The Projects expected contribution to cumulative impacts would be limited by its distance offshore and by the small number of projects or activities either operating or currently planned to be operating offshore Guyana. There

is the potential for other future offshore Guyana oil and gas exploration and possibly development. If such nonProject activities were to occur the Project and nonProject activities together could cumulatively impact some resources such as Marine Mammals via vessel strikes or sound Marine Turtles vessel strikes Marine Fish degraded water quality and cooling and ballast water entrainment Community Health and Wellbeing increased demand for limited medical treatment capacity Marine Use and marine congestion especially near Georgetown harbor and Social Transportation Infrastructure and Services increased demand for limited housing utilities and services. Many of the above potential impacts that require offshore interaction between the Project and others have a limited chance of occurring given the size of the Stabroek block. All of these potential cumulative impacts were considered to be of Negligible to Minor significance.

10.4 Degree of Irreversible Damage

The planned Project would not cause irreversible damage to any onshore areas of Guyana. There would be a very minor approximately 0.3 km² permanent loss of benthic habitat as a result of the installation of wells flowlines and other subsea equipment which may be proposed to be left in place upon decommissioning. However this equipment can ultimately provide the substrate for recolonization of the impacted areas. Even in the unlikely event of an oil spill little irreversible damage would be expected although it could take a decade or more for all resources to fully recover depending on the on the volume and duration of the release as well as the time of year the release were to occur.

10.5 Project Benefits

The Project will generate benefits for the citizens of Guyana in several ways Through revenue sharing with the Government of Guyana although the details of this revenue sharing is confidential. The type and extent of benefits associated with revenue sharing will depend on how decision makers in government decide to prioritize and allocate funding for future programs which is unknown and outside the scope of the EIA; By procuring select Project goods and services from Guyanese businesses to the extent reasonably practicable; and By hiring Guyanese nationals where reasonably practicable although the potential magnitude of hiring will be limited.

May 2017 416 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10 Conclusions and Summary of Impacts In addition to direct revenue sharing

expenditures and employment the Project would also likely generate induced economic benefits as other nonProject related businesses benefiting from direct Project purchases or worker spending will reinvest locally or expand spending in the area thereby also generating more local valueadded tax. These beneficial multiplier impacts will occur throughout the Project life. 10.6 Summary Table 101 provides a summary of the predicted residual taking into consideration proposed mitigation measures impact significance ratings for impacts to each of the resources receptors that may result from each of the Project stages i.e. well drillingSURFFPSO installation Production Operations and Decommissioning unplanned event i.e. oil spill and cumulative impacts. Assessment Liza Phase 1 Development Project Chapter 10 Conclusions and Summary of Impacts

11.0 RECOMMENDATIONS ERM recommends the following measures be considered by EPA

GGMC and the EAB as conditions of any approval of the Project Embedded Controls incorporate all

of the proposed embedded controls see Table 111. Mitigation Measures adopt the recommended

mitigation measures see Table 112. Management Plans implement the proposed Environmental and

Socioeconomic Management Plan to manage and mitigate the impacts identified in the EIA. The

ESMP includes the following Management Plans o Environmental and Socioeconomic Management

Plan Framework o Environmental Management Plan including Air Quality Management Water

Quality Management Waste Management Plan Marine Ecosystems Management o Socioeconomic

Management Plan including Stakeholder Engagement Plan Grievance Management Transportation

and Road Safety Management Cultural Heritage Management and Chance Finds o Environmental

and Socioeconomic Monitoring Plan o Preliminary End of Operations Decommissioning Plan o Oil

Spill Response Plan including Oil Spill Modeling Coastal Sensitivity Mapping results of the Net

Environmental Benefit Analysis Emergency Preparedness and Response Procedures and the

Wildlife Response Plan Oil Spill Preparedness EEPGL has proactively embedded many controls into

the Project design to prevent a spill from occurring and we agree that a spill is unlikely. But given the

sensitivity of many of the resources that could be impacted by a spill e.g. Shell Beach Protected

Area marine mammals critically endangered and endangered sea turtles Amerindian communities

reliant on ecosystem services for sustenance and their livelihood we believe it is critical that EEPGL

commit to regular oil spill response drills simulations and exercises document the availability of appropriate response equipment on board the FPSO and demonstrate that offsite equipment could be mobilized for a timely response. With the adoption of such controls mitigation measures and management plans and requirements for emergency response preparedness the Liza Phase 1 Development Project is expected to pose only minor risks to the environmental and socioeconomic resources of Guyana while potentially offering significant economic benefits to the residents of Guyana.

Table 111 List of Proposed Embedded Controls Embedded Control Measures Drilling and SURFFPSO Installation and Commissioning

Utilize WBDF to the extent reasonably practicable and in other cases use lowtoxicity IOGP Group III NABF. When NADF is used utilize a solids control and cuttings dryer system to treat drill cuttings prior to discharge such that end of well maximum weighted mass ratio averaged over all well sections drilled using nonaqueous fluids shall not exceed 6.9 percent wet weight base fluid retained on cuttings. For VSP activities commence such operations during daylight hours after a suitable prewatch by Marine Mammal Observers MMOs is performed and begin with soft start procedures in accordance with JNCC guidelines which incrementally increase source sound levels in order to allow marine mammals and turtles time to move away from the activity before full sound source energy is utilized. With respect to prevention of spills of hydrocarbons and chemicals during the drilling stage

- o Change liquid hydrocarbon transfer hoses periodically
- o Utilize drybreak connections on liquid hydrocarbon bulk transfer hoses
- o Utilize a liquid hydrocarbon checklist before every bulk transfer
- o Perform required inspections and testing of all equipment prior to deploymentinstallation;
- o Utilize certified Blowout Prevention BOP equipment;
- o Regularly test certified BOP equipment and

other spill prevention equipment; o Utilize overbalanced drilling fluids to control wells while drilling; o Perform operational training certification including well control training for drill ship supervisors and engineers; o Regularly audit field operations on the drill ships FPSO and shorebases to ensure application of designed safeguards; and o Controls for mitigating a failure of the DP dynamic positioning system on the drill ships and maintain station keeping which include Use of a Class 3 DP system which includes numerous redundancies; Rigorous personnel qualifications and training; Seatrials and acceptance criteria; Continuous DP proving trials; System Failure Mode and Effects Analysis; Continuous DP failure consequence analysis; and Establishment of wellspecific operations guidelines.

May 2017 420 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10 Conclusions and Summary of Impacts Embedded Control Measures

ResourcesReceptors Benefitted During pile driving activities gradually increase the intensity of Marine mammals hammer energy to allow sensitive species to vacate the area before injury occurs i.e. soft starts. Maintain marine safety exclusion zones with a 500 m 1640 ft radius around drill ships and major installation vessels to prevent unauthorized vessels from entering potentially hazardous areas. Marine use and transportation safety Production Operations Reinject produced gas which is not utilized as fuel gas on the FPSO to avoid routine flaring. With respect to nonroutine flaring the following measures will be implemented o Monitor flare performance to maximize efficiency of flaring Air quality operation; o Ensure flare equipment is appropriately inspected and function tested prior to production operations; and o Ensure flare equipment is appropriately maintained and monitored during production operations. Treat produced water on the FPSO to limit oil and grease OG to 29 mg/L monthly average and 42 mg/L daily maximum. Design produced water and cooling water processes to avoid increases in ambient water temperature of more than 3C at 100m 328 ft from the FPSO when discharging. Perform onboard waste incineration for certain categories of waste. Utilize a Mooring Master from the FPSO located onboard the offloading tanker to support safe tanker approachdeparture and offloading operations. Utilize support tugs to aid tankers in maintaining station during approachdeparture from FPSO and during offloading operations. Utilize a hawser with

a quick release mechanism to moor the FPSO to the tanker at a safe separation distance during offloading operations. FPSO offloading to tankers will occur within an environmental operating limit that is established to ensure safe operations. In the event that adverse weather occurs during offloading operations that is beyond the environmental operating limit the tanker will cease the offloading operations and may disconnect and safely maneuver away from the FPSO as appropriate. Utilize a marine bonded doublecarcass floating hose system certified by Class or other certifying agency that complies with the recommendations of OCIMF Guide to Manufacturing and Purchasing Hoses for Offshore Moorings GMPHOM 2009 Edition or later. Utilize breakaway couplers on offloading hose that would stop the flow of oil from FPSO during an emergency disconnect scenario. Marine water quality mammals turtles fish and benthos seabirds ecology and ecosystems Marine water quality mammals turtles fish and benthos seabirds ecology and ecosystems Land use Marine use and transportation safety Marine use and transportation safety Marine use and transportation safety Marine sediments water quality mammals turtles fish benthos and seabirds Marine sediments water quality mammals turtles fish benthos and seabirds Marine sediments water quality mammals turtles fish benthos and seabirds May 2017 421 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10 Conclusions and Summary of Impacts Embedded Control Measures Utilize a load monitoring system in the FPSO control room to support FPSO offloading. Utilize leak detection controls during FPSO offloading which include

- o Leak detection for breach of the floating hose that complies with the recommendations of OCIMF GMPHOM 2009 Edition or later;
- o Utilization of instrumentationprocedures to perform volumetric checks during offloading.

Provide trained medical personnel on board the FPSO and major installation vessels to minimize reliance on medical infrastructure and facilities in Guyana. Utilize marine safety exclusion zone of 2 nautical miles around the FPSO to prevent unauthorized vessels from entering potentially hazardous areas. Project vessels will conduct ballasting operations in accordance with IMO regulations. General Measures Maintain equipment marine vessels and helicopters in good working order and operate in

accordance with manufacturers specifications in order to reduce atmospheric emissions and sound levels to the extent reasonably practicable. Regularly inspect and service shorebase cranes and construction equipment in order to mitigate the potential for spills and to maintain air emissions at optimal levels. Shut down or throttle down sources of combustion equipment in intermittent use where reasonably practicable in order to reduce air emissions.

Resources/Receptors Benefitted

Marine sediments water quality mammals turtles fish benthos and seabirds Marine sediments water quality mammals turtles fish benthos and seabirds Community health and wellbeing Marine use and transportation safety Ecological Balance and Ecosystems Air quality water quality marine mammals marine turtles Air quality Air quality Utilize secondary containment for bulk fuel storage drilling fluids Water quality and hazardous materials where practical. Regularly check pipes storage tanks and other equipment Water quality associated with storage or transfer of hydrocarbons/chemicals for leaks. Perform regular audits of field operations on the drill ship FPSO and shorebase to ensure application of designed safeguards. Treat sewage to applicable standards under MARPOL 73/78. For those wastes that cannot be reused treated or discharged/disposed on the drill ship or FPSO they will be manifested and safely transferred to appropriate onshore facilities for management. Waste management contractors will be vetted prior to utilization. If deficiencies in contractors operations are noted an action plan to address the identified deficiencies will be established.

May 2017 422 Air quality water quality Marine sediments water quality mammals turtles fish benthos and seabirds Land use

EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10 Conclusions and Summary of Impacts Embedded Control Measures Utilize oil/water separators to limit oil in water in bilge water to 15 parts per million ppm; per MARPOL. Provide standing instruction to Project dedicated vessel masters to avoid marine mammals and turtles while underway and reduce speed or deviate from course as needed to reduce probability of collisions. Provide standing instruction to Project dedicated vessel masters to avoid any identified rafting seabirds when transiting to and from PDA. Observe standard international and local navigation procedures in and around the Georgetown Harbour and Demerara River as well as best shipkeeping

and navigation practices while at sea. Project workers will be subject to health screening procedures to minimize risks of communicable diseases. Utilize an established SSHE program to which all Project workers and contractors will be required to mitigate against risk of injury/illness to workers. All workers/contractors will implement and will be required to adhere to its principles. Maintain an OSRP to ensure an effective response to an oil spill receive and training on including maintaining the equipment and other resources specified in the OSRP and conducting periodic training and drills. Where practicable direct lighting on FPSO and major vessels to required operational areas rather than at the sea surface or skyward.

Resources/Receptors Benefitted: Marine sediments, water quality, mammals, turtles, fish, benthos and seabirds. **Marine mammals:** marine turtles, Seabirds. **Marine use and transportation safety:** Community health and wellbeing, Occupational and community health safety and wellbeing. **All resources and receptors:** Seabirds and marine turtles. **Provide screening on FPSO and drill ships for seawater intakes to:** Marine fish, minimize the entrainment of aquatic life where practical.

Table 112: List of Proposed Mitigation Measures

Proposed Mitigation Measure	Report
direct GHG emissions from the facilities owned or controlled by the Project to the EPA on an annual basis in accordance with internationally recognized methodologies and good practice.	
Procure select goods and services locally to the extent reasonably practicable enhancement measure.	
Utilize Guyanese nationals where reasonably practicable enhancement measure.	
The Project will issue Notices to Mariners via MARAD, the Trawlers Association and fishing coops for movements of major marine vessels including the FPSO, drill ship and installation vessels to aid them in avoiding areas with concentrations of Project vessels and/or where marine safety exclusion zones are active.	

Resources/Receptors Benefitted: Climate, Economic Conditions, Employment and Livelihoods. **Economic Conditions:** Employment and Livelihoods. **Marine Use and Transportation:** May 2017.

423 EEPGL Environmental Impact Assessment Liza Phase 1 Development Project Chapter 10: Conclusions and Summary of Impacts. **Proposed Mitigation Measure:** Augment ongoing stakeholder engagement process to identify commercial cargo, commercial fishing and subsistence fishing vessel operators who might not ordinarily receive Notices to Mariners and where possible communicate

Project activities to those individuals to aid them in avoiding Project vessels. Promptly remove damaged vessels associated with any vessel incidents to minimize impacts on marine use transportation and safety. Proactively communicate the Project's limited staffing requirements as a measure to reduce the magnitude of potential population influx to Georgetown from jobseekers. Adopt and implement as needed a Chance Find Procedure that describes the requirements in the event of a potential chance find of heritage or cultural resources. Project workers will be required to adhere to a Worker Code of Conduct which will address shoreleave considerations. Develop and implement a Road Safety Management Procedure to mitigate increased risk of vehicular accidents associated with Project-related land transport activities. The procedure will include at a minimum the following components:

- o Definition of travel routes;
- o Definition of required driver training including defensive driving loading/unloading procedures and safe transport of passengers if applicable;
- o Designation and enforcement of speed limits through speed governors GPS or other monitoring systems;
- o Avoidance of deliveries during typical peak traffic hours as well as scheduled openings of the Demerara Harbour Bridge to the extent reasonably practicable;
- o Monitoring and management of driver fatigue;
- o Definition of vehicle inspection and maintenance protocols that include all applicable safety equipment; and
- o Community outreach to communicate information relating to major delivery events or periods.

Implement the OSRP in the unlikely event of an oil spill including:

- o Conduct air quality monitoring during emergency response;
- o Require use of appropriate PPE by response workers;
- o Implement a Wildlife Oil Response Program as needed; and
- o Implement a claims process for damage caused by an oil spill as needed.

Resources/Receptors Benefitted: Marine Use and Transportation, Marine Use and Transportation, Social Infrastructure and Services, Cultural Heritage, Community Health and Wellbeing, Community Health and Wellbeing.

s. 3.] 4. Bylaws The Governor may make alter or repeal bylaws in accordance with and for the purposes of clause 7 of the Agreement and the bylaws a b shall be published in the Gazette; shall take effect and have the force of law from the date they are so published or from a later date fixed by the order making the bylaws; c may prescribe penalties not exceeding 100 for a breach d of any of the bylaws; are not subject to section 36 of the Interpretation 2 but shall be laid before each House of Act 1918 Parliament within 6 sitting days of such House next following the publication of the bylaws in the Gazette. page 2 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule [Heading deleted No. 19 of 2010 s. 422.] First Schedule Dampier Solar Salt Industry Agreement [s. 2] [Heading amended No. 50 of 1974 s. 4; No. 19 of 2010 s. 4.] AN AGREEMENT under seal made the 21st day of November One thousand nine hundred and sixtyseven BETWEEN THE HONOURABLE DAVID BRAND M.L.A. Premier and Treasurer of the State of Western Australia acting for and on behalf of the said State and instrumentalities thereof from time to time hereinafter referred to as the State of the one part AND DAMPIER SALT LIMITED a company incorporated under the provisions of the statutes of Western Australia and having its registered office in the State of Western Australia at Perth hereinafter called the Company which term shall include the successors and assigns of the Company including where the context so admits the assignees and appointees of the Company under Clause 23 hereof of the other part. WHEREAS the parties hereto desire to enter into this Agreement with the object of the establishment and carrying on at and in the vicinity of Dampier of a solar salt industry and such other allied mining and ancillary industries as may conveniently be carried on in conjunction therewith and to do all acts matters and things to attain and to facilitate the abovementioned object. NOW THIS AGREEMENT WITNESSETH and the parties hereto COVENANT AND AGREE with one another as follows

Definitions 3 1. In this Agreement subject to the context Director of Engineering means the Director of Engineering for the time being in the Public Works Department of the State of Western Australia or the officer for the time being discharging the duties of that office; Land Act means the Land Act

1933; Mining Act means the Mining Act 1904; Minister means the Minister of the Crown to whose administration the ratifying Act is for the time being committed or if there is no such committal the Minister for Industrial Development; As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 3 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement month means calendar month; notice means notice in writing; person or persons includes bodies corporate; production site means any land leased to and held by the Company pursuant to the provisions of Clause 3 hereof; ratifying Act means the Act referred to in subclause 1 of Clause 2 hereof; shipped includes removal from the work sites by ship or any other means; stockpile site means the land for the time being leased from the State pursuant to subclause 3 of Clause 4 or held by the Company under any other tenure for the purpose of being used for stockpiling salt; this Agreement hereof and hereunder refer to this Agreement whether in its original form or as from time to time added to varied or amended; ton means a ton of two thousand two hundred and forty 2 240 lbs. net dry weight; work sites includes the production site stockpile site whether or not leased from the State and the land comprised in or the subject of any lease license or easement granted or given hereunder other than any grant or lease under Clause 13 hereof; year means a year commencing on the 1st day of July; reference in this Agreement to an Act shall include the amendments to such Act for the time being in force and also any Act passed in substitution therefor or in lieu thereof and the regulations for the time being in force thereunder; marginal notes shall not affect the interpretation or the construction of this Agreement

3. Ratifying Act

3 1 The State shall introduce and sponsor a Bill in the Parliament of 2. Western Australia to ratify this Agreement before the 15th day of December 1967 or such later day as the parties hereto may agree upon. If the Bill is not so

page 4 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule passed as an Act before the 31st day of December 1967 or such later day as the parties hereto may agree upon this Agreement shall be of no force or effect and neither of the parties hereto shall have any claim against the other of them with respect to any matter or thing

arising out of done performed or omitted to be done or performed under this Agreement. 2 If the Bill to ratify this Agreement is passed as an Act before the 31st day of December 1967 or such later day as aforesaid the following provisions of this clause shall notwithstanding the provisions of any Act or law thereupon operate and take effect namely a the State may by Agreement acquire or compulsorily take or resume as for a public work within the meaning of the Public Works Act 1902 any land or any estate or interest in land which in the opinion of the State is reasonably required for the objects of this Agreement and may thereafter dispose or deal with the same in accordance with or for the purposes of this Agreement apart from the provisions of that Act or any other Act AND when any land is to be so compulsorily taken or resumed under the powers conferred by this paragraph the provisions of subsections 2 to 7 inclusive of section 17 and section 17A of the Public Works Act 1902 shall not apply to or in respect of the land or to the taking thereof except that notice of intention to take or resume the land shall be given in accordance with the provisions of paragraph b of subclause 2 of the said Act; b all land the subject of any lease hereunder shall for the purposes of the Mining Act 1904 be deemed to be Private Land for the purposes of that Act. Production Site 3

1 As soon as conveniently may be after the coming into operation of 3. the ratifying Act the State shall on the written application of the Company cause all that land edged in red in the Plan initialled on behalf of the parties hereto for the purpose of identification and comprising approximately 28600 acres or so much of it as the Company in that application specifies to be leased to the Company under the provisions of the Mining Act 1904 which shall be deemed to be so amended varied and modified as to enable the lease to be granted on the following terms and conditions namely a for a term of twentyone 21 years commencing from a day to be agreed upon by the parties hereto; As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 5 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement b at a rental computed at the rate of 4 per one hundred 100 acres per annum; c subject to the payment by the Company of the royalties hereinafter mentioned and to the due and punctual performance by the Company of its obligations hereunder; d that the Company shall be entitled provided the right of

reentry contained in the lease or the renewal thereof as the case may be has not been exercised to the options to renew the lease for a further term of twentyone 21 years and on the expiry thereof to further renew the lease for a further term of twentyone 21 years on the same terms and conditions as are contained in paragraphs b c f and g of this subclause; e that the cost of any survey required by the State be paid by the Company; f subject to the reservations required in Crown Leases pursuant to the Petroleum Act 1936 or required for the purpose of preserving rights that have been or may be granted under the Petroleum Submerged Lands Act 1967; g otherwise on such terms and conditions as are reasonably required to give effect to the provisions and objects of this Agreement; and h that the State without compensation to the Company may at any time excise from the lease such area adjacent or near to the existing railway as shall be sufficient to permit the construction of another railway or road or both across the leased area. The Company on demand shall pay to the State a sum sufficient to reimburse the State for the cost of resuming or taking any land required for the production site. 2 Until the 31st day of December 1977 subject to the provisions of subclauses 4 and 5 of this Clause the Company shall have options exercisable at any time and from time to time on notice to the State to have added to the area leased pursuant to subclause 1 of this clause the whole or such part of the area edged in blue in the Plan referred to in subclause 1 of this Clause hereinafter referred to as the optioned areas as the Company specifies in any such notice. page 6

Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule 3 If at any time before the 31st day of December 1977 the Company gives notice to the State that it desires an option over the whole or any specified part of the area edged in green on the plan referred to in subclause 1 of this clause then providing that it is satisfied that the area nominated by the Company is not important for the breeding or development of prawns the State shall extend to the said area the option referred to in subclause 2 of this clause. Any reference in this Agreement to the optioned areas shall include any such area to which the option is extended pursuant to the provisions of this subclause. 4 If the State should ever require any part of the optioned areas either for its own use or

for any other public purpose or for lease to any other business enterprise then it may notify the Company accordingly and thereafter in respect of the area notified the date by which the Company may exercise the options granted in subclause 2 of this clause will be two years from the date of the States notice if the States notice be given within five years of the date of the production site lease or otherwise one year. 5 The Company may not exercise any option given pursuant to this clause in respect of any land leased by Hamersley Iron Pty. Ltd. without its prior written consent. 6 The Company may not exercise any option pursuant to this clause without first giving not less than 3 months notice to the Director of Engineering of its wish to exercise the option in respect of the land described in such notice and thereafter the Company shall not exercise an option in respect of so much of that land as the Director of Engineering informs the Company will in his opinion be reasonably required for public or private road or rail purposes.

Lease for Shiploading Facilities

3 1 If the Company notifies the Minister that it wishes to construct a 4. jetty with berthing and loading facilities in the vicinity of Dampier harbour then the State shall grant the Company an appropriate lease at a nominal rental of the area reasonably necessary for the Companys requirements and a licence therefor under the provisions of the Jetties Act 1926 and the Company may thereupon construct such jetty and berthing and loading facilities provided that the Minister has approved of the specifications therefor and is satisfied that ships using the same would not be likely to unduly interfere with the traffic of ships to and from the service wharf and any other wharf constructed by Hamersley Iron Pty. Ltd. under the Iron Ore Hamersley Range Agreement Act 1963. As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 7

Dampier Solar Salt Industry Agreement Act 1967 First Schedule

Dampier Solar Salt Industry Agreement

2 If the Company makes all necessary arrangements with Hamersley Iron Pty. Ltd. for the construction of such a jetty and facilities as an extension to the northern end of the said service wharf then the Company may construct such jetty and facilities provided that the State has first approved of the specifications therefor and the State shall issue a license therefor under the provisions of the Jetties Act 1926.

Lease for Stockpile Site

3 3 If the Company notifies the Minister that it requires a stockpile site in the

vicinity of a jetty used for the loading into ships of salt produced at the production site and if having regard for the general development of the vicinity with a view to the reasonable use thereof by others there is available to the State land sufficient for the Companys requirements which are presently estimated would be 20 acres then the State shall grant to the Company a lease thereof subject to the same term and options of renewal as apply in respect of the production site lease and at a rental of Five Dollars 5 per acre per annum.

Flood Protection 3 The State shall not unreasonably refuse applications by the Company for 5. licenses to establish and maintain levees channels or other like works on Crown lands adjacent to the production site for the purpose of diverting the flow of ground waters away from the Companys production facilities provided that the Company first obtains the written approval of any lessee of the lands and provided also that the Company submits to the Minister and receives his written approval of the plans and specifications of the works.

Road Rail or Conveyor Transport 3 1 If the Company notifies the Minister that it requests from the State 6. appropriate rights to permit the Company to construct and operate between the production site and the stockpile site or jetty used by the Company for loading salt into ships or between the stockpile site and such jetty a railway a private roadway or an apparatus for conveying salt by other mechanical means including without limitation pumping in slurry or transferring by conveyor or aerial ropeway and if the Companys notice a gives a general description of a proposed route and of the intended railway roadway or apparatus and b bears the approval of Hamersley Iron Pty. Ltd. insofar as the proposed route traverses any lands owned or leased by that page 8 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule Company or to which it is entitled to a lease pursuant to the Iron Ore Hamersley Range Agreement Act of 1963; then subject to subclause 4 of this Clause the State after consulting with Hamersley Iron Pty. Ltd. and the Company will cause to be surveyed at the cost of the Company the route which the State considers would be most practicable and convenient. 2 As soon as practicable after the completion of that survey and subject to the payment by the Company of all inental costs and expenses including the

cost and expense of any necessary acquisition or resumption of lands over which the route passes the State shall cause to be granted to the Company a lease easement or license whichever is most appropriate in the circumstances over the surveyed route exclusive of any part which is a public road on such terms as are reasonably required to give effect to the objects and provisions of this Agreement and to ensure compliance with the conditions if any upon which Hamersley Iron Pty. Ltd. approved of the grant and thereafter the Company shall be entitled to construct and use the particular railway with or without compliance with the requirements of section 96 of the Public Works Act 1902 roadway or apparatus in accordance with the terms of the said lease easement or license.

3 The lease easement or license will continue for so long as the Company is the lessee of the production site and will enable the Company to use the surveyed route for the purposes only of constructing operating repairing renewing and subject to Clause 19 removing the railway private roadway or apparatus as the case may be. 4 Notwithstanding anything hereinbefore contained the State shall have no obligations to cause a survey to be made or grant a lease easement or license under this Clause insofar as to do so would be inconsistent with the obligations of the State and the rights of Hamersley Iron Pty. Ltd. pursuant to the Iron Ore Hamersley Range Agreement Act of 1963 or would unreasonably prejudice or interfere with the general requirements of the State in regard to the use of the area for public purposes or industrial development. Bylaws 3 At the reasonable request of the Company from time to time the Minister 7. shall recommend to the Governor in Executive Council that he make alter or repeal as may be desirable bylaws in respect of the management or use of any of the Companys facilities that have been constructed pursuant to this Agreement. As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 9 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement 1 On application by the Company the State shall cause to be granted to 8. the Company such machinery and tailings leases and such other leases licenses reserves and tenements under the Mining Act or under the provisions of the Land Act modified as in subclause 2 of this Clause provided as the Company may reasonably require and request for its purposes under this

Agreement on or near the production site. Without limiting the generality of the foregoing the State shall grant to the Company appropriate rights enabling the Company to take without royalty stone gravel sand or earth for the purpose of making improvements to the work sites. 2 For the purposes of the preceding subclause the Land Act shall be deemed to be modified by a the substitution for subsection 2 of section 45A of the following subsection 2 Upon the Governor signifying approval pursuant to subsection 1 of this section in respect of any such land the same may subject to this section be sold or leased; b the deletion of the proviso to section 116; c the deletion of section 135; d the deletion of section 143; e the inclusion of a power to offer for sale or leasing land within or in the vicinity of any townsite notwithstanding that the townsite has not been constituted a townsite under section 10; and f the inclusion of a power to offer for sale or grant leases or licenses for terms or periods and on such terms and conditions including renewal rights and in forms consistent with the provisions of this Agreement in lieu of the terms or periods and the terms and conditions and the forms referred to in the Act. 3 The provisions of subclause 2 of this Clause shall not operate so as to prejudice the rights of the State to determine any lease license or other right or title in accordance with the other provisions of this Agreement. Companies Obligations 3 If the Company gives to the Minister the notice referred to in subclause 1 9. of Clause 34 then page 10 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule a the Company shall not later than the thirtyfirst day of December 1968 commence and thereupon diligently proceed with the construction and establishment on the work sites of a solar salt plant designed to have the capacity to produce and to load into ships not less than 475000 tons of salt per annum and estimated with its equipment and staff housing to cost not less than 5000000. The Company shall complete the construction and establishment of the plant not later than the thirtyfirst day of December 1972. b the Company will be obliged subject to it obtaining satisfactory markets and finance to progressively increase the capacity of the plant to produce and load into ships not less than one million tons of salt per annum. Royalty 3 1 Throughout the continuance of this Agreement the Company shall 10. pay

to the State a royalty on all salt produced at the work sites and shipped computed as set out hereunder On the first 500000 tons in any year Rate per ton 5 cents On the second 500000 tons in any year 6.25 cents On all tonnages in excess of 1000000 tons in any year 7.5 cents Tonnages shall be ascertained at Dampier in such manner as the parties hereto may from time to time agree upon.

Returns 3 2 Within twentyone days after the quarter days being the last days of March June September and December in each year commencing with the quarter day next following the first shipment of salt produced at the work sites the Company shall furnish to the Minister for Mines a return showing the quantity of all salt the subject of royalty hereunder shipped during the quarter ending on the respective quarter day and shall not later than one month after the date on which such return is due pay to the State the royalty in respect of all salt shipped during that quarter. As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 11 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement Inspection of Records 3 3 Throughout the continuance of this Agreement the Company shall permit a nominee of the Minister for Mines to inspect at all reasonable times the books of account and records of the Company relative to the production of salt on the work sites and any sale or shipment thereof and to take copies or extracts therefrom so far as is necessary for the purpose of determining the royalty payable in respect of salt shipped hereunder. The Company will take reasonable steps to satisfy the State either by the certificate of a competent independent party acceptable to the State or otherwise to the reasonable satisfaction of the Minister for Mines as to all relevant weights and will give due regard to any objection or representation made by the Minister for Mines or his nominee as to any particular weight of salt which may affect the amount of royalty payable hereunder.

Other Charges 3 11. The State may make or cause to be made against vessels using any jetty erected by the Company the usual charges from time to time prevailing in respect of services rendered to vessels by the State or any agency instrumentality or other authority of the State and may charge vessels using any such jetty such conservancy and pilotage charge or dues as are payable from time to time pursuant to the provisions of any Act.

Escalation 3 1 Notwithstanding anything herein contained it is

hereby agreed by 12. and between the parties hereto in order to provide for the equitable performance of this contract that in the event of the price of salt as hereinafter defined on the 14th 21st 28th 35th 42nd 49th or 56th anniversaries of the commencement date being the day of the commencement of the term of the lease of the production site exceeding the price of salt on the 7th anniversary of the commencement date then the percentage by which the price of salt on the relevant anniversary exceeds the price of salt on the 7th anniversary of the commencement date shall be calculated and the several amounts and payable by the Company to the State as a rental under paragraph b of subclause 1 of Clause 3; b rental under subclause 3 of Clause 4; c royalty under subclause 1 of Clause 10; page 12 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule shall be increased by the percentage so calculated and such increased amounts in respect of those items shall be payable by the Company to the State during the seven 7 years next following the relevant anniversary. 2 For the purposes of this Clause the price of salt on the 7th anniversary of the commencement date and on each of the aforesaid anniversaries means the average price of salt shipped from the work sites during the previous year payable by the purchaser or purchasers thereof to the Company less all export duties taxes and fees payable to the Commonwealth on the export of salt and the costs and expenses properly incurred and payable by the Company in respect of that sale from the time it is shipped to the time it is delivered to and accepted by the purchaser or purchasers including a ocean freight; b marine insurance; c port and handling charges at the port of discharge d all costs properly incurred in delivering the salt from the port of discharge to the purchaser as evidenced by relevant invoices; e all weighing sampling analysis inspection and representation costs; f all shipping agency charges after shipment; and g all import taxes imposed or levied by the country or the port of discharge. 3 Throughout the continuance of this Agreement the Company shall use its best endeavours to obtain for the salt produced at the production site the best price possible having regard to market conditions from time to time prevailing. Housing 3 1 Subject to the provisions of this Clause the state will on the written

13. application made from time to time by the Company for land for housing or staff amenity purposes grant to the Company in such locality as land is available therefor a lease of such vacant lots as the Company requests on the following terms and conditions namely a for a term of five years commencing from a day to be agreed upon by the parties hereto; As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 13 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement b at a rental sufficient to reimburse a reasonable proportion of the costs if any incurred by the State in the preparation of the land for subdivision; c that the lessee will within eighteen months of the commencement of the term of each lease granted for housing purposes complete on the land the subject of that lease the erection of a building for the accommodation for a family or single persons at a cost of not less than 15000; d that on the expiration of the term of the lease and subject to the due and punctual observance and performance by the lessee of all the covenants agreements and conditions on the lessees part therein contained on the request of the lessee the State will grant to the lessee an estate in fee simple in the land the subject of the lease at a price not exceeding two hundred dollars 200 plus Crown Grant and survey fees; e that the Company will not sell transfer assign sublet or mortgage charge or encumber any lease without the consent of the Minister first had and obtained PROVIDED THAT the consent of the Minister shall not be required to the transfer assignment or sublease to an employee of the Company of a lot leased for housing purposes nor to any mortgage of a lot in respect of which the Company has complied with paragraph c of this Clause in relation to that lot; f that the Company will pay to the relevant local authority when requested by the local authority so to do such amount as the local authority reasonably requires at the time of the grant of the lease to enable it to supply or make available the usual services; g otherwise on such terms and conditions as are reasonably required to give effect to the provisions and objects of this Agreement. 2 The State shall not be required to lease to the Company pursuant to this Clause more than one hundred lots. The request for each lot shall be made by the Company at least six months before the Company requires the lease of that lot to be granted to it. In the event of the Minister consenting

under the provisions of paragraph e of subclause 1 of this Clause to a transfer assignment or subletting of the lot the State shall not be required to lease another lot in lieu of the lot so transferred assigned or sublet. page 14 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule Road Transport 3 1 Subject to the provisions of subclause 2 of this Clause it shall be 14. lawful for the Company to use for the carriage of salt on any public road between the production site and the stockpile site prime movers each with two trailers the combined length of which shall not exceed eightyfive 85 feet notwithstanding any provision in any Act to the contrary. 2 The right conferred by subclause 1 of this Clause shall operate until the tenth anniversary of the day of the first shipment of salt and thereafter until determined by not less than three years notice in writing by the State. Such notice may be given to expire on the tenth anniversary of the day of the first shipment of salt or at any time thereafter. Sea Water 3 15. The Company may without charge draw take and use sea water for all or any one or more of its operations in respect of the mining extraction and production of salt on the work sites and the Company may store at such place within the work sites as may be convenient or discharge at or below high water mark at such points near to the work sites as are approved by the State residual brines resulting from those operations. If requested by the Company the State shall grant to the Company any necessary easement or licence for these purposes over Crown lands upon such terms and conditions as shall be reasonable having regard to the requirements of the Company under this Clause and the overall development and use by others of those Crown lands. Subject to the Companys compliance with the Mining Act and all other relevant statutes and regulations for the time being in force the Company if and when it becomes economical so to do shall have the right to the exclusion of any other person to mine and recover any other minerals substances or chemicals in the said residual brines. Rights of Ingress and Egress 3 16. The State shall from time to time on the written application of the Company grant to the Company a license or licenses over Crown lands to permit the Company by its servants agents contractors invitees and customers the right of ingress to and egress from all or any one or more

part or parts of the work sites on such terms and conditions as shall be reasonable having regard to the requirements of the Company in respect of the construction maintenance operation and inspection of the improvements from time to time constructed or As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 15 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement installed on the work sites and to the overall development and use by others of those Crown lands. Export License 3 If at any time or times under Commonwealth law an export license is 17. required by the Company for the export of salt then on written request by the Company the State shall make representations to the Government of the Commonwealth of Australia for the grant to the Company of a license or licenses under Commonwealth law for the export of salt in such quantities and at such rate or rates is shall be reasonable having regard to the tonnage of salt being produced by the Company at such time or times as a license is so required and to all contracts made or likely to be made by the Company for the export or supply of salt from the work sites. Limitation of Liability 3 18. Where the Company from time to time constructs a levee or other works on the production site for or inental to the production of salt and thereafter a third party makes improvements to lands or becomes the owner of improvements so made on lands adjacent to the production site and subsequent to those improvements being made the Company removes either wholly or partly or fails to maintain or to repair that levee or other works and in consequence thereof the third party suffers sustains or incurs damage to those improvements or any part thereof then notwithstanding any Act or any rule of law or equity to the contrary the Company shall not be liable for those damages to any person or persons whatsoever. Default 3 19. The parties hereto covenant and agree with each other as follows a that in any of the following events namely if the Company fails in any year after the 30th June 1977 to ship at least 350000 tons of salt and furthermore the average of the tonnage shipped in that year and in the previous three years is less than 350000 tons a year or if the Company makes default in the due and punctual performance of any of the covenants agreements or obligations to the State herein or in any lease sublease easement license or other right or title

granted under this Agreement on its part to be performed or observed and shall fail to remedy that default within reasonable time after notice specifying the default is given by the State to the Company and also to any Mortgagee approved pursuant to page 16 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule Clause 23 hereof if it has a registered office in Perth or if the alleged default is contested by the Company and promptly submitted to arbitration within a reasonable time fixed by the arbitration award where the question is deed against the Company the arbitrator finding that there was a bona fide dispute and that the Company had not been dilatory in pursuing the arbitration or if the Company abandons or repudiates its operations under this Agreement or if the Company goes into liquidation other than a voluntary liquidation for the purpose of reconstruction then and in any of such events the State may by notice given to the Company determine this Agreement and the rights of the Company hereunder and under any lease license easement or right granted or demised hereunder or pursuant hereto PROVIDED HOWEVER that if the Company fails to remedy any default after notice is given to the Company specifying the default or within the time fixed by the arbitration award as aforesaid the State instead of determining this Agreement as aforesaid because of such default may itself remedy such default or cause the same to be remedied for which purpose the State by its agents workmen or otherwise shall have full power to enter upon lands occupied by the Company and to make use of all plant machinery equipment and installations thereon and the costs and expenses incurred by the State remedying or causing to be remedied such default shall be a debt payable by the Company to the State on demand made by the State; Effect of determination of Agreement 3 b that on the cessation or determination of this Agreement i except as otherwise agreed by the Minister the rights of the Company to in or under this Agreement and the rights of the Company or any assignee of the Company or any mortgagee to in or under any lease license easement or right granted or demised hereunder or pursuant hereto shall thereupon cease and determine but without prejudice to the liability of either of the parties hereto in respect of any antecedent breach or default under this

Agreement AND the Company shall without further consideration but otherwise at the request and cost of the State transfer or surrender to the State or the Crown all land the subject of any lease license easement or right granted or demised As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 17 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement hereunder or pursuant hereto AND the Company hereby irrevocably constitutes and appoints the Minister or such person as he may from time to time nominate the true and lawful attorney of the Company to execute the transfer or surrenders aforesaid; ii iii the Company shall forthwith pay to the State all moneys which may then have become payable or accrued due; save as aforesaid and as provided in paragraph c of this Clause neither of the parties hereto shall have any claim against the other with respect to any matter or thing in or arising out of this Agreement; c that on the cessation or determination of any lease license easement or right granted or demised hereunder or pursuant hereto by the State to the Company or except as otherwise agreed by the Minister to an assignee of the Company under Clause 23 hereof the improvements and things erected on the relevant land other than machinery equipment and removable buildings shall remain or become the absolute property of the Crown without compensation and freed and discharged from all mortgages and encumbrances and the Company will do such things and execute such documents including surrenders as the State may reasonably require to give effect to this provision AND the Company hereby irrevocably constitutes and appoints the Minister or such person as he may from time to time nominate the true and lawful attorney of the Company to do those things and to execute those documents including surrenders. In the event of the Company immediately prior to such expiration or determination or subsequent thereto deing to remove its machinery equipment and removable buildings or any of them from the work sites the Company shall not do so without first notifying the State in writing of its decision and thereby granting to the State the right or option exercisable within three 3 months thereafter to purchase at valuation in situ the said machinery equipment and removable buildings or any of them. Such valuation will be mutually agreed or in default of agreement shall be made by such competent

valuer as the parties hereto may appoint or failing agreement as to such appointment then by two competent valuers one to be appointed by each party or by an umpire appointed by such valuers should they fail to agree; page 18 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule d the provisions of this Clause shall not apply to any land which at or prior to the date of cessation or termination of this Agreement had been the subject of a lease granted to the Company pursuant to Clause 13 and which at that date is held for an estate in fee simple by any person or is held for an estate in leasehold by any person other than the Company or is held for an estate in leasehold by the Company and in respect of which the Company has effected some improvements and has not failed to observe any obligation on its part under the lease. 20. Any hospital or educational facilities including staff accommodation which appear to be reasonably necessary to meet the needs of employees of the Company or contractors engaged by the Company and their families shall be supplied by the State subject to the Company bearing and paying the capital cost thereof and if the State and the Company are unable to agree upon the necessity for such facilities or the standard or cost thereof then the matter shall be determined by arbitration. Salt for use in Australia 3 21. The Company acknowledges the desire of the State to have available a constant and reliable source of supply of salt for use in Australia. To attain this object the Company subject to the fulfilment of its overseas contracts will use its best endeavours to have such quantities of salt available at all times during the currency of this Agreement for sale for use in Australia as will meet reasonable demands therefor made on the Company from time to time at a price which is competitive in the Australian market provided that such price is not less than that which the Company is receiving or able to receive for similar quantities of salt sold on similar terms and conditions for use outside Australia. Restrictions on resumption 3 22. The State further covenants with the Company that the State a having regard to the particular nature of the industry proposed to be established by the Company under this Agreement and subject to the performance by the Company of its obligations hereunder shall not resume or suffer or permit to be resumed by

any State instrumentality or by any local or other authority of the said State any portion of the work sites the resumption of which would unreasonably impede the Companys activities nor shall the State create grant or permit or suffer to be created or granted by an As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 19 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement instrumentality or authority of the said State as aforesaid any road right of way or easement of any nature or kind whatsoever over or in respect of the work sites which may unduly prejudice or interfere with the Companys operations hereunder without the consent in writing of the Company first having been obtained which consent shall not be arbitrarily or unreasonably withheld; nothing in this paragraph shall prevent the State exercising any power given it pursuant to paragraph h of subclause 1 of Clause 3 of this Agreement; No discriminatory taxes or charges 3 b except as provided in this Agreement shall not impose or permit or authorise any of its agencies or instrumentalities or any local or other authority of the State to impose discriminatory taxes rates or charges of any nature whatsoever on or in respect of the titles property or other assets products materials or services used or produced by or through the operations of the Company in the conduct of the Companys business hereunder nor shall the State take or permit to be taken by any such agency instrumentality or authority any other discriminatory action which would deprive the Company of full enjoyment of the rights granted and intended to be granted under this Agreement; Upgrading of Roads 3 c shall at the request and cost of the Company except where and to the extent that the Commissioner of Main Roads agrees to bear the whole or part of the cost involved widen upgrade or realign any public road over which the State has control subject to the prior approval of the said Commissioner to the proposed work; Rating 3 d shall ensure that notwithstanding the provisions of any Act or anything done or purported to be done under any Act the valuation of all lands whether of a freehold or leasehold nature the subject of this Agreement except as to any part upon which a permanent residence shall be erected or which is occupied in connection therewith shall for rating purposes be deemed to be on the unimproved value thereof and no such lands shall be subject to any discriminatory rate; page 20 Version 01c006

First Schedule Dampier Solar Salt Industry Agreement the event of the offer having been submitted to arbitration the offer as varied or modified by the award on arbitration provided the State has first offered to the Company the right of first refusal of such terms and conditions and such offer is not accepted by the Company within a reasonable time. Indemnity 3 29. The Company will indemnify and keep indemnified the State and its servants agents including all Ministers of the Crown in right of the State of Western Australia and contractors in respect of all actions suits claims demands or costs arising out of or in connection with the construction maintenance or use by the Company or its servants agents contractors or assignees of the Companys solar salt plant jetty berthing or loading facilities roads railways or other works or services the subject of this Agreement or any plant apparatus or equipment associated therewith. Compliance With Laws 3 30. Subject to this Agreement the Company in the construction operation maintenance and use of any work installation plant machinery equipment service or facility provided or controlled by it shall comply with and observe the laws for the time being in force in the State of Western Australia. Notices 3 31. Any notice consent request or other writing authorised or required by this Agreement to be given shall be deemed to have been duly given by the State or the Minister if signed by the Minister or by any senior officer of the Civil Service of the said State acting by the direction of the Minister and forwarded by prepaid registered post to the Company or an approved mortgagee or assignee as the case may require at its registered office for the time being in the said State and by the Company if signed on its behalf by any person or persons for the time being appointed by it for the purposes of this Clause and forwarded by prepaid registered post to the Minister at his office in Perth AND any such notice consent or writing shall be deemed to have been duly given on the day on which it would be delivered in the ordinary course of post. Relevant Law 3 1 This Agreement shall be interpreted according to the law for the time 32. being in force in the said State. page 24 Version 01c006 Published on www.legislation.wa.gov.au As at 11 Sep 2010 Dampier Solar Salt Industry Agreement Dampier Solar Salt Industry Agreement Act 1967 First Schedule 2 All payments made or to be made under this Agreement shall be made in the State of Western Australia in Australian

currency unless otherwise agreed. All sums mentioned herein are in Australian currency. Expiration of Agreement 3 33. This Agreement shall expire on the expiration or sooner determination of the lease of the production site including the respective renewals thereof but without prejudice to the right of action of either party hereto in respect of any breach of the covenants agreements and conditions herein contained. Conditions 3 1 This Agreement is conditional upon the Company at any time prior 34. to the 31st day of December 1968 giving notice to the Minister that a the Company has entered into or intends to enter into contracts or arrangements satisfactory to the Company for the sale by the Company of salt; and b the Company has made or is about to make arrangements satisfactory to the Company for financing the works referred to in Clause 9 hereof and that the Company proposes to proceed with such works. Determination by Company 3 2 Notwithstanding anything herein contained the Company may at any time give notice to the State that matters have arisen which make the completion or continuance of the works impracticable or uneconomic and desires to determine this Agreement whereupon this Agreement will then cease and determine and the State may enforce all or any one or more of its rights remedies or powers set out in Clause 19 hereof. Right of Surrender 3 3 The Company shall have the right at any time and from time to time to surrender to the Crown in right of the State any reasonably substantial part of the work sites which is no longer required by the Company. Power to extend periods 3 35. Notwithstanding any provision hereof the Minister may at the request of the Company from time to time extend any period or alter any date referred to in As at 11 Sep 2010 Version 01c006 Published on www.legislation.wa.gov.au page 25 Dampier Solar Salt Industry Agreement Act 1967 First Schedule Dampier Solar Salt Industry Agreement this Agreement for such period or to such other date as the Minister thinks fit and the extended period or other date when advised to the Company by notice from the Minister shall be deemed for all purposes hereof substituted for the period or date so extended or altered. Provided that where any such extension of period or alteration of date would have the effect either directly or indirectly of extending the term of any lease license temporary reserve or other concession granted under the Mining Act the consent of the Minister shall not operate until the

Company has also obtained the like consent of the Minister for Mines. 36. The State shall exempt from any stamp duty which but for the operation of this clause would or might be chargeable on a this Agreement; b any instrument executed by the State pursuant to this Agreement granting to or in favour of the Company or any permitted assignee of the Company any lease license easement or right granted or demised hereunder or pursuant hereto PROVIDED THAT this clause shall not apply to any instrument or other document executed or made more than seven years from the date hereof. 34 AGREEMENT NOVATING PRODUCTIONS SHARING CONTRACT Contents 1. Definitions and interpret
ation 2. Novation 2. Confirmation of Terms 4. Representations and Warranties 5. Miscellaneous... Schedule
1 Oyo Field 23444 This Agreement is dated 2010 and is made BETWEEN 1 ALLIED ENERGY PLC formerly All
ied Energy Resources Nigeria Limited a company incorporated under the laws of the Federal Republic of Nige
ria and having its registered office at Plot 1649 Olosa Street Camac House Victoria Island Lagos Allied Energy

CAMAC INTERNATIONAL NIGERIA LIMITED a company incorporated under the laws of the Federal Republic of Nigeria and having its registered office at Plot 1649 Olosa Street Camac House Victoria Island Lagos Camac Nigeria and together with Allied Energy Allied 34 NIGERIAN AGIPEXPLORATION LIMITED a company incorporated under the laws of the Federal Republic of Nigeria and having its registered office at Plot PC23 Engineering Close Victoria Island Lagos NAE and CAMAC PETROLEUM LIMITED a company incorporated under the laws of the Federal Republic of Nigeria and having its registered office at [] CPL together the Parties and each a Party. WHEREAS.

On 3 June 1992 Allied Energy was awarded an oil prospecting licence to block 210 OPL 210 an interest of 2.5 in which Allied subsequently assigned to Camac Nigeria on 30 September 1992. B.

On 28 August 2002 Allied were granted oil mining leases 120 and 121 OMLs with respect to the OPL 210 for a term of 20 years commencing from 27 February 2001. C. Pursuant to a Deed of Assignment dated 22 July 2005 Allied assigned to NAE a 40 interest in the OMLs with remaining 60 being retained by Allied. D. On 22 July 2005 Allied and NAE entered into a Production Sharing Contract PSC setting out the terms of agreement in relation to petroleum operations on the territory of the OMLs. E.

Each of Allied Energy and Camac Nigeria wish to novate to CPL the beneficial ownership of their respective interests in and all rights and obligations under the PSC in relation to the Oyo Field further details of which are set out in Schedule 1. NOW IT IS HEREBY AGREED as follows

1 Definitions and interpretation

1.1 In this Agreement unless the context otherwise requires

1.2 In this Agreement unless the context otherwise requires all words and expressions defined in the PSC shall have the same respective meanings in this Agreement.

1.2.1 reference to clauses and schedules are to Clauses of and Schedules to this Agreement

1.2.2 headings do not affect the interpretation of this Agreement the singular shall include the plural and vice versa and reference to one gender include all genders

1.2.3 reference to any English legal term or concept shall in respect of any jurisdiction other than England be construed as reference to the term or concept which most nearly corresponds to it in that jurisdiction

1.2.4 a reference to any other document referred to in this Agreement is a reference to that other document as amended revised varied novated or supplemented at any time and

1.2.5 any phrase introduced by the terms

including include in particular or any similar expressions shall be construed as illustrative and shall not limit the sense of the words preceding those terms. 2.1 Subject to Clause 3.3 and with effect from and including the Novation Date Allied Energy and Camac Nigeria assign to CPL all their respective rights liabilities duties covenants undertakings warranties and other obligations contained in the PSC in respect of the Oyo Field only including all claims and demands in respect of the Oyo Field arising in connection with the PSC. 2.2 Subject to Clause 3.3 and with effect from and including the Novation Date CPL accepts all respective rights and liabilities of Allied Energy and Camac Energy under the PSC and agrees to perform all the duties and to discharge all the covenants undertakings warranties and other obligations of Allied Energy and Camac Energy respectively and to be bound by all the terms and conditions of the PSC in respect of the Oyo Field only in every way.

2.3 This Agreement shall become effective on the date Novation Date on which all the Parties hereto have signed

this Agreement. Allied Energy shall indemnify and hold each of NAE and CPL harmless against all losses damages injuries expenses and actions of whatever kind and nature suffered by each of them respectively where such losses damages injuries expenses and actions are as the result of the failure of Allied Energy to notify the Department of

Petroleum Resources DPR of the transaction described in this Agreement. 2.4 Subject to Article 2.3 NAE acknowledges and agrees to the novation of the PSC contemplated under this Agreement and agrees to be bound by the terms of this Agreement. 2.5 Unless the context otherwise requires with effect from and including the Novation Date references to Allied Energy and/or Camac Nigeria and/or Allied in the PSC as far as the Oyo Field is concerned in accordance with

this Agreement shall be deemed to be references to CPL. 3 Confirmation of Terms 3.1 Subject to Clause 3.3 of this Agreement and except where inconsistent with the provisions of this Agreement the terms of the PSC are confirmed and shall remain in full force and effect. 3.2 With effect from the Novation Date this Agreement and the PSC shall be read and construed as one document. 3.3 For the avoidance of doubt the Parties hereby confirm that at 3.3.1 the terms and conditions of Articles 8.1 a 8.1 c and 8.3 of the PSC relating to Royalty Oil Tax Oil and the Escrow Account shall remain unaffected by this Agreement and Allied Energy shall retain its rights and

obligations

under those Articles 3.3.2 the waiver by NAE of its rights in Article 8.1 of the PSC in favour of Allied Energy in respect of the Oyo field NAE Waiver is no longer applicable with effect from the Novation Date and will be reinstated by NAE with effect from the Novation Date upon receipt of a notice from Allied Energy that CPL has become an Affiliate of Allied Energy to be served together with appropriate supporting documentation reasonably satisfactory to NAE evidencing that status of CPL as an Affiliate of Allied Energy. For purposes of the foregoing reasonably satisfactory evidence shall include without limitation any document filed and available to the public with the United States Securities and Exchange Commission disclosing that CPL is a subsidiary of Pacific Asia Petroleum Inc. PAPI and that the same company that controls Allied Energy controls PAPI and a certificate signed by an officer or director of a PAPI certifying that CAMAC Energy Holdings Limited CEHL owns more than 50 of the shares in PAPI and further certifying that PAPI owns more than 50 of the shares in CPL and b CEHL certifying that it owns more than 50 of the shares in Allied Energy. Notwithstanding the foregoing if CPL becomes an Affiliate of Allied more than two (2) months after the Novation Date then the reinstatement of the NAE Waiver will be effective from the date CPL has become an Affiliate of Allied and when the NAE Waiver is reinstated pursuant to Article 8.1 such waiver will be deemed to extend to the interest of CPL in the Oyo Field. For the avoidance of doubt if at any time CPL ceases to be an Affiliate of Allied then the NAE Waiver shall no longer apply in accordance with Article 8.1 of the PSC.

3.3.3 all terms and conditions of the Cooperation Agreement between NAE and Allied Energy dated 15 January 2006

as amended remain in full force and effect and shall remain unaffected by this Agreement including without limitation to procurement and engineering services provided by Allied Energy to NAE with respect to the Oyo Field.

3.3.4 notwithstanding anything to the contrary in this Agreement or the PSC CPL shall not be entitled to appoint any representatives in the Management Committee nor to exercise any right to vote therein in respect of any matters including with respect to the Oyo field. It is understood that CPL's interest in the Oyo field will be represented by Allied.

3.3.5 notwithstanding anything to the contrary in this Agreement or the PSC but without prejudice to Clause 3.3.1

the following provisions of the PSC shall not apply to CPL but will continue to apply to Allied or the First Party as the case may be Article 57.27.38.69 11 12 13.31 4.3. For the avoidance of doubt the evaluation procedures of Article 9 of the PSC shall be binding on CPL. 4 Representations and Warranties Each Party severally represents and warrants on behalf of itself that 4.1 it has full power and authority under its memorandum or articles of association or other governing documents and otherwise to enter into and perform its obligations pursuant to this Agreement and 4.1.1 it has duly authorised executed and delivered this Agreement and this Agreement constitutes valid and binding obligations enforceable against it in accordance with its terms. 4.1.25 Miscellaneous 5.1 The provisions of Articles 16 Confidentiality and Public Announcements and 20 Laws and Language of the

PSC shall apply mutatis mutandis to this Agreement. 5.2 This Agreement may be executed in any number of counterparts each of which when executed and delivered shall be an original but all of which when taken together constitute a single instrument. IN WITNESS WHEREOF the Parties have entered into this Agreement on the day and year first above written. Signed for and on behalf of ALLIED ENERGY PLC Signatures Mickey A. Lawal Name Mickey A. and Regulations dealing with rights and obligations of the Contractor shall be read as part of but not nullify the provisions of this Agreement and any Licence issued to the Contractor.

Article 2
Agreement the Operator Liabilities and Indemnities

2.1 Agreement This Agreement constitutes an agreement made under section 10 of the Act consistent with the Act and the Regulations and is a production sharing agreement the objective of which is the exploration for development and production of Petroleum in the Contract Area by the Contractor subject to the terms hereof and the provisions of the Act and Regulations under which the Contractor shall have an economic interest in the development of Petroleum from the Contract Area.

2.2. The Operator a Esso shall be the Operator charged with conducting the day to day activities of the Contractor under this Agreement. No transfer of operatorship to another Party not comprising the Contractor shall take effect unless it has been approved by the Minister which approval shall not be unreasonably withheld. The Minister shall be notified of any change of operatorship to another Party comprising the Contractor in writing.

b The Contractor shall provide the Minister with a memorandum summarizing the operating arrangements between the Operator and the Contractor including any Party comprising the Contractor for the conduct of Petroleum Operations which will include inter alia a provision whereby the Operator agrees to conduct the applicable laws of Guyana.

2.3. Liability 2.4 Indemnity The Contractor shall at all times keep Government indemnified against all actions claims and the demands that may be brought or made against Government by a third party by reason of negligence any act or omission or reckless disregard of harmful consequences which results in damage to a third party by the Contractor or the Operator in the exercise or purported exercise of the rights of the Contractor under the Act or the Licence provided however that nothing in this Article shall require the Contractor to give the said indemnity for any claim or demand in respect of Petroleum taken by the Minister pursuant to Article 11 after title has passed to the Minister at the Delivery Point or in respect of assets acquired by the Minister pursuant to Article 20 from and after the date of acquisition. Liability by the Contractor to the Government for damages in respect of Petroleum Operations under this Agreement is limited to insurance required in accordance with Article 20.2 a

Page 9 Petroleum Agreement Government of Guyana Esso Nexen and Hess ph provided however that the Contractor shall not be liable to the Government for indirect punitive or consequential damages including but not limited to production or loss of profits. Page 10 Petroleum Agreement Government of Guyana Esso Nexen and Hess 1 Article 3 Petroleum Prospecting Licence and Guarantee 3.1 Petroleum Prospecting Licence a On the date of this Agreement the Minister in accordance with the Act the Regulations and the terms of this Agreement shall grant to the Contractor the Petroleum Prospecting Licence for an initial period of four 4 years from the Effective Date over the area described in Annex A and shown on the map attached as Annex B hereto. b Subject to Article 4 and the other terms of this Agreement such Petroleum Prospecting Licence may be renewed but not more than twice at the election of the Contractor for consecutive periods of up to three 3 years each in accordance with the provisions of the Act and the Regulations. 3.2 Guarantee Each of the Parties comprising the Contractor shall on or before the sixtieth 60th day from the Effective Date during year one 1 of the initial period in accordance with Article 4.1 a hereunder and thereafter no later than ninety 90 days after the commencement of all subsequent work commitment periods as specified in Article 4.1 provide an Affiliated Company guarantee or other form of guarantee acceptable to the Minister in proportion to each of their corresponding undivided participating interest in the rights and obligations derived from this Agreement and for a combined amount of ten percent 10 of the budget submitted by the Contractor pursuant to Article 7.1 for each specific work commitment period. Notwithstanding the foregoing if the Contractor exceeds its minimum work commitment in any phase specified in Article 4.1 the completion of such work commitment shall constitute a waiver of such proportion of the requirement of the guarantees by the Minister which is the equivalent of the excess work previously completed but which is applicable to the subsequent work commitment phase. If the guarantees are Affiliated Company guarantees they shall be in lieu of and satisfy any obligation to provide a guarantee andor bond pursuant to the Act Regulations or this Agreement on the part or on behalf of the Contractor. Page 11 Petroleum Agreement Government of Guyana Esso Nexen and Hess Article 4 Exploration Programme and

Expenditure Obligation 4.1 Exploration Programme Subject to the provisions of this Agreement in discharge of its obligations to carry out Prospecting Operations in the Contract Area the Contractor shall carry out the minimum work described herein during the periods into which Prospecting Operations are divided hereunder a The initial period of four 4 years shall commence on the Effective Date. The Contractor shall within the initial period complete the interpretation of any 3D seismic acquired in respect of the Contract Area and complete the drilling of a minimum of one 1 Exploration Well. At the end of the initial period of four 4 years the Contractor shall elect either to relinquish the entire Contract Area or renew the Petroleum Prospecting Licence for a further period of up to three 3 years. b First renewal period of three 3 years. The Contractor shall within the first renewal period of three 3 years drill one 1 Exploration Well. At the end of the first renewal period of three 3 years the Contractor shall elect either to relinquish the entire Contract Area or renew the Petroleum Prospecting Licence for a second period of three 3 years in accordance with Article 5. Second renewal period of three 3 years. The Contractor shall within the second renewal period of three 3 years drill one 1 Exploration Well. At the end of the second renewal period of three 3 years the Contractor shall relinquish the entire Contract Area in accordance with Article 5. The minimum work commitment for a given phase or period referred to in Article 4.1a b and c may be undertaken in an earlier phase or period in whole or in part and in such case the work commitment with respect to the subsequent period shall be deemed to be satisfied accordingly in whole or in part as the case may be. Contractor may conduct additional work beyond the minimum work commitment in accordance with the terms and conditions of this Agreement which shall be Recoverable Contract Costs. e Subject to Article 24 herein and section 43 of the Act the Minister may extend any Page 12
